Draft and Pack Animals.—The best draft animals are oxen, horses, mules and dogs. Reindeer have lately been suggested for work in the North, but their use is yet in an experimental stage. While mules and donkeys are employed frequently, and oxen sometimes, the main reliance is placed upon horses. The use of dogs appears to be restricted to the drawing of sleds over flat ice or snow-covered surfaces. Horses and mules should not, as a rule, be employed for long journeys, unless some provision for them can be gathered by the way; otherwise, an undue proportion of the burden must consist in food for their sustenance. Horses trained to the conditions they must encounter are generally to be preferred; Indian ponies, for example, will scrape through a moderate layer of snow to find the dried grass below it. Dogs are probably the most economical animals for winter service in the North, because their food requirements are so nearly similar to those of man.[4] The mule and the horse are the best of the lower pack animals, while man himself must often be relied upon for this service. Horses and mules are provided with pack saddles over which the burden is uniformly distributed, a task requiring considerable skill and experience. Man is to be preferred as a pack animal because his services are available in other ways than in the carrying of burdens. Indian packmen, capable of conveying a burden of 100lbs. throughout the entire day over the roughest country, and who will prepare the meals and camping ground, are easily procurable. The burden is made up by means of the ordinary pack straps; the load, being wrapped in the sleeping blankets, is fastened by the pack straps and then adjusted to the shoulders of the carrier.

[TO BE CONTINUED.]

[4] A good pair of dogs can draw 300lbs. over an ordinary frozen surface. A team of five dogs, which can readily haul 600lbs., costs from $100 to $1,000, according to circumstances. It is reported that at Dawson, during the present season, $2,500 was refused for a team of five dogs capable of hauling over 200lbs. each.

Massachusetts Shore Birds.

BOSTON, July 31.—The open season on Massachusetts shore birds began July 15, but not much shooting has yet been done. Mr. L. M. Paine was one of the first to go down to Chatham to look for shore birds. His success was not very marked, there being only flights of small birds such as sandpipers and reed birds. No summer yellowlegs have yet appeared in good numbers. A few redheads were also seen. Wet and foggy weather is expected to bring better flights. L. W. de Pass has reports from Plum Island, where he, with friends, owns a camp. No good flights of birds have yet been seen, and but little shooting done. A few small "peep" have been bagged, but no large birds. The gunners are somewhat worried over the idea of the new Sunday law being strictly enforced. This law was framed at the instigation of some of the land and waterfront owners along the coast, as well as land owners just out of the cities and large towns. It strictly prohibits all Sunday shooting. It is a well-known fact that busy Boston merchants and business and professional men, fond of the gun, have for many years been in the habit of "getting off duty" Saturday afternoon in time to catch a late train for some favorite shooting ground along shore or elsewhere. Business has compelled them to return on Monday morning. Without accusing them of Sunday shooting, it may be stated that nobody has troubled them with any Sunday shooting law so far. If the new law is to be enforced, they will not go shooting on Saturday, and if they cannot go on Saturday, they will not go at all, for the good reason that they cannot afford the time. It comes from some of the friends of the law, living at several points along the south and north shores, that they "shall see that the law is enforced," and gunners hear that one or two sheriffs have been notified that they must arrest persons found gunning on Sunday. Results will be anxiously watched, because some very respectable merchants propose to go down to Chatham and other points over Sunday, the same as ever.

Among the late catches reported by Boston anglers are noted Mr. and Mrs. A. W. Lyon, with five trout, taken near Haines Landing, weighing from 1½ to 3lbs. Mr. John R. Mitchell, fishing at the same resort, recently took ten trout, the largest weighing 4¾lbs. Mr. and Mrs. H. W. Petter, of Boston, have been fishing at the Upper Dam, with good success. Mrs. Petter is reported to have taken six trout in one day, the largest weighing 6lbs. A. B. Nelson, of Boston, is also having good sport at the same point.

SPECIAL.

California County Restrictions.

REDLANDS, Cal., July 22.—*Editor Forest and Stream:* Doves are plenty, but only a few have been shot. I was out on the 16th and found quite a number of birds. Only shot a few. They were fat and fine. I found rabbits plenty, and saw two broods of blue quail that had been hatched out this season. They were about grown. I find by diligent search that the Virginia quail have been planted in various sections of California, notably in Fresno and Los Angeles counties. The former has also prairie chickens and Japanese pheasants. I note with pleasure that the various counties are passing laws to prohibit the sale or export of game and fish (trout) and to limit the bag. The seasons are being shortened, and on deer and trout many counties have no more open season. Larger guns than 10-bore are prohibited, and one county goes so far as to place repeaters under ban. Doubt is expressed as to whether this last ordinance will prove constitutional. Indeed, I see no need of it as long as the bag of birds is limited.

REELFOOT.

Currituck Game.

KNOTTS ISLAND, Currituck Sound, N. C., July 25.—*Editor Forest and Stream:* The bay birds arrived as usual about July 10, but owing to the very dry weather they did not stop with us. There was no rain water on the flats, and consequently no food. But it is rainy now and the shooting is fine. Some excellent bags were made yesterday, and the birds are in splendid condition.

I notice again this summer that a number of black ducks have raised their young at Currituck just as last season, and are beginning to fly around now. The crop of quail seems unusually large, and we should have good quail shooting this fall. Currituck is literally filled with wild celery this season, and canvasbacks should cost a dollar or two less at Delmonico's next winter.

MORE ANON.

Long Island Gunning.

QUEENSWATER, L. I., July 31.—Snipe are beginning to arrive from the North, and are quite plentiful. The law regarding the shooting of meadow hens was misunderstood by many local gunners, who supposed they could be shot after July 1. A notice will be posted calling sportsmen's attention to the fact that they cannot be killed until after Aug. 15.

Do you want Guides?—Parties wanting guides for hunting moose and caribou in New Brunswick this season should correspond with A. Pringle, Stanley, N. B.—*Adv.*

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Toledo and Thereabouts.—II.

Something About a Pioneer Sportsmen's Organization.

IF the people of Toledo and thereabouts have been ardent and enthusiastic devotees of the rod and the gun, it is to their credit that, for the most part, they entertain a just regard for the rights of their fellow men in the denizens of the field and stream. From a very early date in the history of Toledo her hunters and fishermen realized the importance of legal measures for the preservation and protection of fish and game, and they have been a potent factor in the passage and enforcement of some of the best laws now on the statute books of the State.

Very much of the educational influence on public sentiment and the consequently healthful tone of the community upon this subject is due to an association of Toledo gentlemen whose inception dates back more than thirty years ago.

In October, 1867, half a dozen of the most active followers of outdoor recreation were drawn together by that sort of telepathic influence common among sportsmen, to consider the organization of some kind of sportsmen's association at Toledo. At that time there had been in this locality no attempts to secure through lease and ownership the control of the vast hunting territory by private or corporate interests. The great Monroe marshes, the extensive hunting grounds about Bay View on the west and Cedar Point on the east side of Maumee Bay were all as free as the air to anyone who chose to enter them, and posted land along the scattered farms of the northwestern Ohio was a thing unknown. In the later sixties, and indeed for several years thereafter, deer were not infrequently seen and occasionally taken six or eight miles west of the city. The only exception to the lack of organization was found in the Minous Point Club, of Sandusky Bay, a veteran association which originated in the early fifties, and which at this time was in vigorous existence.

In view of the somewhat unsettled condition of domestic affairs in the period immediately following the close of the War of the Rebellion, the game laws of Ohio were fairly good as they stood upon the statute books of the State. There was little difficulty in ascertaining their intent, but when it came to their enforcement that was quite another thing. The population as a whole paid little or no attention to their provisions, and the machinery for their execution was lamentably defective. Judging it from the standpoint of those days, the public apathy was not difficult to comprehend. With game and fish abundant on every hand, both in season and out of season, it was hard to make the average sportsman understand that they should need protection when the supply seemed apparently in excess of the constant demands made upon it. The story is not a new one, and it need not be amplified here.

The informal conference among the six gentlemen already named resulted in the calling of a preliminary meeting, which was held in the same month (October) at the office of Dr. C. H. Harroun, himself a faithful son of Nimrod. Some twelve or fifteen gentlemen responded, and the outcome was the appointment of a committee to draft a constitution and by-laws, which were duly adopted and an organization effected at an adjourned meeting held later. The influential spirits of the new movement were men who, with a wise foresight into the future, were enabled to foresee the changes that were imminent, and because they were in advance of public sentiment they were prepared to mold and direct it on the subject of game protection. Many, very many of them are gone, but their influence still lives in the game laws of the State and in the kindred organizations of which theirs was the worthy progenitor.

The new society was styled the Maumee Valley Shooting Association, a title broad enough to include not only the city but a wide reach of surrounding territory throughout this portion of the State. Its objects were to establish a headquarters where it might develop and foster the social spirit among sportsmen; to improve the game laws of the State and aid in their enforcement; to make ornithological collections of the permanent and migratory feathered game at the head of Lake Erie; to gather a library of acknowledged authorities on sporting subjects with an incidental list of the current periodical publications; to secure paintings of furred and feathered game by artists of recognized standing and ability, and finally to promote in every honorable way the means and facilities for lawful sports afield.

The first president of the Association was Robert Cummings, then the head of the wholesale boot and shoe house of R. & J. Cummings & Co. Subsequently the chair was filled for succeeding years by Messrs. D. C. Baldwin, E. C. Skinner, C. O. Brigham and others. The latter gentleman (now the efficient superintendent of the Western Union system at Toledo) was twice chosen as the chief officer of the Association, an honor no doubt largely due to his earnest and active efforts in its behalf. Messrs. Theodore Klemm and Z. C. Pheatt were its first secretaries.

The first location of the Association was in rooms at the corner of Madison and Summit streets, but at the end of the year it removed into more commodious quarters in the Drummond block. Among its first acts was to send out collectors to secure desirable specimens of the game birds of the valley. These, as fast as they were obtained, were mounted by Mr. James Booth, of Drummondsville, Ontario, one of the most skilled taxidermists of his day, and in a few years the Association had secured a collection second to none other in the State. An excellent library was built up through donation and purchase. During the early days of the Association Mr. W. H. Machen, the well-known landscape and dead-game painter, completed from studies on the ground a large oil painting of the marshes of the Maumee, which he presented to it, and which was held as a valued momento of the donor.

The little handful grew apace, and the new club soon numbered a hundred members, representing the best of the social, business and professional elements of the city. The late Judge Emory D. Potter was one of its honorary members, and gave to it at all times the benefit of his ripe legal experience and his lifelong acquaintance with the fish and game of the State. One of the pleasant episodes in the career of the Association was an address delivered by him before it in the early seventies on "Game in the Maumee Valley in 1840," an address that was replete with valuable and interesting data regarding that now far-off time.

The rolls of the Association are no longer accessible, and yet it is possible to recall many of the men whose efforts did so much in their day to further the cause of game protection in Ohio. The list of members, if it could be given in full, would include such names as those of M. D. Carrington, T. B. Casey, E. D. Potter, Jr., Robert, John and Joseph Cummings, Louis Wachenheimer, Z. C. Pheatt, W. H. Lewis, G. K. Pheatt, a gunmaker of more than local reputation; W. O. Hall, A. L. North, R. W. Matthews (now of St. Paul, Minn.), Frank Drake, Samuel Andrews, Theodore Klemm, L. Humphrey, Fred B. Shoemaker, William Schansenbach (now of Ogden, Utah), W. B. Wiltbank, D. C. Baldwin, C. O. Brigham, Dr. C. H. Harroun, John B. Carson and S. H. Standard. Other names will doubtless suggest themselves to the survivors who may read this history.

In addition to its regular monthly business and social sessions, the Association early introduced frequent meetings for trap shooting, and some of its contests were occasions of much interest throughout the State. In the fall of 1868 a national tournament was held in Toledo under the auspices of the Association, and noted shots from all parts of the country competed for the prizes. At that tournament wild pigeons, then still plentiful throughout northwestern Ohio, were used at the traps as furnishing the most available and inexpensive targets. Alas, the day that was, but is not!

Upon its organization the Maumee Valley Shooting Association at once took the ground that its first systematic efforts should be directed toward inducing the State and the county to appoint special officers to enforce the game laws, instead of leaving that important duty to the indifferent ministrations of the magistrates and their constables. The main plank in its platform was "full and cordial co-operation with all State officers" in the enforcement of the game laws, and the result of its exertions was to put a virtual stop to the illegal killing of all varieties of game in northwestern Ohio. It was at all times an earnest advocate of the abolition of spring shooting, and of the establishment of closed days during the season for waterfowl, and whatever place these measures have had in the Ohio game laws has been largely owing to its influence. It sought at an early date to secure the passage of national legislation controlling the shipment and marketing of game, and to obtain the aid of Congress, so far as its jurisdiction extended, in bringing about a uniform system of game laws throughout the entire country.

In December, 1882, a disastrous fire visited Toledo, destroying in its ravages what then was the finest business block the city could boast. In one of the upper stories were the rooms of the Maumee Valley Association, and with many hundred tons of grosser chattels perished its ornithological collection, its paintings and its library, all possessions too valuable to be listed in dollars and cents, and which cannot now be replaced. Some of the records of the society were preserved by Mr. C. O. Brigham (himself the repositary of much of its unwritten lore), but ten years later a second fire, which wiped out the Toledo Chamber of Commerce, made a final end of the records and the few rare books which Mr. Brigham had up to that time hoarded in his private desk in the latter building.

The Maumee Valley Shooting Association no longer has an existence, save in the hearts of its former members, yet its name will always recall a host of pleasant memories to those who were united in its brotherhood.

The Rape of a Michigan Trout Stream.

The Slagle River (spelled "Schlagel" in cold weather) is one of the most fruitful trout streams in the southern peninsula of Michigan. It lies to the south and west of Ann Arbor Railway, its upper waters being easily reached by that line at Harrietta, some eighteen miles above Cadillac. Its waters meander through the counties of Wexford and Manistee and empty into the Manistee River, after having distributed over the territory named some twenty miles or more of as delightful and productive trouting water as may be found out of doors. For many years it has been the Mecca of Toledo trout fishermen, as well as those of other localities, and it is estimated that during the season the "average daily enrollment" of rods upon its waters is never less than twenty. Its average width is about 10ft., and its depth will range from 2ft. to four times as many. The Slagle Trout Club, with some forty members, has very comfortable quarters on the stream near Harietta, and manages during each season to net a good many days of solid enjoyment and an indefinite number of fish. The lower portion of the stream near the Manistee was at one time cleared for logging purposes, and a dam built about three miles above its junction with that river. The logging has long since been concluded, but the clearing out of the stream has left below the abandoned dam long stretches of wide, deep water, not any too accessible to the most ardent angler, and here some of the finest trout on the stream are taken by those who have the courage and energy to work for them. The Slagle is a natural trout stream, and so far as the writer is aware has never been artificially stocked, but the thousands of fish which are annually taken from its waters are replaced each year by the natural process, and the supply never seems to suffer any diminution.

The Slagle has always been an open stream, but this season Mr. Daniel Segur, of Toledo, who has waded its ripples for a number of years, encountered an Idea on its banks. And the Idea said to Mr. Segur, in a perfectly confidential way, that there was a vast amount of good fishing lying in the Slagle which did not belong to anybody in particular, and that there was something more than a possibility that in the mutations incident to a new and "growing" country some one who cared more for hardwood timber than for trout might come in and work a desolation that all the Michigan Legislatures of the future would be powerless to cure. Mr. Segur thanked the Idea and took it home with him to Toledo, and shortly afterward began a vigorous correspondence with some of the authorities of Manistee county. The result of his correspondence was that he succeeded in locating the owners of the land surrounding the Slagle, and he has just completed the purchase of 1,500 acres of it, including some twelve miles of the river running through it. In compassing this transaction he has been obliged to deal with fourteen different owners of as many different parcels of land in all shapes and sizes, but it has put him in possession of all that part of the stream lying within Manistee county, and he has supplemented his purchase by contracting for fifteen miles of wire fencing with which to indicate the boundaries of his property.

The Slagle is a spring-fed stream, running through a still heavily timbered country, for the most part over a sandy soil, and per consequence always cold and clear. The land has a fall of 10ft. to the mile, and in the natural windings of the stream it surpasses even the famous "Meadow Brook" of the Castalia, since the Slagle in one mile of lineal measure has five miles of stream. It is possible to locate a fishing lodge on the banks of the Slagle at a point where Mr. Segur would have his entire twelve miles of fishing water within such easy reach that not any part of it would be more than half an hour's walk from his quarters.

It seems a little odd that some one has not long before this taken some such action as that which has just been narrated, and which has been rendered practicable by comparatively recent surveys; and yet it is intimated that there were others who were "just agoin'" to acquire the rights and privileges that have heretofore been held as public property. Mr. Segur, who, by the way, is a member of the Bostwick & Braun Company, wholesale hardware, has associated with him in the riparian rights of the property Dr. H. E. Harlan, also of Toledo, and they have doubtless plans for its future which will be developed later. It is not altogether a pleasant thing to see a fine piece of open trouting water pass under private control, but it is consoling to know that there are still a good many miles of free fishing on the Slagle, and that any private stocking of their portion of the river by the new owners cannot fail to benefit the whole stream.

JAY BEEBE.

TOLEDO, O., July 22.

Fishing Up and Down the Potomac.

Overhead Bait-Casting.

"SHOEMAKER, stick to your last," was said to a son of St. Crispin, who, finding a sculptor heeding his just criticism of the shoes on a piece of statuary, was presumptuous enough to criticise the rest of the figure. So a fly-fisherman might lay himself open to unkind comment who attempted to find fault with some brother angler's method of luring the finny tribes from the deep. But it may at least be permitted one to admire a method not his own.

Everyone to his taste and his tackle. Some there be who enjoy best the worm and float; some want many fish and are satisfied with small; some want big ones and are content with few. Others again like large game and plenty of it, but only now and then can such an individual be found with means and leisure to gratify so expensive an appetite, and then, like Senator Quay, he disdains anything but the silver king, and goes on season after season adding to his record of tarpon till they are getting beyond count. That he should take them with a hand line instead of with a rod and reel is purely a matter of taste, and no one will doubt his contests with the big fellows and his victories afford him a pleasure just a little keener than he gets out of any other occupation in life, and when it has accomplished this angling has done its perfect work.

This recalls a thrilling incident of one of his many trips to his bungalow on Indian River. His launch takes his boat down to one of the inlets where the tide makes with a swift current and through which the big fish of the ocean come to feed or play or rest. Near this great natural sluice gate he anchors his skiff and stays alone till after dark, if he does not tire sooner, and gets all there is to be had of the absorbing elements of the lonely ocean and the vaulted sky; as far from the madding crowd as one may well get in this dense world. On the occasion in question he was fishing at this point, while his son and the launch tender were occupying another skiff further in the bay.

He had taken a large tarpon of above 100lbs., which was

bridled to the stern of his boat. It was nearly dusk, but a great white object looking like a raft, apparently 25ft. long, showed up in the river, and circled around the other boat, whose occupants, calling out "Shark!" pulled up anchor and made for shore.

The Senator sat unmoved as the great white beast approached his boat so close that it snapped at the captive tarpon and carried half of it away; and still he fished. Within a half-hour the shark returned and secured the remainder of the tarpon. The ambition of most men for thrills would have been abundantly satisfied with the first bite.

But this was intended to call attention to another style of fishing, for small deer, as compared with these monsters.

At the Baltimore tournament this spring the only sample of bait-casting shown was the upward swing, so well described by Dr. Henshall, but the manager of the contests insisted that the overhead cast was much more simple and effective; that it had been adopted by the Chicago anglers, and that a single boat afforded room for three men to fish, in this way, without serious interference. It is well known that with the old style side-swing most men need the whole of a boat and then are cramped for room.

The only bait fisherman from Washington present was Mr. Hunter, and he resolved if there was a better way he wanted it, and he started at once to attain the accomplishment; and he has it.

It is very easy to do; it is not easy to learn to do.

To see a man, without apparent effort, a simple twist of the wrist, shoot out a ½oz. frog, not a plummet, but 3in. of rubber, over 100ft., is as pretty an exhibition as a 1,000ft. golf drive, or a home run hit to center field, and about as hard to learn.

It is first a question of tackle. The rod should be 6ft. 4in. to 6ft. 10in. in length, and weigh about 6½oz. A something lighter rod is more supple, and for the ½oz. weight only to be preferred as making the cast easier, but in actual practice the more attractive baits weigh more, and in striking the bass at 125ft. or more, as sometimes happens, the lighter rods have not sufficient backbone to do the work effectively or to inspire the angler with that supreme confidence in his tackle which is one of the pleasures too often neglected.

Mr. H. has in the four months bought five, and his pet toy is a 5½oz. bamboo, as dainty as a whalebone whip, but his every-day reliable is lancewood of about 7oz.

The reel should be a quadruple multiplier, nominally for 40yds.; this will hold something more of the thin H line used in casting. A champagne cork around the barrel brings the line within easy reach, and gives and takes more rapidly than without its use.

A 60 or 80yd. reel it is nearly impossible to cast with, since it is so high, the thumb is too nearly upright to control the line, and when in addition to this the thumb is held backward and downward, as the rod is behind one for the cast, it is apt to beget a cramp that impairs its usefulness. If less line is put on the larger reel to leave the line low, the pillars are in the way. Too long a barrel requires so much care to lay the line even in taking in, and everything depends on this, both for a steady flight and to prevent backlashing, with all its disastrous results. A line may easily be sawed in two with an unlucky snarl at the beginning of a cast. An inch to an inch and a half in length is easiest to manage, and the momentum of a light reel infinitely easier to control than a larger one.

In the matter of line there are many to choose from, but few that are fit. Some are excellent for lawn practice that swell so much on being wetted as to be scarce recognizable; others of so short fibered or poor a silk as to be flossy and develop frayed places that soon leave them useless. A tightly braided raw silk is the most satisfactory for the dry work on the lawn, and a parafined, which may now be bought already prepared, the best for the stream.

With the tackle ready, select a 100ft. mark on the meadow; there is no use to fool with shorter goals. With your practice frog, without hooks, drawn up within an inch or two of the end of the rod, address your frog, as you would say at golf, holding it directly in front with the tip of the rod enough above a level to bring the frog in line with the point aimed at. With a smart swing bring the rod straight back over the shoulder to about the same angle, then forward again sharply till it reaches the perpendicular, then release the frog or reel, and as the frog starts on its journey at an angle of about 30 degrees, lower the tip of the rod, that the line may pay out straight from the reel; then manage your thumbing judiciously and your feat of a 100ft. cast is accomplished. Probably not the first time, and one should not be discouraged if it did not go quite so far the second. It is indeed astonishing to beginners how many first casts land within 10ft. of the caster.

Our friend Mr. H. had a couple of joints of an old rod in his bedroom and discarded his Indian clubs and took to imaginary casts for his morning exercise, and contends that as a muscle breeder there's nothing like it. One morning a particularly enthusiastic effort that would have reached the 200ft. buoy if everything had been in harmony with the force exerted, sent the second joint flying across the room, and it imbedded itself in the wall even as Saul's javelin. When the element of danger is introduced even pantomine becomes exciting.

On his return from office the back alley afforded room enough for practice, and he was not at all disconcerted at random excursions the errant frog was prone to make in the earlier days into the neighbors' back yards, or over sundry wires that still proclaim the lingering provincialism of the Capital City. Before the season opened, his holidays, and some that are not on the calendar, were spent at the Anglers' club house, where he has worn a 100ft. track in the meadow, hard enough for a cycle path, as he walked back and forth reeling in, for he is careful enough to walk after his frog instead of dragging it home. It not only saves tackle, but lays on the line better, and that is the most important preparation for the next cast. All this sounds like hard work, but he has the satisfaction of a success that has inspired a dozen imitators. His cast is a graceful picture that a photograph cannot show, for it lacks that essential motion.

Above Great Falls, just before the Potomac went

THE RELEASE.

muddy, he took forty-nine bass, and is naturally delighted with that reward for his efforts. He used for casting the Mad Tom, a little dwarf catfish of about 100z. weight. These were caught in Cabin John's Run, but are found in nearly all the small runs up the river.

He hooked them through the lips and liked them better the longer they are used. He took seven with one bait, and insists that after they have been skinned by numerous strikes they get nearly white, and are then irresistible. But with the single hook through the lip, and rather a large bait, the bass must be given time to turn and gorge the minnow, else one loses too many strikes.

The English in using dead bait make use of a gang of two or three triangles that resembles an infernal machine. A spinning flight is now on trial that avoids these; it ought to do the work.

In this the lip hook is lashed to the snell of the tail hook, and back of these, two small hooks for holding the minnow are fixed, the upper one reversed to curve the bait for spinning. With this as with the gangs of ten or twelve hooks, the bass is taken on the snap and the fisherman strikes as soon as the fish.

There are many ways of preserving the minnows to avoid the bucket, that bugbear of bait fishermen. One of the best is formalin. This is one of the standard preservatives used at the Fish Commission for specimens. The ordinary commercial 40 per cent. solution is carried, and when needed, diluted with nine times its volume of water, giving a 4 per cent. solution.

Experimenting with roach, one of the best of bass baits, seems to demonstrate that while a 4 per cent. solution may be necessary for indefinite preservation, it is too strong for the best results for bait. A 2 per cent. solution leaves them brighter and the fluid cleaner. The ordinary mixture of alcohol, glycerin and water is nearly as good. When fishing the bait should be taken from the jar and carried in dry bran; for weight of tackle and convenience the fly-fisherman has no longer much the advantage of the bait-caster.

For ground covered, the bait excels, for it goes twice as far as the fly. The wind when head on is less embarrassing to the bait-caster, whose heavy missile flies in spite of it, though, of course, not so well. And here a caution: When casting with the wind, with the minnow nearly at the end of the cast, the thumb may be taken off the reel and the wind will carry out the minnow about as fast as the line pays off the reel, but in casting against the wind, at the end of the cast, the reel must be sharply checked, because the wind holds up the minnow and the reel is nearly sure to overrun.

For accuracy, to complete the comparison, the overhead cast leaves too little advantage to the fly to boast; with the side swing, distance was as easy, but there was a constant tendency for the minnow to go sailing off at a tangent; with this other system one is sure of a line shot even if it is short.

Mr. Hunter reaches nearly 130ft. already, and easily averages above a hundred.

It is the prettiest of all ways of taking fish—except with the fly.

HENRY TALBOTT.

CHICAGO AND THE WEST.

Movements of Western Anglers.

CHICAGO, Ill., July 29.—The past week has been one of great warmth, but for some reason or other the fish seem to have become more active than for the two weeks last preceding. A great many parties have been out on our Western waters and all reports go to confirm the earlier belief that this has been a phenomenal fishing year, at least so far as numbers of fishing parties are concerned.

Of the Wisconsin waters I have had good reports this year from Plum and Star lakes, and also from the waters near Minocqua. The largest fish of which I have heard anywhere in the West this season is reported from Plum Lake, a muscallunge taken last week by the fourteen-year-old daughter of Judge William C. Hook, of Leavenworth, Kansas. This fish weighed 43lbs., and the head has been sent to Chicago for mounting. The largest fish of last year, 42½lbs., came from Kabekona Camp in Minnesota, and I have heard no weights approaching these for several years. The young angler may feel very proud of her accomplishment.

Mr. J. W. Embrell, of Chicago, left this week for Plum Lake, perhaps encouraged by the story of recent success there.

Messrs. S. B. Bush and H. H. Hughes, of Louisville, Ky., have been fishing near Minocqua, Wis., for the past week. They are credited with having taken sixty-two muscallunge within two days, the largest weighing 31lbs. I have no verification of this report, but the record is a very good one if authentic.

Messrs. W. P. Martin, R. P. Smith, E. R. West, Dr. Wightman, F. E. Burley, C. B. Woodward, all of Chicago, as well as George L. Hassett, of St. Louis; R. R. Hootan, of Danville, Ill.; William Gehrke, William Davenport, J.

THE BACK CAST.

ADDRESSING THE FROG.

Rhode and P. E. Statler, all of Wausau, Wis., were among anglers who within the past week went in at Minocqua, Wis., after muscallunge.

Among other parties who are this week at Kabekona Camp, Minn., are Mr. E. M. Clendening, wife and son, of Kansas City, Mo.; Mr. and Mrs. A. H. Reeder and N. G. Craighead, of Dayton, O.; Mr. and Mrs. J. E. Callahan, of Chicago; Messrs. C. F. Farnsworth, Metcalf and Dr. R. B. Meury and son, of Memphis, Tenn. All of these parties are now at Woman Lake, and reports come that they are having very fine sport, though I have not the weights of any of their fish at present.

Messrs. Charles Comley, George Neafus and William Long, all of this city, spent a couple of days last week on Silver Lake, near Grand Haven, Mich. They caught eighty-three bass, the largest 4½lbs. These were big-mouths, and are reported as very gamy.

Messrs. Comley, Neafus and Long, with their friend, Mr. William Thompson, also of this city, start next week on a yachting and fishing trip to Green Bay, expecting to be gone a month or more. They will have a royal time and will no doubt meet good fishing at different points.

Reports from Weber's place on Cedar Lake, Ind., on the Monon road, state that the bass fishing has been good this week, two very good catches having been made. The bait was live frog. This water is fished considerably, and the above results lead one to think that the fish have been generally coming to their feed lately.

The Cheneaux Islands, of Lake Michigan, have been known for many years as a fishing ground once famous. Of late years this locality has been chiefly given over to summer resorters, and there is more fishing than fish. Yet I hear of a 16lb. muscallunge taken there within the last week, as well as one of 8½lbs.

From Fox River points I do not hear very good reports this week, except that, a few miles below Aurora, a very handsome string of bass was taken on the fly one evening by two gentlemen whose names I cannot learn. I should be very much disposed to believe that the bass ought to take the fly now on the riffs below Clintonville, on the Fox River. This is wading water, and the best time is toward evening.

In regard to the fly-fishing for small-mouth bass on the Mississippi River, near La Crosse, of which I have spoken once or twice earlier this summer, I should say that reports of this week appear to indicate that the small-mouths are going on the feed. Mr. Tom Watson, of Franklin, MacVeagh & Co., of this city, had a report from a friend near La Crosse, who took sixty small-mouths one day last week. This was somewhere above La Crosse. The report stated that the water was just right and the bass were taking the fly in great shape. The way to fish this country is to start in at Winona, Onalaska, or somewhere a day or two above La Crosse, and boat down stream, casting close up against the cut banks.

In regard to this very region near La Crosse, I find mention as below in a letter from Mr. L. Blair, of Des Moines, Ia., who writes me this week:

"I notice in FOREST AND STREAM for July 22 an item about bass fishing in August with fly along the Mississippi. As a youngster, when we didn't use artificial flies I have caught bass in August by using the ephemera for bait, when fish wouldn't take the minnow at all. The best place for fly-fishing was below a mill dam, in still water, at the head of Rock Island, right in front of Moline. The ephemera were thick in the air then, and we boys used to tie them on our hooks, throw our lines out without sinkers, when as soon as the bait touched the water, flip would come a striped bass, then there was fun. Such a fish at the hook end of a line gives a lively tussle. You couldn't fish there now, for the Government long since took charge of the island, and would not allow any fishing on it.

"I'll never forget the happy times in bass fishing during spring and fall above Davenport; along the rocky points was the best, where the fish were going north in spring and returning to cool weather, fat and juicy. I should think that still water below some projecting point along the Mississippi would give fine summer sport where the bass won't take the minnow well."

Minneapolis for Bass and Trout.

Early mention has been made in these columns from time to time of the Long Meadow Gun Club, whose grounds are near the edge of the city of Minneapolis. Near these club grounds there is a deep creek, which has for some time been supposed to have small-mouth bass in it. Last week Mr. Harry Pratt and some friends decided to fish this creek and see what they could find. They used frogs and had a most exciting afternoon, taking a number of the gamiest small-mouths they ever tackled, and much to their surprise taking also a 4lb. brook trout. This trout is supposed to have escaped from the Davis trout hatchery on the Minnesota River, which hatchery was abandoned some time ago. The members of the Long Meadow Club must have opened their eyes to find that they had such sport so close at hand. This club, although within a short buggy ride from Minneapolis, affords very good duck and snipe shooting during the season, and now that it seems to offer also both trout and bass fishing, I should think that the members might very well mark up their shares.

The Largest Western Small-mouth Bass.

The largest small-mouth bass which I have heard of being taken in Western waters is one of which I was told this week by Mr. Robert Lamp, of Madison, Wis. This fish was taken last October by Ike Palmer, of Madison, on hook and line. It was cold weather—indeed, there was a snowstorm in progress at the time. The fish weighed 8lbs. 10oz., the weight being verified on three different scales. It was purchased by Mr. Lamp and two friends, who proposed to eat it, but it was rescued from this fate by a third gentleman, who had it mounted. I have often seen some of these large and coarse-looking small-mouth bass from the lakes near Madison, but I never saw one that weighed over 6lbs. The largest small-mouth bass which has heretofore come under my observation in the West was one of 7lbs. 2oz., taken on the St. Clair Flats. Even the big Madison record bass must take in its fins before the small-mouth mentioned by Mr. Cheney, a fish which weighed 10lbs., but of which Mr. Cheney does not give us many particulars in his account.

Notes from the Au Sable.

Judge J. M. Kenyon, of Toledo, O., is so good as to give me some detailed information regarding the Au Sable River of Michigan, which I think may also be of interest to readers of the FOREST AND STREAM. I have never fished the Au Sable, although I want very much to do so some day. From all I can learn from several friends who are experienced anglers, this is probably the most remarkable trout stream that we now have in the Middle West, and I take it that it holds something the same position once occupied by the Brule River in its palmy days. Judge Kenyon writes me thus regarding it:

"I have been reading your article in the June 3 FOREST AND STREAM, and note what you say about the Au Sable. I fished the Au Sable this season from May 1 to 13, and from June 24 to July 14, inclusive. The first trip I fished every day, but on the latter trip only part of the time. The May fishing was fine—it was no trouble to catch sixty to ninety fish a day, running from 7 to 11in., with occasionally a larger one—but on July 3 and 4 and again on July 7 and 8 we had heavy rains, which raised the water 7 or 8in.—an unusual rise for that river—and after that the fishing was very dull.

"The Au Sable has been fished very hard for two or three years and a great number of fish taken out, but it is a wonderful stream for the natural production of trout, as its bottom is gravel and in a great many places just the depth the fish like for spawning, and a right current for the eggs to develop in; also, it is not subject to high floods or great discoloration, as it drains a barren sand plain. If the limit could be raised to 8in. (it is now 6) I think it would be almost impossible to deplete it by legal fishing.

"A goodly portion of the fishermen take nothing under 7 or 8in., but a great many who like to boast of their catch kill everything 6in. or over, and I am sorry to say a party from Chicago that was there in May are of the latter class. A. C. King and Doctors Brown and Sanford were there at that time, but they are not the party I refer to. The stream can be waded anywhere from Grayling to twenty or twenty-five miles below with waders, but in some places the current is so strong it is pretty hard work. Wading up stream is not practicable for any distance anywhere, so the fish must be killed or taken up by boat (in live well) if the fisherman works down stream any great distance.

"About eight miles by team—fourteen by river—below Grayling are the Babbit and Stephens camps. Rube Babbit's camp, called Camp Toledo, is a log house 18 by 26, with board floor, good roof, good beds and located up the hill about fifteen rods from the river. Henry Stephens' camp is similar, located forty to sixty rods below Camp Toledo, on same side. John Stephens has two similar camps—one called Camp Basker, the other Camp Gilkim, nearly opposite Henry's—on the south side. All the camps have fine springs near by.

"I should have said that Rube has two camps—one that he uses half of for dining room, the other half for beds. At the Stephens the meals are furnished in their houses near by. The table fare is 'good enough' at all of them.

"My daughter and I were there twenty days last trip and enjoyed it hugely. The mosquitoes are bad, but no worse—and I think not so bad—than on other trout streams.

"The quantity of young brook trout fry to be seen there in May was simply marvelous—they simply swarmed in every favorable spot—but in July they had mostly disappeared from the main stream and were in the little spring brooks. In July there were a good many small fry that I think are rainbows, as they spawn and hatch later than the brook. I know of only one grayling being taken while I was there—that in May."

Wisconsin Bass.

Fox Lake, Wis., continues to keep up its creditable record for big bass. Last week Dick Hoover and Al Ries took two bass, the former having one weighing 6lbs., the latter one weighing 5lbs. 7oz. A day later Mr. Ries captured two pickerel, weighing 8¼ and 11lbs.

Fly-Casting Record.

Mr. Itha H. Bellows, of the Chicago Fly-Casting Club, showed his fitness for the presidency of that body of able anglers a week ago Saturday by smashing all previous club records on long distance fly-casting. Mr. Bellows got a mark of 127ft., within 4ft. of the best record of Mr. Mansfield, of San Francisco. We have young men out here who are capable of doing strong arm work in more ways than one. Personally Mr. Bellows is a good specimen of the human being, above middle height and powerfully built, as pleasant as he is clever, and there are many of his friends here who would not object to his breaking all the records whether for indoor or out-of-door casting. Mr. Bellows is crowding Mr. Mansfield closer than anyone else has ever done.

The Indiana Bass Law.

In a recent issue of FOREST AND STREAM, Mr. G. W. Cunningham, of Portland, Ind., quotes from "Chicago and the West" of an earlier issue to this effect: "Mr. George Murrell and his friend, of this city, have gone to Bass Lake, Ind., again after big-mouths." Mr. Cunningham refers to this as an instance of Chicago selfishness and Chicago lawbreaking. I would like to state in regard to this that the question of the Indiana bass law received very careful attention from many of our anglers this spring, and I think that Mr. Murrell was also among those who looked up the law on account of the changes made last by the Indiana Legislature. Mr. Murrell is Secretary of the Chicago Fly-Casting Club, and I think I may safely say that he would not intentionally break any game or fish law whatever. The section of the new Indiana law, as stated in the Game Laws in Brief, is this:

"Season.—Sec. 4. It shall not be lawful to take any fish in any way nor by any device whatever in the months of May and June in any of the streams of this State; or except with a hook and line in any of the waters of this State except Lake Michigan and the Ohio River, and except also in private ponds between the first day of January and the first day of April and between the first day of May and the first day of July of any year."

The above, in regard to season of taking black bass in Indiana, is certainly blind enough, but the construction put upon the section by the State Fish Commissioner and State's Attorney has been to the effect that bass fishing in the lakes of the State is not prohibited in May and June, although it is illegal to fish in the streams.

Pacific Salmon Fly and Spoon.

To-day I was talking with my friend Mr. F. H. Lord, general passenger agent of the Chicago Great Western Railroad, this city. Mr. Lord remarked to me that he would like to go out to Puget Sound and have a try for the salmon. "I was too late last year for the fishing," said he, "but they tell me it is very fine. My friends told me when I was out there that while the salmon were running they could not be induced to take any fly whatever, but if one found a pool in the stream where the fish were lying and resting they would take the fly there as well as any fish in any water." Of course everybody knows that the Coast salmon will take the spoon, but how about the statements of Mr. Lord's friends? E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Adirondack Pike and Bass.

CHILSON LAKE, Essex County, N. Y.—*Editor Forest and Stream:* A few New York and Albany lovers of the rod are trolling for bass and pike in this lovely sheet of water. Messrs. David Lewis, of Albany, and the writer visited a little pond in the vicinity last week and caught many bass. Each had luck, Mr. Lewis capturing a 5lb. black bass on a light rod. A thick-necked Spring Lake pike fell to the lot of the writer. He weighed 9lbs.

PETER FLINT.

Fish-Fin and Other Poisons.

JOHNSTOWN, Pa., July 28.—*Editor Forest and Stream:* Reading "Fish-Fin Poisoning," by Wau-Kau-Mah in the July *Woodcraft Magazine*, recalls to me that the recipes for poisoning by fish-fin, insect bites, etc., are so many and so varied, and the claims made by those who advise them so favorable, all getting equally good results, that one must conclude that none are specially valuable.

There is a simple, scientific antidote for all these poisons, namely, radiated heat.

The early application of radiated heat has been a long time known as an effective antidote to bites of snakes, insects and to punctured wounds, as from fish fins and sharp inanimate bodies.

I cannot recall reading this fact anywhere, yet I think that it is well known, and like Wau-Kau-Mah, I mention it for the benefit of the readers of FOREST AND STREAM. Even those who are "chained to business" may use it, as it is good for spider bites.

Dr. Constance Hering, a noted scientist, who died in Philadelphia in 1880, aged eighty-one years, was the first person I know of who had used radiated heat to antidote the poison of a snake bite. This he did in his own person, and successfully antidoted the virus of one of the most poisonous snakes of South America, the *Lachesis trigonecephalus*. It seems strange that although the fact that radiated heat is so generally known to be an antidote to all kinds of virus, it is so seldom used as such.

Those who hunt and fish usually have the means at hand to apply it. I have used a lighted cigar, a bunch of waste, a pine torch, the flame of a gasoline lamp, but best of all the glowing embers of the camp-fire.

When the fin of a fish punctures the finger or the hand a sharp pain usually ensues, and may extend from the wound up the arm to the shoulder. This pain is often excruciating and sickening. Hold the wound close to a red-hot ember or anything giving off an equal amount of heat, and you will note that in a minute or two all the pain is gone and that it is seldom necessary to repeat the application of heat. Healing takes place without further attention.

When the face or other parts of the body are tingling and burning and itching from mosquito bites so that it is impossible to go to sleep, give the parts a dose of radiated heat and you will go to sleep without further annoyance from the old bites.

Heat destroys all forms of germ life at 170° F.

Extreme cold, even that of liquid air, 312° F. below zero, does not destroy germs. Remember that germ life is not animal life.

That heat destroys virus is well known to marketers of vaccine virus, for on every package is a warning not to dry the vaccination with artificial heat.

In case of a bite of a venomous animal or insect I would trust radiated heat rather than the actual cautery. The reason is obvious. Grave nervous symptoms or other signs showing systemic affection in persons who have been bitten by an insect, reptile or dog may be due to poison absorbed, or constant irritation at the seat of injury carried to the central nervous system.

Even in these remote effects we have a simple cure in the Buisson bath treatment for hydrophobia, which may be carried out even in camp, it being only a matter of excessively sweating the patient by the use of hot air, or better, by a vapor bath.

Buisson says, vaccinate an infant and give it a vapor bath directly afterward and the vaccination will not take.

Hoping that those who go camping and forget their dope or who are unlucky and get bitten or finned will remember this simple remedy, I am ready for my roasting which I suppose will be forthcoming.

HORACE E. KISTLER.

A Primitive Fishing Ground.

To the fisherman who is fond of making original observations this quaint little old town of Noank, Conn., offers many attractions. Certain affairs this year made it necessary for me to give up my annual salmon fishing and to find a quiet fishing ground within a few hours' ride of New York. The merits of various nearby places were considered, and suddenly it occurred to me that twenty years ago I had spent a summer at Noank with the United States Fish Commission, and that the reason why the commission came here was because it was such a good place for fish. That settled it, and promptly upon the thought I seized my rods under one arm and wife and baby under the other, and marched off to Noank.

The town depends wholly upon fishing and ship building for its resources, and yet there is not a fishing tackle store in the place where the sportsman or contemplative fisherman can get the sort of outfit that he needs. It is all commercial fishing on a large scale, and the idea that anybody would fish for the fun of the thing is as ludicrous to the native as the idea of digging potatoes for fun. The storekeepers look surprised at anyone asking for rods and reels, and fancy things like that. In fact, it is not easy to find the storekeeper anyway. If he has gone to dinner, if there is a show in town, if the children are ill, the shop is closed. You can find the proprietor often by going after him, and that is a custom that is accepted by the villagers as quite proper. If you ask where to fish for weakfish with a rod no one can tell, although the traps catch them by the ton and weakfish are splashing under every dock in town after dark. Ask where the striped bass, sea bass, porgies, flounders and plaice are to be caught, and no one seems able to tell you that the channel right at your feet is full of them. The fisherman with a rod and reel outfit can have something biting at his hook all day long. The matter of bait is a serious question. I have to get all of my own bait. No one knew where to find blood worms and shrimp and little eels, and the common baits that are in demand. This does not imply any unwillingness on the part of the natives, for they are more than ready to be of service. They can tell one where to go for blackfish and bluefish and mackerel, for these are commercial fish.

There is only one hotel in the town, a quiet home of a place, where the idea of a barroom or of the bustling commercial traveler is as foreign as the knowledge about rod fishing. I am not missing my salmon fishing a bit, and the salmon will all be larger for next year, anyway; but I do feel lonesome here in the midst of fishing, with no cranks to "talk it o'er with" on the porch evenings. I can find fish everywhere all day long; but the field is a big one and it needs a number of good fishermen for working out the possibilities of these reefs and channels and flats. I shall be here for a month and shall have fun every day, and if anyone wants points it will please me to give him whatever I have worked out for myself to date. I have fished along a good part of the coast from Delaware to Labrador, and with the exception of Hereford Inlet, in New Jersey, this is the surest place for sport with a variety of game sea fish that I have found. R. T. M.

NOANK, Conn., July 22.

Salt Water League.

NEW YORK, July 31.—*Editor Forest and Stream:* The Protective League of Salt Water Fishermen wants to hear from all salt water fishing clubs.

There are innumerable fishing clubs in Manhattan, Brooklyn, Richmond and other boroughs in Greater New York. New Jersey can point to hundreds of these clubs, and many are located along the Hudson River, while some parts of the Sound are dotted with such organizations. What have these clubs done for the good of the Protective League of Salt Water Fishermen? With but few exceptions the clubs have done absolutely nothing. They have not even extended to the League the assurance of their friendly feeling or good will.

What will they do in the future? What are they expected to do? These questions the League must leave to their own good judgment. But it does hope they will take some action soon, both as clubs and as individual members, toward contributing their mite to the fund to be used solely for securing proper legislation in the future for the protection of salt water fish and enforcing the present existing laws against illegal practices by prosecuting its violators. To prosecute offenders, money is required. The money must come from salt water fishermen through the small annual dues of one dollar, and by subscriptions from the fishing clubs for as much as they can afford, and many of these clubs can afford to contribute as much as five or ten dollars, and even more.

The benefits which they, collectively and individually, will ultimately derive from the great good the League proposes to do for them, will be immeasurable. At the next regular meetings of the League, which are held every third Monday evening of the month at Wall's Hotel, 106 West Thirty-first street, New York, it is hoped that every club will see fit to send one or more delegates, and report to our secretary, and in this way, even by their presence, encourage the earnest workers for the cause. In the meantime, the officers of the League would esteem it a favor if the readers of FOREST AND STREAM would forward to us the titles and location of all the fishing clubs known to them. If this information be supplemented with a copy of the constitution, by-laws and names of officers and members of clubs, our obligations to the sender will be increased.

The Board of Directors and officers meet at Wall's Hotel, 106 West Thirty-first street, on Friday, Aug. 4, at 8 P. M.

Clubs should send for petitions, which, when filled, will be presented to the Legislature this coming season. Be sure to send for some. T. BIEDINGER, Pres.

New England Fishing.

BOSTON, July 29.—The salt-water fishermen who fish for sport are having their inning, with some good catches. Smelt fishing is reported fair at several points along the south shore. In the vicinity of Cohasset and Falmouth many dozens are being taken by the summer boarders. Cod fishing is popular with those who follow it for the fun of the thing. Mr. Mathew Luce has lately made several good catches, while nearly every good day several fishing crafts go off the Nahant rocks with merchants and business men as fishermen. Cod fishing seems to be as much enjoyed by them as does the sport on the Maine trout waters by those so fortunate as to be able to get away. Mr. W. F. Johnson, Jr., is just back from his vacation, which he spent near Quaddy Bay. He went cod fishing many days, and says the pulling up of the big ones is great sport. Smelt fishing continues to improve. The boys are getting a good many dozens off the "Punkins" and at other points near Falmouth. Mr. L. A. Aspinwall is very fond of salt-water fishing at different points along the Providence River, and generally spends his vacations that way. He returned last week from his summer fishing trip, Squeteague were the object this time. With his brother's help he made a catch of twenty-four in one day. Four pounds covered the largest taken. Mr. Aspinwall took seventeen to his brother's seven. SPECIAL.

Pacific Coast Samon Caught with Flies.

I NOTICED an article in the Fishing Gazette of last week on Pacific Coast salmon fishing. It may interest you to know that while staying with a friend in Douglas county, Oregon, in October, 1890, I fished with large-eyed sea trout flies in the South Umpqua River, which ran through his ranch, and on several occasions landed salmon up to 18lbs. The fish were coming up to spawn, and although somewhat red and quite unfit for the table, gave a fair amount of sport. The local anglers fished entirely with salmon roe for the small salmon trout, which were also in the river, and were much surprised at my success with the fly, which they did not seem to be acquainted with. I have a copy of a local journal which has an article on the killing of a salmon by me, and as it is somewhat of a curiosity I regret that I cannot at present (being away from home) let you see it. The fly which I found most attractive was a roughly dressed fiery brown body with a grouse wing, and yellow taft as a tail.—Correspondence London Fishing Gazette.

Long Island Fishing.

EAST ROCKAWAY, L. I., July 31.—The largest catch of fish ever made by one party was made by a party in Jack Simonson's yacht on Saturday. The catch was estimated to weigh over 1,000lbs. There were 467 fish, mostly large porgies, sea bass and a few fluke, blackfish, etc. The fishermen were Narrie J. Stokum, Charles Nulse, Jr., Mr. MacGowan and Samuel Rhame. Three hooks were used on a line, and in several instances three fish were hauled in at once.

QUEENSWATER, L. I., July 31.—Fishing was perhaps never better than it has been during the past few days. The party on board the auxiliary yacht Inner Beach, Captain Henry Wright, caught over 450 fish on Friday. They were mostly porgies and sea bass. It was the largest catch of the season. The party fished until they were completely exhausted. Bluefish are still scarce, and there are very few blackfish or kingfish.

NEW POINT AMITYVILLE, L. I., July 31.—The last few days have been as near perfect as possible. The air has been moderately cool, with a full-sail breeze nearly all the time. Fishing has not been good, owing, it is supposed, to the low temperature of the water. Very few large bluefish have been caught. The smaller bay fish are caught, but only in small quantities.

A Large Nepigon Trout.

PORT ARTHUR, Canada, July 22.—You will be pleased to learn that the largest speckled trout on record (here) was caught in the Nepigon River on June 20 by a Mrs. Tayleur, of Drayton, England. It weighed 9lbs., and was 27in. in length by 15½in. in girth. The fish was weighed and the skin dressed and sent to England as a remarkable specimen of its kind.

Mr. August Belmont, of New York, and party were fishing the Nepigon last week. They had good sport. The largest trout caught weighed 4½lbs. They left on Wednesday in their private car via the C. P. R. for the Pacific Coast. JOHN E. NEWSOME.

Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Bench Show Responsibilities.

THE following report of a cat show case is interesting because the principles apply also to dog show managements. The report is from the New York Times of July 27:

The recovery of $50 by Miss Lillian C. Moeran, in Municipal Court, First District, before Justice Wauhope Lynn, in her suit against the New York Poultry, Pigeon and Pet Stock Association, Limited, as the value of a Manx cat which she delivered to the defendant for exhibition at its show at Madison Square Garden, was yesterday affirmed by the Appellate Term of the Supreme Court. The prevailing opinion, by Presiding Justice Freedman, was concurred in by Justice Leventritt, and Justice MacLean wrote a concurring opinion.

The rules of the Association provided that the entry of animals was to be made at the owners' risk, and that all specimens would be cared for and returned at the close of the exhibition; that the Association would exercise all reasonable vigilance in the care of the exhibits, but would not be responsible for loss by fire or otherwise.

The Presiding Justice holds that the true construction of the contract was that, though the cat was received at the owner's risk, the defendant remained bound to exercise ordinary care to prevent escape. The facts are held to have fully established that the defendant did not exercise the ordinary care requisite for that purpose, but was negligent, and that the escape of the cat was due to such negligence.

In his opinion Justice MacLean said: "Herein is an instance of bailment, or, to borrow learned language from Massachusetts (10 Gray, 366), '*locatum*' of a Manx feline, described as a male specimen, longer as to its two hind legs than as to its fore, prize-winning from agricultural societies, of great value, and without a tail. Zenda, for so the Manx was hight, was brought to the show of pigeons, of poultry and of pets of the defendant, and placed in a coop thereof, by mistress and maid, assisted by an offering man of fair complexion, and dressed in

blue checked overalls, with a colored blouse, in which livery many were about, who opened the coop door, and showed both how to open and close it.

"A little later the powerful and peculiar exhibit had moved the iron cage, unforesightedly not fastened at the bottom, along and partly beyond the platform whereon it stood, making an aperture sufficient for its escape. Then he was off. There was a quick but bootless pursuit by the attendants in pack, with many others, with hue and cry. Though often spied in the secrecies between the roof rafters and sub-cellar of the vast garden, Zenda was never recovered.

"Whether his manucapture was impracticable, because he was strenuously moved to solitude by jealousy or any other of the impulses delicately suggested by Allen, J., in his lettered and sympathetic opinion (22 Barb., 506) anent the contentions of and over the dogs of Oneida county, or because *feræ naturæ*, as was held (47 Hun., 366) to be bivalve, though destitute of locomotivity, in an oyster bed litigation, in an adjoining judicial department, is not stated. The defendant contends that it was relieved from liability for such loss because the animal was received at 'owner's risk.'

"But that proviso in the entrance blank, read with the regulations, also prepared and furnished by the Association, caused the owner to assume only the risk arising from ordinary dangers not to be prevented by reasonable and ordinary care on the part of the show company. It left the latter liable for occurrences which might be avoided, with ordinary care and prudence.

"It still left to the exhibitor a right to anticipate that the coops provided, and in which, within the regulations, exhibits could only be shown, would be suitable for their purpose and such as were likely to enable the defendant to carry out its undertaking. Besides, the constructive caption of the cat at the outset was *lucrandi anumo*, so far as the corporation had a mind.

"It was delivered on the invitation of the defendant, which charged and received a payment for the entry and for the coop. 'Then it was,' to take again from Massachusetts, without plagiary, '*locatum* and not *depositum*,' and the defendant was liable for want of ordinary care. The learned Justice of the Municipal Court, before whom the parties appeared and introduced their evidence, found for the plaintiff, and cast the defendant in damages of $50. He was right."

Kennel Transactions.

Because of his failure to straighten out a certain dog-selling transaction we have discontinued from our Kennel Special columns the advertisement of C. L. B. Landis, of Bowers Station, Pa.

Petrolea Bench Show.

Petrolea, Ont., July 19.—Please be good enough to mention that the Petrolea Kennel Club will hold a bench show of dogs on Sept. 12 and 13 at Petrolea, Canada. C. K. C. rules will govern. F. W. Reynolds, Sec'y.

Points and Flushes.

Spratts Patent will move into new and larger quarters in the near future. It has purchased land near the depots of the great railroads entering Newark, N. J., and is building a factory thereon, which, with its increased number of ovens, will enable the firm to double its present output. The old factory has become too small for the requirements of the firm.

Yachting.

Fixtures.

AUGUST.

9-10-11. Corinthian, Marblehead, midsummer series, Marblehead, Massachusetts Bay.
12. Corinthian, Marblehead,, open, Marblehead, Massachusetts Bay.
12. Horseshoe Harbor, annual, open, Larchmont, L. I. Sound.
12. American, cruise to Squam, Newburyport.
12. Quincy, club, Quincy, Boston Harbor.

Indian Harbor Y. C.

GREENWICH—LONG ISLAND SOUND.

Saturday, July 29.

The eleventh annual regatta of the Indian Harbor Y. C. was sailed to-day. There were seventeen classes and fifty-one starters. The wind blew fresh from the S.E. Marguerite, in the 25ft. open catboat class, was disqualified for fouling the stakeboat, and Edwina II., 18ft. open sloop, lost her rudder. Tigress lost her topmast, but won her race, and Ondawa had her upper stick carried out. The times were:

Schooners—52 to 80ft.—Cruising Trim—Start, 1:05—30 Miles.

	Length.	Finish.	Elapsed.
Katrina, R. E. Tod	73.14	5 10 55	4 05 55
Nirvana, G. G. Tyson	71.19	5 31 15	4 26 15
Wayward, C. Smithers	63.82	5 24 04	4 19 04

Sloops—52ft. Class—Racing Trim—Start, 1:10—22 Miles.

Acushla II., H. W. & A. Hanan	50.15	4 44 49	3 34 49

52ft. Class—Cruising Trim—Start, 1:10—22 Miles.

Ondawa, H. J. Robert	47.83	5 28 26	4 18 26
Penguin, G. E. Brightson	48.94	4 58 17	3 48 17

43ft. Class—Racing Trim—Start, 1:15—22Miles.

Fleetwing, Dr. Francis Valk	42.00	5 23 27	4 08 27
Tigress, C. A. Appleton	40.50	5 20 55	4 05 55

36ft. Class—Racing Trim—Start, 1:15—22 Miles.

Anoatok, O. Sanderson	33.95	5 04 12	3 49 12
Acushla I., C. T. Wills	34.00	5 05 09	3 50 09
O Shima San, H. I. Pratt	36.00	4 59 16	3 44 16
Daisy, R. M. Hyde, Jr	32.15	Not timed.	
Vorant II., L. Whittemore	33.80	5 20 09	5 04 09

Yawls—43ft. Class—Start, 1:15—14 Miles.

Albicore, S. J. Hyde	41.00	5 15 20	4 00 21
Sultan, C. S. Somerville	37.93	5 16 15	4 01 14
Possum, W. N. Bavier	33.00	5 38 33	4 23 33

Sultan won on corrected time, 3:56:17.

Cabin Sloops—30ft. Class—Start, 1:15—14 Miles.

Alerion, A. H. Alker	28.50	3 45 37	2 30 33
Lorelei, A. Peats	27.42	3 56 32	2 41 32

Open Sloops—25ft. Class—Start, 1:30—14 Miles.

Houri, F. J. Bergen	22.95	4 19 20	2 49 20
Celia, W. S. Gould	23.04	4 26 12	2 56 12

18ft. Class—Start, 1:30—9 Miles.

Edwina II., J. N. Gould	16.01	Disabled.	
Ripple, Dr. J. A. Meek	17.99	Did not finish.	
Nike, Guy Forbes	16.00	4 00 27	2 30 27

Cabin Cats—30ft. Class—Start, 1:35—14 Miles.

Windora, W. L. Ward	30.00	4 10 00	2 35 00
Dosoris II., A. H. Sleigh	29.75	4 24 30	2 49 30
Volsung, De Forest Bros	28.70	4 09 39	2 34 39
Mystic, Clarence Lockwood	27.10	4 30 15	2 55 15

Cabin Catboats—25ft. Class—Start, 1:35—15 Miles.

Qui Vive, George A. Freeth	24.87	4 24 10	2 29 10
Scat, G. Paulding 2d	22.73	4 35 25	3 00 25
Win or Lose, J. S. Appleby	23.50	4 33 35	2 58 35
Dandy, J. H. Temple	24.92	4 39 23	3 04 23

Open Catboats—25ft. Class—Start, 1:40—14 miles.

Jennie D., Dady & Harrington	23.92	Not timed.	
Elsie, W. F. Gillespie	23.52	4 56 54	3 16 54
Sirene, Richard Outwater	25.00	4 46 00	3 06 00
Marguerite, S. G. Poole		Disqualified.	

21ft. Class—Start, 1:40—9 Miles.

Spunk, C. E. Silkworth	19.00	4 01 54	2 21 54
Psyche, H. B. Stevens	21.00	4 25 37	2 45 37
Vera, A. M. Bradley	20.07	3 52 02	2 12 02
Ruth, Charles T. Wills		4 35 23	2 55 20
Gosbird, Russell H. Nevins		4 26 58	2 46 58

18ft. Class—Start, 1:40—9 Miles.

Kazaza, T. J. McCahill, Jr	18.00	3 49 25	2 09 25

15ft Class—Start, 1:40—9 Miles.

Louie Belle, J. M. Williams	14.00	4 35 17	2 55 17
The Kid, P. R. Bonner	15.00	Did not finish.	
Lobster, T. J. S. Flint	15.00	4 22 57	2 42 57

Racing Knockabouts—21ft. Class—Start, 1:25—14 Miles.

Mongoose, Simeon Ford	21.00	4 16 53	2 51 53
Robin Hood, G. E. Gartland	21.00	4 20 31	2 55 31
Kantaka, G. J. Bradish	21.00	4 28 55	3 03 25
Kittie, Hazen Morse	21.00	4 16 12	2 51 02
Spindrift, S. C. Pirie	21.00	4 09 59	2 44 59

Seawanhaka Knockabouts—Start, 1:25—14 Miles.

Dipper, A. Iselin	21.00	4 23 56	2 58 56
W. Yatjo, F. S. Hastings	21.00	4 21 59	2 56 59

The winners were Katrina, Acushla II., Penguin, Tigress, O Shima San, Sultan, Alerion, Houri, Nike, Volsung, Qui Vive, Sirene, Vera, Kazaza, Lobster and Spindrift.

30-Footers at Newport.

On July 23 a drifting match was sailed, in which Wawa won. The times were:

	Finish.	Elapsed.
Wawa, Reginald Brooks	6 21 44	2 48 44
Hera, Ralph N. Ellis	6 22 20	2 49 20
Esperanza, Harry O. Havemeyer	6 35 51	3 02 51
Vaquero III., Herman B. Duryea	Withdrew.	

On July 27 a sweepstake was sailed by the 30-footers in a good S.W. breeze, the times being:

	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 28 37	2 20 37
Esperanza, H. O. Havemeyer, Jr.	5 29 08	2 21 08
Polly Wog, A. H. Paget	5 31 39	2 23 39
Veda, C. Vanderbilt, Jr	5 32 06	6 24 06
Hera, R. N. Ellis	5 34 08	2 26 08
Wawa, R. Brooks	5 34 30	2 26 30
Carolina, P. Jones	5 36 44	2 28 44

On July 28 a special race was sailed for a cup offered by Mrs. Herman B. Duryea. The course was to Dyer's Island and back, eighteen miles, and a strong wind blew from the S.W. The times were:

	Finish.	Elapsed.
Polly Wog, A. H. Paget	5 44 29	2 39 29
Hera, R. N. Ellis	5 46 04	2 41 04
Carolina, P. Jones	5 46 30	2 41 30
Puck, E. D. Morgan	5 46 54	2 41 54
Wawa, R. Brooks	5 48 02	2 43 02
Asahi, L. Warren	5 48 14	2 43 14
Esperanza, H. O. Havemeyer	5 50 27	2 45 27

Genesee to Sail for Canada Cup.

The judges of the Chicago Y. C. have decided to select Genesee, owned by Charles Van Voorhis, of the Rochester Y. C. to represent the Chicago Y. C. as challenging party in the races for the Canada cup to be held at Toronto on Aug. 21. This decision was reached on July 27, when Prairie beat Briar, the other candidate for selection as challenger, in a race over the Chicago Y. C.'s eight-mile course. While the race was not a satisfactory trial of Briar, Mr. Geo. R. Peare, her owner, has decided to withdraw as a candidate, owing to the lack of condition of the boat.

The race on July 27 between Prairie and Briar was to decide whether Briar was fit to contest with Genesee for the honor of representing the United States in the coming races for the Canada cup. Prairie's clubtopsail was faulty, and Charles Thorne, her owner, requested Peare to sail with working topsails, but as Briar's working topsail was also unfit for use it was decided to sail the race under jib and mainsail only. Briar crossed the line forty-four seconds ahead of her rival, but at the half-way mark Prairie was over three minutes ahead. Prairie gained on the run down before the wind and crossed the finish line at 5:53:58. The times were:

	Start.	Finish.	Elapsed.
Prairie	3 29 52	5 53 58	2 24 06
Briar	3 29 08	6 17 50	2 48 52

The Canada Cup.

The first meeting of the three Toronto 35-footers, McLeod, Payne and Toronto, took place on July 22. The new Payne yacht, named after her designer, had just arrived from Oakville, where she was launched a short time before, and was thus at a disadvantage with the others, which had been under way for several weeks. The wind was light S.E., with a roll to the sea. Toronto was steered by J. Wilton Morse; Payne by Fred Turner, and McLeod by Æmilius Jarvis. The start was made at 3 P. M., McLeod being over the line and compelled to recross, with a handicap of 1m. 28s. Payne took the lead on the wind, but McLeod passed Toronto and would have caught Payne, but she mistook a mark of the Queen City for her own mark, and lost a little time over the error. At the next mark Payne overstood and went to third place, McLeod being first. The first round was timed:

McLeod	3 33 15	Payne	3 37 42
Toronto	3 34 10		

On the second round Payne did good work in the sea and light wind, but failed to catch Toronto. The final times were:

McLeod	5 19 25	Payne	5 36 00
Toronto	5 35 09		

Toronto carried away her large jib and had to set a smaller one, to her disadvantage.

On the same day the two Hamilton boats, Myrtle and Hamilton, met for the sixth time, Hamilton under her proper rig scoring her second win. The times were:

35ft. Class—Start, 2:35.

	Finish.	Elapsed.
Hamilton	5 10 17	2 35 17
Myrtle	5 14 45	2 39 45

The third Hamilton yacht, designed by Jas. Weir, was afloat, but not yet rigged.

Briar, the last of the Chicago yachts, was successfully launched on July 22.

Oconomowoc Y. C.

OCONOMOWOC—LAC LA BELLE.

On July 26 the race for the $500 cup offered by the Oconomowoc Y. C. was sailed. Argo, of the Oshkosh Y. C., won the cup for the second time, and will hold it for a year, when, if she wins again, she will become permanent holder. A. S.S.W. gale blew during the race, and four boats capsized, while two others were disabled. The four boats which capsized were: Aderyn, Zaza, Galatea and Saic. The times were:

Argo, Jas. H. Jones, Oshkosh Club	1 05 53
Ariel, F. W. Peck, Jr., Green Lake	1 11 40
Pistakee, N. Morris, Pistakee	1 14 29
Avis II., W. H. Thompson, Chicago	1 15 24

On the morning of July 28 the race for the John Dupee cup was sailed in a light south wind, and was won by Aderyn, of the Neenah Y. C. Kismet fouled Avis II. and was disqualified. Saic was towed ashore disabled. The times were:

Aderyn, W. L. Davis	2 27 53
Magic, W. H. Dupee	2 34 00
Galatea, D. H. Murphy	2 34 57
Argo, J. H. Jones	2 36 38
Pistakee, N. Morris	2 30 50
Zaza, P. D. Armour	2 37 16
Avis II., W. H. Thompson	2 38 27

In the afternoon the race for the Pabst challenge cup, limited to yachts of Waukesha county, was sailed. The wind was stronger than in the morning and the race livelier. The times were:

Magic, W. H. Dupee	1 30 00
Galatea, D. H. Murphy	1 35 04
Saic, D. W. Buchanan	1 36 03
Ariel, F. W. Peck, Jr	1 37 53
Rajah, Fred Richbrock	1 38 54
Kismet, P. R. Smith	1 40 17
Peerless, R. Nunnemacher	1 42 50

Williamsburg Y. C.

STEINWAY—LONG ISLAND SOUND.

Sunday, July 30.

The July regatta of the Williamsburg Y. C. was sailed to-day over a triangular course of six miles, the boats sailing twice over the course. A fair breeze blew from the west, and the times were:

Cabin Sloops and Cutters—30 to 35ft.—Start, 3:10.

	Finish.	Corrected.
Reliance, H. Schwartz	4 55 30	1 45 30
Kelpie, F. W. Smedley	4 59 00	1 48 45

Cabin Sloops and Cutters—25 to 30ft.—Start, 3:10.

Olympia, O. Reed	4 59 00	1 55 00
Rosa, R. Perino	Withdrew.	

Cabin Sloops and Cutters—25ft. and Under—Start, 3:20.

Pastime, J. Schnessle	5 13 50	1 57 10
Emily B., E. Bottke	5 25 00	2 05 00
Rover, G. Schwartz	5 24 22	2 05 22
Innocent, Mr. Rawlinson	5 18 20	2 50 00
Le Roy, W. H. Schleicher	5 24 10	2 07 10

Open Sloops—Start, 3:20.

Lady, P. A. Hamburger	5 17 15	1 57 15
Flushing, C. Hartman	5 20 15	2 00 15

Cabin Cats Over 25ft.—Start, 3:30.

Mabel M., E. Haman	5 37 00	2 07 00
Cupid, T. Airey	5 35 30	2 07 00

Mabel had an allowance of 1m. 30s. on Cupid. Race a tie.

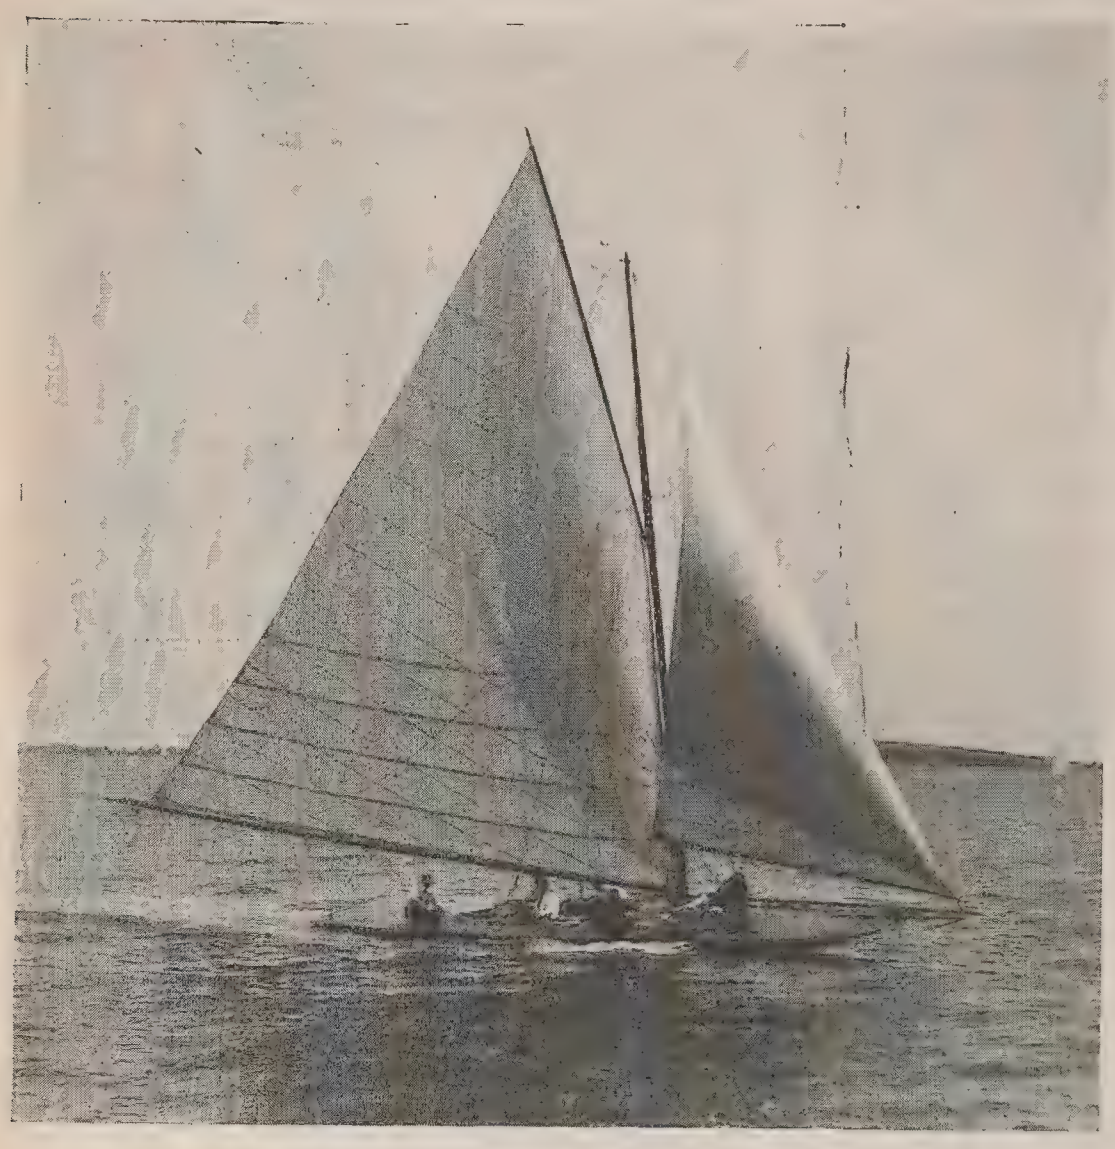
Open Catboats—Start, 3:30.

Paragon, W. E. Long	5 32 35	2 05 35
Opedeldoc, P. White	5 45 00	2 15 00

Douglaston Y. C.

PORT WASHINGTON—MANHASSET BAY.

Saturday, July 30.



Special races for dories and knockabouts were sailed to-day. The knockabouts sailed eight miles and the dories four miles, the times being:

Knockabouts.

	Finish.
Thelga, O. P. Thayer	5 26 00
Midge, J. Boyer	5 26 40

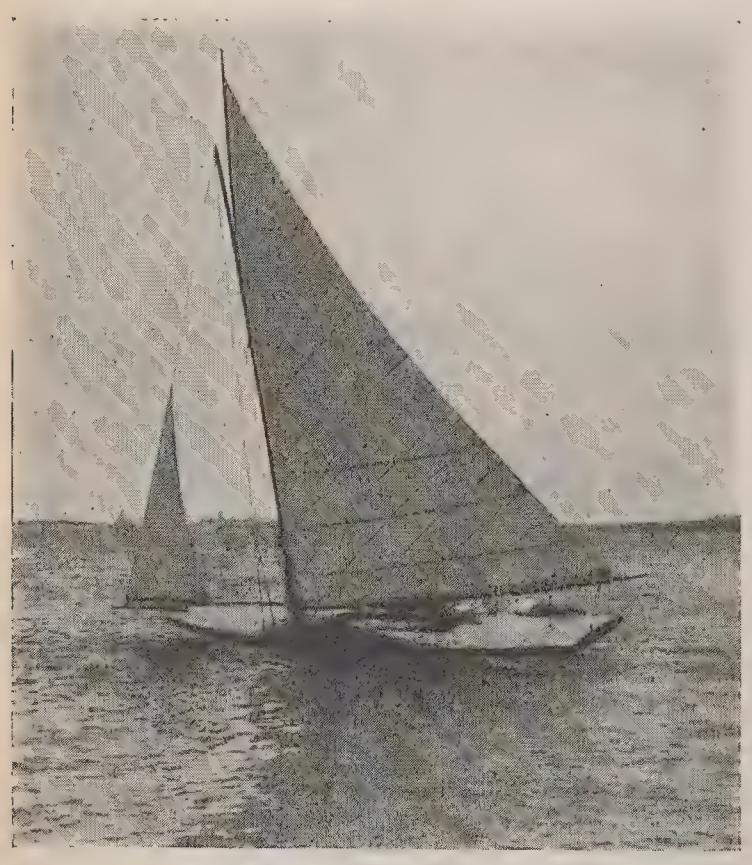
Dories.

Zena, F. E. Barnes	5 23 32
Dud, W. Corry	Did not finish.
John Dory, C. M. Greene	5 24 00
Tom Cod, L. Harvey	Withdrew.
Periwinkle, F. Francis	Withdrew
Prize, H. H. Van Rensselaer	5 23 02

HOSTESS.

HEIRESS.

The Quincy Challenge Cup.



The second annual series of races for the Quincy challenge cup began on Monday, July 24. The final race was sailed on Thursday, July 27, the defender, Mr. H. M. Faxon's Hostess, winning three races and thus retaining possession of the cup for another year, at least. The cup was offered in the winter of '97 by the Quincy Y. C. for the 21ft. l.w.l. class of the Y. R. A. of Massachusetts. Hostess won the trophy in the first series of races sailed in Quincy Bay last year.

The conditions call for a series of three out of five races. The entries were: H. M. Faxon's Hostess, defender of the cup, and C. D. Mower's Heiress, F. L. Pigeon's Thelma, Walter Abbott's Oogrook and W. E. C. Eustis' Pompano, challengers.

The weather conditions on Monday were good for a race. A steady E.N.E. breeze blew up the bay, and the boats went to the mark reefed. Heiress was disabled and withdrew. The times were:

Hostess, H. M. Faxon	1 29 18
Oogrook, Walter Abbott	1 37 32
Pompano, W. E. C. Eustis	1 38 50
Thelma, F. L. Pigeon	1 43 19
Heiress, C. D. Mower	Disabled.

Hostess won again on Tuesday in as exciting and close a race as one would care to see, for Heiress pushed her hard to the line, and was second by the narrow margin of

THELMA.

twenty-nine seconds. The morning was not propotitious for a race, a heavy fog hanging over the bay and a raw rain falling until almost noon. The fog then lifted and the rain ceased. The wind was N.E., and the boats carried full sail. Mr. Mower, owner of Heiress, protested Hostess on measurement after the race, but withdrew the protest. The times were:

Hostess	2 17 53	Oogrook	2 28 04
Heiress	2 18 22	Pompano	2 30 27
Thelma	2 25 27		

Wednesday's race was a drifting match, but interesting nevertheless, for the boats were so close together just before the finish that anyone of them might have won the race. Thelma drifted over the line first, four seconds ahead of Pompano. The race was started in a heavy rain storm, with some wind, but the rain turned into a heavy fog and the wind died down to almost nothing. Hostess and Pompano crossed the starting line too soon and lost two minutes fifty-four seconds and three minutes thirty-eight seconds respectively, because the judges obliged them to make two trials before the start was allowed. The race between Hostess and Heiress was exciting throughout, Hostess beating her rival by a slight margin. Hostess was twice protested by Mr. Mower, owner of Heiress, on alleged fouls, but the protests were not allowed. The times were:

Thelma	4 30 56	Heiress	4 35 38
Pompano	4 34 39	Oogrook	4 41 58
Hostess	4 35 39		

The fourth, and what proved to be the final, race was sailed on Thursday in a fine S.W. breeze, with the boats sailing under double reef. Hostess won this race, her third victory in this series, and retains possession of the cup for another year. The time of the winner, one hour fifty-three minutes thirty-five seconds, for a twelve-knot course, one-third of which was to windward, was a truly remarkable performance. She took the lead at the start and held it throughout, winning by one minute fifty-two seconds. Thelma and Pompano had an exciting race for fourth place, which was finally won by Thelma, Pompano having gotten into difficulty with a yacht at anchor near the finish line. The times were:

Hostess	1 53 33	Thelma	2 11 24
Heiress	1 55 25	Pompano	2 12 06
Oogrook	2 04 25		

Seawanhaka International Challenge Cup.

The fifth series of races for the international challenge cup established by the Seawanhaka Corinthian Y. C. in 1895 on the occasion of the visit of the English half-rater Spruce IV., was begun last week at Dorval, Lake St. Louis, the station of the Royal St. Lawrence Y. C. This club won the cup in 7896, Mr. G. H. Duggan's 15-footer Glencairn I. defeating Mr. C. H. Crane's El Heirie. The contest has been since kept up between the same designers, Glencairn II. defeating Momo I. in 1897, and Dominion defeating Challenger in 1898.

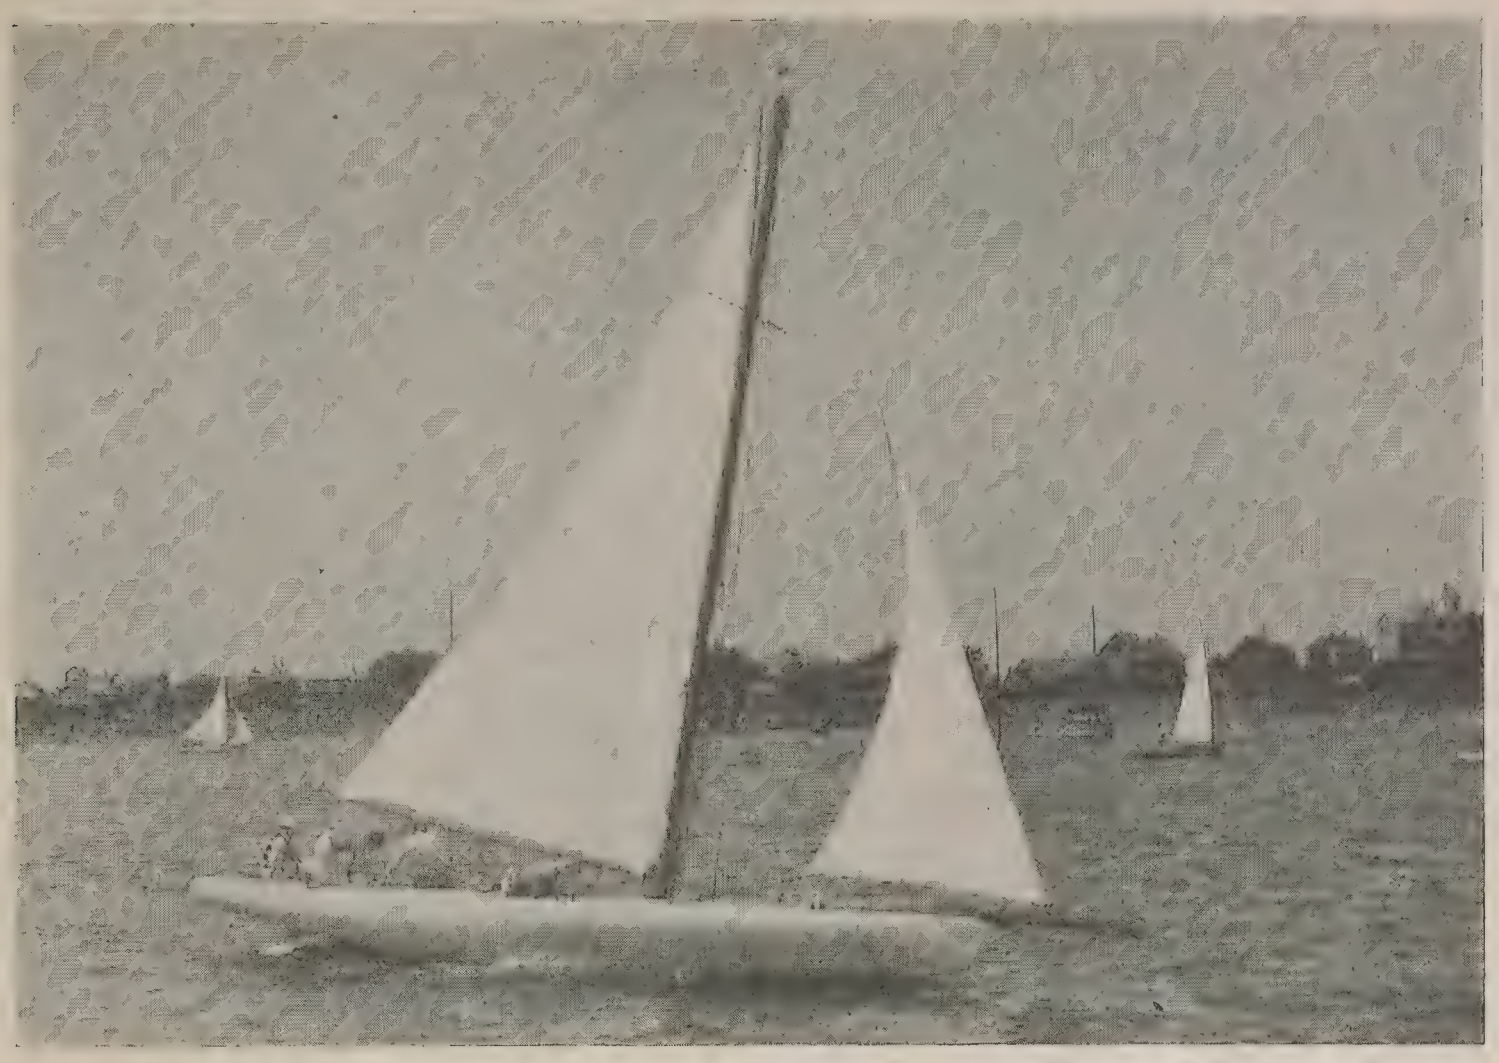
In 1897 the 15ft. class was abandoned in favor of the 20ft., in which the races have since been held.

The conditions this year are unchanged from 1897-8, except that two new limitations were adopted by both parties last winter. The overall length, previously unlimited, was limited to 32ft. 6in.; and a minimum angle of 70 degrees for the bows, or of 35 degrees with the fore and aft centerline, was adopted. Whether or no these limitations will effect the intended end of barring all other kinds of freaks except those in the class prior to last year, and in particular the double-bilge freak, is a question which no one has tried to solve this year. Only four yachts have been built on both sides of the line, and of these none are more extreme freaks than Al Anka and Skate of 1897.

The challenger and defender of this year are both of the general type introduced by Mr. Duggan in Glencairn I. in 1806, and further developed by him in Glencairn II. in the following year. They have the same waterline, about 17ft. 6in., the same beam of about 8ft., a very wide flat floor carried well into the ends, and flaring sides. The after ends of the two are very similar. The great difference is in the fore bodies. The official measurements of the two are as follows:

	Constance.	Glencairn III.
Length—		
Over all	30ft. 10⅝in.	32ft. 4¼in.
L.W.L.	17ft. 9 in.	17ft. 3 in.
Overhang—		
Bow	8ft. ¼in.	9ft. 3⅞in.
Stern	5ft. 1⅜in.	5ft. 9⅝in.
Mast	25ft. 6 in.	25ft. 5¾in.
Boom	23ft.	21ft. 8 in.
Gaff	13ft. 6 in.	14ft. 8 in.
Spinaker boom	15ft. 5 in.	20ft.
Mainsail area	386ft.	370ft.
Head triangle	98ft.	128ft.
Spinaker	196ft.	256ft.
Total area	484ft.	498ft.
Racing measurement	19,875ft.	19,785ft.

As the above measurements show, Mr. Crane has taken less than the allowed over all length by 20in., and the bow is comparatively a fine one. Seen alone, it looks quite hard and full, showing the hump at the forward termination of each bilge, which is one marked characteristic of the modern freak 20-footer. The general comment about Dorval, and it is correct, is that Constance is more like Glencairn II. than any other 20-footer. When seen side by side to Glencairn III., however, the bow looks very fine and easy.



The new boat is the most extreme scow that Mr. Duggan has yet designed. He has gone nearly to the limit over all length, and with this he has snubbed in the bow until the fore end for a distance of a couple of feet would almost fit the V prescribed by the limitations. The deck line is very full and not fair, but shows a break where the V joins the curve of the side. With this full wide deck is a very full bow, showing a big hump at the end of each bilge. When sailed at the effective angle, there is a great lengthening of the waterline. Seen side by side, Constance looks smaller and more shapely than she

OOGROOK.

really is in contrast to the big scow deck and full bows of Glencairn III.

Constance was built by the Spalding St. Lawrence Boat Company, builders of Momo, Challenger and Seawanhaka, and is a handsome piece of work. Mr. Crane has abandoned the composite construction of last year's boats, with metal angles and elaborate bracing of bicycle tubing, and has gone back to the ordinary wooden bracing of the Duggan boats. The scantling is much heavier than that of last year, and the boat is apparently capable of racing for several seasons. The frames are much heavier than in Challenger, and the planking is almost double the thickness. The planking and decking of British Columbia cedar are each ship lap, but the seams of the planking are strengthened by small pieces of batten fastened inside between each pair of frames. The deck is smooth, and

POMPANO.

not in-and-out as in all of last year's Crane boats. The rig includes a fine outfit of hollow spars, with sails by Wilson & Silsby. The mast is fitted with double shrouds, the forward one, which leads well forward of the mast, running to the masthead, with spreaders of bicycle tubing raked well forward; the after one, from the hounds, leads to a chainplate well abaft the mast. There is a traveler for the jib sheets forward, and one on the extreme counter, for the mainsheet; both of hickory. The tiller is of the Y pattern used by Mr. Crane for three years. The rudder is a single bronze plate about 3-16in. thick, almost rectangular in shape, except for a point on the upper fore corner, the blade raking aft.

Glencairn III. was built at the Dorval shop, of similar construction to the Duggan boats of 1898; the plain ship lap. Her bottom planking is of white cedar and her deck of British Columbia cedar, laid in-and-out. Her rudder is of the peculiar shape shown in the design of Dominion published in the FOREST AND STREAM last October. The tiller is of the dog's leg pattern always used by Mr. Duggan. The spars are all hollow, made at the Dorval shop. There is but one shroud to a side, from the masthead, with spreaders of bicycle tubing. The jib traveler is of tubing, as are the two mainsheet travelers.

Both boats have long, open cockpits without bulkheads and centerboards of the same form, of wood loaded with lead. Out of several weights of board, Constance carried in the races one of 438lbs. weight. Mr. Crane has this year abandoned the sliding piece on the after side of the board by which the area was altered at will.

The centerboard carried by Glencairn III. weighs 307lbs. Her sails were made by Oldrieve & Horn, Kingston, Canada. Constance is owned by Hon. Regis H. Post and E. M. Post, Seawanhaka Cor. Y. C.; Gleincairn III. is owned by Com. James Ross, of the Royal Canadian Y. C.

The crews are: Constance, C. H. Crane, skipper, 145lbs.; H. M. Crane, 130lbs.; E. M. Post, 160lbs.; Joseph B. Thomas, 159lbs.; total, 594lbs. Glencairn III., G. H. Duggan, skipper, 149½lbs.; F. P. Shearwood, 149lbs.; Arthur Hamilton, 155lbs.; Shirley Davidson, 141¼lbs.; total, 594¾lbs.

Mr. Sherman Hoyt, who sailed in the crew at Oyster Bay, was with the party, but on account of his light weight was replaced by Mr. Post.

The race committee included Messrs. J. J. Riley, H. B. Young and Prof. Copper, of McGill University. The Americans present were Mrs. R. H. Post, Mrs. E. M. Post, Mr. and Mrs. C. W. Wetmore and C. A. Sherman. Mr. and Mrs. M. G. Foster, of the Seawanhaka Cor. Y. C., made the cruise from New York to Dorval in the 40ft. naphtha launch Wavelet, by way of Lake Champlain, and were present at the first races.

The boats this year were handled with the same scrupulous care as in former years, being hauled out immediately after each race, the heavy centerboards being hoisted out onto the dock by a pair of sheer legs and tackle, while the rudders were unshipped. Constance had a crew of three professionals to tend her and polish her, while Glencairn was looked after by the men who built and rigged her. As a matter of interest, it may be stated that the American boat cost somewhat over $1,500, and the Canadian about half as much. The former is of more elaborate finish, and the handsomer of the two, but for actual racing there is little choice between them. The cost of the 15-footers, it will be remembered, in 1895-6 ranged from $350 to $650.

This year for the first time the defenders have sailed no trial races, merely a few informal trials between Glencairn III. and last year's Speculator.

First Race, Windward and Leeward.

At midnight on July 26 a very violent thunderstorm came up, lasting until 6 A. M. on Thursday. When it subsided a S.W. wind sprung up, freshening steadily through the early morning, until the whole lake was covered with whitecaps. The two boats were launched inside the boom, the race committee and crews were on hand, but as the hour of the start approached no one expressed any desire to sail. The wind came down the lake in heavy gusts, and the seas were running high. At 11 o'clock it was decided to postpone the start for two hours. Mr. Duggan and his crew bent a mainsail on Speculator, turned in three reefs and set a stormjib. Under this snug rig they ventured out and beat up the lake for a short distance. The little boat made very good weather of it, and had the two then been at the line a start would have been made; but the wind and sea were so high that the towing up to Pointe Claire would have been difficult and dangerous. Another wait was made until 2 o'clock, when, as the wind still held, it was agreed by the committee and both contestants to postpone the race to the next day. Soon after the wind began to drop. Speculator went out again and Constance followed, both sailing up the lake. It was then too late for a start, and in fact after its force once lessened the wind fell rapidly, until the evening was quite calm.

Friday brought more clear weather, with the lake smooth under a moderate S.W. wind. The boats went up to the line before noon, Constance in tow of the steam yacht Sirius and Glencairn III. under sail. The Dama called at the club house for the committee, and the Duchess of York carried a large party in spite of the disappointment of the previous day. Mr. C. W. Wetmore, of the Seawanhaka race committee, arrived in the morning and was on the Dama with Mr. Regis H. Post.

The wind at the line was W. by S., and the course of two miles was logged off, the mark being set some distance north of the mark for the triangular course, already in position.

The preliminary signal was given at 1:45, the preparatory at 1:50 and the start at 1:55. Constance went over a little in the lead near the middle of the line, while Glencairn, crossing but a second later, was close to the mark on the Pointe Claire or northern end of the line, and on the weather quarter of the other. Both carried full sail, with just wind enough to make the crews hike at times; Glencairn holding a less angle than Constance.

Crossing on the starboard tack they held it for a long time, little change of position being visible. They came about at 2:06, Constance first, and it was then evident that she had gained a little, being on Glencairn's weather beam. Glencairn footed ahead, but Constance was doing the better windward work. They held the port tack for nine minutes, when Glencairn went on starboard tack and shortly after crossed Constance's wake.

The mark was now visible ahead of the American boat, though it seemed as though she could not fetch it. Everyone was looking to see Glencairn tack as soon as she was well to windward of Constance, but she did not do so, standing on starboard tack out into the lake in the direction of Beauharnois, getting further from the mark each moment as Constance neared it. After she had held this mysterious course for some time, the reason became evident to the spectators. She had sighted one of the marks of the triangular course, similar in construction to the true mark, though the disks were red and white instead of black and white.

While Glencairn was going the other way, Constance was nearing the true mark and fetched it on the one long port tack, rounding before Glencairn discovered her error. With spinaker set to port, Constance was speeding home long before Glencairn reached the mark, the times being:

	Time.	Elapsed.	Gain.
Constance	2 22 02	0 27 02	0 04 48
Glencairn	2 26 50	0 31 50	. .. ..

Judging from the work of the boats up to the time Glencairn broke tacks, had she sailed the proper course she would have been a full minute astern of Constance at the mark.

Glencairn's spinaker was handled smartly, and she ran very fast in the vain effort to overtake Constance, but they met as the latter was on the wind after rounding. The end of the round was timed:

	Time.	Elapsed.	Gain.	Lead.
Constance	2 37 00	0 14 58	. .. ..	0 03 48
Glencairn	2 40 48	0 13 58	0 01 00	. .. ..

On the run Glencairn had cut a minute off the lost time.

After luffing around the mark Constance started the round on port tack, standing in toward Pointe Claire and making a number of short tacks. Glencairn followed at a distance which made it impossible to judge of the relative performance of the two. They were timed at the weather mark:

	Time.	Elapsed.	Gain.	Lead.
Constance	3 06 10	0 29 10	. .. ..	0 03 40
Glencairn	3 09 50	0 29 02	0 00 08	. .. ..

The leeward leg was run with a falling wind. Glencairn had to jibe her spinaker, and Constance picked up a few seconds, the times being:

	Time.	Elapsed.	Gain.	Lead.
Constance	3 25 21	0 19 11	0 00 05	0 03 45
Glencairn	3 29 06	0 19 16	. .. ..	. .. ..

There was a slight freshening of the breeze as they started on the last windward leg, but it was not as strong as in the previous rounds. Glencairn did very good work, but took the ground on one of her starboard tacks out toward the shoal, striking twice; she was compelled to raise her board in order to get clear. The mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Constance	3 57 13	0 31 52	. .. ..	0 02 35
Glencairn	3 59 48	0 30 40	0 01 10	. .. ..

They ran home with a light breeze, the final times being:

		Leg.		Whole Course.	
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.
Constance	4 13 28	0 16 15	. .. ..	2 18 28	0 02 15
Glencairn	4 15 43	0 15 55	0 00 20	2 20 43	. .. ..

Owing to the small craft about the end of the line, the Dama was not quite on the line when Constance was timed, and there is possibly a few seconds more in her favor, but Glencairn managed to cut in half her bad handicap of nearly five minutes on the first leg.

After the finish the breeze fell somewhat, but as soon as Glenceirn reached the club house the mainsail was bent on Speculator and the two started out, Mr. Duggan steering Glencairn and Mr. Davidson steering Speculator. They sailed about the lake for over an hour.

Second Race, Triangular Course.

On Saturday morning there was hardly a breath of air on the lake, the smoke blowing lightly from the south or southeast at most points. The yachts went out to the line at noon, where the Duchess of York was ready with a large party on board. The smooth water and clear sky tempted out a very large fleet of canoes, rowboats, small launches, steam yachts and sailing craft, the latter being barely able to make way against the current. The Sirius anchored with Constance astern, while Glencairn lay astern of the Dama. A few faint catspaws in the early afternoon raised hopes which were not realized. About 4 o'clock the two yachts got under way and sailed about for a short time, but it was plainly idle to think of starting a race. What little wind there was fell after a time, and at 4:30 the fleet started home.

When she reached the club house the board and mast of Constance were hoisted out and she was taken into the shed over Sunday.

In the evening a dinner was given at the club house in honor of the American visitors.

The second race for the Seawanhaka cup which was sailed on July 31 was won by the American yacht Constance by fifty-five seconds over the triangular course. Constance crossed the starting line first and was never headed. The times were:

	Constance.	Glencairn.
Start	1 25 00	1 25 16
First buoy	1 47 34	1 50 30
Second buoy	1 56 42	1 58 52
End of first round	2 06 21	2 08 21
First buoy	2 29 21	2 32 58
Second buoy	2 38 05	2 41 49
End of second round	2 48 00	2 50 34
First buoy	3 11 20	3 12 53
Second buoy	3 20 30	3 21 39
Finish	3 29 00	3 29 55

Mr. Stephens' report of this race, which was received too late for publication in this issue, will be printed next week in connection with the report of the remainder of the races.

Rifle Range and Gallery.

Sept. 4.—Sea Girt, N. J.—Meeting of the New Jersey State Rifle Association. De Lancy G. Walker, Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made at the rifle range July 23. Payne was high on the champion target with 216; Bruns was high on the honor target with 65. Weather conditions were fair:

Champion score:										
Gindele	17	20	23	22	20	24	20	18	20	20—204
Nestler	18	20	21	25	21	19	23	15	17	23—202
Weinheimer	22	23	18	11	18	12	22	22	5	18—171
Trounstine	9	21	20	16	16	17	21	15	14	20—151
Otto	19	19	13	14	14	17	20	17	6	22—161
Payne	21	24	21	21	20	22	22	25	22	18—216
Roberts	16	22	14	18	22	17	14	22	17	22—184
Bruns	16	18	14	18	24	21	20	24	22	19—196
Drube	16	16	11	18	19	19	13	15	21	19—161
Strickmeier	21	13	15	20	20	14	19	20	11	22—177

	Special Score.										Honor Target.

The "Berthon" Bullet.

THIS bullet is designed to give the greatest amount of stopping power with the smallest diameter, and may be described as an "opening" bullet, neither explosive nor mushrooming. It is composed of a casing or envelope of nickel composition containing a lead core; this core is in two distinct pieces, fitting tightly together, but not adhering to one another, thus forming a core divided up the center for about two-thirds of its length. The core for No. 3 bullet is inserted from the front of the casing, leaving the point partly exposed, and is divided from the base. That for No. 4 is inserted from the rear, and has the casing spun over the base, and is divided from the point, the core completely filling the case. The action is as follows:

No. 3, on striking an object direct, upsets slightly at the point, and aided by centrifugal force the smaller segment opens the case and flies forward riding outward over the shoulder of the longer segment, greatly increasing the area of the bullet, so that the object struck absorbs the whole of the bullet's energy locally. No. 4, on striking, the segments bulge outward with the same result. No. 3 is for small game, where a light bullet with a flat trajectory is desired; No. 4 is for both small and big game. No. 3, however, possesses the advantage of traveling only a very short distance after first graze, which breaks it up, though it is equally effective at short or long ranges; it is intended for any rifle of any caliber, and is not liable to leave its casing in the bore when fired.—The Inventor in London Field.

Baltimore Indoor Range.

THE Baltimore Sun of July 27 has the following interesting account of a new range in prospect in that city, as follows:

It is among the probabilities that a long-needed institution is about to be established. For a year or more Dr. Samuel J. Fort has agitated the establishing of modern revolver and rifle ranges in Baltimore. A place which could be easily adapted for the purpose has been found in the large building on Fayette street, opposite Ford's Opera House, occupied in part by Clarke Bros. for bowling alleys. In the second floor a range of over 100ft. can be built.

Dr. Fort has in these columns shown the great good that would ensue from pistol practice by cavalry militiamen and police officers and the advantagees that would accrue if ladies would learn to handle a revolver. He cited a case in point by showing the quick improvements made in the shooting by members of Troop A, Maryland National Guard.

Besides the civilians, there is a large number of citizens who are especially interested in rifle and pistol shooting. As soon as the fall arrives there will be doubtless an increased interest in matters military.

Commander Isaac E. Emerson, of the Naval Reserves, is already on record as advocating ranges where the Reserves, without too great sacrifice of time, could practice shooting small arms in the daytime and by artificial light. Col. Willard Howard, of the Fourth Regiment, has also declared himself in favor of having his staff and line practice regularly. Members of the Fifth Regiment have been doing some desultory practice.

It is now proposed to call a meeting of those interested and to have them inspect the proposed ranges, and then to form a club or association to regulate matters. If the plan does not miscarry monthly prizes will be given, and team and individual matches will be shot among members of the same troop, regiment or company, and between different companies or regiments. Certain hours will be set apart for civilians, and if a ladies' club can be organized on special afternoons the ranges will be devoted to their exclusive use.

Rifle at Shell Mound Range.

SAN FRANCISCO, July 24.—There was a good attendance of marksmen at Shell Mound Range yesterday and some good work was done. In the Germania Club's bullseye shoot Mr. Schuster made the very fine score of eighteen 6in. bullseyes in 20 shots (only one score of 20 shots allowed each month1). In the same club's continuous competition, 3 shots, Dr. Rodgers made 74 rings—25, 24, 25—the highest ticket so far this year. This puts him considerably in the lead for the first prize—$100. Best 10 scores of 3 shots each to win: The Doctor has 721 rings so far; D. B. Faktor is second, with 715. Competition will continue until Dec. 31. J. E. Gorman, the expert pistol shot, did some good work at the Golden Gate Butts, making the following scores consecutively at 50yds. with S. & W. pistol, long rifle cartridge, standard American target, 10 shots: 92, 91, 95, 95, 91, 96, 91.

At the recent shoot of the Golden Gate Rifle and Pistol Club, open to all, the handsome sum of $255 was netted. So this young club starts out with good prospects.

ROEEL.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Aug. 3-4.—Wolcott, N. Y.—Tournament of the Catchpole Gun Club. E. A. Wadsworth, Sec'y.

Aug. 5.—Dunellen, N. J.—Contest of Central New Jersey Trap-Shooters' League.

Aug. 5.—Mount Kisco, N. Y.—All-day target tournament of the Mount Kisco Gun Club. Ralph W. Gorham, Sec'y.

Aug. 8.—Haverhill, Mass.—All-day shoot of the Haverhill Gun Club; added money. C. F. Lambert, Sec'y.

Aug. 9-10.—Portland, Me.—Interstate Association's tournament, under auspices of the Portland Gun Club. S. B. Adams, Sec'y.

Aug. 9-10.—Duluth, Minn.—Seventh annual tournament of the Central Gun Club; $250 in cash added. E. C. Mayfield, Sec'y.

Aug. 15-17.—Little Rock, Ark.—Arkansas State Sportsmen's Association's ninth annual tournament; $375 added; two-cent targets; Rose system. Paul R. Litzke, Sec'y.

Aug. 17.—West Chester, Pa.—First of intercity contests between ten-men teams of the Phoenix Gun Club, the West Chester Gun Club and the Shuler Gun Club.

Aug. 18.—Hackensack, N. J.—Hackensack River Gun Club's live-bird shoot at Heflich's grounds, Hackensack River Bridge, Paterson Plank Road. John L. Chartrand, Sec'y.

Aug. 30-31.—Auburn Me.—State tournament on the grounds of the Auburn Gun Club. L. A. Barker, Sec'y.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 13-14.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.

Sept. 19-22.—Detroit, Mich.—Jack Parker's eighth international tournament; live birds and targets; $500 cash added.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The following from a Canadian paper, descriptive of a contest which occurred on July 22, recounts the details of a close race: "An interesting match for the individual trophy was shot at Montreal on Saturday, when T. M. Craig, of the Sherbrooke Gun Club, met W. L. Cameron, of Montreal. Mr. T. M. Craig was right after it, and almost brought it back to Sherbrooke. The first shoot was a tie. Craig led by 3 birds up to the pairs, when he dropped, and both came out with 41 birds out of 50. In the shoot-off Craig again led up to the pairs, when he fell away, and Cameron came out with 22 out of 26 to Craig's 21. Cameron won the trophy on Dominion Day here, and since that time has defeated E. C. Eaton in his endeavor to grasp the coveted cup."

The contemplated establishment of a trap-shooting park on a large scale at Chicago, as set forth by Mr. E. S. Rice in our trap columns this week, is worthy of the earnest attention of all trap-shooters in America. In this broad land there is room for several such institutions, which will help shooting in particular and in general, and thus will help each other. We would be pleased to see the park established on the broad lines which Mr. Rice presents. It would stimulate the old shooters in renewed activity, and would add new ones to the list for hundreds of miles about its vicinity. Let the good work go on.

The Ferd V. Van Dyke memorial fund received material support at the shoot of the Pawling Rod and Gun Club Saturday of last week. Mr. Horatio Nelson, the captain of the club, won the prize (a gun case) in one of the main events and immediately put it up again for competition, the proceeds to be donated to the memorial fund. The club in this event threw the targets free. This resulted in $10 in cash for the fund, which Mr. Nelson forthwith handed over to Mr. Edward Banks, who is a member of the committee having the fund in charge. It was whispered about privately that this was but one of many good deeds done by Mr. Nelson, and that his heart was always warm and in the right place. One year ago July 4, "Van" attended the tournament of the Pawling Club, and though weak and ill shot in excellent form. His sterling worth as a man made friends of all with whom he came in contact. The material tribute of esteem from the Pawling shoot is one which is open to others who may be pleased to adopt it.

Mr. R. W. Gorham, the secretary of the Mount Kisco Rod and Gun Club, Mount Kisco, N. Y., was in attendance at the Pawling shoot last week and reported that the club's new house and grounds, which are just without the corporate limits, are all that could be desired. They are level, have a good background and are pleasantly situated. The inaugural shoot takes place on Saturday of this week, for which a programme of fifteen events is provided. There is a total of 225 targets, with a total entrance of $21.20. Targets will be thrown Sergeant system of three traps. Shooters may shoot for targets only. The club contemplates an event, the proceeds of which will be donated to the Van Dyke memorial fund. The club hopes to have a good attendance from New York and vicinity.

John S. Wright, manager of the Brooklyn Gun Club, has announced that he will give a live-bird shoot on Mr. Tom W. Morfey's grounds, at Lyndhurst, N. J., some time in the latter part of this month, and that it will be a function recherché in every particular. A pink tea in comparison will turn pale. Mr. Wright has not yet confided to the boys just what the programme will be, but it is safe to assert that he will arrange a programme in every particular satisfactory. Mr. T. W. Morfey has pledged his word to provide birds specially made for guns bored for nitro loads, with his trade-mark blown in all and each of them, these birds making a very flat trajectory many times in their flight over and beyond the boundary. Out of 400 birds of his recently trapped he had but one sitter.

Under date of July 29 Mr. C. F. Lambert, of Lynn, Mass., writes us as follows: "The present outlook for our tournament on Aug. 8 is very good, and the club will spare no effort to have a smooth-running shoot. Those shooters who wish to make the trip from Boston to Portland by steamer can easily make connections by leaving Haverhill at 5:15 P. M., arriving at Boston in ample time for same. Those who are planning to attend this shoot can ship ammunition, guns, etc., care of S. G. Miller, and same will be delivered to grounds free. While the hotels of Haverhill are not so numerous, the Thorndike will on trial be found to afford good accommodations—better, in fact, than many cities of the size of Haverhill can boast."

The Interstate tournaments this year have been gratifyingly successful to all concerned in them, and the indications are that the next one at Portland, Aug. 9 and 10, will be equally successful. The programme is arranged with a special view to the interest of the amateur, the professional shooters being permitted to shoot for targets only. The Haverhill Gun Club holds its shoot on Aug. 8, so that shooters en route to Portland can participate in its competition without extra transportation expense or inconvenience. This the shooters should note and keep in mind. The Haverhill shooters are as pleasant a group of gentlemen as one could ask to associate with, and a good and pleasant day is assured to all who pull their latchstring.

The annual meeting of the Rochester Rod and Gun Club was held Friday evening, July 14, and officers were elected as follows: President, Dr. J. L. Weller; Vice-President, Thos. R. Griffith; Secretary, John B. Mullan; Treasurer, Sam B. Williams; Auditor, Wm. F. Brinsmaid; Historian, W. C. Hadley. The reports presented by the secretary-treasurer, show a flourishing condition, and a committee was given full power to proceed at once upon some needed improvements on the club's grounds and make arrangements for live-bird shooting, which of late has become quite a feature in our club shoots.

Trap-shooting is gaining a broad footing in Louisiana, a State wherein game abounds to a degree plentiful beyond the dreams of the Northern shooter. The Donaldsonville, La., Chief, in recounting the particulars of a shoot of the St. James Gun Club, presents this for information: "The grounds at Salsburg plantation are now equipped with both Sargent system and the Marautrap, which the shooters can use at will." This is not bad for a beginning, and later on the Sergeant system will be applied to the traps instead of equipping the grounds, probably.

The Parker Gun Club, of Meriden, Conn., will hold their fifth annual Labor Day shoot at their grounds, near Hanover Park, Sept. 4. A magautrap will be used. A good programme will be put out soon. A special attraction will be the dinner, which will be served in the grove near the club house, and will be known as a "sheep bake," which will be cooked and served by an experienced party who makes a specialty of this kind of feasts. A good time is assured, and all are welcome. For further information address C. S. Howard, Sec'y.

The programme of the Haverhill Gun Club, Haverhill, Mass., fixed for Aug. 8 as to date, has a very attractive programme of eight events, with a total of 200 targets. Of these, one is at 10 targets, 70 cents entrance; six at 15 targets, $1.30 entrance, and one at 100 targets, $6 entrance. The latter is divided into four 25-target events, with additional optional sweeps of $1.50 each. The club adds $25 to this event, subject to the regular division governing the events. Targets 2 cents. Sweepstakes optional. Lunch served on the grounds. Shooting commences at 10 o'clock.

There is a most commendable competition shown in the trap-shooting world, the gladiators of the shotgun challenging a return match with spirit and determination when defeated. Mr. Charles A. Young has challenged Mr. J. A. R. Elliott for a contest for the cast iron stove lid. Mr. W. R. Crosby is also camping on Mr. Elliott's trail, and the indications are that to hold and to keep the trophies will be a succession of victories wrested from the very best talent that America can produce.

Mr. J. A. R. Elliott is at present at Easton, Talbot county, Md., at his brother's place. He has asked those in authority for a copy of the conditions governing the E. C. cup competition, as he is inferentially studying up the conditions governing the cups in his possession, so that any debates concerning them may be more inexpensive to him hereafter. He will accept Mr. W. R. Crosby's challenge, the time and place to be named at a later date.

It was Doctors' Day at the Brooklyn Gun Club's shoot last Saturday, there being four of the lights of that distinguished profession present, and they shot matches right and left in a manner which is worthy of emulation. Their shooting, too, was of good quality. No man has improved so much, however, as Dr. F. H. Creamer, his time and general execution now being nearer to that of the best experts than it was some weeks ago.

Mr. Everett Smith, of Schenectady, N. Y., was a visitor in New York on Monday of this week. He was brown as a nut, after the exposure in Canada incident to a fishing trip. The largest fish he caught was a muscalonge, which weighed 14lbs.—a good one. His visit was a pleasant one, though he at first posed as a man of provincial habits; but if that is true we do not know what is cosmopolitan.

By inadvertence the word "target" was omitted from Mr. Edward Banks' communication concerning the forthcoming tournaments of the Interstate Association, published in our columns last week. The sentence should have read as follows: "It was also decided to hold during the year 1900 the first annual Grand American Handicap Target Tournament, the dates for this tournament being the week commencing June 11."

Messrs. F. W. Moffett, of Bloomfield, N. J., and E. Morgan, of Paterson, N. J., have arranged a live-bird contest, the former standing at 32yds. and shooting at 25 birds, the latter at 29yds. and shooting at 29 birds, for $25 per side, the race to come off at Lyndhurst. Tom Morfey has promised some of his best Harveyized, hand-sewed birds for the occasion. The race is fixed to take place on Thursday of this week.

The live-bird match between Messrs. U. R. Bender, of Fanwood, N. J., and E. Morgan, of Paterson, at Singac, N. J., on Thursday of last week, resulted in a victory for the latter by a score of 16 to 15. Bender stood at 30yds. and shot at 25; Morgan stood at 28yds. and had 28 birds to shoot at, but shot at 25 only. The birds were very poor flyers.

Messrs. F. W. Moffett, and G. A. Hopper of Paterson, N. J., have arranged a match, to be shot on Aug. 24, on Mr. T. W. Morfey's grounds, at Lyndhurst, N. J., the conditions being 100 birds and $100 a side. This is expected to be a very close and good race. Morfey has promised some phantom pigeons for the event.

From Worcester, Mass., Mr. F. Bucklin, secretary of the Bay State Gun Club, reports an encouraging revival of trap-shooting matters in his section. The club's recent tournament was quite successful, and its management promises to hold another tournament about Sept. 10, with added money and merchandise prizes as a material attraction.

The Hudson Gun Club, of Jersey City, will hold a shoot on Aug. 20 as a kind of house-warming event, in honor of the completion of its new club house, which is more commodious and better equipped every way than was the old one. Plenty of shooting at a very reasonable rate is a feature of their pleasant shoots.

The Interstate Park Association, we learn, is pushing its work very energetically, and will begin the work of preparing the ground, building fences, digging foundations, etc., within a few weeks. It is said that the hotel and casino will be mammoth structures, with first-class appointments in every detail.

At Singac, N. J., Thursday of last week, Mr. F. W. Moffett, of Bloomfield, N. J., defeated Mr. E. Morgan, of Paterson, the former standing at 32yds. and shooting at 25 birds, the latter at 28yds. and shooting at 28 birds, for $25 a side. The scores were: Moffett 22, Morgan 20. The birds were largely sitters and poor flyers.

The secretary of the Piasa Gun Club, Mr. F. C. Riehl, writes us as follows: "The Piasa Gun Club will give its third annual fall tournament at Douglas Park range, Alton, Ill., Sept. 28 and 29. This will be an open shoot, and every lover of trap-shooting is invited. Programmes will follow soon."

Mr. Paul R. Litzke has a most interesting collection of trap news in "Arkansas and the South" in our trap columns this week. It covers the contest for the Busch medal, at St. Louis, a little 100-target matter of definition between Messrs. Gilbert, Budd and Klein, doings of the Capital Gun Club, etc.

The Hastings Gun Club, of Hastings, Neb., announces through its manager, Mr. W. S. Duer, that its target tournament for amateurs only will be held on Sept. 19, 20 and 21, and that $500 will be added. Targets will be thrown at 2 cents each.

The first of the series of intercity shoots between the Phoenix Gun Club, of Phoenixville; the West Chester Gun Club, of West Chester; the Schuler Gun Club, of Pottstown, will be shot at West Chester, Pa., on Aug. 17.

The Canton Gun Club, Canton, Ill., will hold its annual tournament on Aug. 23. Full information concerning it will be furnished by the secretary, Mr. J. C. Thompson, Jr., Canton, Ill., to those who apply.

Col. Springer, of the Columbus Gun Club, won the Peters Cartridge Co. medal, at the tournament held at Warm Springs, Ga.

Owing to a press of matter on our trap columns this week, several reports of shoots are necessarily held over till next week.

BERNARD WATERS.

ON LONG ISLAND.

Hell Gate Gun Club.

New York, July 30.—Herewith are the scores made at the Hell Gate Gun Club's tournament and clambake, held July 25, in Brooklyn, L. I. The weather was extremely unfavorable, being rainy the entire day, with a few stormless intervals.

Fifteen sweepstake events were shot off, nevertheless, but the mechandise event was the main one.

In it seventy-five shooters lined up to the score, which, adding the re-entries, footed up a total of ninety. This event was a 20-bird handicap affair, for a number of merchandise prizes, the handicap allowances being added instead of being shot out. Thanks to Col. John H. Voss, Secretary Eugene Doenick, George K. Breit, John Wellbrock, John P. Dannefelser and other members, there were a large number of prizes.

Two sets of traps were kept going from 10 o'clock in the morning until nearly 7 in the evening, No. 1 being run under the Sergeant system, the other set at rapid firing. Minta (Mrs. Peter Ganns), who is a clever live-bird shot, tried her hand at clay birds in the merchandise event, and scored the limit. In the sweepstake shooting, Dr. Ashley A. Webber and Louis Schortemeier carried off the honors, and incidentall ythe cash. The scores:

Merchandise event, 20 birds, handicap: Dr. A. A. Webber, scratch, 17; Bernard Amend, scratch, 14; Henry von der Bosch, scratch, 13; Louis Schortemeier, scratch, 10; August Schmitt, allowance 5, 20; J. A. Bissett, allowance 4, 20; Tom Short, allowance 4, 18; W. A. Sands, allowance 6, 20; George K. Breit, allowance 6, 10; Martin Major, allowance 4, 14; Charles Stuetzle, allowance 5, 10; Dr. Kemble, allowance 5, 16; Dr. Creamer, allowance 7, 19; Adam Dietzel, allowance 6, 16; Dan Valenti, allowance 7, 13; Adam Frey, allowance 6, 11; Joseph J. Bermel, allowance 5, 12; Emil Marquardt, allowance 7, 8; Ernest Meckel, allowance 7, 16; John Hildebrand, allowance 4, 7; Charles Schaefer, allowance 6, 15; John J. Young, allowance 5, 14; Henry Hafften, allowance 6, 14; J. P. Dannefelser, allowance 5, 17; H. W. Voss, allowance 5, 20; J. H. Voss, allowance 5, 20; W. A. Noe, allowance 5, 9; George Reifschneider, allowance 5, 7; Dr. O'Donoghue, allowance 4, 11; Chris Wigger, allowance 5, 16; Henry Bahn, allowance 5, 19; L. T. Muench, allowance 6, 15; Pierce Brennan, allowance 7, 15; Henry Forster, allowance 5, 15; Peter Ganns, allowance 7, 16; Eugene Doemick, allowance 6, 19; D. J. Deady, allowance 7, 17; Fred Trostel, allowance 6, 12; James Hickey, allowance 4, 10; Phil Woelfel, allowance 7, 10; Henry Wehler, allowance 5, 7; Henry Wiswell, allowance 7, 7; Peter Wolff, allowance 5, 19; Conrad Weber, allowance 7, 13; Dr. Groehl, allowance 6, 14; John Woelfel, allowance 6, 9; Fred Pfaender, allowance 5, 20; Jacob Himmelsbach, allowance 5, 18; Edward Dunkers, allowance 4, 12; K. F. Schneider, allowance 7, 17; John Selg, allowance *, 12; Henry Weiler, allowance 5, 8; Charles Weiblein, allowance 7, 15; W. N. Gallon, allowance 7, 11; Charles Lang, allowance 7, 9; Emil Steffens, allowance 5, 17; Phil Rutz, allowance 7, 9; Patrick Dunn, allowance 7, 11; J. A. Belden, allowance 6, 17; John Wellbrock, allowance 5, 19; O. R. Wacondah, allowance 5, 10; James Flaherty, allowance 7, 7; James J. Conklin, allowance 5, 13; James Dalton, allowance 7, 7; F. A. Mannheimer, allowance 7, 7; Fred Boutiger, allowance 7, 7; Fred Passe, allowance 6, 15; Henry Kohla, allowance 7, 15; James Biggs, allowance 7, 9; George Elsie, allowance 7, 8; Richard Woods, allowance 6, 20; Minta (Mrs. Peter Ganns), allowance 7, 20; John Schlicht, allowance 7, 16.

Brooklyn Gun Club.

Brooklyn, July 29.—The small attendance shot till near dark steadily. Several matches were shot. In one at 25 targets Dr. Littlefield defeated Dr. Creamer by a score of 20 to 17. In a match at 25 Dr. Kemble defeated Dr. Littlefield by a score of 21 to 20, and in a return match Dr. Kemble again won, score 20 to 19. They tied in the third match—19 to 19—and in the fourth Dr. Littlefield was the winner by the excellent score of 23 to 21. In the fifth match they again tied—19 to 19—and in the sixth Dr. Littlefield won by the score of 23 to Dr. Kemble's 22. It was close racing throughout.

A number of the club members were absent on vacations, which acounts for the small attendance. All had a good time.

New Castle Gun Club Tournament.

NEW CASTLE, Pa., July 29.—The fourth annual tournament of the New Castle, Pa., Gun Club, held July 26 and 27, was an unqualified success, except, possibly, in point of numbers of shooters. Seventy-nine shooters faced the traps the first day, and between 5,000 and 6,000 bluerocks were thrown during the shoot, counting the miss-and-out events after the regular programme had been shot through. Unfortunately the Oil City, Pa., contingent, eight in number, had to leave for home Wednesday evening, and we would like to say right here that any tournament is bound to be a success with such true sportsmen and gentlemen as Dorworth, Bates, Chlay, Smedley, Loomis, Graham and Crozier present. Graham, of Oil City, carried off the honors and quite a wad of money the first day. De Witt, of Pittsburg; Hull, of Akron, and Snow, of Brooklyn, O., were the biggest winners for the second day. Perkins, of New Castle, made the best run, breaking 54 out of 55 shot at. Owing to a very sore shoulder he was unable to do much shooting the second day. Jimmy Atkinson, of the home club, did not shoot up to his usual high standard, owing to the fac tthat the burden of running the shoot was on his shoulders. (Some one has aptly said that one cannot shoot and work.) He was ably assisted by our hustling president, D. A. Moore, better known as the Farmer, who was here, there and everywhere, looking after the comfort of the guests, pulling trap, chasing the kids and cussing softly, but soulfully, under his breath, and busier, as he expressed it, "than a pup in a field of high oats."

The cashier's office was in charge of Billy Bryant, and suffice it to say that during the whole shoot there was not the shadow of a kick of any nature made, which speaks volumes for Mr. Bryant's efficiency. Wm. H. Hill was referee for the first day, and Will Harlan the second day. It is also a matter of record that not one objection was offered against their decisions. Bad Shot and No. 7, of Junction Park Gun Club, were present the first day. Both shot well and were very kind in their praise of the manner in which the shoot was conducted. Uncle John Gelm, of Braddock, Pa., demonstrated to the boys that age and a superabundance of adipose tissue do not affect one's shooting, as he shot in his usual fine form. Judge Wolfe, of the Common Pleas Court of Mansfield, Richland county, O., was present the second day. Owing to a slight indisposition he did not shoot much nor well, but by his genial ways he proved to all present that a man can be a mighty good fellow even if he is a Judge.

It has come to be generally understood in western Pennsylvania and eastern Ohio that a shoot is not a shoot in the fullest sense of the word unless Frank Snow, of Brooklyn, O., is present. The writer has had the pleasure of meeting Mr. Snow at quite a number of shoots during the last three of four years, and his slow, drawling "P-u-l-l" is familiar to hundreds of shooters, as is also the fact that his scores are usually very, very near the top. Mr. Snow said that our tournament was better than 90 per cent. of the ones he had attended during his career as a trap shooter. This, coming from a man of his experience, was mightily pleasing to the management. The refreshment stand was under the management of Billy Rearie, the leading caterer of our city, and the quality and quantity of the edibles he set up, as well as their cheapness, gave entire satisfaction.

The live-bird shoot, which occurred during the afternoon of the second day, showed that there are a few good pigeon shots besides W. Fred Quimby, notwithstanding Fred's well-known penchant for "straights" and—things!

By some unlucky chance, three crates of birds which the management had secured at a distance did not arrive at the express office until 4 o'clock on the evening of the second day, consequently there were only a few over 100 birds to shoot at. They were a good strong lot of flyers, and the event proved the most interesting one of the day. Klee was the only one to kill straight in the first event. Agnew (Pills) lost his only bird, the fourth, dead just outside the boundary, much to the regret of nearly everyone, as he was shooting in magnificent form.

Herewith find scores of both days:

Events:	1	2	3	4	5	6	7	8	9

Live-bird shoot—First event, 7 birds, $5 entrance.

De Witt	1220212—6	Gaston	1020021—4
Pills	222*211—6	Klee	1222122—7
Shaner	101*1*2—4	Clark	2*12012—5
Atkinson	221622*—5	Hull	1221102—6
Eggleston	1101212—6		

In the second event four high guns divided the purse. It was a miss-and-out, $2 entrance. The scores were Klee 1, Pills 1, Delbitt 4, Gaston 3, Shaner 1, Hull 4, Snow 0, Crable 4, Wolf 0, Atkinson 4.

Third event, miss-and-out: Pills 1, Atkinson 2, Delbitt 0, Crable 1, Klee 0, Hull 2.

HENRY P. SHANER.

Robeline Gun Club.

ROBELINE, La., July 22.—Our shoot was on July 20 and 21. The Winchester people sent two traveling representatives. These are gentlemen of the highest type, viz.: Messrs. F. M. Faurote and J. Hildreth. They will make friends and sell goods wherever they go. Everyone here is delighted that they visited our little town and will always extend them a glad hand. Unobtrusive, frank, genial, open-hearted, they captivated all. The W. R. A. Co. is fortunate in these two men. Mr. Faurote did some remarkable shooting, making 25 straight and three 15 straights and a total of 121 out of 125, or 97 per cent.

We have a forest for a background, which makes the shooting hard. We shot under the Sergeant system, with the traps set low and hard.

Mr. Charles Porter and J. W. Freeman, the first prosecuting attorney and the second sheriff of the parish, displayed the greatest possible nerve in shooting a losing race all the way through. Mr. Freeman especially distinguished himself, as did Mr. Richard Maher, of Many. These gentlemen will all make good shots in time, as they have the necessary perserverance.

We have four men here who are fast developing into experts, viz.: Messrs. Ponder, Henderson, Lindsley and Caldwell.

One-half cent on every target was given as an average to the five high guns shooting through both days. Those winning the first, second, third, fourth and fifth averages were: First, J. F. Welch; second, A. L. Ponder, of Many, La.; third, E. M. Lindsey, Robeline; fourth, H. Henderson, Many; fifth, J. H. Caldwell, Robeline.

All had a great time and went away feeling that they had got all the shoot they desired.

The manufacturers make a big mistake by not working this field. When the writer came here in 1893 the natives had never seen a clay target and trap. In fact, an old darky stole one of ours for a coffee mill. We started a gun club. Scores flocked to our shoots, and it has been spreading since, until now every town in the immediate vicinity has a club. Thousands of pounds of smokeless powder are used where before it was unknown. Scores of breech-loaders are in constant use where one was known formerly. All this by the unaided efforts of a few ardent sportsmen. We have constantly called for aid, but get none. Yet thousands of dollars are going into the pockets of those who refuse us. We expect to keep it up; another tournament will be held here the second week in September and one at Many in August.

The Rose system was used for the second time. It is not a success in small tournaments. It worked excellently in the Little Rock tournament last year, but this is the only place to my personal knowledge that it has. There was $500 added.

It was again remarked, "What a non-kicking, generous set of men a lot of true sportsmen are!" Truly, the lover of rod and gun is the "salt of the earth."

Mr. J. V. W. McCook and daughter Estelle handled the books to the satisfaction of all.

There is only one error in this report and that is in Mr. Hildreth's score, which was unavoidable and is small—i. e., the error is—as he shot like a veteran.

The Robeline Gun Club's tournament, July 20 and 21:

WESTERN TRAPS.

Garfield Gun Club.

CHICAGO, Ill., July 29.—The following scores were made to-day on our grounds, and for some reason the scores are not up to our general standard. Class A medal was won by Richards on a score of 21; B by Northcott, on a score of 21 also, and C by Cornelson on a score of 19. The day was fine, with only a light breeze and a very comfortable temperature. The low scores were probably caused by a heavy smoke bank from the city, making a bad background and an uncertain light. Visitors were numerous, among whom were quite a number of ladies. All seemed to enjoy themselves. The scores:

Team shoot: Hellman 11, Dr. Shaw 12, Northcott 13, Nusley 10, Workman 13, J. Wolff 9, J. Fanning 8, Dr. Graves 7, Dr. O'Byrne 5, Strichlik 3, Pollard 5; total 96.

Richards 8, E. S. Graham 14, McClellan 11, Dr. Meek 11, Smedes 8, Ford 15, Mrs. Shaw 10, Cornelson 6, Kehl 5, Brabrook 8, Baker 10; total 96.

Trophy shoot, 25 targets:

DR. J. W. MEEK, Sec'y.

Arkansas State Championship.

PINE BLUFF, Ark., July 22.—*Editor Forest and Stream:* We notice in a recent issue of FOREST AND STREAM a communication from Fort Smith stating that Joe Matthews had held the State championship medal unchallenged ever since he won the same from John J. Sumpter, last fall. While every shooter in the State is familiar with the "muddle" the State championship medal has gotten in, we desire to call the attention of the outsiders to a few things, with the sole purpose of showing that the gentlemen composing the Pine Bluff Gun Club have more courage than the honorable secretary of the Fort Smith Gun Club gives us credit for.

In the first place, the rules governing the championship medal require the challenge to go to the treasurer or secretary, accompanied by $10, and the shoot advertised in some paper. This Mr. Matthews did not do, hence the Pine Bluff Gun Club protested for the purpose of warning all future would-be champions as much as anything else.

Mr. J. A. Coles considered Mr. Matthews such a "good thing" that he could not wait until the officers of the Arkansas Sportsmen's Association rendered their decision on our protest, and for fear it might be in favor of Mr. Matthews and some one would get a chance at him first, he immediately challenged Mr. Matthews in the regular way; but in a few days received word from the secretary or treasurer that the officers had declared the match not according to rules governing the same, and that John J. Sumpter was still champion. Mr. Coles immediately challenged Mr. Sumpter, and after his challenge went unanswered for sixty days, the required time, he withdrew his money from the treasurer, and according to the rules governing the medal J. A. Coles, of Pine Bluff Gun Club, is the proper owner of the championship medal of the State of Arkansas.

We desire to say in this connection that we, the Pine Bluff Gun Club, are not shooting 1,000 per cent., but by no means consider Mr. Matthews a "hard proposition," as the secretary of Fort Smith Gun Club does, and that furthermore we expect to have three, probably six, shooters at the State shoot in Little Rock Aug. 15, 16 and 17, that will break more targets in the championship race than the hard proposition from Fort Smith.

SECRETARY.

Trap Around Reading.

READING, Pa., July 29.—The Electric Rod and Gun Club, of this city, held an interesting target shoot this afternoon at the club grounds, on Neversink Mountain. A large crowd witnessed the events. Scores:

First event, 25 targets: Longacre 21, Luft 19, Coxe 23, Wentzel 24, Wolf 23, Enis 16.

Second event, 25 targets: Coxe 22, Bettinger 22, Maderia 22, Bowers 21, Trumbauer 24.

Third event, 25 targets: Coxe 19, Brown 13, Bettinger 24, Wentzel 22, Weidner 19.

Phoenixville, Pa., July 27.—The Phoenix Gun Club held a large meeting this evening, and arranged a series of intercity shoots between teams of ten men from the West Chester Gun Club, of West Chester, Pa.; Shuler Gun Club, of Pottstown, Pa., and the Phoenix Gun Club, the first match to be shot at West Chester, Aug. 17.

A committee was also appointed to purchase a gold medal to be shot for once a month and awarded the person who scores the greatest number of wins in one year.

Pottsville, Pa., July 28.—The live-pigeon and target match at Minersvile, Pa., to-day under the management of David Weiss, of that place, was a success. The programme called for two live-bird matches at 10 birds each, and one target match at 10 targets. The first live-bird match had ten entries, and Haverty, of Pottsville, won by killing 7. In the second event Haverty and Bechtel, of Pottsville, divided first money, each killing 9 out of 10. In the target event, Haverty, Weir, of Cumbola, and Danden, of St. Clair, each broke 9 targets and divided first money.

West Chester, Pa., July 29.—At the regular Saturday shoot held here to-day on the grounds of the West Chester Gun Club, Ford won the challenge cup after shooting off a tie with Lumis. The score:

West Chester challenge cup, 25 targets: Ford 23, Lumis 23, Jackson 15, Nate 15, Davis 18, Howard 15, Mowere 17, Hoopes 17, Todd 11, Hoar 18, C. Brinton 19, P. Brinton 17, Sellers 19, Ferguson 21, Gill 16, Harrison 16, Peters 22, Henry 22.

DUSTER.

Soo Gun Club.

SIOUX CITY, Ia., July 28.—The eighth of the series of shoots of the Soo Gun Club for the Schmelzer trophy took place at the Soo park, on the afternoon of the 27th inst. Myer and Duncan tied for the honors of the day.

After the principal event a number of the boys shot up their back scores, and a lot of them are now in a bunch.

Practice, 10 targets: Kortright 9, Hunter 9, Duncan 9, Harris 8, Gray 9, Leach 8, Bowser 4, Dye 8, Boubrake 2.

The scores of the main event follow:

Kortright, 2	1110101000111111111111110101111	—23—2—25
Gray, 1	1111110111011111011100110110111	—23—1—24
E A Leach	1111111111111111111111111111110	—29

Event No. 2, 30 targets: Leach 25, Kortright 25, Hunter 24, Ellis (2) 25, Hoberg (3) 24.

Event No. 3, 30 targets. Kortright 27, Ellis (2) 24, Trotter 26.

Event No. 4, 30 targets: Ellis (3) 28, Keefe 23.

Event No. 5, 30 targets: Ellis 27 Keefe (2) 25.

WANECHA.

E C Cup.

JULY 24.—There are few men who have held the public gaze in the trap-shooting world more earnestly and persistently than have Messrs. J. A. R. Elliott, of Kansas City, and W. R. Crosby, and this on their merits as great performers with the shotgun in competition where the best artists of the gun do congregate.

There was a great attendance of spectators, the fame of the shooters and the importance of the event evoking the highest degree of interest.

The weather was of the humid kind which at that time was distressing the people throughout the East, the air being so full of moisture that the perspiration on the skin could not evaporate, and acted as a blanket when no blanket was needed.

Elliott used the gun which he has contributed to make famous and which reciprocally has added to his fame. His load was 40grs. of Hazard powder in a 2⅞in. Winchester Leader shell, with 1¼oz. of No. 7 chilled shot.

Crosby shot his Baker gun, his load being 44grs. of E. C. powder in a 3in. Leader shell, and 1¼oz. of 7½ chilled shot.

J. A. R. Elliott.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Midsummer Target Tournament.

July 22.—There was a mighty turnout of shooters at the Midsummer Tournament and five men team contest, held at Holmesburg Junction, Philadelphia, July 22.

Fourteen teams were in the competition, the conditions of which were five men to a team, 30 targets, of which 15 were known and 15 unknown angles, with free entrance and free targets. Cup to winner. The scores in the team race were as follows:

Keystone Shooting League, No. 1.—W. H. W. 26, Landis 27, Ridge 24, Stevenson 22, Longnecker 26; total 125.

Florist Gun Club, No. 1.—Anderson 24, Cartledge 23, Life 22, Burton 22, Coleman 23; total 114.

Penn Gun Club.—J. R. Yost 25, H. M. Johnson 24, F. Gross 24, R. Jenkins 19, T. V. Smith 22; total 114.

Keystone Shooting League, No. 2.—J. A. Ross 26, A. C. Stevenson 20, Eames 23, Henry 22, Franklin 21; total 112.

Trenton Gun Club.—W. T. Taylor 23, F. Smith 16, C. A. Allen 24, W. Widman 26, W. Vanarsdale 21; total 110.

Frankford Gun Club.—W. Bourne 26, Betson 24, H. George 21, Puff 21, Davis 17; total 109.

Clearview Gun Club.—Downes 16, Senat 22, Fisher 25, Urian 23, Miller 23; total 109.

Glenwillow Gun Club.—McFalls 20, Giles 23, Cowen 20, Pepper 21, Shaaber 25; total 109.

West Chester, No. 1.—Torpey 25, Peters 18, Ford 22, Gill 19, Lumis 21; total 105.

Silver Lake, No. 2.—Woodstager 19, Peden 22, Reed 23, McGregor 18, Felix 22; total 104.

Hillside Gun Club.—Parsons 26, W. Haywood 19, J. Haywood 16, M. Bisbing 22, R. Bisbing 21; total 104.

Silver Lake Gun Club, No. 1.—Fisher 20, Winchester 20, O'Brien 25, Edwards 19, Lane 19; total 103.

West Chester, No. 2.—Davis 20, Ferguson 20, Brinton 17, Devoe 23, Henry 19; total 99.

Wayne Gun Club.—Phillips 19, Duway 19, Wood 24, Smith 22, Green 15; total 99.

Florist Gun Club, No. 2.—Dorp 14, Daniels 17, Reed 15, Harris 22, Georges 14; total 82.

The programme events had a total of 175 targets, which resulted in high scores in the aggregate as follows:

W. H. Wolstencroft broke 153, average .874; J. S. Fanning 151, average .863; H. Ridge was third and D. Longnecker fourth. H. Money shot at 105 targets, with an average of .885 per cent.

The scores:

Echoes from the Green Mountain State.

Editor Forest and Stream:

At the Bellows Falls tournament held June 14 and 15 fifty-six different shooters took part in the various events. Of this number but four were manufacturers' agents, Messrs. Norton, Le Roy, Dickey and Colville; seven were fairly good amateurs, who shoot considerable at the trap, and the remaining forty-five were virtually beginners at the trap, the very class that the Interstate Association is desirous of encouraging, developing and bringing forth.

In round numbers 10,000 taregts were trapped in the regular and preliminary events and practice.

Shooters were present from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York and Canada.

At the close of the tournament the local club expressed its satisfaction over the increased interest created, and discussed different methods of handicapping, with a view of bringing out their weaker shots and placing them on an equal footing with the better shots in the club to contest for some special prizes already offered.

On the whole, it was considered one of the best and most successful tournaments ever given by the Association; that is, taking it from an Interstate Association standpoint, viz., "the encouragement of trap-shooting."

The settlement of Bellows Falls antedates the memory of man, but if we are to judge by its physical conditions and surroundings and the case with which its inhabitants ascend steep grades we are led to believe that the original Bellows Falls people, charter members, as I might say, are descendants from the Cliff Dwellers, for we see in Bellows Falls houses perched upon the sidehills reached by sort of terraces instead of by ladder.

The town is beautifully situated among these high hills, and the deep gorge that runs through it affords some beautiful views from the neighboring hills and bridges. The beautiful homes, well-kept lawns and sea breezes are very attractive, and I know of no place in New England that impressed me so favorably to make a home as this snug little corner in the Green Mountain State. I am quite sure that all the sportsmen who attended the recent Interstate tournament will be found present at the next meeting, using their influence to bring others with them. The firm of Norwood & Field have a fine general hardware and sportsmen's goods store, are energetic business men and active members of the Bellows Falls Gun Club. I also had the pleasure of meeting Mr. Leach, an oldtimer, who has been identified with shooting interests for the last forty years or more, and at one time was a correspondent to the sportsmen's press. I enjoyed the close friendship of Mr. Charles Hallock; my visit with him was reminiscent and delightful. The last evening of my stay Dr. Knight invited Messrs. Shaner, Norton and myself to visit his rooms, and gave us a delightful hour listening to a description of his experiences in the woods and on the water and examining pictures from his camera of scenes while afield. The pictures for most part were very artistic, showing the amateur hand advanced in the science of photography. The doctor is a thoroughbred sportsman in every sense of the word; he is a hard worker at his business, but takes a portion of each year for recreation, and thereby building himself up in a physical condition to take care of his business and insuring to a certain extent a long life. Pity it is that there are not more like him, and fortunate it is that some are seeing the way as he sees it.

DICK SWIVELLER.

Connecticut State League.

BRIDGEPORT, Conn., July 27.—The fourth shoot of the Connecticut State League was not well attended. The club grounds in Stratford were the scene of the competition. The tournament nevertheless was a success.

There were twelve events on the programme, at 10 and 15 targets, 165 in all, with a total entrance of $10.

Among the notable marksmen present were Dr. A. A. Webber and L. H. Schortemeier, of New York, who are regular attendants at all metropolitan trap shoots. Others present were W. F. Parker, of Meriden; Messrs. Potter, Claridge, Whitney, Robertson and Bristol, of New Haven; Joyner, Bartlett, Phelps, Bronson, Brown and Holmes, of Winsted, Norton, of New York, and Drake and Fox, of Norwalk, all well known in sporting circles. This city was represented by U. M. C. Thomas, M. Beers and Fruit, the latter a shooting name.

St. Paul Rod and Gun Club

ST. PAUL, Minn., July 22.—The St. Paul Rod and Gun Club held its regular weekly shoot on Saturday afternoon. Several merchandise prizes were shot for, resulting in lots of sport and some good scores.

Danz won the prize in the first event. Dr. Cameron won in the second event, after shooting off the tie with Kellsey. Danz, Perry and Morrison tied for first in third event (not decided); Wilkinson second and Kellsey third.

Morrison having won the senior badge so many times refused to be a contestant for it, which was very kind of him to give us fellows a show for it, as we are outclassed by him when he just scored 373 out of 385 at our tournament.

A. E. P.

Bay State Gun Club.

WORCESTER, Mass., July 29.—Herewith are the scores made at the tournament of the Bay State Gun Club, Friday, July 28. Interest in trap-shooting has been at a very low ebb here for the past year, but the enthusiasm shown in this, the first tournament of the new club, promises a speedy revival of the sport.

Hitherto the attendance at local shoots has ranged from a half dozen to zero. We had eighteen shooters present, and believe this an indication that the trap-shooting thermometer is on the rise.

Among the shooters present were the genial Leroy Woodward, representative of the Remington gun, who gave an object lesson of the merit of Du Pont and U. M. C. goods; G. H. Wheeler, of Marlboro; H. G. Griffith, of Pascoag, R. I.; I. O. Converse, E. R. Cutler, of Fitchburg; F. L. Gilson, Fred Lenoir, D. W. Sawin and W. B. Stacy, of Gardner.

Leroy was in fine form, and succeeded in winning two of the silver trophies and the Forehand gun. The latter he generously donated to Mr. Cutler, of the Fitchburg Club, to be shot for in the coming tournament there.

The shooters expressed themselves as much pleased with the pleasant location and fine backgorund of the club. The management promises another tournament about Sept. 10, with merchandise prizes or added money.

F. BUCKLIN, Sec'y.

Mr. E. S. Rice to Americann Sportsmen.

IN a personal letter to us from Mr. Rice is the following paragraph: "The time has arrived, it seems to me, when the Western sportsmen should join hands in an effort looking to the establishment of a shooting park that shall be second to none in the world, and it is under this impression that I make the present effort."

CHICAGO, July 29.—To Sportsmen of America: The unprecedented growth and success of the Grand American Handicap, and the promised continued growth, led to a fear quite generally expressed during the latter days of 1898, that as an annual institution it was becoming "to large and too cumbersome for successful management."

It was editorially stated in one of the Eastern sporting papers that "nothing would swamp the Grand American Handicap so quickly and so effectively as a squad of shooters from every city."

Being unable to agree with this sentiment, I have been urged by many friends to express my views regarding greater accommodations for sportsmen, and I shall herein present same in response to such requests:

In 1897 I attended the Grand American Handicap, accompanied by fifteen other Western gentlemen. In 1898 I organized a second party and was accompanied by fifty-two ladies and gentlemen.

Upon the occasion of the last Grand American Handicap I organized a third party and was accompanied by 100 ladies and gentlemen.

This rapid increase in attendance indicates very clearly an increasing interest in trap-shooting matters, that warrants an effort on the part of American sportsmen to secure grounds, buildings and general accommodations of a magnitude sufficient to meet all demands of the present and as far as possible anticipate difficulties of the future, and responding to an oft-repeated demand upon me personally, I have concluded to submit a plan and to offer a few suggestions.

In selecting Chicago as the one most available site for the World's Exposition, Congress in 1890 paid that city a tribute that may at this time be repeated by American sportsmen in the selection of a site that shall be par excellence for national and international tournaments.

I believe it is an indisputable fact that Chicago furnishes the greatest transportation facilities of any city in the world, and each trunk line (in the neighborhood of thirty, I believe) pays particular attention to its suburban facilities, thus bringing outlying districts closer to the heart of the city of Chicago than is the case in almost any other city in the Union.

Several suitable sites for the purpose under consideration are available and within thirty-five minutes (by steam) of best hotel accommodations.

The strongest and best live birds are to be had, and in abundance at all times of the year, at this point. It would in my opinion prove an admirable and an acceptable point for the holding of individual contests, so often following little disagreements among shooters as to personal prowess.

Thinking over this matter from time to time, the claims of this section to something better than we have ever enjoyed in the way of shooting grounds has been forced home upon me.

Eastern sportsmen and visiting brothers are accommodated at Elkwood Park (near Long Branch, N. J.) upon grounds that were once thought ample, that are, as a matter of fact, very beautiful and complete, but to-day scarcely large enough for a gathering *upon a general invitation to American sportsmen.*

Our country is large enough, our sportsmen liberal enough—why should we not have beautiful shooting grounds in New Jersey, Illinois, and upon the Pacific coast?

Concluding that I must vote in the affirmative, I have thought of and with pencil in hand spent many an hour upon the question of grounds and buildings. Evolving as a result but crude sketches and drawings, I appealed to a personal friend in no particular interested in shooting matters, but a splendid architect. Giving this friend (Mr. Foltz) all information regarding shooting parks and shooting matters that I possessed, together with my sketches and figures, Mr. Foltz has very kindly prepared a drawing and a perspective which I have pleasure in submitting to my friends, and beg to further offer in explanation of Mr. Foltz's work the report by that gentleman accompanying the drawings aforesaid.

Modestly advocating this enterprise, the selection of Chicago by sportsmen generally as a central point, and earnestly asking the co-operation of all, I would further invite consideration of the following scheme:

About forty acres of inclosed grounds, well located as to transportation, is the first requisite; large club house, gun rooms, superintendent's residence, pigeon lofts and dog kennels, a second; finally the grounds should be laid out so as to accommodate, in my opinion, not less than five sets of the most improved traps to be had.

Ample accommodations must be provided in this club house and upon its grounds for 500 to 1,000 contestants, and it is with these needs constantly in mind that I have striven.

To provide these good things money will be required. Money, and considerable of it, will be absolutely requisite.

Believing that sportsmen without exception will take greater interest in an enterprise of this kind, having first become contributors, I suggest that this scheme be taken up by each interested gentleman as a personal matter; that it be carefully considered by each individual and that for himself he determine the extent of his interest and the consequent amount of his contribution, providing an organization shall have first been formed under the laws of the State of Illinois, in and to the success of which not less than 100 well-known and responsible sportsmen shall have pledged themselves as charter members, each and every charter member binding himself to pay upon completion of the organization and before soliciting funds generally the sum of $100.

This would afford a guarantee of good faith and success to the general contributor. Subscriptions in reasonable amounts should of course entitle the subscriber to certain privileges, the extent and duration of which would be determined by those finally chosen to manage the association's affairs.

From the charter members the first board of directors should be selected, and the board of directors should from its number annually select a president. The directory should be selected for varying terms, one, two and three years' service, thus at no time necessitating the incoming of an entirely new board.

In conclusion, I should like to hear through the columns of the sporting papers, or direct and as a personal matter, opinions of those who may find interest in this question. I should like to hear *personally* from every gentleman who will become a charter member in the proposed organization.

I have repeatedly been promised the support of sportsmen of the West in an enterprise of this kind, but I desire a new pledge from each, and in turn I promise that no use shall be made of the pledge until at least 100 shall have expressed a desire for incorporation and co-operation, when I will issue through the columns of the sporting papers a call for a meeting.

Further effort on my part will depend entirely upon the promptness with which I shall receive responses and the degree of interest taken in the foregoing scheme, which is respectfully submitted by yours truly,

E. S. RICE.

The Architect's Letter.

CHICAGO, Ill., July 19.—Mr. E. S. Rice, Masonic Temple, Chicago, Ill.: My Dear Sir—Carefully following suggestions and making use of data submitted by you, I have pleasaure in the delivery herewith of a sketch or ground plan and a perspective (two separate sheets), which I believe embrace your ideas of ample trap-shooting grounds.

In explanation of these sketches permit me to say that they provide for five sets of live-bird traps, and if desired an equal number of plants for throwing clay birds, in live-bird tournaments, permitting five contestants to shoot simultaneously and each entirely independent of the other.

This plan requires five boundary rings or circles 300ft. in diameter, the boundary being a segment of a circle, with a radius of 50yds., and a dead line; the circle drawn from the center trap terminates where it joins the dead line on each side of the shooter's score, and the dead line is placed at a point 33yds. distant from the center of the trap and at right angles to a line drawn from the center of the trap and at right angles to a line drawn from the shooter's score to the center trap.

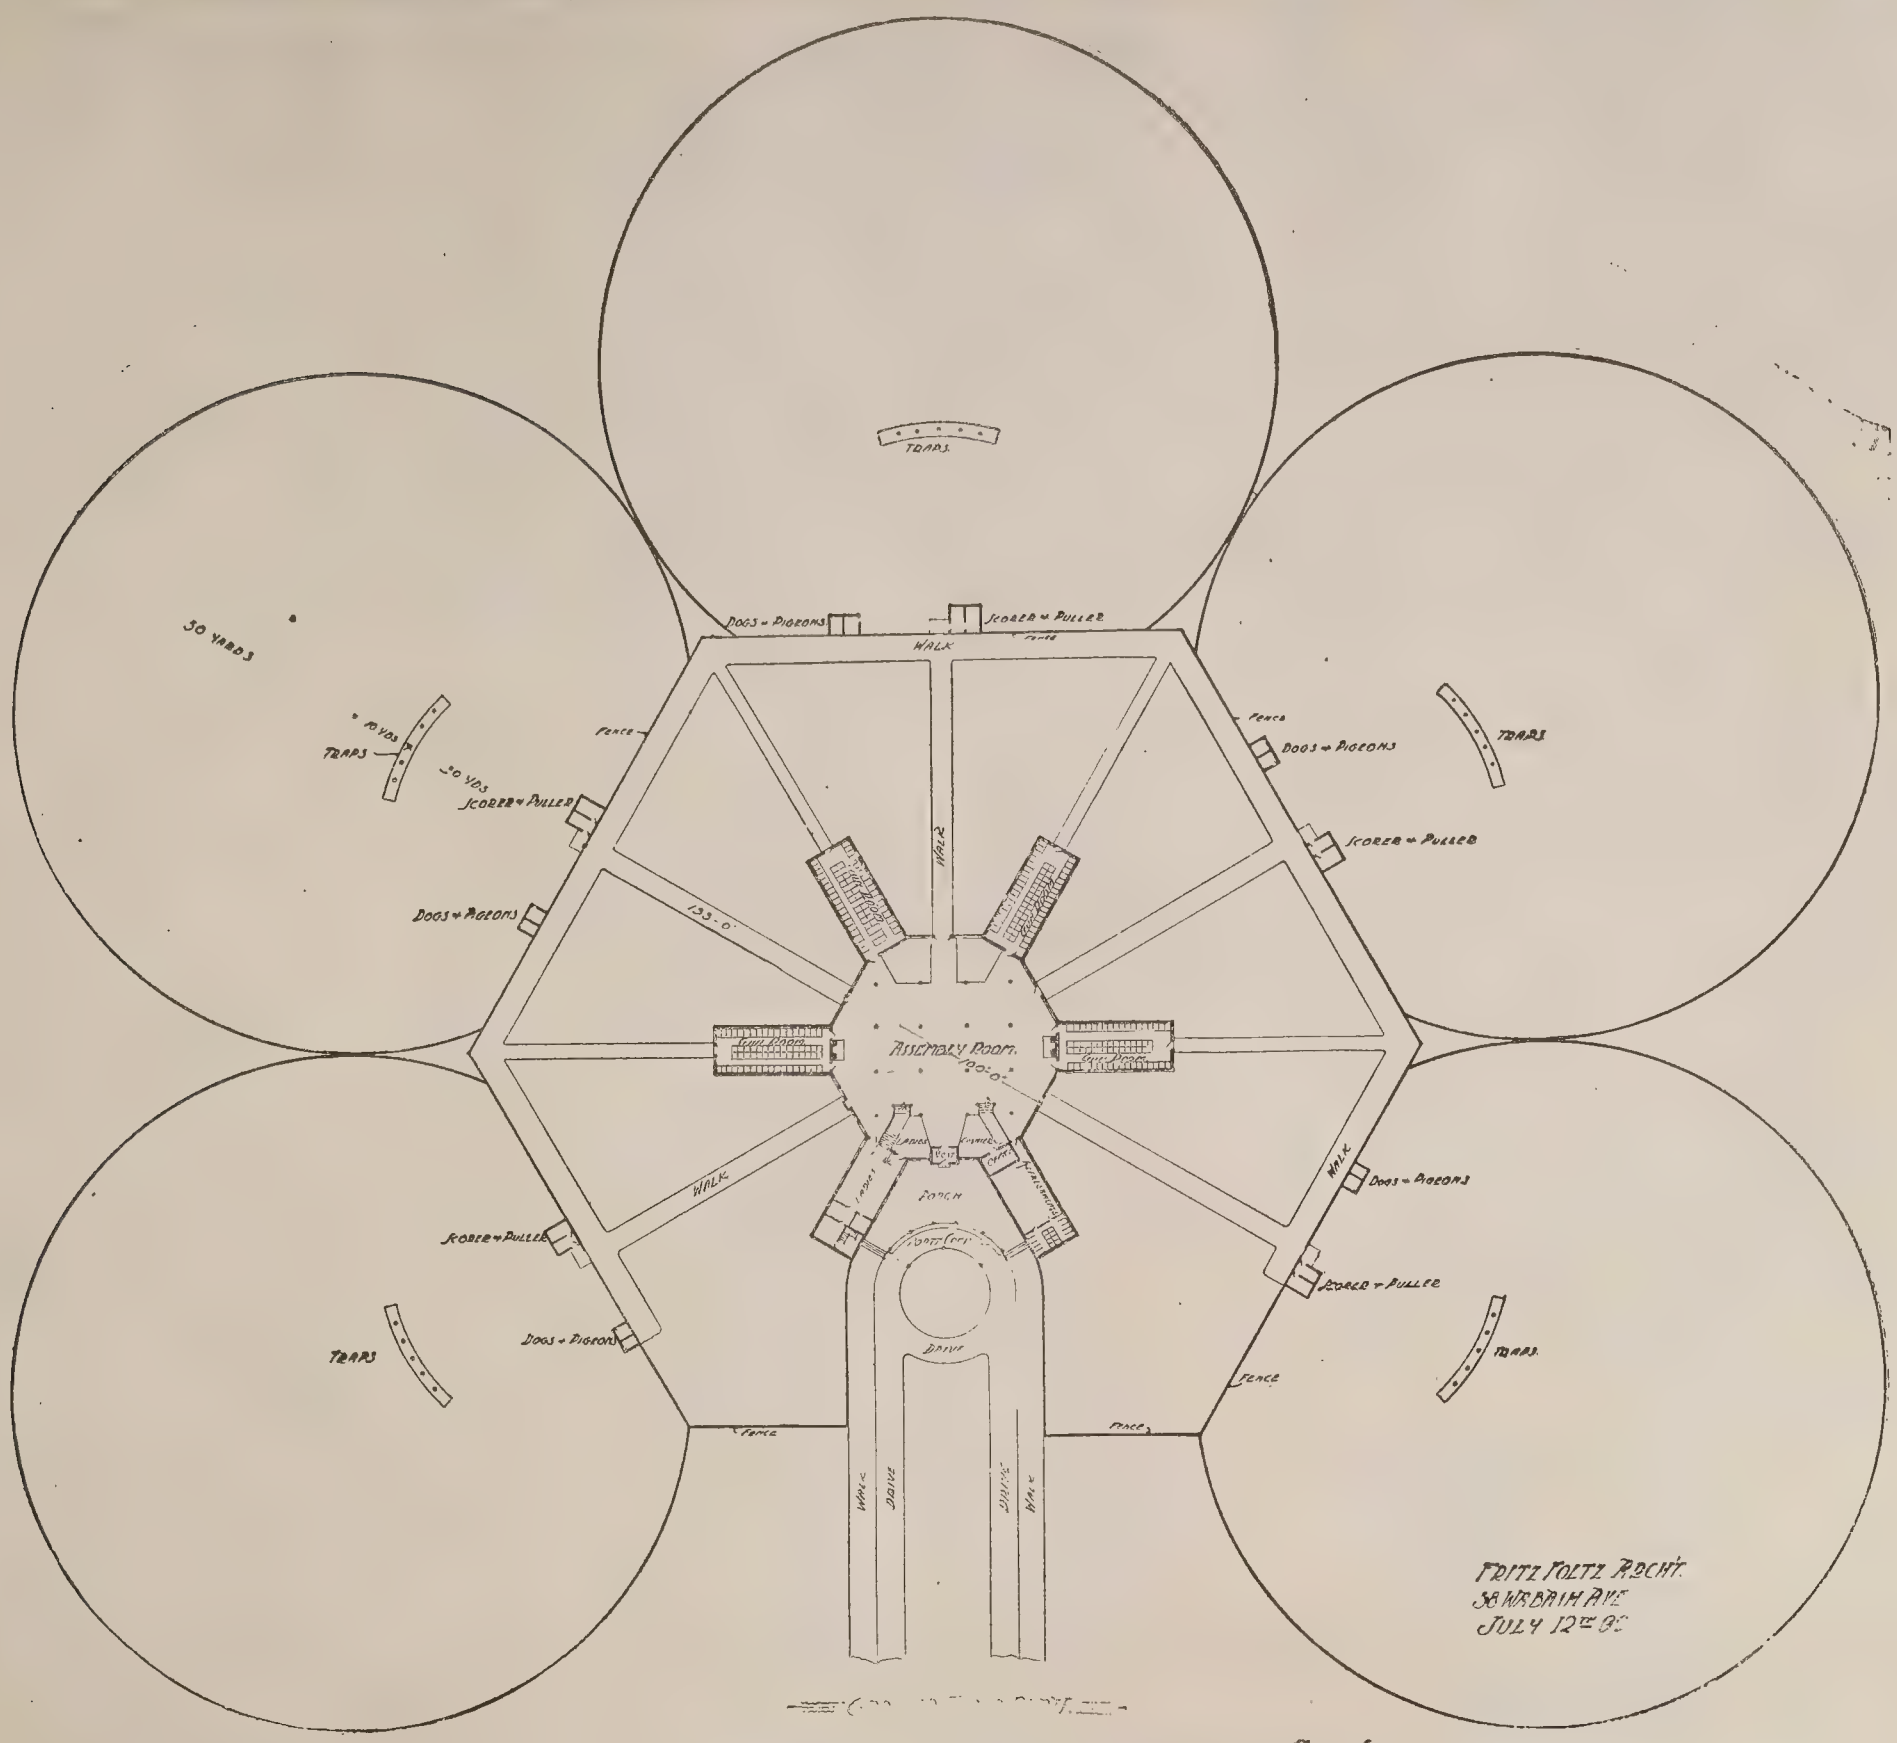
That the distance from the shooting score to the gun rooms and club house may be minimized, a plan has been adopted contemplating a hexagonal building in the center field, five sides of which form the base or dead line of the five outer or boundary fields, while the sixth will be used for access to the building, the hexagonal center field to be surrounded on five sides by a strong picket fence, separating spectators from shooters.

Five gates or openings for access to the shooting scores should be provided. On the inside of this fence will be a promenade 16ft. wide, extending entirely around the hexagon, which will in turn be connected with the building by walks for spectators and shooters, radiating from it.

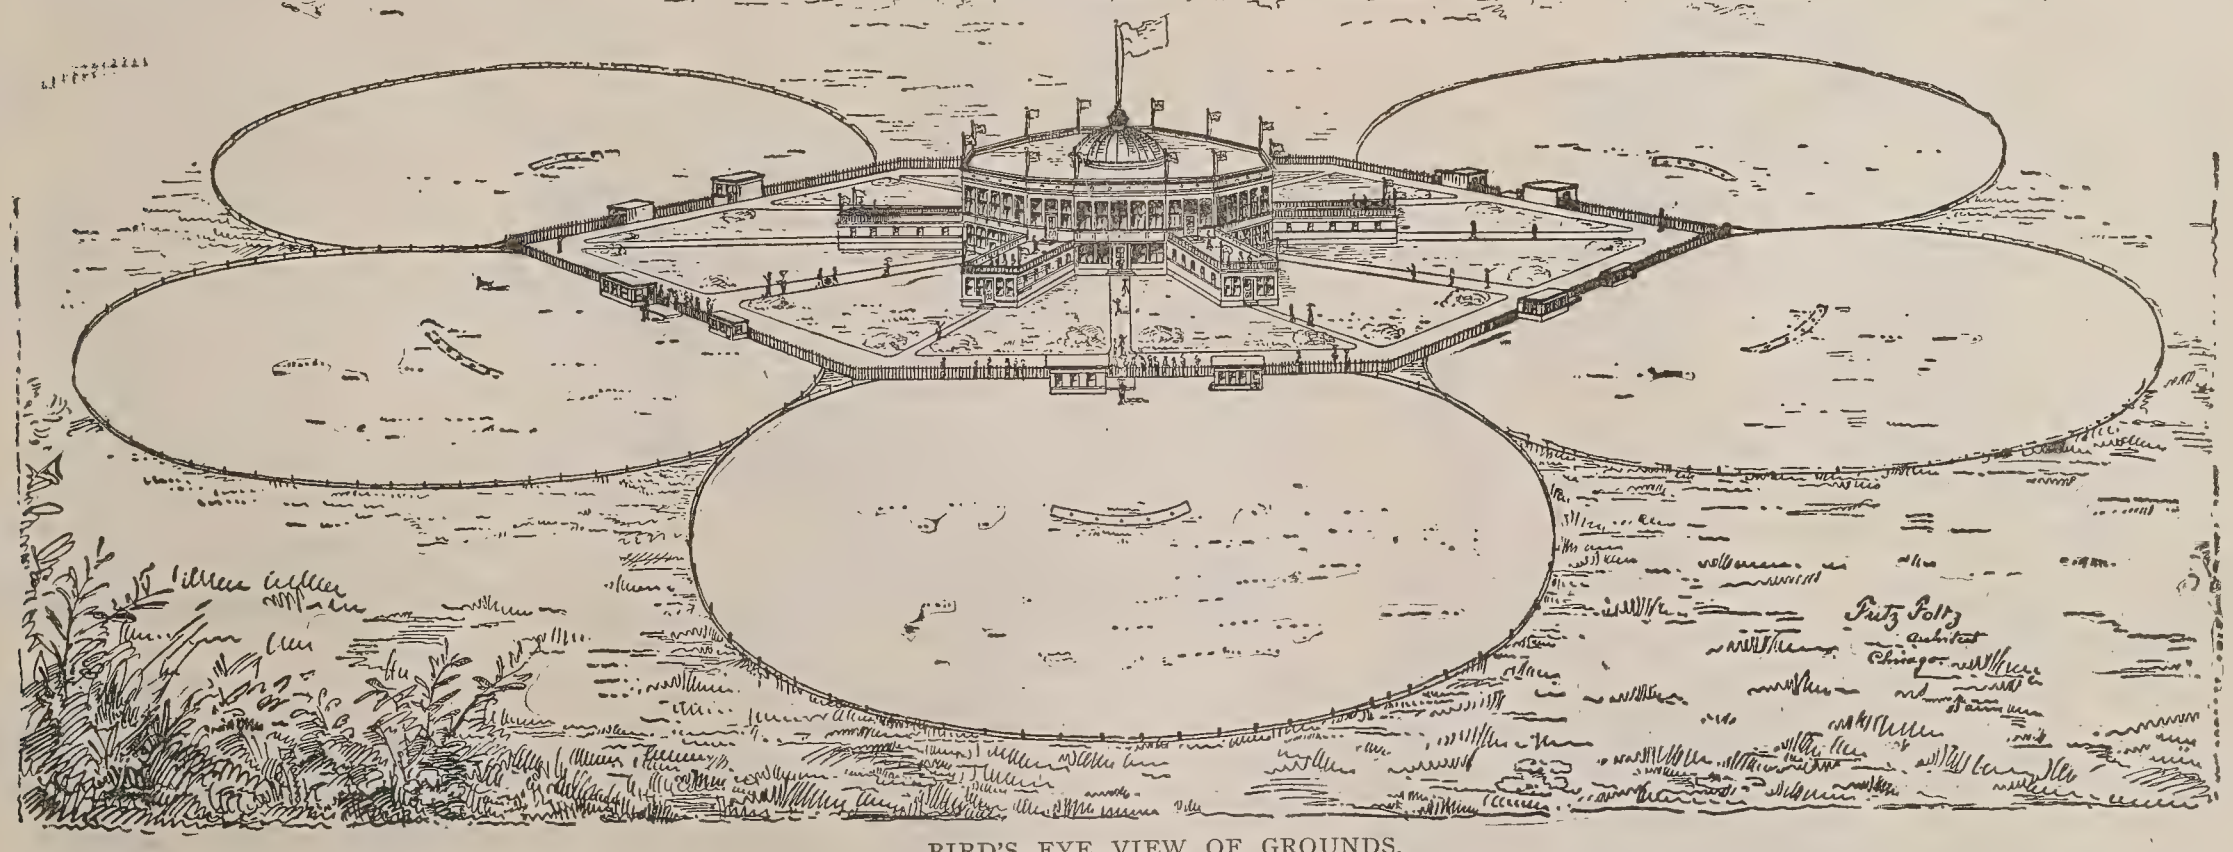
On the right of the shooters' several positions should be constructed houses for trap-pullers. Traps and trap-pulls should be automatic in their action, so that the manipulators are in ignorance as to which trap will be opened by the levers they press.

On the line of the shooting score are to be located still larger houses for the referee and scorer, for retrieving dogs, their keepers and pigeon crates.

The traps may be placed over semi-circular trenches or not, as the question of underground or surface traps may be decided upon later.



As shown in my perspective, each trap boundary is indicated by circular wire fence, presumably about 18in. in height. Grounds should be sodded, the center portion about the buildings beautified



Supplement to Forest and Stream.

ON THE HEIGHTS.

Copyright, 1899, by Forest and Stream Publishing Co.

BIRD'S EYE VIEW OF GROUNDS.

by flower beds, the entire grounds surrounded by substantial fence to keep out intruders.

In the center of the hexagonal field will be placed the club house proper. This will consist of a main building, planned in shape of a twelve-sided polygon and six wings, radiating from the center building like the spokes of a wheel.

The main building and the two south wings will be two stories in height, while four of the wings will be but one story in height.

The buildings are to be classic in style, plain in detail, but effective in general appearance, owing to the breaking of the sky lines by projecting wings.

The main building will be adorned with a dome of moderate height, with a lantern crowned by the Stars and Stripes. The twelve corners of the main building and the corners of the wings will be decorated with flags of foreign countries. The predominating color of the buildings will be white.

In approaching the grounds from the railroad station and public highway one passes through ornamental gates, with gate lodge for the gate-keeper, which controls the whole of the grounds. By drives and foot-walks one reaches the building. In the space between the two south wings, through a spacious covered porch, part of which will give ample room for several carriages to land their passengers under cover. In this part of the grounds will be located bicycle stands and accommodations for horses and carriages for the convenience of those who reach the grounds by horse conveyances.

In entering the building one will find himself in a large assembly room 100ft. in diameter, with two large fireplaces on either side. To the right of the entrance will be the cashier's and bookkeeper's office, connected with a private office. Back of this will be a buffet, where refreshments will be served. Connected with this will be the toilet room for gentlemen.

On the left of the main entrance will be a space railed off for ladies, and connected with it will be a ladies' parlor, with dressing and cloak room and toilet room.

On the side opposite the main entrance on the right will be located the space for the compiler of scores, and on the left a space for the members of the press, with telegraph and telephone rooms.

There are to be five exits from the assembly room leading to the grounds through spacious double doors, flanked by large windows. These exits will lead to 10ft. walks connecting the building with the promenade walk for spectators.

The four remaining rooms are to be used for gun rooms, where about 300 lockers will be provided for shooters. These gun rooms are to be connected with the promenade by 5ft. walks for the shooters.

At either side of the main entrance is to be placed a broad stairway leading to a large foyer, and through this into a large banquet hall, where about 500 people may be seated at one time at individual tables.

At either side of the main entrance and underneath stairways leading to the large foyer will be constructed fireproof vaults for the safe care of guns that may be left with the management from time to time.

The wings containing the ladies' parlor and toilet rooms and the buffet will be two stories in height. The second stories of these wings will contain the kitchen and service rooms and private dining and board rooms.

The four flat roofs of the wings containing the gun rooms will be covered with plank, and railed in for the spectators who care to watch the shooting.

The whole of the outer walls of the first and second stories will be glazed, with large windows, and will have glazed doors, so that ample facility will be provided for spectators to follow the shooting in bad weather.

Under the kitchen wing will be placed a basement for the heating apparatus.

The whole of the structure will be light and airy, and everything will be done to give as much opportunity to watch the shooting as possible, while all comfort and convenience will be provided for the members of the association and their guests.

I have assumed in this work that it would be the purpose of the promoters of this enterprise to furnish in the grounds and buildings herein contemplated an ample place for the congregation of sportsmen, tournament accommodations exceeded by nothing of the kind in the world, where guests of its promoters could be cared for in a manner worthy of our great city, of its sportsmen, and thus afford best possible opportunity for a test of skill in a sport second to none.

If I can be of further service to you or to your sportsmen friends you have but to command. Yours very truly

FRITZ FOLTZ.

Fort Smith Gun Club

Fort Smith, Ark., July 23.—The practice shoot of the Fort Smith Gun Club which should have come off on Thursday was postponed on account of rain, and Saturday found only five members facing the traps. The grounds were not yet dry, and the trap boys had very uncomfortable quarters; but after the trap house was baled out things went on about as usual. The day was awfully hot and the birds somewhat erratic.

Coffee was the only man in Class B present to contest for the medal. He remarked: "I knew there were no Class B men coming out to-day, so I thought I would come out and win the medal," which caused a laugh.

The conditions governing the contest for the medals were changed from 50 birds to the man to 25 birds, it being the opinion of the club that it would give the weaker shots a better show.

After the medal race two sweeps, one of 15 and one of 10 birds, were shot. Hunt was badly off in his shooting, and is beginning to believe that there are ups and downs in the shooting game.

Regular practice shoot next Thursday evening at 4:30.

Medal Race—Class A.

Matthews	14	5			

July 28.—The regular weekly shoot of the Fort Smith Gun Club took place at the club grounds Thursday evening. The attendance was fair, considering the hot weather, though quite a number of shooters are out of town on business and otherwise.

Matthews' shooting was the feature of the day, he winning Class A Gardner Jewelry Co. medal on 25 straight, and then running 23 more straight in the team race, making 47 straight, and finished up the day with 49 out of 50, and with no effort whatever.

Coffee won Class B medal for the second time, though, unlike the last week's shoot, he had competition, and Judge Oglesby was the runner-up. The Judge was heard to remark as he missed his last 3 straight something about the weather being warm. If the Judge had broken 2 out of that last 3 he would be now the proud possessor of Class B medal instead of having Frank Coffee strutting around a two-time winner and telling Bob Hunt that if "he will just watch and hold his gun like he does he can wear medals too," to which Bob replies, "Just you wait, young fellow; I'll catch you some day when I'm feeling pretty gay, and I'll make you look like 30 cents."

The team race was a walkover for Matthews' team, they winning in easy fashion by a score of 72 to 64.

The programme for the ninth annual Arkansas State Sportsmen's Association tournament, which is to be held at Little Rock, on Aug. 15-17, will be out in a few days, and will be distributed to the members of the Fort Smith Gun Club by the secretary. In this tournament $375 will be added to the purses, and targets will be thrown for 2 cents each. Purses divided Rose system. There will also be team races and the race for the individual championship medal, now held by Mr. Joe Matthews, of Fort Smith. It is to be hoped that a team representing Fort Smith will be in attendance. We have the material, if they will only get toegther and work.

Following are the scores:

Medal Race—Class A.

Matthews .....1111111111111111111111111—25
Baptiste .....1011100111011111111111111—21

St. Louis Doings—The Busch Medal.

St. Louis, July 22.—The initial contest for the magnificent Busch challenge medal took place at Dupont Park to-day, and brought out the goodly number of twenty contestants, which represented the very acme of St. Louis shooting talent. In consequence, it was not very surprising that this race should have developed a most spirited contest, as three of the principals killed 25 straight. The shooting of Griesedick, the ultimate winner, was especially noteworthy, as his last 30 birds were shot from the 33yd. mark. The contest took place under what is known as the Riley handicap, which compels the contestant who scores straight to go back 1yd. after each bar of 5. Thus Griesedick started in at 29 yds. and had gone back 4yds. by the time he shot his final 5 in the original contest. The shoot-off took place from the mark reached by those in the tie, and for this reason the winner's score of 49 out of 50 ranks among the very best performance on the local grounds. Kling and Conrades both shot very well, but could not keep stride with Griesedick, and were rather easily disposed of in the shoot-off.

The conditions of the race are 25 pigeons, handicap rise, winner subject to challenge every fourteen days, and is allowed that length of time to accept and name date for contest. Anyone residing in St. Louis county can challenge for the trophy, and must send his challenge, accompanied with bird money, to Mr. P. M. Kling, who is chairman of the trustees, the others composing this board being E. A. Peck and Chas. McL. Clark. These were appointed by Mr. A. A. Busch and will hold office for one year or till their successors may be elected. In order to become the property of anyone the medal must be won six times. The future contests will be individual affairs.

This trophy bids fair to accomplish more to maintain the shooting interest of St. Louis than anything of that nature submited to the sportsmen of the Mound City. The scores:

Gilbert-Klein-Budd.

Spirit Lake, Ia., July 24.—Charley Budd is up here on a visit, a guest of Fred Gilbert. The latter, in company with that little brother-in-law of his, Russell Klein, endeavored to show Budd a nice time and invited him over to look at the Klein farm. While there he proposed that they have a little shooting match. This appeared to be to Charley's liking, and each proceeded to shoot at 100 targets, which resulted in Gilbert breaking 98, Klein 94 and Budd 93. Gilbert missed his 17th and 27th and then finished with an unbroken run of 73. Klein made one run of 50, from his 38th to the 88th. Charley Budd got off wrong, as he lost 5 out of his first 25, but only dropped 2 thereafter, while his best run was 39. Charley Budd is accompanied by his wife and will spend several weeks in the vicinity of Spirit Lake camping out. The scores:

Capital Gun Club.

On Thursday, July 20, a rainstorm prevented the local club from holding its regular weekly medal shoot, but this contest was held on the following day, which somewhat cut down the attendance. Some who had made preparations to be present on the previous day were detained by business, so that but nine materialized for the contest. The conditions were favorable to good shooting, but the imaginary straight that the contesants conceived prior to the race failed to materialize, with a single exception. Thibault started off by breaking his first 25 straight, but ten of these were in a preliminary sweep, so that in the main event he had to be content with 42, a total just sufficient to tie with Fletcher, and the latter won out in the shoot-off, though it is possible that the old man did not extend himself, as Fletcher has long been a protege of his. Dickinson was very largely in the race during the first half of it, but with this exception none of the others cut any figure.

July 27.—The extreme heat was the only handicap that the shooters had to contend with to-day, as aside from this the conditions were all that could be desired when one is anxious to make a good showing. There was not a breath of air stirring, and the traps threw a very even and regular target; but notwithstanding this there were no very large scores made. Pemberton won the medal on 45 out of 52, and really did the best shooting of the day, as he afterwards scored 24 out of 25, and also killed 20 out of 23 pigeons. Dickinson is gradually getting back to form, as he actually tied Pemberton, but his handicap was one less, and this is what probably cost him the medal. Bragg, one of the unknown quantities, showed up very strong, and with his handicap of 10 stood an excelent chance to win, while Thibault and Fletcher also were factors in the race. Henceforth better scores may be looked for, as most of the boys are going into training for the State shoot.

Peay-Fletcher.

These two engaged in a 25-live-bird race prior to the medal shoot, and this resulted in a win for Fletcher by a score of 16 to 14. Both showed absolutely no form whatever, as under the existing conditions the score should have been much better. The birds were a fair lot, but there was no wind to aid them, so that the shooters had only to pit themselves against the birds' own resources. The scores:

A ten-men team race on July 22 between the Washington Park and Kansas City clubs, both of Kansas City, resulted in a win for the former by a score of 83 to 76. Each contestant shot at 10 pigeons. The birds were poor and the shooting equally so.

Paul R. Litzke.

Cincinnati Gun Club.

Cincinnati, O., July 22.—The scores in the contest for the diamond medal are given below. Squires won it this time. The standing of winners to date is as follows. Trimble and Squires have won it twice; Maynard, Kirsch and Waddell, once each. Squires got in on the tie by making a straight score on the first shoot this month.

There are two shoots: the first Thursday after the first Friday, and the fourth Saturday.

Handicap, 50 targets:

Pawling Rod and Gun Club.

July 29.—The shooters who participated in the tournament of the Pawling Rod and Gun Club to-day had a pleasant time in every particular. The number was not so large as was expected, but the shoot was a success nevertheless. There were present Messrs. A. Betti, R. W. Gorham and A. Brian, of Mt. Kisco, N. Y.; Messrs. Horatio Nelson and Frank Fry, Dover Plains, N. Y.; I. H. Tallman, J. G. Dutcher, Edward Banks and B. Waters. The shooting progressed at a lively rate. Two extras were shot before the regular programme began, and several extras at doubles were shot after it was finished. The club entertained the visitors very pleasantly. A palatable lunch was served free.

There were fifteen events on the programme, with a total of 220 targets, and a total entrance of $22. No. 7 was a handicap event, $2 entrance, for a gun case. This resulted in a tie between Messrs. Nelson and Betti, which when shot off resulted in a victory for the former. Immediately thereafter Mr. Nelson informed the shooters present that he would put up the gun case for competition after the programme was shot through, the proceeds to be devoted to the Van Dyke memorial fund. The entrance was fixed at $1, and the club donated also the targets free. After this event was concluded Mr. Nelson handed $10 to Mr. Banks, this sum being the proceeds of this event. This generous action greatly pleased the shooters present and evoked high praise from them. This is an example which clubs everywhere could follow with but little expense or trouble to themselves, yet in the aggregate to the great increase of the fund, the purposes of which were set forth fully in last week's issue of Forest and Stream. Many were the expressions of tender regard for Ferd V. Van Dyke and profound regret at his death, uttered at this meeting.

Event No. 11, a handicap for the silver cup, was won by Mr. Betti.

The handicap for the cash prize, $5, was won by Mr. Tallman. Messrs. Banks and Tallman were the scratch men, all the others having a handicap.

No. 16 was the Van Dyke memorial event, and resulted in a tie between Fry, Gorham and Jones, which was shot off at 10 targets, Fry winning on a good score.

The weather was charmingly pleasant, but the stiff 2 o'clock wind frolicked with the targets in a way which resulted in many goose eggs in the scores of the slower shots. The targets are thrown out over a down-hill slope, and the wind, blowing stiffly up the hill diagonally, made all kinds of atmospheric swirls and currents, which the targets merrily responded to.

Class shooting was advertised, but in deference to the shooters the Rose system governed the division of the moneys. The cashier's department was most ably conducted. It was in charge of the treasurer of the club, Mr. Geo. Daniels, assisted in the forenoon by Mr. G. S. Williams, the club secretary, and in the afternoon by Mr. Geo. Holmes. Mr. Morton Haines acted as referee; Mr. Fred Chapman, scorer, and Mr. Harry Burr, puller. All were thoroughly efficient. Mr. F. C. Taber, the president of the club; Mr. Horatio Nelson, the captain, and Mr. J. G. Dutcher, of the committee, participated actively and looked after the management besides.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

Betti won cup. Nelson won gun case. Tallman won $5 cash prize.

Minneapolis Gun Club.

Minneapois, July 27.—The weather was unfavorable for a large attendance at the shoot yesterday afternoon, but those who did attend suffered but little from the excessive heat, as the score was covered with awnings and a strong breeze blew all the afternoon.

The new classification of members will take effect next Thursday, and as there will be but four more reglar badge shoots this year before the opening of the game season, a large attendance is expected from now on. The shooting yesterday was of a high order, as the scores that follow will show:

Val Blatz diamond badge, 15 singles, unknown angles: French 9, Parker 12, Dr. Bill 7, Mrs. Johnston 11, Johnston 13, Nelson 13, Trapton 7, Stone 12, McKay 13, Cooper 7.

Shoot off, Nelson 1 hdkp.: Johnston 3, McKay 2, Nelson 4. Nelson won badge.

Schlitz diamond badge, 25 singles, unknown angles: French 18, Parker 24, Dr. Bill 13, McKay 18, Johnston 21, Nelson 21, Stone 18, Mrs. Johnston 20, Trapton 11. Parker won badge.

Paegel challenge badge, 25 singles, unknown angles: French 18, Parker 21, Dr. Bill 20, McKay 21, Johnston 22, Nelson 17, Stone 19, Mrs. Johnston 21, Trapton 13, Chamberlin 18. Johnston won badge.

Club badges, 10 singles, unknown angles, 5 pairs:

French .....0111111101 11 10 00 10 10—13
Parker .....1001111111 10 11 11 11 01—16

Cooper 1101110001w

Parker won senior badge; Mrs. Johnston won junior badge; Chamberlin won amateur badge.

Trap at Omaha.

Omaha, Neb., July 25.—Herewith are scores made by Mr. Grant July 21 on Omaha Gun Club's grounds. He shoots a 32in. barrel gun. The scores he makes tells the story. He shoots quickly, smashing his targets to dust. To-day the targets were thrown harder than usual, and Mr. Grant is to be congratulated upon the best shooting done on these grounds this season. On July 22 he broke 165 out of 170:

S Grant.....1111111111101111111—19
1111111101111111111—19

Moosehead Lake.—Jacking a moose is not considered a sportsmanlike proceeding. It is a mode of hunting which is usually forbidden by the law.

PUBLISHERS' DEPARTMENT.

Delightful Vacation Trip.

TOUR TO THE NORTH VIA PENNSYLVANIA RAILROAD.

Visiting Niagara Falls, Toronto, Thousand Islands, Quebec, Montreal, Au Sable Chasm, Lake Champlain and Lake George, Saratoga and the Highlands of the Hudson. Leave Philadelphia by special train Aug. 12. The tour will be in charge of one of the company's experienced tourist agents, and a chaperon, having especial charge of unescorted ladies, will also accompany the party.

The rate of $100 from New York, Brooklyn, Newark, Trenton, Philadelphia, Harrisburg, Baltimore and Washington covers railway and boat fare for the entire round trip, parlor-car seats, meals en route, hotel entertainment, transfer charges and carriage hire.

For detailed itinerary, tickets, or any additional information, address Tourist Agent, Pennsylvania Railroad Company, 1196 Broadway, New York; Ticket Agent, 860 Fulton street, Brooklyn; 789 Broad street, Newark, N. J.; or Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Hunting Knives.

The Philbrook hunting knife, which is advertised elsewhere, is of excellent model, and the material is honest. The specimens we have seen are "taking." The N. W. Philbrook Co. will send descriptive circulars.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, AUGUST 12, 1899.

VOL. LIII.—No. 7. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

If all the year were playing holidays,
To sport would be as tedious as to work.
1 Henry IV., i. 2.

THE COLORADO GAME PARK SYSTEM.

THE new Colorado game law contains some novel features respecting parks and game preserves, which are deserving of attention because of the growth of the preserve system in this country and the probability that future legislation will more and more be determined by an intent to give special privileges to the owners of parks.

The law provides that no person shall hold in captivity in any park, whether land or water, any game or fish unless first having procured a license for the park, and any park maintained without the prescribed license is made a public nuisance and as a penalty the game contained in it may be liberated by the officials and the park fences destroyed. One who has established or proposes to establish a game park is required to make application in writing to the Commissioner, describing in detail the location and extent of the preserve, and in return the Commissioner issues a license authorizing the park owner to keep and propagate such game as is specifically named in the license. Park owners are permitted to capture wild game for stocking purposes under a special permit issued by the Commissioner, designating the variety and the number of animals which may be so taken; and there are very stringent provisions to prevent the taking of any such game or fish for any other purpose than for stocking. Park proprietors are also permitted to exchange game or fish with other persons within or without the State, but this exchange also is controlled by a specific license issued by the Commimssioner.

When a private park or lake already contains game quadrupeds or fish belonging to the State at the date of the license, the right is reserved for the Commissioner to demand and receive from the proprietor not more than ten per cent. of the game increase for each year, and not more than ten per cent. of the fertilized fish eggs stripped from the fish in the preserve, or if the owner does not strip the fish the Commissioner has the right to do so. The game and fish thus obtained by the Commissioner from private parks are to be used by him for the stocking of other parks, streams or lakes.

Game and fish contained in private parks are by the law made the private property of the owner, "to the extent that he may lawfully retain, pursue, capture, kill, use, sell or dispose of the game or fish therein in any quantity at any time of year." It was under this provision that Governor Tanner was permitted to take his deer in the Debeque preserve. A further restriction is made that the aggregate number of game or fish contained in any private park or lake belonging to the State at the date of taking effect of the act shall not subsequently be lessened by the park proprietor, the purpose of this provision being to maintain as to the park territory the natural game supply. But even here a special license may be extended to the owner on application to reduce the superfluous stock of a given variety.

The law contemplates close supervision of the game and fish produced from a park. The owner is required when selling or giving away game or fish to deliver to the purchaser or donee an invoice containing full particulars of the transaction. Without such an invoice transportation and possession are forbidden. Duplicates of the invoice must be supplied to the Commissioner at Denver, and when the game or fish is shipped by rail or express, the original must accompany it attached to it and in plain sight. The proprietor of a private game park is required, whenever directed by the Commissioner, to make report of the number, age and sex of the game added to the park or taken from it annually. Licenses for the parks extend for terms of two years or ten years.

Fees are charged for game park licenses and for the several privileges accorded in connection with the park. The fee for a quadruped park for two years is $40, and $30 for renewal; for ten years $100, and $75 renewal; for bird park, $10 for two years, $25 for ten years. A lake license costs $10 for two years. For export of game the fees are $10 for an elk, $5 each for deer and antelope, and $2 for a lot of fish.

While the Colorado law is not the first statute designed to give special privileges to owners of preserves, it is by far the most elaborate. It is the product of a desire on the part of the framers to accord all practicable concessions to the preservers, without endangering the public game supply. If the provisions are strictly enforced and in the transportation and sale of game and fish the prescribed vouchers are rigidly complied with, there is little reason to apprehend that the system will interfere with efficient protection. On the other hand, laxity of supervision on the part of the wardens might readily open the way to the illicit marketing of game and fish belonging to the public supply.

Among the curiosities of game legislation is a New York law which forbids the hunting of moose, elk, caribou or antelope, all of which species have long since been extinct in the boundaries of the State in a wild condition. Nevertheless the law carefully provides that moose, deer, elk and antelope meat may be possessed or sold during the open season for venison, if killed without the State or in private parks; the last clause in concession to the preserves which have been stocked with Western game. On the other hand, in Pennsylvania, where the law absolutely forbids the exportation of game, certain owners of private parks who have stocked their preserves with Western elk are legally debarred from taking the venison home with them to New York city. Some modification of the Pennsylvania statutes in line with the Colorado system would benefit park owners without endangering any real interest as to the State's own game.

AN ADIRONDACK DEER HOUNDING CASE.

THE Ives deer hounding case decided by the New York Court of Appeals has already been referred to, and deserves further mention because of the importance of the principle involved in the decision. Mr. Frank C. Ives, the well-known billiard expert of this city, had in the summer and fall of 1897 a camp at Long Pond in St. Lawrence county in the Adirondacks. In October of that year a hound which had been harbored by Mr. Ives was found running deer, and suit was brought by direction of Chief Game Protector Pond against Mr. Ives, as the owner of the hound, to recover the penalty for infringement of the law which provides that dogs of the breed commonly used for hunting deer shall not be permitted by the owner or person harboring them to run at large in the country inhabited by deer. The dog was one which had been brought into Mr. Ives' camp by his guide, and was one which was known to have been trained on deer. The testimony showed that on several occasions the dog had got loose and had run in the woods, and was heard barking. The particular occasion concerned was the 25th of October, on which day, according to the testimony given by Mr. Ives, he had left his camp for the season and was on his way to the railroad station at the particular hour when the protector discovered the dog running a deer in the woods near by. There was no question about the identification of the dog, its harboring was not denied by Mr. Ives, and while he himself was not accused of deer hounding, the particular point at issue was as to his responsibility for the dog under the circumstances related. Mr. Ives contended in defense that he had never permitted the dog to pursue deer nor to be at liberty in the deer country. The jury on the original trial found against the defendant, and the Court of Appeals has sustained the finding of the lower court. The decision appears to have been strictly in keeping with the evidence in the case, and the principle it establishes is of the utmost importance in the enforcing of the anti-hounding law in the Adirondacks.

If those who own or harbor dogs could evade responsibility for the dogs when loose, it is clear that the law would be a dead letter; in fact it was because the statute without this provision had been found so weak that the new clause imposing the responsibility upon owners was found to be necessary. No sensible person will keep a deer dog in a deer country unless he means to hunt deer with it or to let others hunt deer with it, or unless he is ready to stand for the dog's hunting on its own account. Mr. Ives paid in penalty and costs $324.56 before going to the Court of Appeals, and this, with his counsel fees, made the deer dog Socks an expensive creature before he finished with it.

SNAP SHOTS.

The apathy of certain men in matters of sportsmanship, to which Ransacker has so touchingly referred, is not without a bit of unconscious pathos in it, for it is the expression of the changes which come to us all with the passing of the years. It would be an erroneous conclusion, however, to accept the implied principle that a declining aptitude for such pursuits, a diminished capacity for enjoyment of them, and a lessened inclination to follow them mean the attainment of a higher ethical standard for approving or disapproving them. The change is in the individual man, not in the pursuits themselves; and it is a change in keeping with the rules of life. When one has had a surfeit of good things, the relish for them is not so great afterward as it was before. Neither is the novelty so great in looking backward over known things as it is in looking forward to the unknown; the actual difference is in the point of view of the mature and the point of view of the young.

The whole of one's life is marked by well-defined stages, wherein the new is accepted and the old ignored. The tin horse yields to the baseball bat; this in due time to the canoe, or dog and gun, or rod and reel; and all together in turn must yield to some adorable woman. There comes a time when watermelons would not taste so luscious, even though hooked on a moonlight night, and indeed the advanced man might not have a thought of eating the melon if it were at his elbow. Why? Because he might not have the appetite which he had in his boyhood days. In this there might be no question of ethics, though there might be one of appetite. And so it goes to the end of the chapter, when one may sorrowfully exclaim: "All is vanity and vexation of spirit"—the cry of him who is looking backward, not that of him who is looking forward.

This is but one of many stages in the evolution of the individual, the same which has been reached by all who have gone before us, and will be reached by all who are following after us. It is not a part of the ethical problems at all. It is the cry from incapacity for enjoyment, easily confounded as a development of new ethical ideas. If our capacity for enjoyment is gone, it is hardly logical to declare that all enjoyment has ceased to exist. The sage remark of Shakespeare is good for all time, and expresses a great truth:

Sir To: Dost thou think, because thou art virtuous, there shall be no more cakes and ale?

Clo: Yes, by Saint Anne, and ginger shall be hot i' the mouth, too.

State Game and Fish Commissioner Johnson of Colorado tells us that the deer killed by Governor Tanner of Illinois, at Debeque, last month, was lawfully taken, inasmuch as all the hunting was done within the limits of a private park, and hunting under such conditions in the general close season is permitted by the statute. We need not add that this explanation will be received with genuine satisfaction, for it entirely relieves Governor Tanner from any criticism of his hunting on the score of illegality.

The strong hold our woods life, or water excursion or mountain exploration, has upon us is not always capable of exact definition or statement. We find ourselves insensibly hungering for the locusts and wild honey of the free life in the open. In reverie the majestic panorama of the mountain ranges is unfolded before us. We see through the trees the white canvas of our home under the pines. We long for the bark shelter, the camp-fire, the stars seen through the whispering tree tops. And in the pictures which come and go, the actual taking of game may have insignificant place.

New Mexico publishes its game laws in Spanish. Trespass signs near New York are in German. On Penikese Island in Buzzard's Bay the warnings against killing terns are in Portuguese. In still other sections of the country such signs are readily understood if written in English.

The Sportsman Tourist.

On Orange Mountain.

Thirty-five years ago it was but a short ride from the City Hall to the genuine country, with its green farms, rustic population and *feræ naturæ*. Turning from Broadway at the ramshackle pile of market buildings, long since torn down to make room for the postoffice, one might take the Hoboken ferry and from its terminus seek the picturesque seclusion of the Elysian Fields and the more remote Palisades; or, if time permitted, drive over Bergen Hill, then unpierced by great trunk lines, and after crossing the dreary, mosquito-infested, malodorous Hackensack marshes to Newark, the Oranges and the Bloomfields, enjoy the peaceful quiet of the First and Second mountains. A favorite route was that of the market gardeners, from Jersey City over the old plank road to Newark.

Orange, or First, Mountain had three vantage points from which in the long, hot afternoons of summer the traveler could look eastward over intervening field, farm and forest upon the metropolis, see the spires of New York, watch the white sails lazily moving up and down the Passaic—aye, see the ocean-wearied three-masters come in through the Narrows and beyond the blue of Old Ocean itself. The view was not broken by skyscrapers or by the giant towers of the Brooklyn Bridge. The suburban towns of New Jersey had not yet been thought of, nor were the crest and slope of the mountain dotted with the beautiful villas that are to-day its principal decoration.

Of the three vantage points the tower on the Caldwell turnpike was the central. A mile to the north was Washington Rock, and two miles to the south Eagle Rock. Washington Rock was said to have been the point from which the great commander surveyed the British forces on his memorable retreat to Morristown, and in the village below—Cranestown (Montclair)—is, or was, a traditional Washington's headquarters, the room in which the hero slept being an object of much interest in my boyhood days.

Eagle Rock was the most prominent of the elevations. In those days it was approached by a rough trail, that it was considered quite a feat to climb. Even the heights of the Rockies, Cascades and Sierras have never had quite the zest for me that Eagle Rock once possessed. The name was given more than half a century ago, the occasion being the finding of an eagle's nest in its clefts. Llewellyn Park had just been laid out, and near the foot of the rock Mr. Haskell had built "The Eyrie." I well remember that Mr. Haskell's views were not considered "orthodox" by his Calvanistic neighbors and he was regarded by the young folk as a very mysterious man. In fact, many of the early dwellers in the lovely park were men and women of "advanced" thought, with whom the godly farmers had naught in common. Strange, isn't it, how times change? The daily Sabbath quiet was unbroken by the whistling of rival engines. Knee-breeches and queues were still worn by the very old men. There was the music of the whetted scythe, the creaking of the cider press, the dull thud of the flail.

Village life was very, very quiet. At Cranestown the two village stores, where everything was sold, had their full quota of loafers, who assembled on the advent of the daily mail to discuss war news and condemn some of the neighboring gentry of supposed "Copperhead" proclivities. In these gatherings were always to be found a few negroes who remembered slavery days in New Jersey and who still clung to cabin life. Sometimes a wagon bearing a long pine box covered with a flag would pass along the turnpike on its way to some more remote hamlet, and we vaguely knew that another of our boys in blue had answered his last roll-call in the marshes of the James or the beautiful valley of the Shenandoah. There was the tavern, with its creaking, swinging sign, kept by Capt. Munn, and in the barroom, where pure applejack was the principal beverage, Uncle Billy Siglar, William Speer and other worthies of rod and gun met to talk over the latest pigeon shoot at Pine Brook, a coon hunt, or the snipe prospects on the marshes. There were wild pigeons and coons and possums in those days.

Our wood rambles invariably commenced with Washington's birthday, at which time the hepaticas in the moist sheltered nooks beneath Eagle Rock commenced to bloom. A little later came the violets and jack-in-the-pulpits. By Easter we found the fragrant, showy orchis and the lady-slipper, dogwood, azalea, the spring floral catalogue ending with the bloom of the rare magnolia glauca, found near Short Hills. When we did not gather flowers we would study the nesting birds and watch the fishhawks sailing homeward over the hills to some remote pine, carrying their infants' breakfast in their beaks.

When the summer vacation came our excursions would frequently lead to the little brook that rose near Verona and meandered through the shady meadows, between First and Second mountains, emptying into the Passaic near Little Falls. Botany presses were exchanged for fishing tackle, and in the mill-ponds—for there were old and picturesque mills along our course—we would angle for suckers and an occasional eel. Where the waters hurried and swirled over sand and pebbles we would sit for hours and throw out little sunfish with more enjoyment than we now find in casting flies for 3lb. trout. Or, if we simply loafed, we revelled in the flaunting glories of the cardinal flowers, in the song of the bobolink, in the pictures in the clouds, or, perchance, hunted sandpipers' nests on what we termed "the shore."

It was when the slopes of Orange Mountain were painted with the crimson of the maple and the old gold of the chestnut; when there was the haze of Indian summer as the days grew shorter; when the wild grapes purpled and the jay chattered and the corn was being shocked; when

> "All sights were mellowed and all sounds subdued,
> The hills seemed further and the stream sang low;
> As in a dream, the distant woodman hewed
> His winter's log with many a muffled blow,"

that life seemed most worth the living. Then, in addition to the never-forgotten schoolboy's lunch, we took sacks for nuts and the old muzzleloader and shot pouch and powder flask, with never a thought about yesterday nor a care for the morrow. An early breakfast would be the order and then, heedless of field or fence, we would strike the timber at the foot of the mountain where were great groves of butternuts and black walnuts, and where saucy red squirrels chattered as merrily as ourselves. Both walnuts and red squirrels were too common to be interesting. Higher we strolled, warm but never weary. Sometimes a partridge would whir up so suddenly as to startle us, and the unready gun would only hasten his flight to pastures new; and again a too confiding cottontail would stop to look at us, and as a result would find a resting place in the capacious bag. Stopping occasionally to look down upon the autumn picture to the east, we reached the level summit. Here the triple-ovuled chestnut burrs, opened by the early frosts, and great, soft-shelled shagbarks, peered from half naked branches waiting to be threshed. On the upland clearing the farmer dug his late potatoes, and along the oak-rail fence, buried in asters, in goldenrods and russet brambles, the border of his little patch, gray squirrels dared us to a test of marksmanship. Nor, in the mountain marshes, was the woodcock quite a stranger.

Beside some crystal brook or beneath some grateful shade of orchard, where the air was heavy with the incense of fallen apples, we would eat our lunch and count our trophies o'er and feast upon the promised pleasures of the afternoon. Then homeward bound, we would retrace our morning's wanderings, nor note the flight of time until sweet, shadowy evening stole upon us unawares. Proudly did we lay down our childlike store of nuts and game, happy in the encomiums we received, and, supper done, we found the healthful sleep that only tired boys can properly appreciate.

What of the companions of the long ago? What of my friend who traveled by my side, who initiated me into the mysteries of the breechloader and who taught me how to hunt the wily partridge with as noble a setter as ever stood to scent? The worry and the toil of the great vortex of business life drew him in, and now he wanders in the silent land. What of the neighbor lad, who loved the wild flowers as he loved his friends? I used to see his name in Forest and Stream, signed to sketches from far Samoa. Too harsh for him, with his hopes and ideals, was the cruel competition of a careless world. He, too, has his name on the ever-lengthening roll of the departed. One after another has gone; even the old mountain has changed its face to suit another age. It would be painful for me to revisit it.

Shoshone.

Yukon Notes.

Farewell to Fort Selkirk.

(*Continued from page* 83.)

Mac and I said good-by to Mr. Pitts the night of Dec. 30, 1897. We packed our sleds that night and the following morning had breakfast and were off before the first sign of dawn. Barton's party were feeding their dogs and almost ready to start as we passed their cabin. We would have liked to have traveled in their company, but men pulling sleds cannot hope to keep up with dog teams on long journeys.

Mr. Pitts' cabin was unlighted and the only sign of life was the wolfish sledge dogs curled up in the snow by the front door. These dogs lie out in all weathers. With fifty below their fur becomes white with the hoar frost and they twist themselves into the most compact balls imaginable and bury their noses in their thick fur coats to keep them from freezing. When the dogs first lie down they wriggle around sometimes for five minutes before they succeed in getting satisfactory positions, but after that they rest without moving for hours at a time.

Beyond Pitts' cabin we passed the store, with the faded paper notice still tacked to the door, stating that as no steamer had visited the post for two years and no supplies were for sale with the exception of a little condensed milk. The first lean travelers of the gold rush had taken the condensed milk, but the notice had not been changed. Beside it was another which informed the public that the usual dried salmon dog feed could not be supplied and that beef heads and offal would be furnished instead. We knew that the store contained a large supply of valuable furs, including sable and black and silver fox skins, and that besides this there was a small amount of dry goods for the Indian trade. The white men who persuaded Pitts to open up for them to look over the stock had a hard time to find anything to buy. Some of them would take the agent into a corner and give him a jolly such as this: "Now, old man, you've known me for three years. I ain't no cheechako, see. Where's them beans you're going to let me have? Money ain't no object and you know blanked well I've got the dust. Just put 10lbs. in this sack and leave it by the corner of the shack where I can get it without nobody seeing, and if there's a quid of chewing left or a squid of bacon, just put them in, too. Savvy?"

To which Pitts would reply in a colorless, weary tone: "I couldn't let you have ten beans for 10lbs. of gold. There's no food on the place for sale, and all the gold in the Klondike couldn't buy any.

Mr. Pitts was sensitive on the subject, and he disliked beyond anything to refuse food. He did not show it, however, and his manner was sometimes mistaken, and he was accused of being indifferent and heartless.

Some of the men who came along cursed everything from their dogs—poor brutes—to the terribly silent mountains that walled in the river, and such men naturally cursed Pitts.

"This man keeps a store and has nothing to sell," they said. "What's it all for if it isn't just to spite us!" And they threatened all kinds of bodily violence to the agent. It was commonly believed that Mr. Pitts had supplies which he was concealing for fear of a still more pressing demand later on, or else holding for exorbitant prices; but as a matter of fact he was by this time out of everything except an extremely limited supply for his own personal needs. To his honor be it said that he did not attempt to take advantage of opportunities afforded for selling food at extravagant prices. As long as any supplies remained he sold them at the regular valuation of the country, and at that time a poor man would not have been turned away hungry for the reason that he had no money.

Beyond the store we came to the levee-like river bank, and holding on to the backs of our sleds coasted down on to the ice of the river. Mr. Pitts still had a water hole open in the ice, though it kept one of the Indian boys busy with an ice chisel to prevent its closing up.

We passed the line of Indian cabins on the bank above, each with its elevated cache, where were stored not only the meat and provisions of the family, but also the paraphernalia of the chase, snowshoes and toboggans; and last of all Dalton's corral and abattoir, with its wooden chute for lowering the carcasses of slaughtered beeves to the rafts that were to convey them to Dawson.

The Ice Trail.

In front, to the south, ran the ice trail through a country barren of supplies for a distance equal to that which separates New York city from Quebec, Canada. The journey was hard enough at best, but without dogs it involved a danger from starvation that was unpleasant to contemplate. Few men on long journeys have the strength to pull more than their own weight of camp outfit and provisions. Blankets, tent and stove make up a large proportion of the load, the ratio to the food varying according as the man fears most death by starvation or freezing. Hard work and the intense cold give ravenous appetites, and under the circumstances it is no wonder that few of the hand-sledding parties got through to the coast on the strength of the supplies they carried on starting. The remarkable thing is that any got through at all and that death from starvation was not common.

The trail was over an almost continuous ice jam from the start up to the lakes, and it was as rough in most places as ice packs on the frozen Polar ocean, judging from photographs. The fact that a large number of men made the journey without the aid of dogs and traveled a distance greater than that which has separated Arctic explorers from the Pole would lead one to believe that the trip to the Pole is by no means an impossible undertaking. A well-broken dog team and a month's supply of provisions should enable a man under favorable conditions to reach the pole from latitude 82 degrees. The team will carry him there, and for the return trip, if his supplies are gone, he can pull his own sled and eat dog.

The cold endured by Arctic travelers is not as a rule greater than that borne by the returning Klondikers. It is a well-known fact that in winter there are two poles or regions of greatest cold, the one in northern Siberia and the other to the north of the American continent. On the ocean between these points the fall in temperature is never so great. De Long on the Jeannette in the winter of 1879-80 recorded no temperature lower than 53½ below zero, while 40 below was rather exceptional cold. He reached a northing of 78 north latitude, only 840 miles from the Pole.

If some of the nervy, enterprising fellows who have been on the Yukon of late years and traveled thousands of miles with their dog teams with only occasional bases of supplies could be carried by vessel to within 600 miles of the place where latitude ends and turned loose, something would happen.

According to Mr. Pitts' count 340 men had passed Fort Selkirk on their way to the coast up to the last of December. Among the first were a number of parties unprovided with dogs; but later, as the snow grew deeper on the ice and the pulling became harder, the men who drew their own sleds became more and more the exception, and after the time of our start I only know of one other party that went out without dogs. The rush of travel had passed, and it was too late to think of making arrangements to join in with another party. Consequently, at the start, we had to make up our minds to dispense with stove and tent. With the average hand-sledging party one stove and one tent sufficed for half a dozen men. The weight of blankets could be reduced, for with stove and tent and some one awake all night to keep the fire going, no great amount of covering was necessary.

As there were only two of us we could not have bothered to stay awake to attend to the fire at night, even if we could have afforded to leave behind provisions of a weight equivalent to the stove and tent. We started with seven pairs of blankets and one caribou skin, besides a Kenwood sleeping bag; but before passing the Big Salmon we had thrown away three pairs of blankets and had grown so immured to the cold that we could sleep comfortably under four or five thicknesses. I got my rabbit-skin robe later on. Blankets are not a satisfactory protection from severe cold. One can feel the cold circulating through the pores and has to be careful not to freeze his nose and extremities in bed. To get the benefit of mutual warmth we sewed the blankets along the edges, making a double sleeping bag large enough for both of us.

Mac and I slept out this way during the month of January, and never on any occasion kept a camp-fire in all night. We experienced some very low temperatures and were uncomfortably shivery once in a while, but on the whole we did well, and we came out in the end in first-class physical condition.

The Pioneer River Steamer.

Three miles above Fort Selkirk the Barton party overtook us and passed with their two dog teams. The wind was blowing a gale from the south, and though we managed to keep up with them and followed close behind, their trail breaking benefited us very little, for the snow blew and filled the track the instant they had passed. At the time they came up with us I had turned aside a few minutes from the trail to photograph a historic old river steamboat which lay back in thewoods just off a slough forty or fifty rods from the river. The high water in the river three years before had left her stranded, and efforts to launch her had proved unavailing. The boat was a small stern-wheeler of the Mississippi River type. The name Polly adorned boards on either side of her pilot house, but we were told that she had only borne this name for a short time before being stranded, and that she was the original New Packet, one of the first, if not the very first, steamboats that ever bucked against the tireless current of the Yukon.

When Ed. Schieffelin, the founder of Tombstone, Ariz.—the man who made a million and died a pauper—made his famous prospecting trip up the Yukon to prove his theory of a mineral belt encircling the world, he chartered this boat, and later, in "starvation year"—1889—when the Arctic was wrecked and as a result not

pound of supplies reached the gold country, it was the New Packet, loaded gunwale deep with her human freight, that carried the miners to food and safety at St. Michaels.

On a gravel bluff near by stood a deserted cabin, and through the roof, in lieu of a chimney, projected the boat's smokestack. The owners of the cabin had in time gone by swung the pipe by its stay irons so that its lower end was within 3ft. of the ground, and constructed a rude hood to conduct into the pipe the smoke from their fire, which was built on the dirt floor. No doubt the fact of the smokestack had influenced the building of the cabin at that spot. Such opportunities are not common on the Yukon, and in winter facilities for a good fire are of the first importance.

Mile Posts.

We made camp that night on one of the Ingersoll Islands just above the mouth of Wolverine Creek, and no great distance from the point where our boats had been lost in the ice two months before. The following morning we were up betimes and passed the Barton party still in camp at a point about a mile above us. Shortly afterward we had some nasty traveling along narrow channels back of islands, where the swift current kept the water open despite the fact that in places broken sections of ice 5ft. in thickness could be seen. The Chinook wind still continued and the thermometer had risen to 20 above zero and the heat was very trying. The day before we had covered about twelve miles over very rough ice; but this day, the first of the new year, we only put four miles to our credit, owing to the numberless detours and the difficulty of dragging our sleds over unbroken trails and across islands. We had the satisfaction of knowing that we had done as well as could be expected under the circumstances, for at nightfall we camped within sound of Barton's axe.

Our second camp was made on the same island we had camped on the morning before our boats were lost. It was a desolate spot, under naked frozen mountains, with a fringe of funereal spruce trees next the river. As I watched Mac drying out his footgear that night I recalled some of the lines of Archibald Lapman's fine poem, "The Woodchopper's Hut," one of the best expressions of winter and solitude that has ever been written:

> "And only the stars above him at night,
> And the trees that creak and groan;
> And the frozen, hard-swept mountain crests,
> With their silent fronts of stone.
> As he watches the fitful glow of the fire,
> And the flickering flame upcaught,
> Cleaning his rifle or mending his moccasins,
> Sleepy and slow of thought."

The quotation is from memory, and no doubt I have made mistakes.

Peculiarities of the Trail.

We crossed and recrossed the river thirteen times in going the first twelve miles as the river runs from Selkirk. Though we only logged twelve miles to our credit we had undoubtedly walked nearly twice that distance. This was not an exceptional record for the part of the river between Selkirk and Five Fingers. For long distances the trail averaged one crossing of the river for every mile of advance. The crossings were generally nearly at right angles with the course of the river, and at first were frequently half a mile or more in length. The trail never led directly up the center of the river.

Once, as we were following the shore of an island, we came to a mass of ice 20ft. in height, and here the trail turned abruptly to the right and crossed over to the mainland, where there was a cut bank and a jam every whit as bad as the one the trail had tried to avoid. Apparently the track was laid out by a blind man. Once the cut bank was gained it turned directly about and crossed back to the island, reaching it at a point only a few yards above the place it left it, after a detour of nearly a mile.

Examples of this kind might be multiplied almost indefinitely. At Cassiar Bar the detour was exactly duplicated. Some dugout cabins on the west bank were probably the cause of the needless lengthening in this case. No one seems to think of bettering the trail. The night after going over the Cassiar detour we caught up with the Henning party, and I said to one of the men:

"When you passed those cabins to-day and back-tracked on your trail to the east bank again, why didn't you go back a little and put a bush on the trail and make a cut-off? You would have saved us a mile of walking and it would not have taken five minutes' time."

The man grinned and replied in a tone that showed he felt sure of his ground:

"For the same reason, partner, that you neglected to do it. Why didn't you think of all those sore-footed chaps that are following on your trail?"

Storyof the Trail.

Frederick Palmer, who has written a very readable book about the Klondike, published by Scribners, writes of this trail two months later:

"We would pay our respects with some bitterness to the man who had made this strange and lonely trail, though in better moments we were willing to admit that he was a pioneer and pathfinder. As soon as the ice would bear him, when the wind had drifted the snow here and there and lifted the slush ice up to be frozen into rifts, with his dogs and sleds he set his face toward the coast, winding in and out between these rifts, back and forth across the stream and along its banks, wherever he could find the best footing; and all who came afterward followed in his footsteps. He was making a path for himself and not for us, and it was to his interest, if not to ours, to have it as crooked as the track of a snake, and on the most crooked of rivers at that."

The description of the trail is all right, but the history is not altogether accurate. The men who made the trail were the refugess who left Dawson in boats and on foot before the river closed, driven out by threatened starvation. These men crossed the river backward and forward where the ice was jammed, and where the river was open they followed the narrow rim of shore ice. At times they slipped into the icy water and their sleds were lost or broken and their tents and blankets thrown away. At night they built great fires and stood or sat between them, and they carried their axes and scanty supplies on their backs and endured all the sufferings of slow death by cold and hunger.

Two such men entered our cabin one day while Mac was alone and without a word helped themselves to all the cooked food in sight, eating it ravenously like beasts that expected to be driven away. After they had finished they left without asking for more or leaving their thanks for what they had eaten. Some of these poor devils became so emaciated as a result of the cold and inability to assimilate their food that they looked like the pictures on exhibition a short time since of the plague victims in India or the starving people of Cuba.

These were the pioneers of the trail. They could not take the shortest course from point to point because of open water and other obstacles that did not exist later. The men who came after followed in their footsteps partly because they could not be sure that the detours were not still necessary, and partly because it is easier to follow than to originate. One result of this was that nearly all the smooth stretches of ice between islands or in mid-channel were missed, because when the pathfinders came along these places had not yet frozen over. Another result was that as the water in the river grew less the main body of ice settled, leaving the rim of shore ice either tilting at greater or less angles with the horizontal, or else separated by sheer drops of 6ft. or more. All along the edge the ice was badly cracked and the water frequently came up through and soaked the snow, greatly increasing the danger of frozen feet. It was a difficult and tedious matter to drag the sleds over these inclines and up the perpendicular faces, and there was always the danger of the ice benches breaking off with the sledger on them or of accident through falling into crevices concealed by the snow.

J. B. BURNHAM.

Pioneer Days.—XII.

Retreat from Ticonderoga.

CARLTON'S fleet got but little beyond Crown Point when a strong south wind set in and continued with increasing fury, until he, despairing of getting any further, weighed anchor and sailed for Canada.

During the winter Josiah Hill lingered about the forts and neighboring settlements, leading an aimless, vagabond sort of life, now chopping, now trapping, until the following summer brought Burgoyne's overwhelming invasion, when all non-combatants departed and all able-bodied patriots joined the army. Warner's earnest appeal brought Josiah, with many another, to the defense of the fortress which he had helped to capture. Burgoyne's army had invested the place, and it was now well known that if he should occupy the strangely neglected heights of Sugar Loaf or Mount Defiance, Ticonderoga would be at his mercy; but Gen. St. Clair hoped that an assault might be decided upon, for this he felt confident he could repel.

Upon indications that guns were being hauled to the top of the mountain a council of war was held and it was decided to evacuate Ticonderoga and Mount Independence. Night had fallen; lanterns twinkled on the crest of Mount Defiance like stranded stars; shouts of command, the challenge of sentinels, the rumble of gun carriages could be faintly heard coming from the British lines; and now and then the fierce yell of the Indians, more fearful than the panther's scream, as they celebrated some preparatory rite of warfare.

The Continental troops were outside the walls of Ticonderoga, some already within those of Independence; small detachments were crossing the long, floating bridge and orderlies were hurrying to and fro. In the laxness of discipline which was but too common in the Revolutionary armies Josiah was wandering at will, listening to the various sounds which came from the British lines and watching the glimmering lights on Mount Defiance, when he heard approaching voices and slipped into a shadow to escape observation, and so unwittingly became an eavesdropper.

"Yes, the troops are all ready to move," said one voice.

"The Yankees of the Grants are all inside the fort?" the other asked.

"All but Warner's," was the answer.

"They're likely to be gobbled," said the other with a chuckle, "and that would be an easy way of disposing of a very troublesome element and make matters easier for our New York friends."

"Warner's regiment will be the rear guard, so if we are pursued"——

"Yes, I see"—— and the voices passed out of hearing.

Josiah had heard enough to satisfy him that some treachery was intended against his people, and went at once to the gate, where he gave the countersign and was admitted. Inquiring for Col. Robinson, he was told that officer was sick and could not be seen. As he stood at the door of the quarters, contriving some means of giving warning, an officer hastily approached it with a pitcher of water.

"Major," he said, "I want tu speak tu the Colonel 'baout suthin' 'at consarns him mightily!"

"Well, what is it?" the officer demanded, curtly.

"I can't speak on't here. Le' me go inside."

"Come in, then," said the other with some show of annoyance, after eyeing him sharply. Josiah followed him into the barrack room, where Col. Robinson lay on a pallet, looking pale and distressed.

"Here's a man wants to speak to you, Colonel, an' won't take 'No' for an answer," said the Major. "His name is Hill and he belongs to Warner's regiment."

"Well, what is it, my man?" Robinson asked, and Josiah told what he had overheard in the fewest words.

"By God! That tallies exactly with what I've just seen!" the Major blurted out.

"Who do you think they were that you overheard?"

"I wouldn't want tu swear to 't, but I think it was the General, for one; t'other I didn't know."

"Well, we'll block their little game," said Robinson, rising painfully. "Major, let the men be paraded under arms, with their knapsacks. Do it quietly. I'm obliged to you, Hill, and won't forget it."

The regiment was soon in line and marched through the gate, when, after a brief halt, it took its way toward the head of the bridge.

"What is this regiment moving without orders for?" Gen. St. Clair demanded, in hot haste. "Halt, battalion!"

"Battalion, march!" cried Robinson. "It means, sir, that we're not to be caged like rats."

"I'll order you fired on, if you don't halt!" St. Clair stormed.

"Fire, and be damned!" said the Puritan colonel. "Battalion, prime; load; fix bayonets; shoulder arms; forward, march!" and the regiment marched steadily on toward the bridge, while other troops in the route moved out of the way.

The long triple column of ununiformed militiamen went swaying across the undulating bridge, Josiah sticking close to its rear until the sharp slope of Independence was mounted, when the regiment was halted near Warner's, in which our straggler took his place.

All was bustle and confusion, men singly and in squads hurrying in all directions; here a party burying blacksmith tools and intrenching implements, there another with teams carting bags of grain from storehouses and emptying them into fissures of the rocks, and now the main army came pouring across the bridge, through the fort and out upon the road which led toward Castleton.

They had nearly all effected a crossing, apparently undiscovered by the enemy, when a rattle-brained Canadian settler came running bareheaded to a wooden house inside the earthworks.

"Dat domn hol' Anglais' he ant goin' gat mah haouse! No, not not'ing in it!" he cried, lighting a torch at a smoldering camp-fire and rushing into the house.

He threw the contents of a straw bed upon the floor, thrust the torch into it, and in a moment the building was in a blaze, and the insignificant house grew into a tower of red flame. The mounting flames threw a lurid glare over everything, revealing the scattered groups, the serried ranks, the crowded bridge, the buff and blue uniforms of the Continentals waiting at the further end, the gray walls of the fort, the Stars and Stripes still floating above them, and the disturbed lake shimmering in the fitful glare of the conflagration.

All was confusion—almost rout—and this was increased by a shot from Defiance whistling through space and plunging into the channel at the base of the cliff of Mt. Independence before the sullen boom of the cannon's report shook the air.

The rattle of drums calling to arms; the shrill screaming of the fife, the blare of bugles, announced the beginning of pursuit by Frazier's British regulars and Reidesel's Brunswickers. The forest-paled road was choked with crowding troops—Continentals, Rangers and militiamen inextricably mixed—officers shouting and cursing in vain endeavors to restore order out of chaos.

Robinson's regiment struck into the road and St. Clair again threatened to fire upon it. There was an ominous chick of cocked muskets and the threat was not executed. Warner's coolness and commanding presence were of most avail, and at last the column fell into orderly and rapid retreat, his regiment holding Mt. Independence till the last company had taken its route.

Then, as the timbers of the burning house fell and smoldered, casting fitful gleams amid intervals of gloom upon the scene of desertion and desolation, the brave Green Mountain Boys took up their dogged retreat into the shadows of the forest, bitterly cursing the neglect of defenses which had caused the abandonment of the stronghold which but two years before they had wrested from the enemy.

Arriving at Hubbardton, the weary army halted for a brief rest. When, in the morning, it resumed its retreat, Col. Warner was left with his own, Herrick's and Hale's regiments to occupy the position until all stragglers had come in, and then to keep one and a half miles in the rear of the main army.

"There is my fort," said Tom Torrey, a man of middle age standing next to Josiah in the ranks, and pointing to a neat log house in the midst of a new farm; "an' I hope the garrison's left it. No, by George!" he continued, anxiously, after a moment of intent watching. "Their flag's a-flyin' yet," as he saw the smoke flaunting from the chimney. "It hain't no place for a womern an' children naow. I don't see why they hain't cleared aout!"

Just About a Boy.—XXIII.

THE summer days were changing to autumn and here and there a bit of brown had encroached upon the greenery when the boy and I pulled up in town "down in the States" again after our long trip into the desert. We were browner and probably a bit healthier than when we started, for the dry, pure air of the desert country is a balm for the outdoor man, and we had breathed our fill.

From Ward's ranch all the way home we had gone through about the same kind of country and had about the same experiences that had been our portion on the outward trip, and as a result the boy who came back was a well seasoned young person, able to take care of himself in the gray wilderness of sage and bare buttes—of alkali water and quicksand—with the best cow puncher who lived there.

He had mastered the mysteries of "throwing a rope" until he could catch a horse off-hand. He had sent lead across the landscape after deer and antelope until he had become satisfied from the abundance of shooting.

Horned toads, diamond-back rattlers and prairie dogs had become too commonplace to give more than a passing glance to, and now the youngster wanted to "rest up" along the little river again.

After all, it is the first love that is the best, although we may not think so sometimes, and thus become weaned away by the novelty and newness of the unknown and untried; but when the unknown becomes known to us it seems commonplace and we find ourselves wishing for the things that we knew so well before.

The boy was undergoing this change of heart as we came nearer home, and when we reached the top of the hill he had pulled up short as the sun hung low above the valley of the little river and the little town that spread up the slope of the eastern hillside—the place that the boy knew so well—the place we called "home."

What a meaning that little word has to the wanderer!

I think, perhaps, the boy felt the stress of it, and yet did not know what it was or why he felt it; but he looked long and earnestly at the scene—at the familiar houses and the shining river that wound about among the fringe of trees in the center of the valley.

After a little he spoke.

"C'manch, less go up river fishin' t-morruh—will yeh?"

"Aren't you a little premature with this fishing, my boy? Had we better not wait a few days and get acquainted with the folks a bit before we strike out on this new tack?"

The boy rubbed his chin reflectively and gazed at the ribbon of river where it came out of the north, then his eye ran the course of it down the valley past the little town, and on until the valley came to the rim of the southern sky.

"Yas, uh reckon thet's 'bout whut we'd ought to do, but I do want to juss chuck a minnie to thet ole Balaam ut I know is a waitin' 'n nunder th' ole maple stump down there b' th' islan'. I know they's one there juss 's well 's though I'd a seen him, cos ain't nobudy knows juss 'zackly where tu drop uh hook there 'ceptin' you'n me, 'n we ain't bin heyer 'tall sence early this season; an' 'nuther thing is—— O, Gee! I furgot 'bout these heads we got in th' wagon; guess we'll haft tu let th' fishin' go tull we git them took care of, that's a fack—never thought 'bout them. G'up, Bill!"

And so we moved on down the gentle slope of hillside and entered the town.

Tired men, home-coming with dinner pail a-swing and coat across their other arm, looked at the travel-stained outfit and passed a pleasant "howdy" as we went by, some asking a few questions, others waiting for a later time to inquire about our success—you know, this is a village habit, and each wanderer must come back prepared to tell of his experiences in the far countries he has visited—yes, tell them in detail and over and over again, else the village folk will not be satisfied and the traveler is apt to be dubbed "stuck up" and adjudged to hold himself as a superior being because of his traveling and sightseeing.

"Hullo! Ole man Hagey's place muss' a bin sold er somp'n—look ut th' new fence—'n' new sidewalk, 'n'—Gee! They's a new kitchen, too! Guess his folks wouldn't never go t' all th' 'xpense o' doin' thet," said the boy, as we drove by.

"There's Curly Lee, 'n' Sap Williams, 'n' Ed. Cole, 'n' Walt Fiske, 'n' a whole gang o' fellers comin' down th' street; bet they're goin' swimmin'. Hullo, fellers!"

"H'lo, Kid! Git 'nything? Where yeh bin all summer? What—— Why——"

And in a minute more there were a dozen or more boys all about the wagon and all trying to talk at once.

They clambered up on the wheels, shook hands, raised the canvas wagon cover, and chattered like a bunch of magpies for about ten minutes.

By that time calm enough settled over the crowd to enable one to talk at once while the rest stood, arms akimbo, and listened or passed the comments such as all boydom passes under the circumstances.

When we began to move ahead once more the boy had learned that this crowd of young savages were in truth going "swimmin'," and he had promised to "be down town at Lewis's" after supper. I knew that a business meeting of a flock of geese could not produce anything to compare with the noise and gabble that would be the programme at "Lewis's" that evening, in consequence.

This home-coming through a small town is a slow proceeding, and lights had begun to twinkle in the windows when the boy pulled up at the barn and we were at our journey's end, tired, dusty and glad that we were at home once more.

Then the welcome that was ours when "the folks" found that we had returned—the thousand questions to be asked and answered while we unhitched and put the team away.

Then, while supper was being prepared, we must needs unload the outfit and carry everything up to the back porch, where it had to be re-sorted and such things as we decided could not be left outside had to be stowed away in odd corners about the house "till morning." Of course there were a dozen or more children from the neighborhood on hand to assist by asking queer questions, and "helping" by getting in just the wrong place at just the right time to have someone tramp on their numerous bare toes, until their infantile yells rent the air and brought more than one nervous mother skurrying in to see "what on airth ailded Jimmie."

But what is the use of lumbering up columns of good type with this plain description? Everybody knows just how these things always happen anyhow, for wanderers have wandered across the earth since time began, and some of them always come back to repeat the scene we enacted in the little town that evening. Always the children are on hand, and of course they get into some sort of trouble, and equally of course this always brings the mother, and many times the father also, and then the wanderer who wants a chance to get a bit of rest because of his physical fatigue must needs answer a rapid-fire lot of questions, most of them, of course, having no bearing on the subject at hand at all.

The boy did not get down "to Lewis's" that night, for it was 10 o'clock before we got our chairs away from the supper table, and even then the dishes had to "wait till morning" for their tri-daily bath which is part of the domestic mystery called "housekeeping."

When the last impromptu guest had looked at the clock for the tenth time and then suddenly discovered that it was "gettin' late," the boy and I again had a few moments of comparative quiet, which we used by storing everything snug for the night, and at last even he, too, clattered down the steps and on down the walk with his merry whistle, bound homeward.

"Goo' night, C'manch—see yeh in th' mornin'," he called as he passed out into the street and let the gate slam shut with a clang of complaining hinges.

The next morning he appeared very sleepy and woebegone when he came around the corner of the house.

"Bin sleepin' s' olng out o' doors 'at uh couldn't sleep 'tall tull uh tuk uh blanket 'n' rolled up on th' grass," he explained.

EL COMANCHO.

We should say the average length of full-grown tigers would be 9ft. 2in. and tigresses about 1ft. less. If eight were shot the majority would certainly be under 9ft. 7in. and the sportsman would be fortunate to get more than one of that length.—Asian.

Natural History.

Grouse and Grouselings.

ITHACA, N. Y.—I have never heard the ruffed grouse classed as an aquatic bird, but I was witness of an incident once that in a way is quite convincing, that in a case of sink or swim the bird chooses to swim. My family and I were enjoying an outing one Memorial Day some two or three years ago, and our walk led us for some distance close beside the historical Buttermilk Creek. We were presently startled by a great bluster in the patches of bushes, grass and weeds just ahead of us. Then came a sharp rattle of wings, and a wildly disturbed mother grouse with a ricocheting flight swept across the stream and disappeared in the dense undergrowth on the opposite side. Hustling up a bit we beheld three or four downy, diminutive balls of electricity losing their identity under convenient leaves and snarls of grass. One plucky chick, however, with its trifling, spike-like pinions beating the air spitefully, tumbled aggressively into the water, which at this point was running rather swift and deep, and swam as lightly as a tippet of thistledown to a tiny island clinched hard fast out in mid-stream. The brave little chap scratched ferociously to make a landing, a task it had scarcely accomplished ere the anxious parent, all unmindful of unwelcome intruders, dashed to the rescue with a demonstrative but intensely reassuring gabble. With wings outstretched, eyes aflame, and every feather bristling in defensive array, this wild mother of the woodland appeared to the party standing in mute astonishment within a few steps of her, a magnificent picture of heroic mother love and intrepid daring. For a moment, as if challenging us to approach nearer, mamma grouse maintained this position, then with a thunderous flirt of wings and a peculiar low clucking call which vigilant baby grouse seemed to perfectly understand, she buried herself in a near-by thicket to be followed an instant later by her fuzzy but sinewy offspring.

This reminds me that my first acquaintance with the noble ruffed grouse was made when, as a bare-legged schoolboy scarce six hands high, as the horse trader might say, I succeeded, in company with a couple of other lads, in capturing a trio of birds just out of their nest. The soft, fluffy mites of life, even then thrilling with the unconquerable wildness of their kind, were appetizing morsels of wonderment to the freckled, sun-browned urchins from the undignified schoolhouse, low arching on the hillside above. So much so, indeed, that we patiently toiled up the long, green lane, blazing hot under the spring sunshine, with our precious charges carefully ensconced within the hollow of hands held gently together, to the birch wielding astyaea of the aforesaid seat of learning. After a little space, in rebellious imitation of the general who marched up the hill and then marched down again, three disappointed youngsters set their faces toward the lower end of the green lane charged with the duty of safely returning their feathered captives to a shrewd mamma's care.

When the last tiny, satin-garbed fledgeling had twinkled in the light for an instant as it made its plunge into the sprawling shrubbery, six scarred and weary legs pegged manfully in the direction of Cobb's spelling book and a blonde divinity in gingham apparel, the owner of one pair of those legs in the meantime forming a respect and attachment for the grouse family that has continued to thrive and lead him ever joyfully afield for a long flight of years.

M. CHILL.

Something About Snakes.

Editor Forest and Stream:

In a communication to FOREST AND STREAM, published in the issue of July 15, the writer, innocent of offense, referred to certain brook trout as "speckled beauties," not knowing that the term had been banned by certain sentimental sportsmen. However, we offer no apologies to Coahoma. The expression may be gray with age—but even this might be an argument for its due veneration. "Speckled beauties" those trout were, neither more nor less. The term cannot be condemned as either illogical or improper. It conflicts with neither ethics nor morals, and further, is free from rhetorical error. If, meeting the requirements of the logician, the ethicist, the moralist and the rhetorician, who then may attack it? Merely the sentimentalist. And what is sentiment? Merely individual taste.

We observe what Mr. Cheney writes concerning the use of the mooted expression, and naturally must respect an official request. Personally we see no reason to discourage the use of the term—outside of the columns of FOREST AND STREAM.

But I am more interested in snakes than in this discussion. Being more or less associated with zoological research and having made some special study of our native ophidians, I am frequently called upon to identify species. A few days ago a gentleman residing at Smith's Ferry who during the past twenty-five years has caught many rattlesnakes on the ledges of Mt. Tom, and who is fairly well posted concerning the habits of the common snakes of this vicinity, sent word that he had captured a snake entirely new to him—one that while not particularly vicious, nevertheless showed some fight when captured (it was taken alive with regular snake tongs), and that it elevated its head and expanded a "hood," very similar to that shown in pictures of the cobra of India, and at the same time made a loud, hissing noise. The description was quite sufficient to identify it, nevertheless I drove up to the Ferry the following afternoon to see the snake, thinking it somewhat strange that the snake suggested by the description given should be unknown about Smith's Ferry. A glance through the netting which covered the box in which the snake was housed settled its identity, and as the question "Do you know it?" was answered with "I guess so," the door of the box was opened, a hand was passed inside, and in no wise intimidated by the "hissing" and "spreading," a full-grown puff-adder (*Heterodon platyrhinus*) was brought out for closer inspection. As the box was opened one of the boys standing near made a rush for the tongs which were close at hand, but he soon saw that they were not needed in handling this specimen.

Of all our native serpents the puff-adder—otherwise known as "flat-head," "hog-nose," "deaf-adder," "spreading adder" and "blowing viper"—is one of the most interesting. Not only are his markings pleasing to the eye, but his facial expression is more attractive than that of most snakes. Moreover, he is an excellent actor, raising, when disturbed, his head, flattening his neck, expanding his body, and blowing and drawing his breath through the nostrils with a shrill hiss. He will jump, too, as though to grab the intruder, but close observation shows that this "jumping" is merely for the purpose of intimidation and not for striking, as the head is seldom thrown near the intruder and the mouth remains closed. Once in a while an old puff-adder will open his mouth very wide, and swinging his head about, succeed in fastening his small teeth in cloth or flesh, but this is so rare and then done with such deliberation that one would almost be justified in saying that the puff-adder never bites. And if he does? His small, fish-like teeth will hardly puncture the skin and need be feared no more than a mosquito's bite. After one of these fellows has been kept in captivity awhile and handled occasionally it becomes quite indifferent, and is often with difficulty made to "spread" and otherwise "show off." A little run in the grass of the lawn soon, however, recalls the advantages of a free life in the fields and brings a return of its natural means of defense.

Don't kill the puff-adder when you meet him sunning in some sandy field or wooded patch. If you approach quite near him he will certainly make a great show and try, poor fellow, to scare you off. Unfortunately for this snake, his bravery in not running away and in the great attempt to intimidate the pedestrian is usually his own death warrant, for who, except a student of herpetology, is likely to permit such a bold—and hence, to the majority of people, dangerous—snake to roam at large? Reader, if you are a snake-hater, vent your spite on every rattler, moccasin and copperhead in the country, but think twice before killing a puff-adder, or our beautiful green snake (*Liopeltis vernalis*), or the little red-bellied snake (*Storeria occipito maculata*), or the little brown snake (*Storeria dekayi*)—in fact, before killing any non-venomous serpent. They have their uses, as those of us know who have seen the king snake and the black snake slay the rattlesnake and copperhead. The three little snakes mentioned above are not only handsome, but may be handled with as much impunity as an angleworm, and to one familiar with them, certainly with more pleasure.

J. HOBART EGBERT, M.D., Ph.D.

HOLYOKE, Mass.

"The Robin as a Mock Bird."

Editor Forest and Stream:

With all due deference to Mr. Townsend, I beg to submit that he fails to throw any real light on the above subject in his communciation in FOREST AND STREAM of the 5th inst. The fact that he never heard a robin clearly whistle "Bob White" or cry "Whip-poor-will" falls considerably short of being negative evidence on the point in question, and his ingenious theories can hardly be expected to count for much against the positive statement of persons who have heard both. Mr. Krum can speak for himself about his "Bob White" robin, but so far as I am concerned, I beg to repeat what I first said—that my robin's cry of "Whip-poor-will" was "as distinct as the bird that bears that name could utter it"—and it was by no means "a fancied rather than a premeditated resemblance," as Mr. Townsend is inclined to assume. Furthermore, it was not a part of the robin's well-known regular song, but in a sensible degree separate and apart from it.

CAMP PERCY, N. H., Aug. 7.

Game Bag and Gun.

The July number of the Game Laws in Brief and Woodcraft Magazine is now ready. See advertisement of it.

The Sportsman.

PHILADELPHIA.—*Editor Forest and Stream:* After reading the very excellent article by Ransacker, in FOREST AND STREAM of Aug. 5, I found that he dealt with many subjects over which I myself have pondered, but concerning which we radically differ. I desire to state distinctly, however, that there is in this no assumption that he is wrong and I right, nor vice versa. I merely contribute my mite to the argument.

Ransacker's communication may be divided under two heads, the first of which defines what constitutes sport and sportsmen, and the second goes to show that there are no sportsmen.

Let us first consider the former, concerning which he lays down his premises as follows: "The word as defined by Webster is an abbreviation of the word disport, and its import definition, as generally interpreted, implies play, diversion, wantonness, mockery and trifling. Webster's definition of sportsman is 'one who pursues the sports of the field; one who hunts, fishes and fowls.'"

In the foregoing there is an unfair bunching up of all the definitions of the word, some thirteen in all, many of which have a special meaning distinctly apart from matters of sportsmanship. From the broad premises based on all the special, irrelevant definitions of the term, he bases his particular conclusions. The premises thus having much false and irrelevant matter, the conclusions are erroneous. Granting that Ransacker's contention is based on sound premises, then on the same line of reasoning nearly every word in the language is wrong.

Every profession, industry and class interest abounds with terms which have a technical, restricted, appropriate meaning. It matters not in the least from what word or group of words the technical term or terms were derived—the special meaning of such terms in their special connections and applications is the only one to be accepted. Thus, if a sportsman were speaking of his dog backing, it would not be understood in the same sense as if a horseman were speaking of his horse backing, yet

in the special connections the terms would have well and accepted meanings in both instances, quite distinct from each other.

Now, when Ransacker quoted Webster I think that he overlooked this important essential—that is to say, the special class meaning of words when they are applied in a technical or restricted sense. To be more specific, and taking up Webster's definition of a sportsman again, the matter would be better presented as follows: "Sportsman.—One who pursues the sports of the field; one who hunts, fishes," etc. Then, going back to the definition of sport, we find the following: "5. Diversion of the field, as fowling, hunting, fishing." There then would be logical consistency which would be strictly in accord with the thought and purpose of the great lexicographer, and in accord with the language of sportsmanship. But if we were to include also the following, "2. Mock; mockery; contemptuous mirth; pastime amusement," it is plain that we would include an irrelevant meaning, which if accepted would do violence to common sense, befog the whole language of the sport, substituting vagueness for what is clear and abandoning the fact for a fancy. This is wherein Ransacker has erred, and many of his deductions from premises so false must be entirely defective and his whole argument fall to the ground in consequence.

So also falls much of Ransacker's contention that there are no sportsmen. While there is the widest difference of opinion as to what constitutes sportsmanship, there is a general consensus of belief that it really exists.

Nearly all writers who have treated the subject have confounded the manner of it with the thing itself. There is such a thing as dining, yet the manner of dining differs widely with individuals. There have been long treatises written on dining, so much being devoted to the manner of it that to him who knew nothing of manner it would seem as if dining was quite a distinct matter from eating. In shooting and fishing, the manner of each individual varies from that of every other individual, yet the principles of the sport are common to all alike. Each enjoys the pursuit and capture in his own peculiar way. It is all the same thing, differing in manner.

There are unwritten laws governing the matter of sportsmanship, known well to the class of sportsmen, though perhaps unknown to the world at large. If anyone were to attempt to define these laws, it would be impossible for him to do so. If they are violated, common sense and the circumstances of each given case would make the application of the laws easy.

It likewise would be impossible to exactly define what qualities were attributes of a gentleman, yet each person knows what such attributes are. Still, if each person were to write out at length his opinions of true gentility there would be quite as much difference of opinion concerning it as there is concerning what constitutes true sportsmanship. In the discussion of the particulars the *tout ensemble* would be lost.

LUCIUS ANDREW CHILDRESS.

The Equipment of Camps and Expeditions.

BY PROF. CHARLES H. SNOW, NEW YORK UNIVERSITY, NEW YORK CITY.

(A paper presented before the American Institute of Mining Engineers at the New York meeting in February, 1899.)

[*Continued from page* 107.]

Food.

Foods suitable for camps and expeditions differ from those available for more ordinary conditions in two respects. First, they are deficient in those imperfectly comprehended vital elements which exist in fresh beef, vegetables or fruit, as compared with cured beef, canned vegetables and dried fruit. Second, they are limited in variety. The first difficulty, while important, is not insurmountable. Life and health have been sustained for long periods on imperishable foods such as are here considered. It is, however, very important that the greatest possible variety should be provided. Foods which are at first acceptable, and which are undoubtedly sufficient in nutritive value, become objectionable if persisted in for too long a period. The digestion and working efficiency of the consumers are also impaired. Members of the party will work more cheerfully and resist the influences due to an absence of fresh food for an infinitely longer time where variety is provided. Variety is obtained by the utilization of the many forms of cured or preserved foods available, and also by a knowledge of cooking as applied to such foods. A cook experienced in the requirements of camps will provide a considerable variety of dishes from a comparatively small list of elementary food substances.

Foods suitable for camps and expeditions should be satisfying, easily packed, readily cooked, and as light in weight as possible.

Meats.—The choice of meats is unfortunately limited, so that this subject presents many difficulties. Fresh meats should invariably be preferred to any substitutes, and should be procured wherever possible. The United States Government assumes 20oz. of fresh meat, such as beef or mutton, as an allowance per man per day. This quantity is presumed to be interchangeable with 12oz. of cured bacon.[5] Canned meats must be more or less resorted to when the period of exposure is to be long. When well prepared, they are probably the best form of preserved meats, save that they are heavier than some of the others. Beef, mutton, turkey, chicken and ham are the principal meats thus prepared. Specifications governing the canning of meats have been framed by the United States Navy Department, and will be found to be of service. The preparation of canned foods should be most carefully superintended, and no product should be selected which has not passed the test of actual experience. Canned meats do not always remain good and fresh in warm climates. This is probably due, at least in part, to carelessness in manufacture. It is asserted that these preserved meats have been concentrated, or otherwise altered, so that less weight is required than if the meat were fresh. Such an assumption can hardly be relied upon practically, save as it may refer to the removal of bone and gristle. It is certain, however, that the per cent. of protein is greater in canned meats. Sixteen to 18oz. of canned meat should be specified per man per day.

Meat pastes or mixtures are frequently employed. Pemmican, an illustration of this class of foods, was originally prepared by the North American Indians, and consisted of dry venison, which, after having been pounded orotherwise pulverized, was mixed with fats, the flavor being sometimes improved by the addition of herbs. It is now made from the round of beef, cut into strips, dried, shredded, and then mixed with beef suet and Zante currants. Pemmican resembles the biltong of South Africa. It is sometimes taken on polar expeditions, and can be relied upon to remain good for long periods.[6]

So-called "emergency foods," in which meat, as an active principle, is combined with other food elements, are manufactured, to some extent, with the purpose of furnishing a more or less complete animal and vegetable food in as small a bulk as possible. The "standard emergency ration," manufactured by the American Compressed Food Co., of Passaic, N. J., consists of dried meats, meals and vegetables, reduced to convenient form by hydraulic pressure. Three tablets of this compound, with one of compressed and sweetened tea, weigh 1.28lbs. and occupy 27 cubic inches. They are placed in a can of convenient proportions, thus forming what is intended to be an entire day's allowance. The food appears to possess unusual merit as compared with others of its class.[7] It should, however, be supplemented by other foods. The "concentrated military soup," manufactured by the Tanty Canning Co., of Chicago, was originally prepared by M. Tanty, a celebrated French chef, for use in the Russian army. It has since been employed by the government of France. Beef extract is sometimes combined with partially cooked bean or pea meal, and then placed in films, so as to closely resemble the common sausage. This mixture, known as erbwurst, is prepared in the shape of soup, only a few minutes' cooking being necessary. It is manufactured by the C. H. Knorr Co., of Heilbrun, Germany.[8] Although this mixture is designed abroad as an equivalent or substitute for meats in emergency rations, it would be classified in this country among the vegetable foods.

Some of the emergency foods are undoubtedly satisfying to individuals. It is not so certain, however, that they would meet, as an exclusive diet, the requirements of the majority. They are certainly useful as occasional substitutes, affording an agreeable temporary change. But too great a reliance should not be placed upon them, since preparations of this kind have received their principal tests in Europe, where the requirements for food are not as high as in the United States.

Bacon and ham are almost universally relied upon in the United States, because they are compact, durable, more or less satisfying, easily cooked, and readily procured in any market. Bacon was recommended by the U. S. Commissary-General of Subsistence as the best emergency meat, after the consideration of separate reports from eight army departments.[9] Ham differs from bacon in containing much less fat. The two meats may sometimes be combined to advantage. Bacon should be specifically purchased as fat, lean or medium, according to climate or personal preference. The result is likely to be unsatisfactory unless the grade is thus distinctly specified. The recommendation of the U. S. Commissary-General, above quoted, was in favor of a preponderance of lean meat. Where bacon alone is to be employed, lean meat should almost invariably be specified, the leanest bacon being sufficiently fat. A larger proportion of fat is permissible where it can be used in combination with ham.[10] Some forms of sausages are useful, because they afford variety. Approximately, 13oz. of these meats may be considered as a substitute for 20oz. of fresh meat, for the conditions now under consideration.

Desiccated or "crystallized eggs have been employed as a camp food to a moderate extent, and appear to be worthy of a more prominent place in the expedition or camp provision list. These eggs can be prepared in many ways, notably in omelets, to be used in connection with bacon and ham. This substance, as prepared by the La Monte Desiccated Egg Co., of St. Louis, as distinct from some others, was one of the most satisfactory articles in the outfit of a party recently sent, for scientific purposes into a very remote region, and detached from its base of supplies for more than six months. One pound of the dried product is said to contain the substance of forty-eight fresh eggs. Crystallized eggs should be combined with cold water before heating.

Evaporated eggs are difficult to obtain in the East in small quantities, but may be procured by the case without difficulty. In many Western cities they are employed by bakers, and can be obtained in small amounts. It is reported that the yolks of eggs which are discarded in the manufacture of prepared albumen for photographic purposes are wasted. It would appear as though a considerable demand might be created for this most valuable substance.

Condensed milk should be employed wherever possible.

Wild game is frequently considered as a resource. A party which is to pass through a section in which wild game is supposed to abound should not, as a rule, depend unduly upon it. The hunting of game requires much time and heavy weapons, such as are otherwise not usually necessary. Moreover, the hunter's success is uncertain and intermittent. The work of the party is more likely to progress rapidly and regularly if the possibility of game for food was disregarded when the outfit was made up. Certainly, reliance should never be placed wholly upon game or any other outside means of support.

Foods Other than Meats.—It is not hard to decide upon foods other than meats. White beans, yellow cornmeal, white flour, Carolina rice, oat meal, baking powder, sugar, salt, tea, coffee, chocolate, prunes, raisins, Zante currants, dried apples, peaches and apricots are all available in this connection. All these articles can be prepared so as to remain uninjured for long periods. They meet the requirements for food in this connection, in that they are satisfying, easily packed, readily cooked, sufficient in variety, and comparatively light in weight. The tomato is an unusually acceptable vegetable, and should be included wherever possible; a product containing as little water as possible being preferred.[11] The market offers many compressed vegetable foods, some of which are quite useful. Bean or pea soup, either in meal, tablets or sausages, is usually very good. One of the best grades of pea meal is erbwurst, the qualities of which have already been referred to. This substance has been tested by the U. S. Commissary Department, which reports that it is a good substatute for all other dry and fresh vegetables, and that it is most satisfactory when mixed with small pieces of bacon and used as soup.[12] The principal objection to erbwurst is the difficulty of obtaining it, save in large cities. Other mixtures of similar nature are no doubt more easily available, and some of them may be quite as good. None of them, however, have been so exhaustively tested. The fact that preparations of this kind are partially cooked is important, as raw beans and peas require long-continued preparation. Soup from erbwurst is not as palatable as that from fresh split peas, yet during the tests later alluded to students requested soup from erbwurst because of its nutritive qualities, instead of that freshly prepared from the best dried peas.

Saccharine has received considerable attention as a substitute for sugar. It is quite certain that it contains no injurious principle, but is, on the contrary, helpful in correcting some of the intestinal troubles due to camp life. It is clearly distinguished from sugar, in that sugar is a valuable food, whereas saccharine is simply a flavor. Recent experiments are reported to have been conducted in Germany[13] in which sugar was permitted to form a portion of the daily allowance of a considerable number of soldiers; and it is said that the results, when compared with those obtained from men who abstained from sugar, idicated in a very marked degree its value as a food. The writer has particularly noticed the beneficial effects of sugar when greatly fatigued and living upon low diet. At such times it appears to act as a stimulant, probabaly because, unlike starch, it is so immediately absorbed. Sugar should certainly never be omitted from camp supplies, save possibly in case of emergency. Even then its superior qualities are thought to offset any disadvantage due to its greater weight. Two grains of saccharine are said to possess the sweetening qualities of 1oz. of sugar.[14]

Evaporated vegetables are not good from a nutritive point of view. They give variety, however, and are useful in this respect. Dried onions are one of the most reliable, and dried potatoes one of the least so, of these foods. Dried fruits, as distinct from dried vegetables, should invariably be employed, particularly if the expedition is to be out for some time. Prunes, apricots, peaches, apples and raisins have been found to be satisfactory from every point of view. They are not only valuable foods, but supply one of the best means for the prevention of scurvy. One-fifth of a pound of dried fruit may be assumed as the equivalent of 1lb. of fresh or canned fruit. Numerous varieties of canned vegetables are available where weight is not a consideration. Many, if not most, of the compressed foods specially prepared for the requirements of camps have but little practical value. The stomach requires physical exercise as well as nourishment. This exercise cannot be obtained unless the food is to some extent bulky. A desiccated or compressed food should be of such a nature that bulk can be given to it by the addition of water. An adjustment must always be made between necessary and needless waste.

Citric acid is desirable as a substitute for the natural acids of fruit. When in solution, the flavor resembles that of lemonade. Concentrated or "evaporated" vinegar is more or less pure acetic acid colored with caramel and flavored with extractive. Chemically pure acid (of 80 per cent. strength) may be handled with perfect safety, and when diluted with fifteen times its own bulk of water will afford excellent vinegar, particularly if flavored with estragon or some similar substance. White beans are universally relied upon in camp diet. Their high percentage of protein renders them one of the best vegetable substitutes for meat. One ounce avoirdupois of white beans measuring 1¼oz. increased after cooking to 2¼oz. weight and 3 fluid ounces bulk.

Hardtack must be distinguished from pilot biscuit, which is ordinarily sold as hardtack. The former is harder, and, while less palatable, is more durable.

Rice is one of the valuable articles in this connection. Good, clean, large-kerneled Carolina rice should be selected. One ounce avoirdupois, occupying 1½ fluid ounces, increased after cooking to 5 fluid ounces in bulk and 6¼oz. in weight.

Tea is generally used by the inhabitants of cold climates, while coffee is preferred by the inhabitants of warmer ones. Tea and coffee have little if any importance as nutrients, but are valuable in that they prevent waste and are harmless stimulants. It is important that personal preference be gratified as regards tea and coffee. An inhabitant of a temperate climate will usually retain his

[5] See U. S. Army Issue and Conversion Table.

[6] The Australian pemmican, as prepared by Dr. Bancroft for the British army service, consists of beef mixed with 30 or 40 per cent. of fat, flavored with beef extract. The composition is said to be about as follows: Moisture, 2.95; fat, 32 to 42.25; albuminoids, 42.25; other nitrogenous substances, 5.20 to 12; ash, 3.22 per cent. Five ounces of this mixture is said to be equal to 1lb. of beef. (Report of the Commissary-General of Subsistence, 1894, p. 16.) Pemmican is not generally known in the United States, and is very difficult to obtain. Messrs. Kemp, Day & Co., of New York city, have provided this food for several expeditions known to the writer.

[7] Since writing the above, tests conducted by the Government at Chickamauga, and reported by the current press, appear to confirm the above. The impression made upon those in charge is said to have been so favorable that the food is under consideration as a Government emergency ration.

[8] The success of the German army during the Franco-Prussian conflict of 1870 has been largely attributed to the use of this substance. As in the case of pemmican, this food is difficult to obtain in the United States except in large quantities. It can be obtained from Messrs. Rode & Co., Sixty-first street and Third avenue, New York city.

[9] Report of 1896, page 63.

[10] Ham that is broiled or fried appears to be more concentrated, and therefore more satisfactory than when boiled. Broiled or fried, it may be classified with bacon, while boiled ham may be compared with corned beef.

[11] Tomato soup tablets are available where canned tomatoes cannot be used.

[12] Communciation from Major C. A. Woodruff, Feb. 12, 1899.

[13] Sugar as Food, M. H. Abel, U. S. Dept. of Agriculture.

[14] It is well known that large quantities of sugar are demanded by the lumbermen of the northern woods, who employ it with great freedom upon beans, pork and other food. The negroes employed upon sugar plantations are said to use considerable sugar. The writer has passed through several consecutive days of unusual toil without much difficulty, depending principally upon crude sugar, other provisions having failed.

TABLE II.—SUGGESTIONS AS TO FOOD COMBINATIONS, WITH PROPORTION OF EACH FOOD WHEN THUS EMPLOYED IN COMBINATION.

	Characterized by rapidity and ease of cooking. Fifteen minutes required for preparation of meal. Three items only needing heat. List may be lightened by omitting raisins, chocolate and 2oz. of erbwurst, but will then apply to but four or five days. Men tested upon this list showed no material loss of weight after six days, and affirmed ability to continue a week longer if desired. Erbwurst, tea, chocolate, etc., see references.				Contains variety sufficient for extended service. Simple cooking appropriate to travel is called for. Ham should be broiled, since, weight for weight, broiled or fried ham is more satisfying than boiled ham. Men placed upon this list gained several pounds within a few days. Evaporated eggs, etc., see references.				Contains variety sufficient for extended service. A wider range of cooking is necessitated. See references.				Exhibits greater weight, yet closely similar nutritive value. Distinguished from succeeding list in that cooking requirements are simpler. Weight of tomatoes includes can, 65 per cent., gross weight can and contents being food. Canned beef and peaches are listed net, no allowance being made for weight of package. Allow five times net weight canned fruit as equal to one time net weight dry fruit. Waste, etc., see references.				This list limited only by necessity for foods remaining fresh. See preceding foot notes for references to canned tomatoes, fruit, etc. Canned corn is also listed net, without package. Waste, etc., see references.			

* Alternates.—Variations due to climate, season and individuals. See text for discussion of the various alternates.
[1] Pemmican. "Standard Emergency Ration" (partial). Canned ham, bacon, sausages. Ham for boiling. Canned fresh meats. Chicken, turkey, beef, etc.
[2] Add baking powder when flour is substituted for hardtack.
[3] Dried lima beans, split peas, lentils. Farina, hominy and similar corn products. Cracked wheat and other cereals. Canned succotash, lima beans, peas, squash, dried onions.
[4] Cocoa.
[5] Saccharine.
[6] Citric acid, evaporated vinegar (identical with concentrated vinegar).
[7] Zante currants, dried cherries, dried pears. Canned cherries, canned apricots.

preference as regards tea or coffee when transported to some other climate. Tea is, generally speaking, to be preferred to coffee in that it is much lighter, ½oz. of tea being an equivalent of 2½oz. of roast coffee or 3oz. of green coffee. Roasted coffee is to be preferred in traveling, while green coffee may be provided for camp use.

Chocolate is a food the value of which is not, as a rule, comprehended in America. In France and in some other European countries, stick chocolate is devoured as a regular article of diet. In the United States it is regarded as a confection rather than as a food, and the objection urged against it is that it is indigestible. Chocolate is almost invariably easily digested in considerable quantities by those who exercise freely. It is at least as digestible as bacon. It is the experience of the writer, who has invariably employed it for some years, that members of the party who at first regard it with little seriousness, soon begin to depend more or less upon it.[15]

Raisins are valuable as a convenient form of dried fruit edible without cooking. They are also serviceable when boiled with rice, prunes or other fruit. Raisins are much employed in many of the lumber camps of the Northwest. They should be kept in tight packages.

Canned vegetables should be selected with the greatest care. None should be chosen that have not previously been tested as regards palatability as well as general condition. Experiments in this connection are not permissible. The same point does ont apply to canned fruits with the same emphasis, since canned fruits are not relied upon to any great extent for nourishment, and also because canned fruits are more apt to be good than some kinds of canned vegetables.

Selection and Quantity.—The great bulk of almost all the fresh foods in common use is made up of water. Some foods permit the evaporation of superfluous water without deterioration of the food substances themselves. The majority of these resume most, if not all, of their original bulk when brought again into contact with water, as they must be during the processes of cooking. Such foods are of great value for the purpose under consideration. An effort should be made to secure as many of them as possible; the resulting list being then supplemented by such other articles as have been proved to be satisfactory for other reasons.

Military authorities recognize the necessity of grouping food together so as to meet the requirements of different contingencies. The "Reserve," "Travel," "Emergency" and other rations have been thus called into being. The same necessity for recognizing different requirements exists in civil life. Food combinations that seem best fitted to meet the contingencies of difficult and of easy transportation, of fixed and moving camps, and of emergencies, have therefore been suggested. It is not expected that any one of these combinations can be exclusively adopted, since the work of the civilian, to a degree as great as, if not greater than, that of the soldier, exposes him to unexpected contingencies, so that all of the requirements noted are possible within a comparatively short experience. The distinctions between such classes of food must be comprehended, however, if the outfit is to be made up intelligently; and in many cases they must be carried into effect throughout.

Where exposure is to be endured for a short time only, it will usually suffice to rely upon a few appropriate articles, such as can be easily cooked, or perhaps need not be cooked at all. Health is not preserved, however, if these abnormal conditions are permitted to exist beyond a very few days. Allowances for such conditions would be entitled "emergency rations." The saving in weight effected by cutting down a full day's ration to the smallest quantity upon which life or some degree of health can be preserved is but small. The principal differences therefore between rations that are to be used in emergencies or upon the march and those that are to be used in camp should be as much as possible along the line of absence or presence of water, variety and ease of cooking. Weight would seem to be less important in emergency rations than in other cases. The emergency ration is intended at most for only a very few days. Several ounces daily more or less would therefore result in a total so small that it need hardly be considered. Adding several ounces daily, however, to rations that are to be continued for weeks or months would be more serious. It would seem as though an emergency ration should be liberal in quantity, without much regard to weight, but characterized by the simplicity, ease and rapidity with which it can be cooked.

Parties established in well adjusted, fixed camps, where provisions have been unpacked and cooking facilities have been developed, require, and can employ, a larger variety of foods than those stopping at short intervals, in quickly improvised camps, along the line of a journey. The difference between foods selected where transportation will be easy and those selected either for fixed camps or for moving men where transportation is not easy should lie, as much as possible, along the line of weight of uncooked food. Parties traveling easily by boat, for example, can employ canned fruits; whereas dried fruits, which weigh approximately one-fifth as much, would have to be utilized by those looking forward to transportation over some difficult trail.

Climatic and personal considerations always influence the selection of foods. The Eskimo, for example, requires foods abounding in fats, while the inhabitants of tropical countries require lighter foods. Tea appears, in a general way, to be more appropriate to the North, and coffee to the South. Fruits, peppers and highly seasoned foods are also characteristic featuresof the Southern or tropical diet. The food requirements upon a cold day are much in excess of those upon a warm one. Other distinctions also exist. Foods upon which certain nations rely are not always suited to the requirements of other nations. The German diet, for instance, does not appear satisfactory to the Frenchman; while a diet satisfactory to a French soldier would be insufficient for the requirements of an American civilian. A certain amou of adaptation may be expected, where people of on region are transported to another.

The subject of quantity is a difficult one, owing to th variation due to weather, cliamte, labor and person habits. It is frequently customary to order supplies fc parties in bulk without much attempt at mathematic apportionment, trusting to chance to provide new su plies when the original ones are exhausted. Supplies ca be purchased in such large quantities as to be clearly b yond the limit of requirement. Government data are he of imperfect service. The civilian usually requires diffe ent foods from those satisfatcory to privates in the reg lar army. American studies in this direction are invari bly to be preferred, for American conditions, to thos made in Germany or elsewhere, even though mo attention has been given to this subject in Europe tha in America. Conclusions based upon experience are i variabley to be preferred to those derived from chemic analyses. Combinations of food could be arranged th would be theoretically sufficient for life and health, whi practically insufficient to preserve either. The chemist of the vital elements of food is not yet perfectly compr hended. In the absence of other data, foods may b theoretically measured or compared by the presence of series of substances called protein, and by other seri of substances classified as fats and carbohydrates.[16]

The former are supposed to be valuable in promotin or sustaining tissue, while the latter are associated wi warmth and muscular action. Prof. W. O. Atwater, o of the foremost American authorities on this subjec has established a tentative standard of 150 grammes protein and 4,200 calories of energy as the requireme of a man at hard muscular labor. The average of fou teen dietary studies of mechanics' families in this cou try indicates a daily food consumption corresponding 103 grammes of protein and 3,465 calories of energ The value of all foods must obviously be judged by oth standards than those established by chemistry, even these were entirely reliable. Digestibility and pa atability are always important; while foods that are i tended for special purposes, such as those called for camps and expeditions, must, as has been indicated,

[15] The "German" Sweet Chocolate, manufactured at Dorchester, Mass., by the Walter Baker Company, is very satisfactory.

[16] The chemistry of foods is yet indefinite. Protein, includi albuminoids and gelatinoids, is divided into series called protei nitrogenous extractives and amids. All are particularly as ciated with such foods as beef, eggs, wheat and nutritious ve tables. Fats are present in most meats and vegetables, wh carbohydrates are in gums, sugars and starches. The prote series are presumed to make and to protect tissue, while fa and carbohydrates produce heat and energy. The disintegrati of tissue may result in heat and energy. A lean man fed up lean food may therefore be as warm and energetic as one who quires and can assimilate fats and carbohydrates, which theoretically more distinctly heat and energy producers. Prot is measured in grammes, while heat and energy, being int changeable, are measured in terms of heat, the calorie or u being the quantity of heat required to raise the temperature 1lb. of water 4° Fahr. The protein value of food is determin by the ordinary quantitative means, while the heat or energy va is determined by the burning of fats, starches or similar foods an apparatus called a calorimeter. Studies along this line being conducted at Middletown, Conn., by Prof. W. O. Atwat

udged according to weight, appropriateness, climate and other standards.[17] After substances have been selected so as to accord with all of these more important standards, they may then, perhaps, be measured or compared in terms of their protein and of their energy. It is believed that, although the following lists have been compiled with a view to meeting average conditions, they may also be employed as bases for others, intended to meet extraordinary conditions.

Table I. contains series of provisions suitable for camps and expeditions under average American conditions. The different foods are grouped together, so that a day's allowance may be formed by selecting any one substance or a lesser quantity of two or three substances from each of the several groups of meats, breads, vegetables, etc. The protein and energy values of each one of the substances thus enumerated are given for ounces. The writer is indebted to Prof. Atwater for the latest figures in this connection.

Table I.—Meats, Breads, Vegetables and Other Foods, Particularly Suitable for Camps and Expeditions, with Protein and Energy Value of Each.

	Substance.	Protein. Grammes per Ounce.	Energy. Calories per Ounce.
Meats	Bacon	2.64	175.6
	Ham	3.85	104.0
	Evaporated eggs	12.58	138.7
	Bacon and ham	....	.....
	Bacon, ham, evaporated eggs	.....	.....
	Canned corned beef	7.45	80.6
	Canned fresh beef	7. 2	89.1
	Canned fresh fowl	....	.....
	(Fresh beef)	(4.19)	(65.0)
Breads	Hardtack	3.52	112.2
	White flour	3.11	100.9
	White bread	2.66	75.9
	Oatmeal	4.76	115.6
	Corn meal	2.63	104.4
	Farina	3.12	104.1
	Cracked wheat	3.60	106.2
	Hominy	2.41	103.4
Vegetables	Rice	2.21	102.2
	White beans, dried	6.38	100.0
	Lima beans, dried	5.13	101.2
	Peas, dried	6.97	103.4
	Lentils, dried	7.28	101.2
	Pea meal (erbwurst)	6.97	103.4
	Canned tomatoes concentrated	1.70	32.8
Beverages	Tea	....	.....
	Coffee (roast)	....	.....
	Chocolate	3.65	178.7
	Cocoa	6.12	145.0
Sugar	Sugar	....	116.2
	Saccharine	....	.....
Condiments	Salt	....	.....
	Pepper	....	.....
	Baking powder	....	.....
	Vinegar, concentrated	....	.....
Milk	Condensed milk	2.52	94.7
Fruits	Raisins	0.65	90.3
	Prunes	0.51	74.4
	Dried apricots	1.33	80.6
	Dried peaches	1.33	80.6
	Dried apples	0.45	84.4
	Canned peaches	0.19	13.7
	Canned pears	0.08	22.2

A day's ration to be made up of one item from each of the several groups, or a lesser quantity from two or more varieties of a group.

An exception is made in the case of vegetables, where one item should be selected from each of the several divisions under the pea head, or three vegetables in all, tomatoes also being included wherever transportation permits.

Table II.—This table groups foods best fitted to meet the several conditions of difficult and easy transportation and emergencies. The quantity that is to be taken of each substance is noted, with the corresponding totals of protein and energy. The selection of appropriate foods and figures as to quantity are based upon actual experience, checked by comparison of available data. The lists, with slight variation, have been employed in several instances, and have been found to be satisfactory as to variety. A series of experiments, conducted upon a small body of carefully selected students[18] in order to ascertain what would be a liberal proportion of the foods in question when thus used in combination, indicates that the amounts allowed are at least approximately correct for average conditions.

Waste.—Cans, bones and other waste must be taken into account.

Two-pound tins of canned corned beef were found to consist of 25½oz. meat and 6½oz. can. Twenty-ounce cans of condensed milk of 17½oz. milk and 2½oz. tin. Cans of average good tomatoes weighing 2lbs. 9oz. were composed of 2lbs. 3oz. tomatoes and 6oz. tin. These same tomatoes, when evaporated to ordinary table consistency, weighed 1lb. 10oz., or, approximately, 65 per cent. of the original package. The larger the can the less is its proportionate weight. Canned corn, succotash, or vegetables other than tomatoes contain much less water than tomatoes and may be calculated without further deduction than the weight of the can. This same figure in determining the waste of other useless parts does not apply in the same degree to canned fruits, since canned fruits are not relied upon for nourishment. Meats differ in their proportion of waste. Five pounds of superfluous fat, bone and rind have been removed from a 12lb ham. At least 5 per cent. of bacon consists of rind. Bacon may be relieved of much of the superfluous fat and all of the bone and repacked without injury.

It is usually wise to acknowledge the fact that some claims will be made upon the party along the line of hospitality or the actual relief of others. It would be hardly practicable to calculate so closely that such contingencies would embarrass the outfit. It is well to remember that such claims will have to be met. Deterioration, loss and detention by accidents must also, at least, be considered.

Packing.

It is often convenient to divide everything, save fresh meat, proportionately, so as to form packages of perhaps 50lbs. each. Each package may be placed in an air-tight can, with lids and seams tightly soldered. These cans should not be round, but flattened upon the two opposite sides, so that they can be readily packed and carried. Matches should be included in each can, and

[17] The weight of the regular U. S. field ration is 3.21lbs. The weight of the regular travel ration is 2.43lbs. The weight of the regular emergency ration, authorized 1896, is 2.07lbs. The bulk of the authorized emergency ration is 125cu.in.

[18] Tests of this kind are not entirely reliable, since change of diet is always likely to be immediately beneficial. The fact that each student showed a tendency to exceed the full allowance of 2oz. of sugar daily is thought to be of interest.

one can only should be opened at a time. Where articles are thus divided among several packages, the contents of each one should be checked twice before it is finally enveloped. Paper should not be used for making up packages, because of its disposition to soften under moisture. Canvas bags should be employed. Where provisions are to be transported upon the backs of men, the packs are made up by placing cans or canvas bags filled with provisions in the center of the sleeping blanket, which is then folded around the load and fastened with the ordinary pack strap. The load is then adjusted to the shoulders. Attention has been called to the wisdom of dividing the outfit among several boats, when passing rapids, or among several parties when upon the march. Every article should be selected, if possible, by the leader personally; and each parcel should be packed in his presence, or in the presence of some competent representative.

[TO BE CONCLUDED.]

A Deer and a Bicycle.

DUNBARTON, N. H., July 31.—A few days since a young man of this town was riding on a wheel on one of our roads, when he saw two deer a short distance ahead—a doe and a fawn. The doe crossed, but the fawn ran down the road. The man gave chase and ran into the fawn, rolling it over, and the rider was upset. The young deer was not hurt in any way and jumped up and scudded into the bushes.

Deer are being seen more frequently about here this summer than ever before, and quite a number of fawns, showing that they are breeding.

The man who ran into the deer goes gunning quite a good deal, but very seldom shoots anything except a few rabbits. He now thinks a bicycle will suit him better to hunt with than a gun. He ran over a rabbit one day with his wheel, ran into a deer, and expects next to run over a fox.

C. M. STARK.

Governor Tanner's Deer.

STATE OF COLORADO, Department of Game and Fish, Denver, July 31.—*Editor Forest and Stream:* In reply to your favor of the 29th inst., I beg to say that the reported violation of the Colorado game law by Governor Tanner, of Illinois, was duly investigated by this Department, and the facts regarding the matter are as follows: The buck deer in question was killed by the Governor in Glen Beulah Park—a duly licensed private park—with the consent of the owners of said private park, and hence in strict compliance with the game laws. Under the present law, the proprietor of any such licensed private park is required to make report of such killing to this office. In inclose herewith copy of report made by the proprietor of the park.

T. H. JOHNSON, Commissioner.

Massachusetts Shore Shooting.

BOSTON, Aug. 5.—Shore bird shooting is improving along the coast. Mr. Frank F. Dodge went down to Chatham Saturday, and had very good sport, though the flights of birds are not yet very full. He got a chicken plover or two, several grass birds, a couple of brownbacks and some yellowlegs. Mrs. Dodge, who is a good shot with the rifle, was in the blind a part of the time, having the dandy little 20-gauge gun of Mrs. Sumner Paine in hand. But no birds dared venture near the lady. Mrs. Paine, who, with her husband, has a cottage there, is an excellent shot. Mr. Dodge will doubtless be down again the last of this week. Mr. C. H. Tarbox, of Byfield, one of the selectmen of the town, was able to get out on Friday last. Senator Charles O. Bailey was with him.

SPECIAL.

Long Island Shore Gunning.

EAST ROCKAWAY, L. I., Aug. 7.—Pot-hunters who wander over the meadows and beaches after the little snipe and meadow hens are having what they call good sport, but no birds of considerable size or value have arrived yet. Surf snipe are very scarce.

QUAHAUG.

Not to be Resisted.

SOME years ago, at a session of the Legislature of Kentucky, an effort to repeal the law offering a bounty on foxes' scalps was made, but was defeated by the appeal of a member from a mountainous and sparsely settled region.

"Do the gentlemen want to deprive my constituents and me of the benefits of hearing the gospel preached?" he demanded, with indignation in his tones and overspreading his rugged countenance. "We are all Methodists up my way, and our preachers won't come without we can give 'em chickens, I know. We can't raise chickens unless the foxes are killed by somebody, that's sure, and there ain't anybody that can afford to spend their time hunting foxes and get nothing to pay for it.

"So, gentlemen, if you repeal this law you'll be depriving my constituents of the benefit of hearing the gospel preached. That's the way it looks to me!"

This reasoning was too much for the Legislature, and for the time being the law was not repealed.—Youth's Companion.

Medical scientists, says Science Siftings, have now demonstrated that a brain cell actually loses part of its substance during action. The cell of the exhausted brain, instead of being plump and full of nervous matter, is found to be hollowed out, or "vacuolated," a cavity having formed without its substance, which has become filled with water. This means that a part of the cell substance has been actually consumed, precisely as coal is consumed when one gets heat from a furnace. It has been found that if an animal whose brain cells are thus exhausted be permitted to sleep, its cells readily recuperate, new material is supplied from the blood until the cell is as good as new. The brain of a person, therefore, who is beset by sleeplessness is in the condition of a locomotive which runs night and day without going to the repair shop.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Bull Trout.

AN article, unsigned, in the New York Sun describes the salmon rivers and salmon fishing in the Province of Quebec, and it is an interesting article, too, and the writer shows that he is a Briton in writing of bull trout. Referring to rivers that once contained salmon, and that no longer contain them, he says: "Salmon were taken in nets at the mouth of the tributary streams of Lake Ontario, but never with the rod. The wonder excited by fish traveling such a distance from salt water and swimming up the rapids of the St. Lawrence has aroused doubt whether the Ontario salmon were fresh-run fish from the sea or whether they were bull trout (*Salmo eriox*), but the difference in the markings of the two and the fact that the bull trout has one less vertebra than the salmon dispose of that theory. The only river entering the lake in which salmon were not found was the Niagara. Its strong current, steep, abrupt sides and lack of shallows or gravel beds suitable for spawning may account for this. On the other hand, it offers satisfactory food in abundance; but no one ever saw one of the species in the stream."

The bull trout mentioned in the extract we do not have on this continent, and why anyone should for a moment imagine that the bull trout of the Twee—where it is found chiefly, although it is known in streams in Devonshire, Ireland and Wales—was the salmon that formerly ran up into the rivers that flow into Lake Ontario is beyond my comprehension. We do have a bull trout in this country, but it is a Pacific Coast fish and it is a charr, with large red spot and fins colored after the coloring of the Eastern brook trout, and has the common name of Dolly Varden (*Salvelinus malma*).

The bull trout of Great Britain (*Salmo eriox*) has never before, even by intimation, been charged with inhabiting the waters of North America, and it is not as common in its native waters as the salmon or sea trout. It is also called sewin or roundtail, and as to differing in number of vertebræ from the salmon, the salmon has sixty and the bull trout sometimes has fifty-nine and sometimes sixty, the same as the salmon. The fact is, the British authorities do not seem to be very clear in separating the bull trout from the sea or salmon trout. Day, perhaps the latest authority, does not set it down as a distinct species, separate from the common sea trout.

What surprises me quite as much as that anyone should imagine the salmon of Lake Ontario streams to be the British bull trout of doubtful species, is that the writer I have quoted should intimate that to attract salmon to a stream the stream should "offer satisfactory food in abundance," for while it is contended by a few that salmon feed in fresh water, the investigations of the British fishery and scientific experts seem to have settled the question by declaring that salmon do not feed in fresh water, and in consequence begin to deteriorate from the moment they enter the rivers they select for spawning purposes. However, this clipping I have made extracts from recalled to my mind that I had a letter on the subject of salmon in one of the Lake Ontario rivers, and I made a search for it.

Lake Ontario Salmon.

Col. Henry H. Lyman, one of the Fisheries, Game and Forest Commissioners, when the Commission was created, and now Excise Commissioner of this State, sent one of the reports of the Commission to Hon. Norman C. Harmon, of Waldo, Wis., who was born and lived for the first twenty-two years of his life on Salmon River, N. Y. Mr. Harmon recalled some of his early days on Salmon River and sent a letter on the subject of salmon to Col. Lyman, who forwarded the letter to me and said:

"You doubtless have knowledge of the fact that Salmon River, in this State, was a famous, if not the famous, salmon stream of Lake Ontario; that the farmers along its borders, very many of them, paid for their farms and some even amassed considerable wealth from the profits of the salmon fishery; and it occurred to me that Mr. Harmon might tell us something about the early salmon fishing on that stream, and if you have not closed the matter of your report Mr. Harmon's letter will make interesting reading for the people and be of interest to the Commission, especially in view of the proposition to restock the river with salmon."

When the letters came to me they were too late to be used in the State report, and I filed them away, to make use of Mr. Harmon's letter on a future occasion, and now I find that they are dated two years ago; but the moment I read of salmon in Lake Ontario rivers I thought it was the time to print Mr. Harmon's letter now. I regret that he does not fix the time that salmon ran so plentiful, but it must have been early in this century, for then laws were passed for the protection of salmon and the building of fishways in Salmon River.

Salmon River, New York.

"I am much gratified to learn that the Fisheries, Game and Forest Commissioners of the State of New York are considering the feasibility of restocking with salmon that old home and spawning ground of this wonderful fish, viz., that noble stream which of all others is entitled to the name, Salmon River. I feel a keen interest in this question, because many years ago I was born and raised upon the banks of this stream and participated in the sport of capturing this game fish and know something of its habits and of its outgoing and incoming, and of the causes that contributed to its final destruction, and at the risk of encroaching upon your time and patience I have determined to write you upon this subject, hoping it may assist the Commission in arriving at a favorable conclusion in this matter.

"The salmon, although called sea salmon, does not propagate its kind in the salt waters of the ocean, but chooses the fresh water rivers of the continent. When the prophetic voice of nature intimates to him the command to

multiply and replenish the water, he begins to dream of the fresh, soft, silvery waters 'way up in the interior of the continent, once shadowed by great forests, where comparatively few natural enemies lurked to destroy—'way up, hundreds of feets above the sea level, where he dimly remembers that he first saw the light when he first learned to swim—this is the object of his quest. As a devotee lays aside every weight and girds himself for his great journey across the desert to the shrine of his worship, so this pilgrim to the place of his nativity prepares for his mighty journey. Not a particle of food must enter his stomach to weigh him down during this long and toilsome voyage. He leaves his feeding grounds away off in Baffin's Bay, where he has fattened and matured, and makes his way down the coast of Greenland, among the icebergs, watchful lest some enemy pounce upon him and thwart him in his cherished purpose. Along the coast of Labarador, around Newfoundland, he strikes the fresh waters of the great St. Lawrence that debouche into the ocean. In all this long journey of more than 3,000 miles he has been beset by determined enemies that were seeking his life. Walrus, seal, shark and a hundred other enemies have been watching for him in this nightmare of waters. Like Bunyan's Pilgrim to the Celestial City he has outgeneraled them all and come off victorious. Now he is assured that he has not missed his points of compass. Up the great Gulf of the St. Lawrence, through the surging, plunging torrents of the mighty river into Lake Ontario; thence he feels his way among the islands and along the sandy coast until he reaches the soft, warm currents of Salmon River. Now his journey is drawing to a close; he presses his way through the swift currents up through the rapids, between shelving banks, through still pools, over sandy, pebbly rifts, which his dim memory recalls as the very place that years ago he has visited. Yes, here are the gravelly, sandy beds; here are the great shelving banks on either side; there is the old hemlock, casting his shadows, and there is the falls, plunging over a ledge 70ft. high. Here he rests from his toilsome journey, comparatively secure from his enemies in the water, dreaming of that prophecy of replenishing and peopling the great deep. In the fall of the year the female here deposits her ova in the water upon sandy, gravelly beds, and the male fertilizes the eggs and then gently covers them with the sand and gravel, by brushing it with his fins and tail, and leaves the vitalized ova to be warmed into life by the returning sun and warm spring rains. The salmon fry remain in their native pools until they begin to feed. During the summer and fall of the second year the smolt make their way down the stream and away to the ocean to their northern feeding grounds, and will not return to these waters again until they have grown to maturity.

"This portion of Oswego county was settled in the early years of the present century by people mostly from New England, a strong and self-reliant race. Undismayed by hardships, privations or dangers, they came into these heavily timbered forests for the purpose of making homes for themselves and their children. This wonderful fishery at once attracted the attention of these early settlers and was seized upon as a veritable godsend to assist them in their hard struggle for existence.

"They built boats or skiffs, as they were called, about 18ft. long and 3ft. beam, sufficient to carry two persons, one in the stern with a pike to shove the skiff and one in the bow with a spear. In the bow of the skiff was placed a jack, raised upon a staff, just above the head of the spearsman, which was filled with pitch pine that made a brilliant light. This flaming torch did not frighten the salmon, but rather dazed and attracted them. This brilliant light illuminated the waters for many rods around, enabling the fishermen to see this large fish for quite a distance, and when they once sighted one of them there was an exciting chase until he was landed in the skiff or had evaded pursuit.

"Whenever there came a freshet, and the salmon were running freely, it was a magnificent sight to see this stream illuminated from end to end by these flaming torches, and the fishermen in eager pursuit of this game fish. When the skiff was loaded down they would return to their camp and unload their fish and replenish their torches and return to the pursuit. Thus all night long they would keep up this exciting and profitable sport.

"This fish could not be caught in the daytime with any success, neither could they be caught by a baited hook, as there was no evidence on examining their stomach that they partook of any food while in these fresh waters.

"In the morning these fishermen would count and report to their fellow fishermen the number caught. Some of these reports were quite astonishing, and would increase into fabulous numbers. Like all fishermen everywhere, they wanted to make a good showing. But when the fish peddlers came around and the fish were counted out accurately, in many cases the shrinkage would be quite startling; but this was not considered as evidence of total depravity, but simply winked at as a good fish story. Some camps would actually count as high as one hundred salmon caught in a single night, and others one hundred and fifty, and some very expert workmen have caught three hundred in one night. These represented quite a large sum of money, as they would sell at the camp for 10 and 12 cents per pound. A single fish would bring from $2 to $4 each, according to weight.

"These fish were greatly sought after in the larger towns of the State and were considered a great rarity. They were usually marketed at Rome, Utica, Syracuse, Albany and New York.

"This fishery brought these early settlers a harvest which was four-fold greater than they could reap from their fields and enabled them to establish homes of comfort and plenty. As you can well imagine, the competition among the fishermen became very sharp, and at times led to some very unpleasant squabbles; especially between the lower river and upper river fishermen the friction was acute. When the large school of salmon came up the river in a high stage of water, the bulk of them would get away from the lower fishermen and press on up to the falls. Here the upper river fishermen had decidedly the best of it and could take them at leisure. Now this aroused the jealousy of the lower river fishermen and they sought to retaliate by building dams which the salmon could not get through nor over—a sort of trocha which would preclude all attempts at crossing. Here they could take nearly all the salmon that entered the river.

"This bold attempt to destroy their vested rights in this valuable fishery so aroused the upper river men that they declared open war and determined to raze every dam that had been built for the sole purpose of stopping the fish from coming up the river; so the upper river fishermen mustered their entire flotilla of boats, manned by stalwart, resolute wariors, armed with pikes, saws, axes and crowbars, and sailed down the river early in the morning and took the enemy entirely by surprise. They at once commenced a vigorous attack upon these dams with axes and saws. The enemy soon discovered the assault upon their trochas and sent out riders and runners and blew horns to call in the forces to prevent this clandestine effort to destroy their property. They rallied a considerable force, though greatly outnumbered by the men of the flotilla. They made a fierce charge upon the workers on the dam, hurling stones and rocks at them, and succeeded in driving them away from the dam. Then the flotilla landed their forces and made a flank movement, attacking with great energy, hurling stones and rocks and clubs upon them until the nemy fled, in utter rout and demoralization. This battle was comparatively bloodless, no lives having been lost, but it showed military tactics that compared favorably with those of Wouter Van Twiller. After this rout they returned and completed the destruction of the dams.

"Finally, to cap the climax, they began to fish with nets, and stretched them across the mouth of the river, which completely barred their entrance to the stream, and the salmon ceased to come to the river.

"With proper laws and police regulations, this fishery might have been preserved to this day, and nothing but the wretched wrangling and greed of these fishermen destroyed this goose that laid the golden egg. It is true that the State of New York made some feeble efforts to protect this fishery, but the laws passed by the Legislature were inadequate, and such as they were, there was no police regulations to enforce them.

"I firmly believe, from what I know to be the habits of this fish, that the project of restocking this stream will be a success. Should the commissioners decide to make the experiment, they need not be disappointed if they do not see any evidence of success for several years, for the salmon fry that they plant in the upper waters of this stream will not return for four years; but, like casting bread upon the waters, after many days it will return. Would it not be a fine achievement in the piscatorial line if these salmon could be coaxed back to their old-time breeding grounds?"

It is not presumed that Mr. Harmon pretends to convey the impression that salmon do not feed from the time they begin their "pilgrimage from their feeding grounds in Baffin's Bay," for the salmon feed up to the time they enter fresh water. Salmon taken in nets at the mouth of the Canadian River are found to be gorged with caplins, which they have eaten on their way into the stream. Once I opened a salmon that had been netted in Canada, shipped to Boston and from there to my home, 250 miles inland from Boston, and it was filled with caplins, many not in the least digested. Another thing, recent investigation goes to show that salmon do not go far from the mouths of the rivers in which they are born when they go down to the sea after spawning. Formerly it was the belief that salmon made long journeys at sea away from their home river, and sometimes a salmon has been found many miles from the stream in which it was born; but it is generally believed now that salmon go out to sea only a sufficient distance to find suitable pasturage and there remain until they return to the rivers to spawn. Caplins, belonging to the family of smelts, are found in the ocean from Cape Cod northward, and probably furnish a large part of the food of the adult salmon.

The great obstacle to restocking any stream with salmon is that the desire is just as strong to-day in mankind to spear and net salmon as it was in the days when they were exterminated in Salmon River. The Hudson, which never contained salmon originally, has been planted with salmon, and the fish have returned from the sea to spawn; but dams shut them off from natural spawning grounds in the headwaters, and the netters in the latter river will not let one escape, once the fish enters a net, even though the penalty be $100 for netting a salmon and failing to return it to the water. The salmon question, in one form or another, seems to be in the air this week, for I have received a letter on the subject of salmon taking the fly, which is of more than ordinary interest, and I quote it in full, only regretting that the writer objects to the use of his name. He has had a great many years' experience as a salmon fisherman—more than is allotted to most men—and speaks from his rich experience, and his idea is to me novel in explaining why salmon will not rise to the fly in some waters.

Salmon and the Salmon Fly.

This is the letter: "I have noticed at various times statements made about Pacific salmon taking the fly. I have an objection to appearing in print, having refused all my life to write for sporting papers. My sole object is to set you right on the subject of salmon taking the fly, and therefore ask you not to quote my name. You may be willing to believe me, as a mutual friend has written you about me. Anyway, any old salmon man will indorse any statement I make.

"Salmon will take the fly on any guarded stream in the world, and will not in any netted, speared or fire-hunted ones. I could give you any number of proofs of this, but one will suffice, as it is so well known. You have fished on the Ristigouche and know what a fly river it is.

"Lord Gilmore and two other English expert fly fishers portaged over from Fredericton, N. B., to the headwaters of the Ristigouche and tried that river for over 100 miles and printed in England that it was no fly river. I have fished half a century ago, when all streams were open to Indians, fire and spearing, at which time no salmon would rise at a fly. Only a few years ago the Tobique was worthless till I advised the New Brunswick Government to guard it, and now it is a great fly river. But in addition to this, I have a friend who has killed hundreds of salmon with a fly on the Pacific Coast rivers for several years, after he fouud why he failed when he first tried."

I have said that this was to me an entirely new reason for salmon not rising to the fly on some rivers, upon the supposition that my correspondent means us to understand spearing, netting and fire-hunting create a condition that causes the fish to be more alert to their own safety than when unmolested, and so have no desire to take any moving object on or near the surface in a spirit of play or out of curiosity, as has been assigned as a reason for a fasting fish taking the fly at all. If, on the other hand, the methods of destruction mentioned cause such a decrease in the number of salmon in a stream that none are left with a desire to rise (for I have an idea that not all of even fresh-run fish have the rising habit), it would seem to be good reasoning. However it may be, my correspondent speaks from experience as to the result, and that is all that need be considered here. No one can convince me that salmon are not curious—curious as any man—and that their curiosity is easily satisfied. I have labored under this belief since one day when I was casting with a short line and the largest salmon I ever saw, with one exception, pushed his monstrous shoulders up through the surface of the water behind my fly, and away behind the shoulders was the upper lobe of his caudal fin, like a fin-keel yacht upside down, and the giant simply examined the fly in the coolest possible manner, and without touching hook or feather quietly sank his great length beneath the surface again. There was no rush, no commotion of the water; his majesty merely parted the water with his huge bulk, exposing his full elngth, and finding the thing in motion to be a creation of feathers and tinsel covering a barbed hook, he quietly returned to his throne room at the bottom of the pool. I rested here until I was tired and tried various flies of divers patterns and cast with all the skill that was in me; but having shown me how big salmon do grow on occasion and satisfied his curiosity, his serene highness could not be tempted from his stronghold. From that day to this I have been of the opinion that salmon are possessed of curiosity and desire to know what disturbs the surface of their domain, without becoming over-curious to the degree that results in their own undoing.

"Saturday," a Salmon Fly.

There is already so much of salmon and salmon fishing in my notes this week that they may as well all relate to salmon. The writer who tells of bull trout, above quoted, has something to say about a famous salmon fly:

"In the olden days the favorite fly was one called the Saturday, made by a Scotch tier. Its body was red, blue, green, black or dun color, with a twist of red at the shoulders. The wings were double, one pair (golden pheasant) topping the other, having one side of mallard and the other of teal or woodduck. A very small golden pheasant neck feather was laid over the wings, to which was added a pair of antennæ of blue and yellow macaw. More salmon and larger were taken with that lure than with any other. Fashions change in flies as in all other things; but at this day the genuine Saturday, or modifications of it, are the most valuable of a large collection."

This fly is new to me under the name Saturday, and I cannot recall that I have ever seen a salmon fly that will answer to the description, and I have looked through the list of Hardy Brothers and other English and Scotch fly dressers, and find no mention of such a fly. To be sure, the description is not as specific as it might be, but I looked through the two series of salmon flies in color prepared by George Nelson, and I cannot find anything which resembles the printed description of this fly. The literature of salmon flies is also silent, so far as I can find, concerning a fly bearing the name of the last day of the week; but if it has been and is such a killer, perhaps some reader of FOREST AND STREAM will give us a fuller description of the fly. A. N. CHENEY.

Memories of Aransas Pass.

Editor Forest and Stream:

I wish one of the residents about Aransas Pass, Tex., would give us, through your paper, some ideas as to the appearance of things about the above neighborhood, its fishing, hunting and other attractions, if there are any. I have a kind of irresistible longing to go there once more. Have not been there for thirty-five years, and would like to know how things look after so long a time.

About so many years ago a large hunting party—near a thousand—landed on the lower end of Mustang Island one evening, and trailing up the sandy beach all night, pulling by hand two 6-pounders with necessary ammunition, next morning found the game we were after—a garrison of Johnny rebs on the upper end of the island. We took them all in, including one dead man, a sentry on post, who raised the token of surrender, but was shot by a Maine soldier who didn't know enough to respect a white flag. How we Western soldiers did dislike the Eastern regiments. They were too fancy for us, with their white gloves and paper collars.

Next morning part of the hunting party crossed Aransas Pass and continued on up the coast further, making a large bag at Galveston. Our regiment was left at the Pass, where we continued for about eight months, passing a somewhat lonely existence, except when occasionally making raids over to the mainland, calling upon the people of Corpus Christi, Indianola and other points along the lagoons. Everything didn't come our way on these social calls, as when some of our men who were making requisitions for rations not furnished by the commissary department were bagged by bushwhacking Johnnies and were obliged to pass several months in the Confederate stockade at Tyler, Tex. We captured a schooner somewhere up the bay, and with lumber drawn without as much as by leave of the owners, made quite comfortable quarters among the sand heaps.

We were not equipped for hunting small game then, but a good shot with an Enfield musket would often bring in a wild goose or brant. Ducks were plenty, but we had no small shot for them. A few deer on the lower end of the island afforded sport for those of us who got near enough for a shot at them. Our friends the Johnnies had kindly left a drove of Texas steers on the island and these, driven up near to camp and slaughtered, gave us plenty of fresh beef at somebody else's expense.

Oysters were plenty nearby to be had for the getting; I recollect once of sitting down on the beach at low tide and eating eight dozen before getting up. They were

not as big, though, as those we afterward found in Mobile Bay, else I would not have stowed away so many. We "borrowed" a fish net somewhere over on the mainland, and with it had fine times dragging the surf for a change from meat to fish diet. When the boys wanted oil for their guns they baited shark hooks in the Pass and thus supplied themselves with the necessary lubricant by frying the grease out of sharks' livers.

It was a lonely place, varied only by the routine of soldierly duties. Our quartermaster kept on hand a goodly supply of commissary whisky—the meanest, hottest liquid on earth at that time. Christmas eve the Major ordered that the boys should have all they wanted to pay for. You may bet there was a warm period around that camp that night. At headquarters we played seven-up and euchre and drank milk punch—made of condensed milk and bad whisky—until the undersigned didn't know the ace from the ten-spot. Every "bugger" about headquarters was laid out except the hospital steward, who stayed sober long enough to put the rest into their bunks. From laying around the trenches at Vicksburg and swamps at Port Hudson, and at New Orleans, my system had absorbed a large quantity of ague poison, which no amount of quinine could neutralize. But that night I got such a quantity of villainous whisky under my skin that it completely knocked the fever and ague out of me, and I have never been troubled with it since. I suppose it was on the principle of "like cures like"—the whisky poison was stronger than the ague poison and the latter had to clear out.

Well, I would like to visit the old region once again, if somebody can present its charms in sufficiently glowing terms. SENEX.

The St. Lawrence Anglers.

Editor Forest and Stream:

For a number of years past there has been a strong desire on the part of the true disciples of Izaak Walton whose favorite resort for angling is the St. Lawrence River, to have the laws regulating the catching of fish on the American and Canadian sides of a uniform nature. The Anglers' Association of the St. Lawrence River, which is made up largely of leading business men of Clayton and Alexandria Bay and prominent men from different parts of the United States who own summer residences at the Thousands Islands, has been zealously working with this end in view, and none of the members have manifested a deeper interest in the matter than those who reside in the Dominion. By special invitation of the Canadian members of the organization the sixteenth annual meeting of the Anglers' Association which occurred Wednesday, Aug. 2, was held at the Gananoque Inn, Gananoque, Ont.

In the absence of President Wm. C. Browning, of New York, who was prevented by the severe illness of his wife from being present, First Vice-President Henry R. Heath, of Brooklyn, occupied the chair as presiding officer. The latter called the meeting to order at 12:30 P. M., and explained the cause of President Browning's absence. Mr. Heath said: "This is the first time that the Anglers' Association has held a meeting on the Canadian side of the river, and it is by invitation of Mr. Britton that we have the pleasure of assembling here now. We appreciate the cordial co-operation of our Canadian friends in supporting the laws for the protection of the fishing interests on the river. They have met us at least halfway in these matters. In another manner they have shown friendship for us during the past year. In our time Great Britain has always shown herself our friend." [Applause.] "The thanks of our Association are due to Mr. Britton for the privilege and pleasure of meeting here to-day." [Applause.]

Hon. Charles E. Britton, of Gananoque, on behalf of the Canadian people, welcomed the members of the Anglers' Association to Gananoque. He said that the fish ought to be protected and he was willing to do all he could to help the cause along. He said that Mr. Bastedo, the prime authority on fishing matters in the Province of Ontario, was present. Up to a year ago the Dominion Government had control of the waters of the river on the Canadian side, but now it is in the hands of the Ontario Government. Mr. Bastedo is the gentleman who administers the law. The Government set aside several islands for the benefit of the public, and we hoped to see them improved, as those on the American side set apart for park purposes have been. Mr. Britton explained why several prominent officials who had been invited to attend the meeting were not able to be present. He said the Gananoque people were glad to welcome the anglers, and he hoped their deliberations would be prolific of good results. He hoped to be able to show the visitors around the town after the meeting was over.

W. E. Wolcott, of Utica, was elected secretary of the meeting.

After the minutes of the last annual meeting had been read and approved, Vice-President Heath called on the second vice-president, Hon. Charles R. Skinner, of Albany, State Superintendent of Public Instruction, to make a report in the absence of President Browning.

Mr. Skinner said that if there had been any doubts about the cordiality of the reception the anglers would have they had already been dispelled. He had never had any fears, however, on this score. The fact that the Anglers' Association was meeting on Canadian soil he thought was significant for more than one reason. It affords additional evidence, said he, of what has already been made apparent—the tendency toward the establishment of closer relations between the greatest republic on earth and a part of one of the greatest nations which has done so much to make the world better. [Applause.] Mr. Britton has done much in past years toward helping on the interests of the river. Mr. Britton and his friends have long been recognized by us as co-workers in behalf of God's own country, this beautiful island region. It never looked well to be quarreling as to whether a Clayton man should come over to Gananoque to fish or a Canadian go to Alexandria Bay to fish. It is an interesting incident that the Anglers' Association meets on Canadian soil. We can congratulate ourselves that in President McKinley and Queen Victoria we have two of the best rulers in the world. [Applause.] There is no reason why two such governments where the people have the same blood in their veins and speak the same language should not have close relations. England has done much for her Indian possessions, and her influence there has been for good. It has sometimes been necessary to use force, but it has been for the right. To-day the United States is trying to determine what shall be done with the Philippine Islands. We were forced into a conflict in the interests of justice and humanity, and now we must give the Philippines good government. If the people of the Philippines will not listen to reason without it, then I believe an army should be raised of sufficient size to make a desert of the islands if necessary in the interests of good government. The time will come when the language of the world will be the English. I believe an Anglo-American alliance is coming and that the English-speaking people will eventually control the world. I never could see why text books should teach favoritism, why children in the schools should not be taught about the great events in which England has figured, as well as those in which our own country has. It is only during the past year that the flags of the United States and England have been displayed side by side, as they will hereafter pass down into history together. [Applause.] This has been the feeling deep down in our hearts for a quarter of a century. There has never been a time in half a century when any interloper could have instigated a conflict between England and the United States. The Spanish-American conflict had a tendency to bring our two nations more closely together than ever before. Spain, when victorious, has not been a merciful conqueror, and while looking at the ruins of the battleship Maine in Havana Harbor, and then at the battered hulks of the Spanish warships, I could not help thinking, "Old Spain, it served you right." Mr. Skinner related in a feeling manner the scene in Congress when the letter written by Queen Victoria to the President was read, offering to send the ship Alert to the relief of the Greely expedition. He said he should remember this act of courtesy, kindness and humanity as long as he lived. Such events only foreshadowed what the future relations of these nations will be. If we in this Association can only do a little toward fostering these friendly relations, we will find our reward in our humble instrumentality in bringing closer together these two great nations. [Applause.]

W. H. Thompson, of Alexandria Bay, presented his annual report as secretary. He said: The work of the Association has not been as laborious during the past year as it has been in some years, owing to the lack of attempts at objectionable legislation. Only one attempt in this direction was made, and that was in regard to a bill to permit certain netting in the St. Lawrence River. This we opposed, and the bill was changed. One annoyance we had was in regard to the move on the part of the Canadian Government to charge $5 license for each rod used by an American in Canadian waters. We wrote to the Canadian officials and received satisfactory assurances that the license would not be insisted on at present. We think there should be a record made in some way regarding the matter. Under our laws Canadians have the same rights to fish in American waters in the reservation that we have. Our work has been mainly done in the reservation. Since our last meeting docks for steam yachts and skiff landings have been placed at seven different points in the reservation, and the grounds have been cleaned up. An effort was made to have places of shelter erected, but this was given up for the present, as the appropriation of $10,000 was so nearly exhausted. We desire to see co-operation on this side of the river so that we can say we have an international park. Agreements were made some time ago, but we would like to see the matter placed on record.

Treasurer R. P. Grant, of Clayton, presented his annual report which made this showing: Balance on hand in August, 1898, $359.22; received for dues, $45; from Secretary Thompson, $37.25; total, $441.47; disbursements, $91.24; balance on hand, $350.23.

Mr. Grant spoke of a bill which was drafted last winter which contained a clause permitting netting for coarse fish in the St. Lawrence River, but this was stricken out through the efforts of the Anglers' Association. The Association received and planted during the year 2,000,000 muskallonge fry, one-half of which were sent to Alexandria Bay and the other half cared for at Clayton. About 100,000 of the fry were placed in Hill's Pond, where they will be kept until they are yearlings. The most successful results from planting muskallonge can only be obtained by keeping them in a pond until they are 5 or 6in. in length.

Secretary Thompson presented the report of the executive committee. He said the committee had been working with the Commission to get more points and more islands into the public reservation. An effort was made to have the $30,000 appropriated for the reservation expended before it reverted to the State. The Attorney-General allowed the balance of the appropriation to be used.

Rev. R. H. Pullman, of Baltimore, Md., moved that a committee of three be appointed in connection with the reservation matter. Carried.

The chair named as such committee Hon. Charles R. Skinner, Wm. B. Hayden and Judge J. C. Spencer.

Major J. W. Pond, Chief State Game Protector, who came up from Albany on purpose to attend the meeting, was asked by Hon. C. R. Skinner as to whether netting was allowed on the St. Lawrence at any time during the year. Major Pond replied that it was not, and continuing he said: "I think the game laws in New York State are in fairly good shape. Last year we had 372 actions commenced, and had 335 connections. The department is self-supporting as to the expenses of court and attorneys. People are becoming more interested in protective matters. Legislation is improved a little every year, and with sentiment growing in favor of protection I think there is no necessity for much change in the law. The hatching stations are turning out many young fish.

Hon. Chas. R. Skinner—It seems idle to put into the river small muskallonge fry. It is only feeding the pickerel and perch. If the young muskallonge are kept until they are 4 or 5in. long, additional facilities will be required. What would the expense be?

Chief Protector Pond—If the fry could be transported to Long Island the expense of feeding them would be slight. It is better to plant a speckled trout in the fall, when six months old, than to keep it until a year old. Railroads are very good about transporting fish. If more rearing ponds could be made on Long Island where the tide water sets in there would be no cost for the feeding of young fish, as there are plenty of shrimps. Muskallonge and perch thrive there.

Hon. S. T. Bastedo, Deputy Commissioner of Fisheries for the Province of Ontario, assured the anglers that he appreciated the honor conferred upon him in inviting him to be present at the meeting. He said he had to travel day and night to get there. He had been Deputy Commissioner of Fisheries for seven years. There is some division of power now as to the fisheries subject between the Dominion and the Provincial governments. The Dominion Government has power to regulate seasons and stipulate the implements of capture. You will receive our hearty co-operation, I think, in any measures you may adopt. [Applause.] We should have uniform seasons for fishing. There are no licenses for netting east of Kingston. Our statutes empower us to pass regulations. We have power to prohibit netting in the river. The matter of an international park does not rest with the Provincial Government, but with the Dominion Government.

W. H. Thompson—What are the regulations regarding bass fishing on the Canadian side?

Mr. Bastedo—We limit the catch to twelve bass for one person in a day. The size limit is 10in. The close season is from April 15 to June 15. No bass can be caught except with rod and line. After Dec. 1 bass can only be caught for immediate table use.

R. P. Grant—There was an understanding that the season should open June 9 in the entire reservation. We would like to see the same closed season on the Canadian side that we have on ours. Would it be satisfactory to you to have the season open June 9 instead of June 15?

Mr. Bastedo—The question of closed season is fixed by the Federal Government at Ottawa.

Messrs. Pond, Thompson and Britton also spoke on the subject. The latter thought the Association ought to favor a conference between the proper officials as to the best date of the closed season for bass.

Mr. Grant moved that the executive committee be authorized to appoint a committee of three to confer with Messrs. Britton, Taylor and others in regard to the question of uniform fishing regulations. Carried.

The following committee was appointed to nominate officers for the ensuing year: Walter Fox, Rev. R. H. Pullman, G. M. Skinner.

On motion of Mr. Grant the executive committee was authorized to appoint sub-committees to take charge of matters that might require attention during the year.

A recess was then taken for dinner.

The members of the Anglers' Association enjoyed a fine banquet at the Gananoque Inn at 3 P. M. Subsequently a post-prandial session was held, Hon. C. E. Britton presiding during the first part, and being followed by Hon. Chas. R. Skinner. The toasts were: "Queen Victoria," "President McKinley," "Success to the Efforts of the Anglers' Association," "Vice-Presidents Heath and Skinner," "The Legislature," "The Banking Interests of the Two Countries," "Old Settlers on the River." Speeches were made by Hon. C. R. Skinner, Albany; Hon. C. E. Britton, G. H. Burrows, Mayor W. B. Carroll, F. W. Strong, Gananoque; Hon. John P. Graham, Brockville; R. P. Grant, Clayton; Rev. R. H. Pullman, Baltimore, Md.; Judge J. C. Spencer, New York, and others.

Later in the afternoon the Association reconvened and concluded its business. The committee on nominations reported in favor of the following officers, and they were duly elected: President, Wm. C. Browning, New York; First Vice-President, Henry R. Heath, Brooklyn; Second Vice-President, Charles R. Skinner, Albany; Secretary, Wm. H. Thompson, Alexandria Bay; Treasurer, R. P. Grant, Clayton; Executive Committee, A. C. Cornwall, Col. O. G. Staples, W. Fox, Alexandria Bay; G. H. Strough, G. M. Skinner, John Foley, Clayton; George C. Boldt, Charles G. Emery, New York; Wm. M. Griffith, Utica; Rev. R. H. Pullman, Baltimore, Md.; F. A. Gillespie, Pittsburg, Pa.; Charles E. Britton, Gananoque; R. E. Waterman, G. R. Malby, Ogdensburg.

At the conclusion of the meeting the members of the Association enjoyed a carriage ride around the town.

W. E. WOLCOTT.

UTICA, N. Y., Aug. 8.

Maine Waters.

BOSTON, Aug. 7.—Fishing in the Maine trout waters continues better than usual at this season. Mr. J. Parker Whitney, who is spending the entire summer at his elegant camps at Mosquito Brook, Richardson Lake, says that with a guest last week he had most remarkable luck, taking trout from grounds that had never been thought of before. Mr. H. A. Phinney, of Arlington, with Mrs. Phinney, Mr. F. S. Frost, Mr. W. G. Peck and daughter, Miss Lillian, and Mrs. Helen G. H. Dolliver, are having good sport at Round Mountain Lake. The other day Mr. and Mrs. Phinney and Mr. Frost, Mrs. Phinney's father, went with a team from Green farm over toward the station to fish. The horse was hitched beside the road, with Mrs. Phinney in the carriage, while the gentlemen went down the stream. Soon the men came out of the bushes into the road, when right between them and the team was a large bear, of which they all got a sight before the beast took for the woods. In all his seventy years it is doubtful if ever Mr. Frost wished for a camera or sketching materials more and time to use them. The two sons of Mr. C. S. Clapham, of Boston, and whose home is in Somerville, are suddenly developing into great fishermen. Their names are Harry and Foster, aged thirteen and fifteen. They have fallen in with a fishing enthusiast of more years than they—an old man, in fact—and he has inspired them with a fever that they will hardly ever get rid of. One of their last trips was up to Lake Quannapowit, in Wakefield, which waters were then just legally open for the season. Their first trip they took a fine string of pickerel, with several large ones. They have also taken some good strings of perch. Their father says that they are crazy over fishing, and he does not discourage it, while their mentor, the old gentleman, inspires them on by discussing the tackle and telling of former exploits. They have also fished the trout streams for quite a distance around, often gone all day and

covering eight or ten miles. Mr. Charles L. Bly, of Boston, writes of excellent fishing at Round Mountain Lake. The lake has been alive with trout at times, and sportsmen have had all the fishing they wanted. The small trout are invariably put back uninjured, with only a few for the table retained. Mr. Bly also says that partridges are unusually plenty, with deer very abundant. The same report is heard from many of the resorts in that section. Mr. Bly says that flocks of partridges are seen every day, and near the camps, a condition that has not existed for several seasons. SPECIAL.

CHICAGO AND THE WEST.

Movements of Western Anglers.

Mr. Geo. E. Thatcher, of Shreveport, La., stopped in Chicago this week to replenish his outfit preparatory to his trip to Green Lake, Wis. This is one of the most beautiful of our Western summer lakes and a body of water frequented by a mysterious tribe of large bass which cannot be induced to bite except for a very limited season early in the summer.

Mr. A. W. Eschenburger, of Chicago, left this week for a trip of some days to Wisconsin fishing waters, going in at Woodruff, Wis. He will try for 'lunge, bass and the other game fish of that fishful region.

Mr. M. L. Smithey, of St. Louis, passed through this city this week en route for Woodruff, Wis., and may also visit Marinette and vicinity.

Mr. H. R. Pearson, Assistant District Attorney of this city, left this week for Squirrel Lake, Wis., via Minocqua, and will have a go with the muscallunge in that good territory.

Messrs. F. T. Childs, L. P. Allen, Walter Moore, Wm. Mitchell and J. L. Helm made up the last and largest party of this week for Kabekona Camp, Minn.

Mr. J. W. Youche, of Crown Point, Ind., with his son J. H. Youche, leaves this week for an extended trip along the famous Brule River of upper Wisconsin. They will fish a while there for trout and probably drop down to Manitowish and have a try at the muscallunge later in the season.

Mr. and Mrs. E. W. Kirk, of Chicago, have left for Trout Lake, Wis., for a little tour of that region.

Mr. H. J. Furber, of this city, left this week for a season of rest and relaxation in Maine, and will spend some time along the sea coast, angling for cod and such like.

Mr. W. Starr Whiton, of this city, has left for Pleasant Point, Green Lake, Wis.

The Muscallunge Season.

The muscallunge season has produced no news this week of special interest, and indeed this style of our Western angling sports has taken on some of the characteristics of trout fishing, and becomes more and more a case of luck. The man who goes trout fishing hereabouts does so at his own peril. He fails several times—many times—and vows never to go again. Of course he does go again, and at last has a grand day, and so returns full of smiles and generous enthusiasm. It was once the case that one could go out for 'lunge in Wisconsin and be pretty sure of getting some fish, very likely some good fish. Then came the frost, the killing frost, when the glories of our new waters were somewhat lessened, but when one could still be confident that he would get some sort of a 'lunge without any special trouble. It was at that stage hardly thought worth while to speak of the fact that one had killed a muscallunge, unless it were a very large one. Nowadays we hear of pretty much every good fish that comes down from Wisconsin, and the capture of a fine fish is something long talked about. Of course this is not the literal state of affairs, but it is approximately correct to speak thus of the situation. This year, strangely enough, there is coming into notice a sort of reversal of form, as it were, as regards Wisconsin and Minnesota. Last year and the year previous it was Minnesota that was showing all the big fish, and Wisconsin offered few good weights to add to the season's records. This year I hear of more fish from Wisconsin than from Minnesota, and the largest muscallunge of the season, that of 43lbs., taken by Judge Hook's daughter at Plum Lake, is a Wisconsin product, as against 42½lbs., the biggest Kabekona Camp 'lunge, in Minnesota, of an earlier season than this. For some reason the fish have not been rising well in the Minnesota ranges this summer, and I presume they are now shedding their teeth and are not yet quite ready to begin operations as they will in the early fall.

Bass.

All is quiet along our bass waters this week. The Kankakee is too full of carp to be called a bass stream now. The Fox offers nothing special this week. The summer lakes are going the toboggan as practical bass waters, and the resorter's photograph of a string of fish is more and more in evidence. Methinks if I were broke I would earn a livelihood by going to a certain class of lake resorts in Illinois and adjacent country, and allowing the hotels to photograph my fish. But even then I would have first to catch the fish! From Chicago out about forty or fifty miles in almost any direction the summer travel has increased so enormously the past five years that the lakes could not hold their stock. Beyond sixty and seventy-five miles the case is better, and one may outside that radius still hope to get some bass. Thus I note that at Fox Lake, Wis., the bass are still rising pretty well, event this hot weather. At this point two gentlemen, Messrs. A. C. Hannemann and C. M. Sager, of Fox Lake, caught 24 wall-eyes one night last week, casting frogs in open water. This was at about 10 P. M.

Got Several.

In these hot summer days, at the time of year when almost any man who has been at work all the year seems a bit let down and willing to rest a while out of doors, by the running brooks and under the big blue sky, it is a sad enough thing to think of the fellows who are well and strong enough to go fishing, but who are chained to business and can't. How much worse is the case of the fellows who are not chained to business, but who are chained to bed! I got a postal card in my mail to-day which has a certain pathetic quality attached to it. It comes from a writer who gives the name of "A. A. Johnson, Co. A, First South Dakota Vols.," and the address of "Ward 22, Presidio Hospital, San Francisco." The card is simply a request for a copy of the FOREST AND STREAM—one of very many which come in from one source or another during the week. I fancy that Mr. Johnson may be Private Johnson. He may be shot, or he may be sick, but at any rate he can't go fishing. He got several copies of FOREST AND STREAM.

This is a great big country, so big and strong that we do not realize our own resources. When we were having a little war with Spain it did not jar this country, but business steadily improved all the time. Now we are having a little war with the Philippines, but we are all so busy that we don't stop to think about that very much. We do not stop to think that this fighting is being done for us by a fine lot of fellows, who do not have time while so engaged to indulge in much personal recreation. It occurs to me that Mr. Johnson's case may be one of many others, and if there are any readers of the FOREST AND STREAM who have a book or a paper here or there which they do not need, it might be a kindness to send them on to such military hospitals as that of the Presidio. If a fellow is sick or shot, a look at the FOREST AND STREAM might make him feel better, you know.

How to Cure Sunburn.

One time, when suffering from a very severe case of sunburn contracted during a couple of days' fishing on the open water, a friend gave me a little advice which resulted in the most immediate and distinct relief. "Go to the druggist," said he, "and tell him to put you up 10 cents' worth of linseed oil and lime-water—half and half. Shake this and rub it on your face, and the burning feeling will go away almost at once." I did as he directed, and in less than five minutes the smarting pain was all gone from the face, which was really in quite bad condition. There was never any pain after that. I kept up the use of the lotion two or three times a day. It did not, of course, prevent the flaking off of the skin, but it stopped the pain and relieved the red and irritated look very rapidly. I have never seen anything which was so good as this, and give the tip to help anyone, lady or gentleman, who may be suffering from sunburn, which at times is temporarily a very annoying and painful thing. This will stop the pain in a few minutes.

Pacific Salmon with a Fly.

I OBSERVE the correction by Rudyard Kipling in the article by A. N. Cheney in his article in the FOREST AND STREAM of July 29, as to his taking the Pacific salmon with a spoon instead of a fly. But Mr. Kipling would have had no difficulty in taking with a fly, to some extent, instead of a spoon, if he had sufficiently so fished. For the Pacific salmon in the sea is an omniverous feeder, as the trout, and will take about anything of moderate size which has the proper motion. In my trolling with fresh fish in 1893 off Monterey and Santa Cruz in the sea, I caught during the season several thousand pounds of salmon, and when I examined the stomach contents of several dozen salmon I found a curious medley of food—anchovies, sardines, smelts, a variety of small cods, shrimps, bluefish (so called), etc. Often when I had my fish bait cleaned off to a small shred of fish skin, I had it taken, when a fly or white rag would have answered equally well.

My hanging sinker attached with a foot of line to my main line, some 50 or more feet from my baited hook, and so fastened with a bow knot that it could be removed readily with a pull from an assistant in the boat to give free play from a clear line, and weighing a quarter of a pound, was many times struck by salmon, and in several instances pulled off.

I have no doubt the Pacific sea salmon could readily be caught with a trolling fly, although fish bait would be far more successful. J. PARKER WHITNEY.

THE PINES, Lake Richardson, Maine.

A Salmon Fishing Predicament.

Editor Forest and Stream:

A brief account of the taking of a salmon on the Bonaventure River, P. Q., under somewhat arduous conditions may be of interest to your readers. July 15 I had been fishing one of the upper pools, known as the Deepwater, and before long was playing what proved to be a good-sized salmon that had risen to my fly (a black one). I had got the fish to within some 20ft. of the canoe when my line suddenly parted on the reel, the broken part, however, not running out through the rings, as the fish was fortunately at a standstill. Almost involuntarily I took hold of the broken line, although, of course, expecting that at any moment the fish would start, carrying my casting line with him.

I had two excellent canoemen—Alan Sinclair and Noel Serome. The latter now said quietly to me, "Let me see that line, sir." I handed him the broken end and held the rod so that he could tie it. The first knot slipped on being tested. All the time the fish had not stirred. A second knot was coolly and deliberately tied, the line replaced, and I reeled and saved the fish, a 21½-pounder. Let me add that the knot as tied would not pass the rings, and I was obliged to keep the salmon within the limit of the broken piece, some 50ft. I was, of course, greatly indebted to good luck in the behavior of the fish, as well as to the skill and coolness of my men.

HENRY G. PICKERING.

UNION CLUB, Boston.

Staten Island Fishing.

ANNADALE, S. I., Aug. 3.—Geo. Beak, of Astoria, and Louis Geller, of Brooklyn, caught twenty-six weakfish here to-day. Capt. Thos. Moore and Wm. Poullion, of Annadale, caught forty-one weakfish and a large string of porgies. Abe Rogers, of Orange, N. J., summering at their summer residence, and a few friends, twelve weakfish and one blackfish. Bait, shedder crabs.

CHAS. GELLEN.

Two Angling Tales.

A COUPLE of angling tales have just reached me which conclusively prove that not all men of the law are simply practiced in the art of their profession. The first story bears the visible trademark of the enterprising but elusive daily reporter, and has in addition an unmistakable New York Sun flavor. It relates that one day recently a party on pleasure bent was traversing Oak Orchard Bay, near Lake Ontario, in a small yacht, when greatly to the consternation of the party several large black bass jumped of their own accord from the water into the boat. The ladies aboard became fairly hysterical and it speedily became necessary to go ashore with the timorous members. Some of the gentlemen of the party immediately returned over the course in a row boat and fifty or more bass flounced into the craft. To give this novelette a sort of ironclad garb of authenticity and to promote its acceptance among unconfiding readers the announcement is gravely made that the extraordinary catch has been duly and faithfully photographed. Prof. Pound, of the Cornell Law School, is said to have been aboard of both crafts and can vouch for the genuineness of this assuredly remarkable manifestation of transparent stupidity on the part of what anglers have hitherto proudly esteemed a wise old family of the finny race. As this story is the counterpart of many others that have gayly sailed the sea of publicity for lo, these many seasons, FOREST AND STREAM may anticipate the genial Professor's version of the exciting incident as soon as he safely arrives in Ithaca.

The second tale, dubbed by the Journal "A Lawyer's Fish Story," is gravely authorized by C. O. Seabring, a '98 graduate of the Cornell Law School, and the illuminative president of the Izaak Walton Club, of Spencer, N. Y. Some time ago Seabring, in company with a couple of Waltonians, went for a "stilly night" row on local waters. With lawyer-like alertness for the riches of even a boat ride, he occupied a seat in the stern of the craft, at the same time trailing his "fee hand" in the water. Presently hand and arm were grappled voraciously and a terrific tug of war ensued, which resulted in the capture by the Athletic Blackstone expounder of a 22lb. 9oz. pickerel. And as a certificate entitling this unique angling feat to full and implicit belief, a photograph of the pickerel is in evidence. It is the record heavyweight pickerel for central New York waters this season, so far as the writer is aware of.

Alas! alas! should local angling methods and conditions continue to degenerate they will have soon reached the level of chopping the groveling carp out of the mud with a bush scythe. M. CHILL.

ITHACA, N. Y.

Later.—Anent the Oak Orchard Bay fishing incident mailed FOREST AND STREAM yesterday, Prof. Pound, a chief principal in the affair, writes to a member of the Cornell University faculty vouching for the absolute truth of the story, namely, adding: "I don't ask you to believe it, for I doubt if I would believe it if I heard it from you." M. CHILL.

The One that Got Away.

MR. D. C. DEAN, of the American News Company, this city, sends us the following extract from a letter written by Prof. Carl Frommel, from the Lake George Assembly. The Professor, Mr. Dean tells us, and as appears from his own letter, is an enthusiastic fisherman. This is what he writes about the pickerel that got away:

"Now a few words about the fish. Last Thursday, July 27, I started in for the first time to have a good scientific whack at them. Had been out before that several times, but always in a hurry, and taking any old thing in the way of tackle that came handy. Had caught some eight or ten so far, but nothing over 5lbs. I looked my lines over, furbished up my spoons, examined the hooks and thought they would hold any fish that would hang on. There is where I made a mistake. Well, I went over the bay toward Gunn's four times, and hooked four fine ones, one on each turn, but only got three. The largest was 8lbs., the smallest 5¼. The first one I struck jerked my leg from under me. You know I have the habit of winding my hand line around my leg. As I have the rod line, it leaves my hands free for any of them. Before I even got my hands on that line, I said, 'That fellow will weigh 12lbs. if anything,' and when I began to pull I felt more convinced. Had pulled in two handfuls, when I saw a curve in my line; looking around, I saw him thrashing around on top of the lake, right abreast of me, about 50 or 60ft. away. He had made a fine rush, doubling up on my line coming to the top. He looked still bigger. 'Well, old feller,' says I, 'you have got to come in.' But the first pull made him break clear of the lake. He looked beautiful as he swung through the air in a half-curve, coming down with a crash. I felt convinced then no 12lb. weight would balance him.

"From then on it was a steady fight, and the hardest fight I ever had with any fish. He was just frantic, rushing in all directions. I had my heart in my mouth most of the time, and came near dropping my line in terror several times, being afraid something would snap. However, I never let him have his head, but brought him along slowly to within about 15ft. of the boat, then I stood up once to have a good look at him. That seemed to throw him in convulsions. He probably got a sight of me then for the first time. Well, right then and there something snapped, and that was the end. When I brought my line in I found two of the hooks gone. I felt pretty chargrined then and said a few things, but as there was no remedy I started in fresh with another spoon, and the result you know. When I came in, everyone shouted over the fine fish, and they think I am a wonderful fisherman, whereas I am too disgusted to speak, except to call myself an old duffer and chump.

"Well, that big one is around here somewhere and waiting for you. I have not tried it since. Don't think I shall again until you come. Yesterday was bass fishing day. One of the men here, with my boat, caught fourteen fine ones, running from ¾ up to over 5lbs. for the largest, claiming he lost one bigger than the one he has. That's pretty good sport."

Angling Chat.

CHARLESTOWN, N. H., Aug. 4.—*Editor Forest and Stream:* The letter of your correspondent Special a week since agrees with mine in saying that taking 700 trout in any one day of ordinary length must have been very tiresome work; but it also calls my attention to a point in Mr. Seymour's letter which I had not noticed, and that is that these trout were taken in the meadows adjoining the ponds. If such is the case, he must have got into the "nursery," or breeding brooks, and the enormous catch have been simply of fingerlings, which were just "snaked out" and tossed to the guide to unhook, while a fresh cast was made on the return of the rod.

In no other way that I can imagine could such a feat have been performed on time.

Now, I have no especial desire to "jump on" Mr. Seymour, who may be a distant relative of mine, for one of my great grandmothers bore that name before her marriage, in the "good old colony days," and was of the same family which produced Governors for both Connecticut and New York, the latter of whom would certainly not have approved of such a raid upon "the innocents" as has not been equaled since the days of the late lamented King Herod of immortal memory.

Allowing these to have been all "babies," the second day's record is not much better—that, is, 650 trout weighing from ½lb. to 1½lbs. to two rods in six hours, or 325 trout to a rod in 360 minutes, averaging 1lb. each by the published record. It is a simple impossibility, and I think we should read ounces instead of pounds. With no ill feeling toward Mr. Seymour, I simply wish to pillory this style of fishing reports, made to advertise certain camps, ponds and guides. Shoshone, in his last delightful letter, this week, expresses the true angler's feeling on this subject, and that letter also suggests a botanical question I want to ask Shoshone. He speaks of the "blue columbine." Is it any relation to our Eastern columbine, with its scarlet nectaries and their yellow lining, or is it of the harebell family? I believe Shoshone is of New England birth and will know the common scarlet columbine of our rocky hills.

For the first time for many years I have not caught a trout this season. My first trial, April 30, was too early, and before I could go again the hot weather had shrunk the brooks, and the "count fishers" had stripped them, and I can no longer take the tramps "over hill and dale" which I used to to get to some favorite stream. I hope Mr. Talbott has taken my advice and read Mrs. Gordon's memoirs of her father, Christopher North, who was wont to take longer tramps than I ever attempted; but then, the Scotch climate was in his favor.

VON W.

Despoiling Berkshire Trout Waters.

THE Springfield Republican reports that the trout streams in western Massachusetts are threatened with ruin. It says: The efforts made by certain Pittsfield men to stock the streams of Berkshire county with trout fry seem to be rather discouraging. These men have taken pains and gone to considerable expense to stock the streams, to the end that in time there would be good fishing. These Pittsfield brooks have been stocked: Sackett, Brattle's, Roaring, Cameron, Smith, Lillie, Daniels, Schoolhouse and Parker; also Shaker Brook and streams in Dalton, Lenox, Lanesboro, Windsor, Washington, Richmond and West Stockbridge. From the depredations on the brooks it seems as though in a short time all this effort is likely to go for naught, simply because the law is not enforced or stringent measures taken to stop the illegal work.

Some data have been made up showing this destruction of trout. On May 11 parties were seen snaring trout on Sackett Brook, and a little later the same brook was blown up at certain points with dynamite. May 30 two boys saw some Frenchmen snaring trout in the Sackett Brook, and the same week it was reported to the officers that Kitchen Brook at Cheshire had been limed. The first week in June reports were received that parties camping near the Stockbridge Brook had used set lines, and other parties had blown up the south end of the lake. The second week in June it was reported that the Shaker Brook had been blown up; this is one of the best trout brooks in the section, if preserved. The third week in June the Allen Brook was blown up, and the last week in June the Barton Brook in Dalton was limed. The fourth week in June the Sackett Brook was blown up, and it is reported that as a result all the small trout have been killed. Roaring Brook has been robbed of trout, with nets mainly. The officers hear that the Williamstown Brook has been bagged so much that it is practically devoid of trout fry or larger fish. Complaint was lodged a few days ago with Officer Smith that Pittsfield parties blew up the Cone Brook in Richmond and West Stockbridge. Mr. Smith says that if things continue as they are going, the Berkshire streams will soon be utterly ruined so far as trout fishing goes. Complaint also comes of the shooting of robins by boys, mainly on Sundays, and the destruction of other song birds.

The Nipigon License.

By a recent order in council it is provided, with respect to angling in Lake Nipigon and the Nipigon River:

1. That no person shall fish by angling in the said waters without first having obtained an angling license or permit from the Commissioner of Fisheries through the local overseer at Nipigon.

2. That one angler's license or permit only may be issued to each applicant, and shall not be for a longer period than two weeks from the date of issue.

3. That the fee for such license or permit shall be $10 where the applicant is not a permanent resident of Canada; $2 where he is a permanent resident of the Algoma, Rainy River or Thunder Bay districts, and $5 to all other residents of Canada.

4. That the holder of such license or permit shall not catch or kill in one day, or carry away, a greater number of speckled or brook trout than in the aggregate shall weigh more than 15lbs., or a greater number than ten speckled or brook trout in any one day though said number weighs less than 15lbs.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Aug. 4.—Surf fishing has been of a most uncertain quantity thus far this season. While a few weakfish and kingfish are being taken, the catches are far below the average. The continuous cold current has undoubtedly had much to do with the matter, and has driven the fish into the rivers and bays in countless multitudes. I have never known fishing better in Barnegat, nor have I ever seen better conditioned fish. In three hours' fishing recently Judge Wm. B. Guild and myself took 106 fine tide runners, and in the face of a perfect hurricane at that. Striped bass fishing also is of the first order in those waters. In the thoroughfares around Warner's Island they are particularly abundant. Trolling with spinner and blood worm one party took forty weighing from 3lbs. to 7lbs. during one afternoon. This should be sufficient to satisfy the most enthusiastic.

Complaints are coming in of net fishing near the railroad bridge which crosses the bay at Seaside Park. I have had notice of the same mailed to our Commissioners and trust they will take speedy action. The retirement of Protector Shriner is a source of great regret in these parts, as he was a terror to the evil-doers of those waters and will be hard to replace, as his work was always honestly and conscientiously done. Is this the faithful servant's reward?

LEONARD HULIT.

Black Bass Records.

Editor Forest and Stream:

I can personally verify the statement of Mr. Cheney in last issue of FOREST AND STREAM in reference to weight of the black bass (small-mouth) that was exhibited at Blackford's in Fulton Market, in 1884, having been present when it was lifted in a net from the tank and weighed. My impression though is that the weight was 8½ instead of 8¼lbs.—a fine specimen surely—yet compared with a 4-pounder he did look to be twice as heavy. At the time I was showing to Mr. Blackford a pearl the size of a buck shot that I had found inside the muscle of a blue crab's claw—spoiled by boiling, of course, yet a veritable pearl. Mr. B., I think, sent it to Dr. Bean.

E. J. WESTFALL.

Port Arthur Fishing.

PORT ARTHUR, Ont., Aug. 2.—*Editor Forest and Stream:* Anyone looking for cool weather, good fishing and cheap living should try this place in summer. Trout fishing ends Sept. 15. There are three good streams within six miles. I caught two dozen this afternoon in four hours. Law allows fifty per rod a day. Rates at a very comfortable boarding house, good enough for anyone, are $1 a day. Port Arthur can be reached from New York via Toronto and lake route, several steamer lines running, or by C. P. R. direct. The temperature very rarely goes above 75 degrees in shade, and a quilt is a comfort at night. What more can a fisherman ask?

ST. CROIX.

Long Island Fishing.

QUEENSWATER, L. I., Aug. 7.—Fishing has been good. The catches have been confined mostly to porgies and sea bass. The big bluefish are expected every day, and fishermen are waiting anxiously for them. When they come they will no doubt come in a bunch, as fishermen say, and there will be lively work for a time. Several large shark have been caught off the beach toward the fishing banks.

QUAHAUG.

Bass at Riverhead.

MR. J. M. BURGESS, of Riverhead, Long Island, sends us a photograph of a handsome string of black bass taken by Mr. A. W. Smith, of this city. The bass fishing at Riverhead is said to be excellent now.

"The Faithful American Dog."

Editor Forest and Stream:

Supposing it might interest the readers of FOREST AND STREAM, I send you an account of the dog's sagacity and attachment to his master, as related in an old but excellent school book entitled "The American Preceptor," bearing date 1820. I give the account verbatum:

"An officer in the late American army, on his station at the westward, went out in the morning with his dog and gun in quest of game. Venturing too far from the garrison, he was fired upon by an Indian who was lurking in the bushes, and instantly fell to the ground. The Indian, running to him, struck him on the head with his tomahawk, in order to dispatch him; but the button on his hat fortunately warded off the blow. With savage brutality he applied the scalping knife and hastened away with this trophy of his horrid cruelty, leaving the officer for dead, and none to relieve or console him but his faithful dog. The afflicted creature gave every expression of his attachment, fidelity and affection. He licked the wounds with inexpressable tenderness, and mourned the fate of his beloved master. Having performed every office which sympathy dictated or sagacity could invent, without being able to remove his master from the fatal spot or procure from him any signs of life or his wonted expression of affection to him, he ran off in quest of help.

"Bending his course toward the river where two men were fishing, he urged them with all the powers of native rhetoric to accompany him to the woods. The men were suspicious of a decoy to an ambush, and dared not venture to follow the dog, who, finding all his caresses failed, returned to the care of his master; and licking his wounds a second time, renewed all his tenderness, but with no better success than before. Again he returned to the men, once more to try his skill in alluring them to his assistance. In this attempt he was more successful than in the other. The men seeing his solicitude, began to think the dog might have discovered some valuable game, and determined to hazard the consequences of following him.

"Transported with his success, the affectionate creature hurried them along by every expression of ardor. Presently they arrived at the spot where, behold! an officer lies wounded, scalped, weltering in his own gore, and faint with loss of blood.

"Suffice it to say, he was yet alive. They carried him to the fort, where the first dressings were performed. A suppuration immediately took place and he was soon conveyed to the hospital at Albany, where in a few weeks he entirely recovered and was able to return to his duty.

"This worthy officer owed his life, probably, to the fidelity of this sagacious dog. His tongue, which the gentleman afterward declared gave him the most exquisite pleasure, clarified the wound in the most effectual manner, and his perseverence brought that assistance, without which he must soon have perished."

N. D. ELTING.

Tom.

"TOM is dead," Ben responded to one of my first inquiries when I landed at Auburndale, Fla., recently after a prolonged absence. "Morgan and I were getting out rails, and when Morgan was about to drop a big pine I held the dogs off to one side; then as it came down I let them go; but as the tree fell it broke off a dead limb near and fired it into the middle of Tom's back. Neither Morgan nor I would put the dog out of his misery, but when we came back there in an hour he had left Florida."

"The old dog was a good one, Benny."

"You bet; never bothered a thing in camp in his life and knew how to bring the deer out just where we could get them. Remember how he brought your first buck out to you when he thought it was about time for you to shoot something?"

"And the hunt he sent the doe out to you, and afterward the big one?"

"Let me see. Wasn't that the time that you and Morgan tried to catch a big buck with your hands and Tom helped you?"

"Yes; the Colonel's back-and-tan was umpire."

The boys waste breath when they try to persuade me that their new hound is better for deer hunting than the old dog was, for Tom's work can never be equaled, it was so exact and methodical, with no prancing, but just a steady forging ahead that meant businesss, his deep tones ringing out like those of some eminent jurists when they deliver an opinion that is an opinion, and if he undertook to decipher a cold trail even that deer might as well have saved itself the agony of a short wait by flagging its whereabouts at once. The notes uttered by our foxhound while running were only the vocal expression of his thoughts:

"Ahum-m! oho-o-o! Big 'un, big 'un! N-n-now! Ahum, ahum! Would you! Who-o-o! Ahum, ahum!"

The surrounding country during a chase belonged to our dog. The breeze, proud of its message, carried his notes far beyond wide lakes. The grizzled wilderness dallied with his tones as if they had been delicious morsels, to be masticated slowly. All nature, indeed, evidently rejoiced with us in the superb music of our dog. And now he is dead. An able logician has passed from among us. A melodious voice has expired. Let sobbing lakes proclaim their grief; let the trees of the forest lull for him their saddest requiem.

30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

The unfortunate termination of the contest for the Seawanhaka cup has given rise to new discussion and to criticism of the defending club. The following extracts from the New York Times and the New York Evening Telegram are fair samples of the tone of this criticism:

"The outcome of the international races at Lake St. Louis for the Seawanhaka cup was the cause of much disgust among yachtsmen yesterday. They did not hesitate to express themselves in plain terms on the conduct of Duggan in sailing Glencairn over the course alone after Constance had taken ground and failed to start. Technically the decision of the committee was admitted to be right, but that the defender of the cup should have taken a sail over when the merits of the two boats, each of which had won two races, seemed so nearly equal and every reasonable consideration demanded a final decisive contest, was regarded as anything but sportsmanlike."

"The cup this year is lost on a pure technicality, the committee deciding, so far as the news reports affirm, that Constance could not protest the race so long as she did not start in it. The only trouble with our Canadian friends appears to be that they stand on too many technicalities and forget the more liberal side of racing which provides invariably for a contest on the merits of the contestants."

Although both of these journals assume to deal with yachting as experts and from a strictly technical standpoint, their view of the case is the popular one, based entirely on sentiment and an ignorance of the rules of yacht racing. The case is a very simple one, the only point open to discussion being the negotiations between the Seawanhaka representative and the race committee prior to the preparatory signal. Of these we cannot speak from personal knowledge, but they seem to be covered by the direct statements of both parties, quoted in our account of the race.

While the basis of yachting, as in all sports, is that sentiment of fair play which revolts from even the appearance of a mean advantage, the practical management of yacht racing is governed by strict and rigid rules which in many cases cannot be departed from. In the present case, which is very similar to that of the famous Valkyrie-Defender foul, a few plain rules and principles govern.

In the first place, a race begins when the preparatory signal is given. After that each yacht is amenable to all the racing rules and must stand by its own accidents. There is no provision in the racing rules, here or abroad, by which a race committee is empowered to stop a race or recall a yacht after the preparatory signal—of course, excepting the recall of a yacht which crosses the line before the starting gun. The race committee has no discretion whatever after giving the preparatory signal; this starts the machinery of the race, and it cannot be stopped.

To take an extreme case, if after the preparatory signal is given in an international race one contestant should be sunk by the interference of an outside boat, it is questionable whether the committee would have any course but to allow the uninjured boat to sail over and to award her the race. In the present case the race committee would have been greatly to blame had it sent word to Glencairn that the race was off.

On the part of the skipper of Glencairn, he was for the time the representative of the defending club, charged with the care of its interests under the rules. He had no right to constitute himself the judge of an accident of which he could have no definite knowledge, and to abandon the race under circumstances which might possibly mean his ultimate disqualification and the loss of the race to his club. It would, of course, be a very pretty piece of sentiment had he given up, but it would have been very bad sport and a breach of faith on his part toward the club which selected him as its representative.

The real point in the case lies with the negotiations between Mr. Post and the committee prior to the preparatory signal. As we understand it, the circumstances were such as have never before arisen in some twelve similar races over the same water, and the race committee made every possible effort to meet the wishes of Mr. Post, altering the course several times and taking him on the boat which placed and shifted the marks. Mr. Post apparently accepted the course finally laid out, and made no objection to the preparatory signal being given. If this is the case, the only question is whether in accepting the course after both parties had employed every possible opportunity of determining its availability he thus waived the right of protesting in the event of its subsequently proving unsuitable. There is no question that the course was equally fair to both boats, as they are of the same dimensions and type, drawing the same water, and the obstruction was either sand or a rock which shifts every winter with the movement of the ice. It may be conceded that Mr. Post fairly reserved the right of protest and that he was justified in exercising it after his yacht was grounded.

After this comes the question of the fairness of the committee's decision that the protest was not well grounded. The facts as reported seem to show that after the preparatory signal was given with the acquiescence of the Seawanhaka representative the committee had no power but to allow Glencairn to continue, and Mr. Duggan could do nothing but to sail the race to a finish. The one thing possible on the part of the defending club was to submit the entire question to a full meeting of the club and to decide to offer to call the race off and sail another. This could not be done, under the rules of racing, by either the committee or the club representative. There is no question that all good sportsmen will view with regret an occurrence of this kind. Whichever side they may favor, they would prefer to see the decision made on a cleanly sailed race; but there are many eventualities in yachting in which nothing is possible but a strictly technical observance of the letter of the rule.

Under her ketch rig Shamrock sailed from Fairlie on Aug. 3, but after going a short distance returned to repair a small defect about the bowsprit, starting again the same evening. Capt. Hogarth and Capt. Wringe were on board, with Capt. Hamilton of the Allan Line as navigator. The yacht will take a southerly course, which should bring her to New York about Sept. 1. The steam yacht Erin sailed, soon after Shamrock, Sir Thomas Lipton not being on board. Shamrock is insured at Lloyds for £40,000 at 5 per cent.

The efforts of the Newport Y. R. A. to sail a series of races between Columbia and Defender have been unsuccessful through the delay in stepping the new steel mast and the accident to it. The two yachts will meet frequently on the New York Y. C. cruise, Columbia sailing with her original pine mast, the steel mast being meanwhile repaired. After it is shipped there will be further trials.

The New York Y. C. Cruise.

The annual cruise of the New York Y. C. began on Aug. 7 with a rendezvous at New London, a very large fleet being present. The official programme of the cruise is as follows:

In conformity with General Orders No. 3, the regatta committee announce the following details with regard to the racing events and other incidents of the cruise:

General Directions.—By invitation of the commodore the committee will make the cruise on the flagship. Yachts entered for any racing event will display their private signals and numbers as directed by Rule IX, Section 3. They will show no other colors. Club rules will govern all events unless otherwise directed. The course will be signaled before the preparatory signal is made. Should a signal gun miss fire, a prolonged blast of the whistle will be given. At the finish of each race the flagship will display a large club signal at the fore and show a red ball, by day; and after dark she will show four white lights, hung vertically, and will burn club signals at ten-minute intervals. Duplicates of this circular, and detailed sailing directions for the Astor and other cups, can be obtained at the club house and at the Newport Station (No. 6).

Cruising Trim.—"Anchors on the bow and at least one cable bent; cruising complement of boats carried (launches optional); cruising deck, cabin and galley fittings and fixtures in place; topsails extending above the truck and beyond the end of the gaff, barred. Water can be taken into the tanks up to 8 A. M."

A seagoing tug will accompany the squadron as a general utility boat. When she takes the place of the flagship she will be distinguished by the signals already mentioned, and by day will also fly the committee flag at the main. Members wishing to proceed on her from port to port will notify the superintendent of the club, who will be on board.

Squadron Runs.—There will be the customary runs from port to port, in cruising trim. Entries—Crossing the line will be regarded as an entry unless otherwise directed.

Club Prizes.—In each class there will be a prize for first, if two or more start, and a prize for second, if four or more start. (A yacht alone in her class will sail in the class next above. R. W., Section 5—Yachts alone in their respective classes, with the class next above not filled, will be bunched in a mixed class. R. II.) The day before the squadron disbands, the club will offer "wind-up" cups, to be sailed for over a triangular course, starting from Brenton's Reef L. S., and finishing off Castle Hill Light, open to yachts that have made any of the runs. In each class a prize for first, if two or more start. Cruising trim, except that the Columbia and Defender will sail in racing trim.

Special Prizes.—The vice-commodore offers a cup for the schooner winning the greatest number of runs, all sailing in one class. The rear-commodore offers a cup for single-masted vessels and yawls, upon similar terms. The commodore will offer a cup for 30-footers owned by members of the club, to be sailed for on the day of the "wind-up" cups.

Starting Signals—No. 1. Preparatory.—A gun will be fired and the blue peter set. No. 2. Start for single-masted vessels and yawls—Ten minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted. No. 3. Start for schooners (handicap time for single-masted vessels, etc.)—Five minutes later a third gun will be fired and a second red ball hoisted. No. 4. Handicap time for schooners—Five minutes later a fifth gun will be fired and both balls will drop. No. 5. Start for Columbia and Defender—Fifteen minutes later a sixth gun will be fired and a red ball hoisted. Two minutes later the discharge of a gun and the dropping of the ball will mark their handicap time.

Courses.—When the commodore has ordered the squadron under way the committee will establish the start lines, which, like the finish lines, will be between a white flag on the committee boat and the points indicated below. New London to Gardiner's Bay—No. 1, letter B, from a mark east of Sarah's Ledge Buoy to and around a mark 3½ miles S. by W. ½ W. from Watch Hill Light, leaving it to starboard; to a mark 3½ miles S.S.W. from Plum Island Light; 30 miles. No. 2, letter C, from a mark east of Sarah's Ledge Buoy to and around a mark 3¾ miles N. ¾ W. from Montauk Point, leaving it to starboard, to the finish mark, placed as for course No. 1; 30 miles. On each course Race Rock must be left to port. The marks will display a large club signal. The commodore will state at the New London meeting that after the run has been made the squadron will anchor at will and that the flagship and yachts wishing to accompany her will proceed to anchorages off Shelter Island and Greenport. Gardiner's Bay to Newport—From a mark 4 miles S.S.W. from Plum Island Light to Brenton's Reef L. S., leaving Point Judith Whistle Buoy to port; 43 miles. Newport to Vineyard Haven—From Brenton's Reef L. S. to West Chop Buoy (red No. 2), leaving Vineyard Sound L. S. on port hand; 37 miles. Vineyard Haven to Newport—From West Chop Buoy to Brenton's Reef L. S., leaving Vineyard Sound L. S. on starboard hand; 37 miles.

Owl and gamecock colors will be rowed for at such port as the commodore shall decide, under the management of the fleet captain. Entries: Gamecock, $10; owl, $5; dinghies, $2; launches, $10. The club will add $5 an oar, and $10 for launches.

The Astor Cups.—Newport, Aug. 14. A $1,000 cup for schooners and a $500 cup for single-masted vessels and yawls, offered by Capt. John Jacob Astor, N. Y. Y. C., and open to yachts belonging to the club that have not hauled out to clean since the commencement of the cruise. The course will be either club course No. 4 or No. 5. The start will be off Brenton's Reef L. S. at 10:30 A. M. Entries, which must be in writing, will be received at club house, New York, up to 12 M., Aug. 12, and at Newport station (No. 6), up to 8 A. M., Aug. 14. Capt. Astor reserves the privilege of inviting foreign yachts that may be in American waters to enter the race.

Club Boat for the Astor Cups.—Newport, Aug. 14. The sidewheel steamboat Warwick, formerly Day Star, Providence and Fall River Transportation Company, has been chartered for this occasion. She will leave Commercial Wharf at 9:45 A. M. Members can obtain tickets, $3 each, including lunch, but exclusive of wine, etc., and also extra ticket for their friends, at the same price, at the club house, 67 Madison avenue, New York, up to Aug. 11, and from Capt. F. P. Sands, N. Y. Y. C., at the Newport station on or before the morning of the race.

Wood's Holl Y. C.

WOOD'S HOLL, MASS.

Saturday, Aug. 5.

The Wood's Holl Y. C. sailed its thirty-fifth regatta on Aug. 5 in a good S.W. wind. The times were:

Catboats.

	Elapsed.	Corrected.
Maud S., Robert Veeder	1 48 43	1 48 43
Mary E., A. F. Crowell	2 10 55	2 04 11

Lorania, Miss Lee	Not timed.	

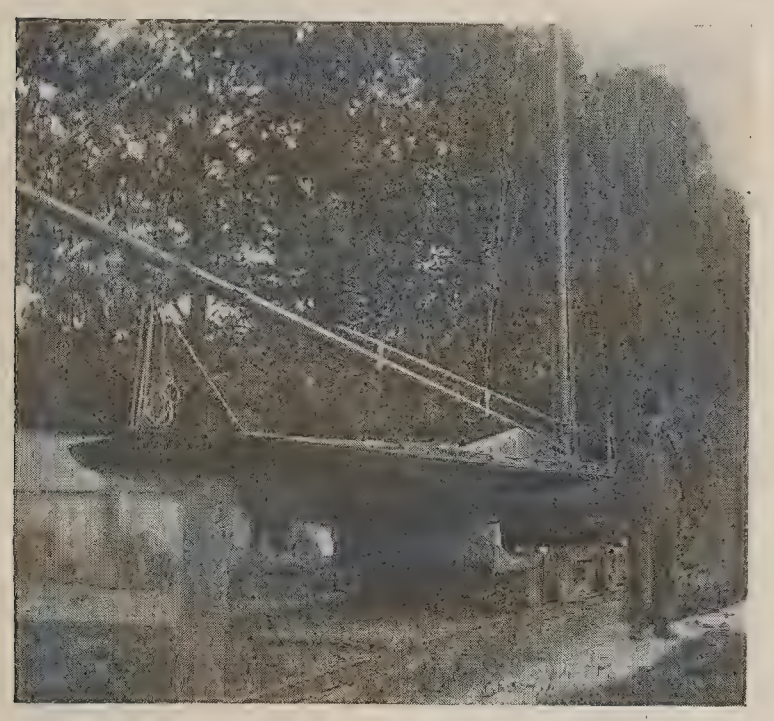
South Boston Y. C. Dinghy Races.

The South Boston Y. C. sailed the fourth of a series of dinghy races on July 29, the times being:

French	0 38 25	Lee	0 47 21
Stickney	0 40 08	Borden	0 48 20
Dolbeare	0 42 22		

The Canada Cup.

The promised trial between Prairie and the new Briar, reported last week, was a mere farce, Briar being in no condition to race, and the two sailing under lower canvas only in a slight breeze. As a matter of course, Genesee was chosen to represent the Chicago Y. C. at Toronto, the formal announcement being made on July 28. She will be carried back to Lake Ontario by steamer and refitted by C. C. Hanley, her designer and builder, for the cup races, which begin on Aug. 21. As far as the inherent merits of Briar's design are concerned, they are as yet untested, the yacht having been built in a great hurry and being yet very far from completion.



On July 26 a race was sailed at Toronto, only Toronto and Payne starting, as McLeod had just had a new mast stepped, a hollow stick of Oregon pine, and the rigging was not set up. The wind was S.W. moderate, and the course was a triangle of one-mile legs. Payne, sailed by Mr. Jarvis, crossed 15 seconds ahead of Toronto, steered by Mr. J. Wilton Morse. The times were as follows:

	Start.	First.	Second.	Finish.
Payne	4 30 05	4 53 50	5 17 59	5 42 35
Toronto	4 30 20	4 55 49	5 22 13	5 48 20

The times at the buoys were:

Buoy.	Payne.	Toronto.	Run.		Gains.
Start	4 30 05	4 30 20	One	Payne	0 00 15
Island	4 40 17	4 41 56	Beat	Payne	0 01 24
Eastern	4 47 52	4 49 54	Free	Payne	0 00 28
Club	4 53 50	4 55 49	Beam	Toronto	0 00 08
Island	5 03 57	5 07 47	Beat	Payne	0 01 51
Eastern	5 11 57	5 16 14	Free	Payne	0 00 27
Club	5 17 57	5 22 13	Beam	Toronto	0 00 03
Island	5 28 36	5 34 12	Beat	Payne	0 01 22
Eastern	5 36 15	5 42 35	Free	Payne	0 00 44
Finish	5 42 35	5 48 20	Beam	Toronto	0 00 25

On July 31 another race was sailed in a violent summer gale that upset many yachts and boats and did serious damage on shore in the vicinity of Toronto. In the course of the afternoon one man was blown from a wharf and drowned, and a number of persons were rescued from capsized boats and small yachts. The cutter Canada was dismasted while under way in Toronto Bay at the start of a race, one of her hands being aloft at the time, but escaping without injury. Merrythought, Mr. Jarvis' cutter, was about seven miles out in the lake, bound for Niagara, when the squall struck her, and cost her a bowsprit. Canada and Vivia started in the larger class, and

CONSTANCE ON THE WAYS.

Payne, sailed by Mr. Wicksteed; Toronto, sailed by Mr. Morse; McLeod, sailed by Mr. Jarvis, started in the 35ft. class. McLeod led from the start, and when the storm struck on the second leg she shifted to a storm jib and went along easily. Payne carried away the bobstay lug on her cranse iron and was forced to withdraw. Toronto knocked down until her mast was almost in the water, but righted. She was overpowered in the strong wind, and though her topsail was stowed and her mainsail reefed she was far astern. McLeod finally gave up and towed Payne in.

On the same afternoon Myrtle again beat Hamilton at Hamilton.

The trial races for the selection of a defender to meet Genesee began on Aug. 7 at Toronto. The committee charged with the selection is composed of Messrs. A. J. Riddell, Royal St. Lawrence Y. C.; E. H. Ambrose, Royal Hamilton Y. C.; Owain Martin, Queen City Y. C.; Sidney Small, Royal Canadian Y. C., and W. G. Phillips, Official Timekeeper of the Lake Y. R. A. The week following the trial races, Aug. 14-19, will be devoted to the annual meet of the Lake Y. R. A. at Toronto and Hamilton, and on the following Monday, Aug. 21, the first race for the Canada cup will be sailed.

On July 30 the sloop Genesee was hoisted on board a steamer at Chicago to be transported to Buffalo, from which port she will sail to Charlotte. There she will be overhauled by Mr. Hanley and put into shape for the cup races on Aug. 21. It is proposed to sail her across to Toronto by Aug. 19. She will be manned by the same crew as in the trial races, with Mr. C. G. Davis at the stick.

Quincy Y. C. Challenge Cup.

Second Match, 1899.

First Race, Monday, July 24.

The first race for the 1899 series for the Quincy Y. C. cup was sailed in a wholesail N.E. breeze. All of the challengers were on hand, and the defender, Hostess, seemed none the worse for a capsize the previous day. The challengers were Heiress, Lynn Y. C., designed and built by Chas. D. Mower, the successful designer and builder of the Y. R. A. winner Duchess, 18ft., in 1898, and Vitesse, 15ft., in 1897. Heiress is on the same lines as the other boats, but is 38ft. over all, 10ft. beam and 9in. draft, with 300 or 400lbs. of inside ballast and 1,000ft. of sail.

Thelma, from the Annisquam Y. C., of Gloucester, is of the same general lines as Heiress, and from the same board, with a little less beam—9ft. 2in.—and 900ft. of sail.

Oogrook, from the Hull-Massachusetts Y. C., designed by John R. Purdou, looks like a cylinder with the upper third cut off. She is 37ft. over all, 8ft. beam and 9in. draft, showing smaller power than the other boats.

Pompano, from the Beverly Y. C., is the most powerful boat of all, being 39ft. over all, 10ft. 6in. beam, with a fin 3ft. 9in. deep, carrying 1,000lbs. of lead and using a centerboard as well. She has a rudder on either quarter and an arrangement for swinging the centerboard sideways.

CONSTANCE ON THE WAYS.

Hostess, the defender, is a Quincy-designed and built boat from the lines of Arthur Keith, of the Coast and Geodetic Survey.

She is 39ft. over all, 10ft. 9in. beam and 9in. draft, with a dagger board. She is of the extreme scow type, with a flat floor and dory sides, and sails best to windward when lifted out as far as her centerboard. Her beam is carried to the ends, and the floor comes on a gradual rise to a sharp edge at bow.

In the first race the boats all started with reefs, though it was only a good catboat breeze. Heiress took the lead, Skipper Faxon, of Hostess, showing care and judgment in keeping out of the bunch and preferring to take the leeward position at the start. After beating to windward a mile it was evident the race was to be between Hostess and Heiress, which had a lead of a few hundred feet, when her tiller straps broke and Hostess was never approached by the other challengers. The summary shows the rest. Oogrook took second place, followed by the fin Pompano and centerboard Thelma.

	Elapsed.
Hostess, H. M. Faxon	1 29 18
Oogrook, Walter Abbot	1 37 32
Pompano, W. E. C. Eustis	1 38 50
Thelma, F. L. Pigeon	1 43 19

Course, N.E. 2 1-3 miles and return and repeat, 9 1-3 nautical miles.

Second Race, Tuesday, July 25.

The start was made at 11:15, with a light wind from the N.E., and the race was over a triangle from the Quincy Y. C. house to Hull Gut, then to the red spar in Hingham Channel, then to the club house and repeat, distance 12 nautical miles. All carried full sail.

Heiress took the lead to windward at once, with Hostess on leeward end of line and Pompano, Thelma and Oogrook between. Hostess soon drew away from these

THE COMMITTEE BOAT.
(Steamer Yacht Dama.)

three and it resolved into a close race between Heiress and Hostess, with the others gradually dropping astern. At the windward mark, distant two miles, Heiress led by 54 seconds. On the reach Hostess caught her and passed her at the Hingham spar buoy, but her position soon turned to her disadvantage, as Heiress, by quick setting her spinaker and small topsail, blanketed Hostess and finally passed and gradually gained to the starting flag, which she rounded with a lead of 15 seconds, finishing the first round.

On the second beat to windward Heiress passed the windward buoy at Hull Gut 53 seconds ahead of Hostess. On the reach to Hingham buoy Hostess nipped Heiress again, and was 30 seconds ahead turning the buoy, where both boats set spinakers for a dead run home. Heiress could not succeed in blanketing Hostess and finished 29 seconds astern, after sailing twelve miles. Thelma showed better form than on the previous day, but, with Oogrook and Pompano, is clearly outclassed by Hostess and Heiress. Hostess does not hold to windward with Heiress, but foots so fast she nearly catches Heiress, and with started sheets goes decidedly faster, while dead before the wind there is no choice.

	Elapsed.		Elapsed.
Hostess	2 17 53	Oogrook	2 28 04
Heiress	2 18 22	Pompano	2 30 27
Thelma	2 25 27		

Third Race, Wednesday, July 26.

The day opened with S.W. squalls and a dangerous looking sky, which soon let down torrents of water, and the wind died out until at starting time it had gone all around the compass. The course was to be to windward and leeward, but after Course No. 4 had been announced and the race fairly started the wind shifted to W.N.W. which made it a reach to Hull and a run back.

Heiress was first across at 1:30, the starting line being on the Weymouth side of bay. Hostess and Pompano both crossed too quickly for the gun and were called back twice before making a fair start, losing nearly three minutes. Soon after the start the fog shut in thick and the judges' boat made for Hull, where to the surprise of all Pompano showed first through the fog, closely followed by Thelma. On the short tack to round Sheep Island Thelma passed Pompano and held her lead round the starting buoy and to the Hull buoy, when she again yielded right of way to Pompano, but immediately passed her on the reach to the Weymouth shore.

Meantime, Hostess and Heiress, though beaten, were cutting up all kinds of tricks on each other, making a sight for the galleries. Flukes and shifts of winds were unable to separate them, and in fact they indulged in a luffing match, which took them two miles out of their way and only stopped when they were 100ft. from the west shore, close in to the Quincy Y. C. house. However, after all their freaks, they crossed side by side in the finish only 100yds. astern of Thelma and Pompano.

	Elapsed.		Elapsed.
Thelma	3 02 56	Heiress	3 05 38
Pompano	3 04 39	Oogrook	3 11 58
Hostess	3 05 34		

Fourth Race, Thursday, July 27.

The fourth and last race was sailed over a triangular course, the wind being S.W. All five boats carried reefs, Hostess having in two. The first leg was a broad reach to the red spar Hingham buoy. On this Hostess pulled ahead, and when half the leg was covered she had 9 min-

THE CLUB HOUSE FROM THE PIER.

utes' lead. Pompano ran up into second place. The first mark was timed:

	Elapsed.		Elapsed.
Hostess	1 31 50	Thelma	1 34 57
Heiress	1 33 21	Oogrook	1 35 53
Pompano	1 33 58		

The second leg was a broad reach to the end of Peddock's Island, two miles. Hostess added to her lead and turned the buoy 2:52 ahead. Time:

	Elapsed.		Elapsed.
Hostess	1 45 26	Thelma	1 50 00
Heiress	1 48 18	Oogrook	1 50 50
Pompano	1 48 50		

The end of the first round showed to everyone's surprise that Hostess had gained on Heiress going to windward. Oogrook also came up, and at the end of the first round was even with Pompano. Time:

	Elapsed.		Elapsed.
Hostess	2 09 52	Oogrook	2 17 28
Heiress	2 13 28	Thelma	2 18 40
Pompano	2 17 28		

On the second round Hostess still drew away, and the time shows the record better than words:

	Elapsed.		Elapsed.
Hostess	2 25 15	Pompano	2 33 19
Heiress	2 28 35	Thelma	2 34 20
Oogrook	2 32 45		

At Peddock's mark, on the second round, the times were:

	Elapsed.		Elapsed.
Hostess	2 36 45	Pompano	2 46 30
Heiress	2 41 33	Thelma	2 47 40
Oogrook	2 44 50		

The last windward leg was sailed in a stronger breeze, and Hostess, not taking any chances of breaking down, was not pushed, while Heiress, sailing for a forlorn last chance, was driven hard to cut down the lead of Hostess. Oogrook worked up into third place, and in the last few tacks Pompano, though a fin-keel, carried on so badly, coming as near going over as she could, that Thelma passed her.

The finish was timed:

	Finish.	Elapsed.
Hostess	3 08 33	1 53 33
Heiress	3 10 25	1 55 25
Oogrook	3 19 25	2 04 25
Thelma	3 26 24	2 11 24
Pompano	3 27 06	2 12 06

W. H. Shaw.

Seawanhaka International Challenge Cup.

THE fifth series of races for the international challenge cup for small yachts established by the Seawanhaka Corinthian Y. C. in 1895 has ended in a third victory for the holders, the Royal St. Lawrence Y. C. of Montreal. This time, as in 1895, it has taken five races to decide the winner, and unfortunately one of the five gave rise to a protest.

The first race, as told last week, was sailed on July 28, the Canadian yacht mistaking a buoy and going far out of her course, though finally making up the greater part of the loss. The second race, in a good breeze, was won on her merits by the American boat. The third and fourth races were won by the superior handling of the Canadian boat. The final race was started in a wind which made it difficult to lay a proper course, and several changes of marks were made by the committee, with the representative of the American boat. The race was finally started over the course agreed to, but between the guns the American boat took the ground, and after getting clear declined to continue in the race, the Canadian being left to sail over. A protest was made, but after a long hearing was disallowed by the committee. This termination was regretted by both sides, as it was hoped that the series would be sailed to a finish on the merits of the boats, but the circumstances were such as to make it unavoidable. After the last race a challenge was received from the White Bear Y. C., the challenger of last year, whose challenge was then set aside in order to give the Seawanhaka C. Y. C. another chance to regain the cup.

Second Race, Monday, July 31.

During Saturday night a westerly breeze sprung up, blowing up to twenty-five miles per hour on Sunday, with a marked fall of temperature. On Sunday afternoon Glenowen, one of the 1897 20-footers, was out with her owner, Mr. Shirley Davidson, of Glencairn's crew, at the stick. She was capsized and driven on a reef, where she pounded until she was a wreck. The breeze held until night, but fell a little by morning.

The bottom of Constance was very rough from hasty varnishing, and after the return on Saturday she was taken out of the water and turned over in the shed. The varnisher of the Spalding St. Lawrence Boat Club was sent for by wire and came down from Ogdensburgh on Saturday night by train. On Sunday the boat was thoroughly rubbed down by her three attendants and repolished with shellac until a perfect surface was obtained.

On Sunday afternoon the American visitors were entertained at the Forest and Stream Club by the members of the yacht club.

Monday morning was clear and very cool, with a cloudy sky and a fresh westerly wind. The flagship Dama went out to the course at noon, towing Glencairn, while Sirius towed Constance. The course was the regular triangle of one-and-one-third-mile sides, sailed three times. The Duchess of York carried a large party for a Monday race, and the steam yachts Alcyone, Chipmuck and Louise, with some smaller ones, were present, with a few sailing yachts and skiffs.

Before the start Constance carried two reefs and Glencairn a single reef. After a short trial on the wind Constance shook out one reef, and just before the first signal she turned out the second. Glencairn set her whole mainsail between the first and second signals. She carried a new mainsail of a yellowish tint, a cotton sail. In the race of Friday she had carried one of Dominion's mainsails. Constance, after trying two silk mainsails, sailed the races with a cotton mainsail nearly white in color. Mr. Sherman Hoyt had his old place in the crew, Mr. E. M. Thomas having returned to New York.

The wind was blowing from the Pointe Claire shore, making the first leg almost to windward, with the course sailed with marks to port. The preliminary was given at 1:15, with the preparatory at 1:20, and the start at 1:25. Just before the gun the two stood in toward Pointe Claire on port tack, Constance luffing round first and coming for the weather end of the line. She crossed within a few seconds, with Glencairn on her starboard quarter and about 10 seconds astern.

They crossed the line on starboard tack, but as soon as they were well clear of the committee steamer they went about, Glencairn first and Constance immediately after. As they started the long port tack inshore Constance was on the weather beam of Glencairn. The latter was clearly overpowered, rolling down to an angle which made both sails and centerboard ineffective. For the first time in the whole series of trial and cup races of four years there was seen a Duggan boat which failed both to point and to hold on. The case of Dominion and Challenger last year was reversed, the Duggan boat this time heeling to a greater angle and sliding off to leeward, while the Crane boat was doing exceptional work to windward.

It was nearly 10 minutes before Constance came about near Pointe Claire, Glencairn standing on for 3 minutes longer. Constance fetched the mark on this starboard tack, while Glencairn was forced to make a pair of short tacks to round, the times being:

	Time.	Elapsed.	Gain.	Lead.
Constance	1 47 34	0 22 34	0 02 56	0 02 56
Glencairn	1 50 30	0 25 30	. . . .	. . . .

Constance slacked sheets, and with a safe lead started on the reach to second mark under her working jib. Glencairn's crew did some smart work and had the balloon jib set in a very short time. The reach was a mere stern chase, without incident, the times being:

	Time.	Elapsed.	Gain.	Lead.
Constance	1 56 42	0 09 08	. . . .	0 02 10
Glencairn	1 58 52	0 08 22	0 00 46	. . . .

The times showed a decided gain for Glencairn, but not as much as might be expected from her extreme inclined length.

The third leg was a reach with booms to starboard; Constance jibed at the mark and was a long way toward home when Glencairn rounded. At 2 o'clock she turned in a reef, seeing which Glencairn followed her example. The crew of Constance was very slow, the boat being stopped for a long time, the outhaul being broken. Glencairn's crew lost no time, but lowered away, tied in and set up again in a very few moments. In spite of the time lost in reefing Glencairn made but 10 seconds on this leg, the times being:

	Time.	Elapsed.	Gain.	Lead.
Constance	2 06 21	0 09 59	. . . .	0 02 00
Glencairn	2 08 21	0 09 49	0 00 10	. . . .

With a single reef Glencairn still had sail enough, as the wind held and came in hard puffs off the Beaconsfield shore. The leg was covered in about the same time with a reef in as under full sail on the first round, the turn being timed:

	Time.	Elapsed.	Gain.	Lead.
Constance	2 29 21	0 23 00	0 01 37	0 03 37
Glencairn	2 32 58	0 24 37	. . . .	. . . .

The times showed a good gain for Constance, though less than on the first round.

The second leg was sailed without incident, Constance carrying her working jib and Glencairn again setting her ballooner.

	Time.	Elapsed.	Gain.	Lead.
Constance	2 38 05	0 08 44	0 00 07	0 03 44
Glencairn	2 41 49	0 08 51	. . . .	. . . .

On this reach Constance showed a slight gain.

The wind was about the same on the third leg, but soon after rounding Constance turned in a second reef for the last beat to windward, also setting a small jib, Glencairn this time picking up a full minute.

	Time.	Elapsed.	Gain.	Lead.
Constance	2 48 00	0 09 55	. . . .	0 02 34
Glencairn	2 50 31	0 08 45	0 01 10	. . . .

After rounding Constance took the old course in toward Pointe Claire, but Glencairn broke tacks at the mark and stood off on starboard. Constance held her port tack for over 2 minutes after Glencairn tacked, so that they were quite wide apart.

Glencairn was apparently doing better work than on either of the previous windward legs, while Constance had too little sail, the second reef being a mistake. There was now a fresh breeze, a clear, sunny sky and an easy sea, all conditions being favorable to a close race. After about 5 minutes on the starboard tack Constance came about, Glencairn, well out to the westward, coming on port tack just after. It promised to be a hot race for the mark, and there was a good deal of excitement among the spectators. Glencairn apparently made a large gain out in the open, but when they came nearer the shore Constance at 3:05 shook out her second reef and at once began to do better work. The turn was timed:

	Time.	Elapsed.	Gain.	Lead.
Constance	3 11 20	0 23 20	. . . .	0 01 33
Glencairn	3 12 53	0 21 19	0 01 01	. . . .

Glencairn had made up a large part of her loss, and it was still uncertain who would win. This time Constance set her balloon jib for the reach, having no time to spare. The second mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Constance	3 20 30	0 09 10	. . . .	0 01 09
Glencairn	3 21 39	0 08 46	0 00 24	. . . .

Just before jibing Constance shook out her last reef, Glencairn being already under full sail. They came down the wind in an exciting stern chase, Constance losing a little, but leading over the line by 55 seconds, the times being:

		Leg.		Whole course.	
	Time.	Elapsed.	Gain.	Lead.	Elapsed.	Lead.
Constance	3 29 00	0 08 30	. . . .	0 00 55	2 04 00	0 00 55
Glencairn	3 29 55	0 08 16	0 00 14	. . . .	2 04 55	. . . .

Third Race, Tuesday, Aug. 1.

The superiority of Constance in windward work was so plainly manifest on every occasion when the two were side by side in anything but a very light breeze that her success in the third race was taken as almost a foregone conclusion after the finish on Monday. The Glencairn crew, however, showed no signs of discouragement, accepting the situation very philosophically. They were ready early Tuesday morning, and at 10 o'clock the yacht was under way, with smooth water, a clear sunny sky overhead, and a S.W. wind that was blowing hard enough to favor Constance rather than the Canadian boat. They sailed up the river for an hour or so, trying the sails and making ready for the great race of the series, the last chance of retaining the cup.

The steam yacht Dama came up before noon and took Glencairn in tow, while Sirius took charge of Constance. The course was logged off, two nautical miles to windward, nearly S.W.; and at 1:15 the first signal was given, followed by the preparatory at 1:20. Both yachts were under single-reefed mainsails, but within a minute before the start Constance shook out hers.

The signal was given at 1:25, Glencairn going over promptly with a lead of 9 seconds and her wind clear. At first Constance drew up on her, and it seemed that the race would be decided in a very few minutes, but Mr. Duggan shook out his reef and then held his own. They made a long stretch on starboard tack out into the lake, Glencairn coming on port tack at 1:42, and Constance immediately following. The two had sailed so evenly that it was impossible to judge of the gain and loss from the distance of the committee steamer; but when they came about it was evident that Glencairn, though neither pointing nor holding on as well as Constance, had managed to keep close to her. They held this tack for nearly four minutes, Constance then tacking for the mark and Glencairn going about with her. The times were:

	Time.	Elapsed.	Gain.	Lead.
Constance	1 49 32	0 24 32	0 00 53	0 00 53
Glencairn	1 50 25	0 25 25	. . . .	. . . .

Constance set her spinaker and balloon jib as well, while Glencairn's crew hurried to set her balloon jib, the wind having shifted a little since the mark was laid.

At 2:56 Constance carried her spinaker to leeward and set it as a big balloon jib, carrying the real balloon jib as well. Glencairn followed her example and set her spinaker to leeward. The difference between the two was too slight to be measured by the eye, but the times showed a gain of 18 seconds for Glencairn.

	Time.	Elapsed.	Gain.	Lead.
Constance	2 06 20	0 16 48	. . . .	0 00 35
Glencairn	2 06 55	0 16 30	0 00 18	. . . .

They started to windward on starboard tack and held it until 2:19, the wind growing a little lighter. The actual times were needed to show the difference, Constance making 6 seconds in the two miles.

	Time.	Elapsed.	Gain.	Lead.
Constance	2 30 32	0 24 12	0 00 06	0 00 41
Glencairn	2 31 13	0 24 18	. . . .	. . . .

Constance set her spinaker to port, but soon took it in, Glencairn under working canvas came up on her weather and she began to luff to keep the Canadian from getting by. This was what Mr. Duggan wanted. The wind had drawn to the northward and he could not use his spinaker, a much larger sail than that of Constance, on the straight course from mark to mark. Glencairn worked out on Constance's weather beam, amid cheers, yells and whistles from the fleet, and went clear ahead, her crew being ready with the spinaker, while the crew of Constance were hard at work over the centerboard tackle. Again they luffed hard, heading directly in for Pointe Claire, far to windward of the course to the line. At last Glencairn bore away and her big spinaker went up with sheet well slacked, bellying toward the sky. Constance set hers and followed in a stern chase. While still some distance from the line, Glencairn's spinaker went heavenward like a balloon and the crew rushed forward to take it in. The sheet was led through a block aft and the screws holding the block drew out. No attempt was made to reset the sail, though that of Constance was hurrying her on astern. The end of the second round was timed:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	2 51 37	0 20 24	0 01 03	0 00 22
Constance	2 51 59	0 21 27	. . . .	. . . .

For the first time in the series the conditions now favored Glencairn. She had a lead of 22 seconds, giving her a good weather berth. The wind was but moderate and the water smooth. A couple of short tacks found Constance still to leeward, then they settled down to a long starboard tack across the lake. As before, Constance began to foot out, while holding a good wind, but Glencairn, sailed with consummate skill, was making the most of her last chance, and managed to hold her weather berth. Constance was first to tack at 3:16, finding Glencairn about and on her beather beam. They stood on for the mark, but failed to weather it, going about at 3:21:30. Another short tack together and they came about again but half a minute later, Glencairn being in position to round, while she had forced Constance to make still another tack alone to fetch the buoy. The gain was small, but 13 seconds in the two miles, but it meant a great deal for Glencairn added to the 22 seconds she had saved by clever work on the run.

	Time.	Elapsed.	Gain.	Lead.
Glencairn	3 22 30	0 20 53	0 00 13	0 00 35
Constance	3 23 05	0 21 06	. . . .	. . . .

The wind was now very light and still falling, making a slow run and leaving Constance at a disadvantage. Glencairn clearly outran her, as was natural under these conditions, but a part of the big gain was due to the very light wind at the finish. The full times were:

		Leg.		Whole course.	
	Time.	Elapsed.	Gain.	Elapsed.	Lead.
Glencairn	3 53 26	0 30 56	0 02 31	2 28 26	0 03 06
Constance	3 56 32	0 33 27	. . . .	2 31 32	. . . .

There were wild salutes for the winner, and the loser came in for her share of the noise as well. After the race Constance was at once hauled out, stripped and carried into the shed for another polishing.

Fourth Race, Wednesday, Aug. 2.

Wednesday morning brought a new variety of Lake St. Louis weather, cloudy and threatening a storm; but none came, and by noon the wind had fallen. The fleet went to the line and laid about for a time with the wind from all quarters. Finally it seemed to settle in the northeast, and the yachts were sent over the triangle with marks to starboard, making the second leg, from the outer to the Pointe Claire mark, to windward. The first signal was given at 1:45 and the start at 1:55. Constance was first away, within 25 seconds of the whistle, but Glencairn was only 2 seconds astern, breaking out her balloon jib as she crossed, the wind being light and the water smooth. Glencairn was soon in the lead, and then gained steadily, Constance holding to her working jib. When within a minute of the first mark Glencairn shifted to working jib for the beat across to Pointe Claire. The first mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	2 10 54	0 15 54	0 01 58	0 01 58
Constance	2 12 52	0 17 52	. . . .	. . . .

There were signs of a coming squall, and the wind freshened on this leg. The two broke tacks as they beat across, but Glencairn continued to gain, the time being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	2 32 07	0 22 13	0 00 43	0 02 41
Constance	2 34 48	0 22 56	. . . .	. . . .

In spite of the heavy clouds gathering astern, both yachts set spinakers, Glencairn being near the mark before she deemed it good judgment not only to take in the kite, but to reef as well. Constance, well astern, carried her spinaker longer, and by the time she was ready to reef the storm was on her. Glencairn met it under three reefs and a storm jib, but twice she was knocked down until she seemed beyond recovery. In the races of 1896, which brought the cup to Canada, Mr. Duggan showed that he was perfectly at home in a thunderstorm, and he handled Glencairn III. as skillfully as he then did Glencairn I., taking her through safely and keeping her going. He chose the better time for reefing, and his crew did the work more quickly than the other. The end of the first round was timed:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	2 54 20	0 22 13	0 00 29	0 03 10
Constance	2 57 30	0 22 42	. . . .	. . . .

The wind now shifted to the south and fell light, while the rain came down in torrents. The course was a reach and reefs were shaken out. Constance picked up over half a minute, the times being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	3 07 08	0 12 48	. . . .	0 02 32
Constance	3 09 40	0 12 10	0 00 38	. . . .

Glencairn set a large jib for the reach, while Constance tried a balloon over her working jib, taking in the larger sail after a time. In the light wind Glencairn still

continued to gain, the times at the Pointe Claire mark being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	3 17 53	0 10 45	0 00 57	0 03 29
Constance	3 21 22	0 11 42	. . . .	. . . .

Where they had carried spinakers in the first round they now hardened sheets for a beat to the line, Constance picking up a little, as the times show:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	3 34 40	0 16 47	. . . .	0 03 10
Constance	3 37 50	0 16 38	0 00 19	. . . .

The wind was light and fluky on the first leg of the last round, and Glencairn picked up a very long lead, the times being:

	Time.	Elapsed.	Gain.	Lead.
Glencairn	3 49 20	0 14 40	0 04 15	0 07 25
Constance	3 56 45	0 19 55	. . . .	. . . .

The second leg was covered under spinakers, the rain still falling and the wind being fluky. Constance picked up nearly 2 minutes, but it was too late to save the race.

	Time.	Elapsed.	Gain.	Lead.
Glencairn	4 04 25	0 15 05	. . . .	0 05 34
Constance	4 09 59	0 13 14	0 01 51	. . . .

With a freshening wind from S.W., Glencairn reached over the last leg with a very slight gain, crossing the line with a lead of 5 minutes 39 seconds. The final times were:

		Leg.		Whole course.	
	Time.	Elapsed.	Gain.	Elapsed.	Lead.
Glencairn	4 15 43	0 11 18	0 00 05	2 20 43	0 05 39
Constance	4 21 22	0 11 23	. . . .	2 26 22	. . . .

While it lasted the storm was very severe, the attendant yachts stowing all canvas and anchoring. Both of the racing boats were well handled, losing very little time.

Fifth Race, Thursday, Aug. 3.

After Glencairn's win on Wednesday, making the chances even between the two boats, there was great excitement on both sides. It had been demonstrated that in a fresh breeze, with merely straight sailing, Constance was the better boat and Glencairn was speedily overpowered; on the other hand, Glencairn was about as fast as Constance in light weather, and in a race where the wind was variable and there was much shifting of positions Mr. Duggan was the better strategist, making the most of every little point. The inferiority of his boat in fresh breezes and the blunder by which the first race was lost seemed to have little effect on him, as he sailed the third and fourth races, after many of his own side had already given up the cup as lost, with the same nerve and self-possession as though he had already two and his opponent none.

The weather conditions on Thursday morning were entirely in favor of Glencairn. The wind was light from S.W. with little prospect of increasing. Glencairn was out for a morning spin to make certain that all was right with her. At noon the wind was very light, and by the time that the committee had decided to call the start, at 1:25, it was from the south. This was the worst possible quarter for the windward and leeward course, lying across the length of the deep water, between Pointe Claire and the long shoal on the south. After a course had been laid out the wind shifted, and at the request of Mr. Post, on the committee boat, the course was changed. Several changes were made in the effort to get a suitable course to windward, and it was not until 3 o'clock that the preparatory signal was given. There was some sharp maneuvering for position, and in the course of it Constance took the ground, her board touching. Mr. Crane hailed the committee boat, but the yacht got off. By this time the starting signal had been given and Glencairn crossed at 3:05:15. Mr. Crane declined to cross the line, and Mr. Post made the following protest:

The Sailing Committee, St. Lawrence Yacht Club.

Dear Sirs: I beg leave to enter a protest against the course as laid out for to-day's race, on the ground that there was not sufficient water for the boats to be sailed in.

Respectfully yours,

REGIS H. POST.

The race committee declined to recall Glencairn, and she sailed over the course, finishing at 6:25:15. The following statements were given out by Mr. Post and the race committee:

Mr. Post's statement:

"The course was supposed to be a beat to windward of two miles and return, and when the outer buoy was placed at 12:45 it was all right. But in half an hour the wind shifted and the course was no longer due windward, as required. I protested.

"The committee agreed and started to relay the course. Prof. Capper, of the sailing committeee, and the pilot of the judges' boat, the Dama, moved the buoy more to the south to make it to windward. But the new position of the buoy was in shallow water, and the course was a little short of one and one-half miles. Under the conditions, if it was impossible to have a windward beat of two miles and return three times, the course might be made a beat of one and one-half miles four times around. Well, as laid out, it was about one and one-tenth miles. I did not object to the distance, but I did object that there were shoals at the outer buoy. If my boat had gone there it would have grounded. There seemed to be a channel direct to the buoy, but in tacking to either side, Constance, as her sailing master did not know the varying depths, would have grounded. You see for yourself that Capt. Duggan, who knows the course, is making very short tacks to avoid the shoals.

"I protested on the ground that it was not a proper course. It was then decided to move the starting buoy nearer to the shore so as to give more room at the windward end. This was done, and after the first signal was given Constance, in maneuvering for the start, struck the ground or a boulder with her centerboard. Of course, I could not know that the starting end by the shifting of the line back had also become improper until Constance struck. But I recalled Mr. Crane because the course was an improper one and made a protest.

"The technical ground was not that the course was short, but that it was unfit for sailing. But I did not want a fizzle, and so I told the committee that if they would recall Glencairn and shorten the course so that it could be sailed properly I would sail it as it then existed.

"The committee decided that it was impossible to recall Glencairn. In maneuvering for the start Constance touched twice. The second time the centerboard was down 5½ft. These facts show that the course was not a proper one."

The race committee's statement:

"The course was first set southwest by south from the Upper Dorval Lighthouse, two miles to windward. On the return of the committee boat, Mr. Crane protested that the course was not due windward, the wind having by this time hauled southerly. The course was then reset, Mr. Post, the representative of the Seawanhaka C. Y. C., being invited to accompany a member of the sailing committee in resetting it. When it was found that the course was slightly short of one and one-half miles, a verbal protest was made by the Seawanhaka representative, a second protest being intimated on account of shoal water for maneuvering around the windward buoy.

"The sailing committee then proposed to reduce the course from one and one-half miles to one mile, but a protest was immediately entered by Mr. Post. The committee therefore changed the starting line closer to Pointe Claire and proceeded to log a course one and one-half miles to windward. The preliminary signal was given at 2:55, the preparatory at 3 and the start at 3:05. Glencairn crossed the line at 3:05:15. Constance did not cross the line. Subsequently Mr. Post and Mr. Crane came on the committee boat and reported to the sailing committee that after the first gun Constance took ground with her centerboard in maneuvering for the line. Notice of protest was given, with a formal protest in writing later.

After the race Mr. Post protested as above, and a meeting was held in the evening, lasting three hours, at the end of which the race committee announced the following decision:

"The sailing committee having received the following protest, namely:

"'The Sailing Committee, St. Lawrence Y. C.—Dear Sirs: I beg leave to enter a protest against the course as laid out for to-day's race, on the ground that there was not sufficient water for the boats to be sailed in. Respectfully yours,

"'REGIS H. POST, S. C. P. Constance.'

And having heard the evidence of Mr. Post, Mr. Crane, Mr. Duggan and Mr. W. Riley, and having carefully considered all the circumstances of the start in to-day's race of the Seawanhaka Corinthian challenge cup series, decides that there is not sufficient ground for ordering the race to be resailed, and accordingly awards the race to the Glencairn III. "JAS. J. RILEY, Chairman.

"HARRISON B. YOUNG, Sec'y."

All yachtsmen will regret that the final race was a failure, but enough has been seen of the yachts to demonstrate their relative merits and demerits. The new defender is a departure from all previous Duggan boats. The races coming early this year, Mr. Duggan attempted to build a boat that would be faster in light weather than Glencairn II., Speculator and the older twenties. In this he failed, just as Mr. Crane did in Momo, the boat being fast in light weather, but very deficient in power and unfit for good work in the average weather. The new Glencairn III. is an ugly boat, clumsy and raft-like in appearance and lacking the symmetrical form that has distinguished the older boats. When heeled to her sailing angle the lines show a longer, finer and more symmetrical form than in the older boats, but when upright she is anything but handsome. When at her best angle for length and form of hull, she is heeled so far that both sails and centerboard become ineffective, she loses in driving power and slides to leeward. In Dominion the exact reverse was the case; her best angle was so much less than that of Challenger that both board and sails were much more effective.

Constance, with a less elaborate and expensive but much stronger construction than Challenger and Seawanhaka, is the best yacht which Mr. Crane has turned out for the class. She is shorter and far cleaner in form than Glencairn III., and looks much smaller. She represents a good average of all-round racing qualities, very stiff and able, with a good form, and fast both in light and heavy winds.

As to the handling, Mr. Crane did very good work in El Heirie in 1896, and he has improved steadily each year, so that with four years' experience in this type of boat and four years' of sailing on Lake St. Louis he was able to do full justice to his design. At the same time, it is no discredit to him to say that Mr. Duggan is the better sailor of the two, his many years of experience in all sorts of small craft, with his natural abilities as a helmsman and his thorough knowledge of his boat, placing him very near to the first place among the Corinthian yachtsmen both of the States and Canada. The crews of the two boats were made up, with the exception of one on Constance, of experienced hands who have sailed many races and are perfectly at home in this type of boat. As far as sail handling went, the advantage was with Glencairn.

As in 1898, the White Bear Y. C. of White Bear Lake, Minnesota, is the first in the field with a challenge, being anxious to redeem the defeat of its yacht Yankee by Dominion in June. The visitors from the West made a most favorable impression in Canada, and they would probably be welcomed in preference to any other club. It is not yet known whether the Seawanhaka C. Y. C. will challenge again.

Rhode Island Y. C.

PROVIDENCE.

Saturday, Aug. 5.

THE Rhode Island Y. C. sailed a race for yachts of the one-design class on Aug. 5. There was a light wind, and the times were:

Start, 3:23.	Finish.	Elapsed.
Rascal	6 00 45	2 37 45
The Kid	6 24 38	3 01 38
Kitten	6 24 55	3 01 55
Sprint	6 27 23	3 04 23
Ruth	6 33 30	3 10 30
Scoot	6 33 32	3 10 32

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Oconomowoc Y. C. Race Week.

THE Oconomowoc Y. C., of Oconomowoc Lake, Wis., held a week of interclub racing, beginning on July 24, the prizes being the Oconomowoc Y. C. cup, a new trophy costing $500; the Green Lake Y. C. cup, the Pabst cup and the Dupee cup.

The starters were as follows, representing different clubs from the vicinity: Avis II., William Hale Thompson, Chicago Y. C.; Avis I., Percival Thompson, Oconomowoc Y. C.; Ariel, Ferd. W. Peck, Jr., Green Lake Y. C.; Magic, Walter W. Dupee, Oconomowoc Y. C.; Zaza, Charles H. Lester, Oconomowoc Y. C.; Galatea, D. H. Murphy, Oconomowoc Y. C.; Skipanou, George W. Simmons, Oconomowoc Y. C.; Peerless, Fred Rietbrock, Pine Lake Y. C.; Rajah, R. Nunnemacher, Pine Lake Y. C.; Kismet, Philip R. Smith, Pine Lake Y. C.; Harpoon, J. A. Kimberly, Jr., Nodaway Y. C.; Aderyn, W. L. Davis, Neenah Y. C.; Argo, J. H. Jones, Oshkosh Y. C.; Saic, D. W. Buchanan, Pewaukee Y. C.; Medea, W. R. Morehouse, Oconomowoc Y. C.; Pistakee, Nick Morris, Pistakee Y. C.

The arrangement was that an "assembly" signal should be given at 10 A. M. for a morning race, or 2:30 P. M. for an afternoon race, the preparatory being given 25 minutes later. On Monday morning there was a light N.E. wind with a drizzle of rain, and the start for the first race for the Oconomowoc cup was postponed until 2:30. At 2 P. M. it began to rain very hard, and many of the yachtsmen were gathered indoors, the yachts being moored at a distance from the start. The assembly was given at 2:30, and the start at 3 o'clock, as per programme, but only three yachts, Avis II., Magic and Zaza, were at the line. The owners of the other yachts got out their boats as soon as possible and started in chase, the whole fleet being becalmed for a time. After a very fluky race the finish was timed:

Avis II.	1 50 51	Ariel	2 03 35
Magic	1 50 56	Pistakee	2 06 32
Zaza	1 52 39	Rajah	2 11 08
Argo	2 01 03	Avis	2 11 30
Aderyn	2 01 43		

There was a great deal of complaint found with the starting of the race under the existing conditions, so the judges finally declared the race off.

The first race of July 25 was for the Green Lake cup, held by Avis I., started in the morning, the times being:

Magic	1 33 10	Pistakee	1 36 00
Avis II.	1 34 46	Aderyn	1 37 28
Argo	1 34 47	Ariel	1 40 00
Galatea	1 35 03	Rajah	1 48 41
Avis	1 35 31		

In the afternoon the race of the preceding day, for the Oconomowoc Y. C. cup, was resailed in a light breeze, the times being:

Argo	2 12 51	Ariel	2 25 38
Aderyn	2 17 29	Pistakee	2 36 05
Galatea	2 21 05	Rajah	2 36 35
Magic	2 22 15	Avis	Broke a stay.
Avis II.	2 23 52		

The second race for the same trophy was sailed on July 26 in a heavy wind, four yachts capsizing. Argo won for the second time. The times were:

Argo	1 05 53	Aderyn	Capsized.
Ariel	1 11 39	Zaza	Capsized.
Pistakee	1 14 20	Magic	Capsized.
Avis II.	1 15 24	Galatea	Capsized.

The afternoon races were postponed until the following day, but on Thursday there was no wind. In the morning of July 28 the race for the Dupee trophy was sailed in a light southerly wind, the times being:

Aderyn	2 27 53	Pistakee	2 36 50
Magic	2 34 00	Zaza	2 37 16
Galatea	2 34 57	Avis II.	2 38 27
Argo	2 36 38		

In the afternoon the race for the Pabst cup, open only to yachts from Waukesha county, was sailed in a moderate breeze, the times being:

Magic	1 30 00	Rajah	1 38 54
Galatea	1 35 04	Kismet	1 40 17
Saic	1 36 03	Peerless	1 42 50
Ariel	1 37 53		

The final races for the Green Lake cup were sailed on Saturday, the time of the first being:

Ariel	1 14 52	Pistakee	1 24 21
Aderyn	1 15 15	Argo	Withdrew.
Magic	1 16 33	Saic	Withdrew.

The sail-off between Magic and Ariel followed, resulting in an easy race for the former, as Ariel lost her mast. Magic won the cup last year on Lake Winnebago.

Corinthian Y. C., of Marblehead.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, July 29.

THE Corinthian Y. C., of Marblehead, sailed its fourth championship race on July 29 in a moderate S. to S.E. wind, the times being:

	Elapsed.	Corrected.
First Class.		
Cartoon, H. Parker	1 21 43	. . . .
Class A.		
Lara, D. H. Follett	1 35 50	. . . .

Beverly Y. C.

MARION—BUZZARD'S BAY.

THE Beverly Y. C. joined with the Sippican Y. C. in two days of racing off Marion on July 28-29. The race of Friday was for the Van Rensselaer memorial cup, sailed over a course of ten and two-thirds miles, in a moderate breeze, the times being:

May Queen, D. L. Whittemore	2 15 41	2 02 59
Cyrilla, R. W. Emmons	2 29 12	2 11 17
Capelin, W. E. C. Eustis	2 36 21	2 13 30
Thordis, T. B. Wales	2 31 33	2 17 58
Nokomis, Alfred Winsor	2 37 52	2 25 10
Goby, S. G. King	2 55 21	2 26 23
Peacock, R. Winsor	2 59 34	2 30 36
Quakeress, W. F. Harrison	2 48 49	2 30 54
Hope, J. H. Ellis	2 56 43	2 32 00
Fuzzy, N. F. Emmons	3 08 40	2 39 42
Kittawake, S. D. Warren	2 59 18	2 41 23
Edith, S. R. Dow	3 03 00	2 42 08
Kalama, David Rice	3 57 00	2 43 02
Esther, F. M. Farnsworth	3 15 15	2 52 24
Maori, Bowler	3 23 12	3 00 21
Columbia, Wood Bros., Fall River	Withdrew.	
Lorelei, R. Wendell, Jr	Withdrew.	
Vim, F. W. Sargent, Jr	Withdrew.	
Heiress, G. G. Amory	Withdrew.	

Two other races were sailed, for catboats from Marion and for boats built by Jabez Jenney, a local builder. The times were:

Marion Catboats.

	Elapsed.	Corrected.
Flash, H. W. Young	1 30 05	1 14 40
Ariana, Edith Austin	1 41 13	1 20 38
Nancy, J. G. Frothingham	1 35 55	1 20 56
Cinch, T. Jaekel	1 38 10	1 22 22
Helen, W. W. Swan	1 43 18	1 23 16
I. T., S. L. Bullivant	1 43 10	1 25 36

Jenney-Built Boats.

Capsize, Ed Richardson	1 11 02	Not meas.
Flatiron, Letherbee	1 14 48	1 02 25
Marjorie, Malcolm Bullivant	1 15 55	1 04 40
Titania, Miss Thayer	1 15 34	1 04 46
Shrimp, Miss Richardson	1 14 40	1 05 16

Titania protested Marjorie for fouling and Flatiron and Capsize for not being Jenney boats. The first two protests were not sustained, but Capsize was barred, the prize going to Flatiron.

On Saturday a good race was sailed in a fresh S.W. wind, the times being:

25ft. Class.

	Elapsed.
May Queen, D. L. Whittemore	2 01 02
Blazing Star, C. M. Baker	2 02 53
Nokomis, A. Winsor	2 05 25
Ulula, W. H. Winship	.. ..

21ft. Class.

Avoca	4 17 10	2 52 10	2 50 35

Newport Yacht Racing Association.

THE first race of the Newport Yacht Racing Association was but a partial success, as Columbia did not start after her mishap of Aug. 2. Defender naturally sailed away from Vigilant and Navahoe; Kestrel won after a hot fight with Syce, and Queen Mab easily defeated Carmita. Columbia was under way, passing the fleet on her way to New London, and not starting. The weather was clear with a light S.W. wind, the course being the old triangle of the Goelet cup races, from Brenton's Reef to the Block Island Buoy and then to a mark off West Island, 38 miles.

The smaller yachts sailed around the Point Judith Buoy and back. They started at 11:55, and the 90-footers at 12. The windward marks were timed:

Point Judith Buoy.

Queen Mab	1 03 10	Kestrel	1 41 30
Carmita	1 27 00	Syce	1 42 15

Block Island Buoy.

Defender	2 21 50	Navahoe	2 44 15
Vigilant	2 39 30		

All set spinakers, the 90-footers running off to the West Island mark and reaching in. The times were:

	Elapsed.	Corrected.
Queen Mab, C. L. F. Robinson	4 05 40	4 05 40
Carmita, W. K. Vanderbilt, Jr	4 30 00	4 23 39
Syce, F. W. Hoyt	3 54 35	3 54 35
Kestrel, J. B. Mills	3 57 12	3 54 00
Defender, W. K. Vanderbilt	5 14 17	5 14 17
Vigilant, Percy Chubb	5 44 51	5 42 24
Navahoe, R. P. Carroll	6 05 03	5 59 17

Queen Mab won by 17 minutes 59 seconds, Kestrel by 35 seconds, and Defender beat Vigilant 28 minutes 7 seconds. Vigilant wins the Association cup from Navahoe. Defender allowed Vigilant 2 minutes 27 seconds and Navahoe 5 minutes 46 seconds. Syce allowed Kestrel 3 minutes 12 seconds, and Queen Mab allowed Carmita 8 minutes 21 seconds.

Cohasset Y. C.

COHASSET, MASS.

Saturday, July 29.

THE Cohasset Y. C. sailed a race of the championship series on July 29, the times being:

Knockabouts—Start, 3:00.

	Finish
Monsoon, J. A. Knowles	4 37 00
Eleanor, F. W. Moors	4 38 09
Delta, R. B. Williams	4 38 38
Remora, Crocker & Tower	4 39 43
Heralda, A. Bigelow, Jr	4 40 15
Kid, H. Bigelow	4 41 15
Nereid, W. R. Sears	4 42 31

Half-Raters—Start, 3:05.

Swallow, J. Richardson	3 49 40
Moon, Benj. Tower	3 50 38
Bee, F. W. Clark	3 53 54

On Aug. 5 a race was sailed for half-raters and knockabouts, the times being:

Half-Raters.

	Elapsed.
Bee, F. W. Clark	4 41 08
Swallow, J. Richardson	4 42 00
Jap, B. Tower	4 42 14

Knockabouts.

Delta, R. B. Williams	5 22 57
Kid, H. Bigelow	5 23 55
Mermaid, W. R. Sears	5 25 33
Remora, Crocker & Tower	5 28 08
Eleanor, F. W. Moors	5 28 57
Barracuba, A. C. Burrage	5 32 50
Heralda, A. Bigelow, Jr	5 37 03
Monsoon, J. A. Knowles	5 37 12

Duxbury Y. C.

DUXBURY—DUXBURY BAY.

Saturday, Aug. 5.

THE final race for the silver cup, open to Plymouth, Kingston and Duxbury yacht clubs, was sailed Aug. 5 in a light wind. Bobolink wins the cup, this being her second victory. The times were:

	Elapsed.	Corrected.
Bobolink, Goodspeed Brothers	1 18 38	1 12 38
Scamper, E. H. Reed & Brothers	1 20 31	1 13 31
Rooster, Watson & Baker	1 13 51	1 13 51
Dolphin, N. Morton	1 29 03	1 14 03
Lobster, C. C. Clapp	1 19 59	1 16 59
If, F. B. Norwood	1 32 28	1 17 28
Geisha, W. T. Whitman	1 20 30	1 17 30
Fedora, Cassius Hunt	1 32 11	1 18 11
Randona, G. F. Cushman	1 37 27	1 18 27
Sconset, H. Dennison	1 26 20	1 19 20
In It, L. W. Gifford Jr	Withdrew.	

Columbia.

AFTER various delays and postponements, the stepping of Columbia's new spar and the shipping of her new topmast and rigging was completed on July 30, and the long-expected race with Defender off Newport was started on Aug. 2. The new mast is of steel, of course hollow, and weighs over a ton less than the first one, of Oregon pine. The topmast, of pine, houses within the mast, the topmast rigging fitting over a funnel or cap which lies on the masthead when the topmast is housed. The spreaders are of wood. In moving the topmast from the fore side of the lower mast to the same center line, the lead of the topmast backstays was so changed that they brought a side strain on the spreaders, and it was intended to make a change in the chainplates to correct this, but there was no opportunity to do so before the first race. There was a fresh S.S.W. wind on Wednesday, and the course was laid out from Brenton's Reef Lightship around a mark boat a mile distant from the Block Island Bell Buoy and return, a total distance of 26½ nautical miles. The start was made at 11:15, Columbia getting the weather berth and crossing 1 minute 9 seconds after the gun, with a lead of 40 seconds on Defender. They crossed on starboard tack, Defender at once going about and heading for the Narragansett shore, Columbia following. They made a long tack, with club topsails and baby jib topsails set, Columbia showing a steady gain over the old boat. The baby jib topsail was stowed on Columbia for a time, when it was evident that Defender was picking her up, and the sail was set again, its utility being fully demonstrated. At noon they were off Point Judith, Columbia having a very satisfactory lead, when, at 12:05, her port spreader broke, just inside the masthead shroud, the topmast broke off at the cap, and the steel mainmast doubled over, the break being some distance above the middle between deck and cap. Mr. Iselin, Mr. Herreshoff and Mate Allen were to leeward and near the mast at the time, and narrowly escaped serious injury, but fortunately no one aboard was injured. The crew turned to very promptly and cleared the wreck, fortunately without damage to the hull, there being but little sea, and the yacht was towed to Bristol, Defender withdrawing. The injury proved to be confined to the loss of the spreader and topmast, the bending of the lower mast, some tears to the sails and general confusion of the rigging. The only injury to the hull was a deep dent in the topsides, which was removed by careful hammering.

Not a moment was lost in getting the riggers back to Bristol, removing the wrecked gear and shipping the pine mast for the New York Y. C. cruise. The injury to the steel mast was but local, as in the case of Defender's steel boom, and the broken plates are being cut out and replaced by new ones.

Hollow Masts and Housing Topmasts.

STOTTVILLE, N. Y., July 31.—*Editor Forest and Stream:* The FOREST AND STREAM of the 29th inst., in speaking of Columbia's steel mast, says that this spar has one feature positively new in yachting—the topmast will house within the lower mast. In 1891 or '92 Dr. L. A. Smith, of New York, had at New London a centerboard sloop about 40ft. waterline, named Phantom, and this yacht's steel or iron mast was rigged as Columbia's is.

I think Dr. Smith died a few years ago, and I believe that housing topmast inside of lower mast was his own idea. I was never on board Phantom, but know that her peculiar masthead rigging was much commented on by boatmen.

The Doctor had a party of friends out for a sail one afternoon outside of Fisher's Island; in a jump of a sea the main weather turnbuckle parted, the mast buckled about 10ft. above deck and bent until the masthead was in water. There were no tools on board, so the mast could not be cut clear, and Phantom was in some danger until a coaster picker her up and towed the party into New London. After this accident the sloop's wood spar was stepped. I think her metal mast was never again tried.

Phantom's sailing master was a New London man, and can probably give a clear description of her old masthead rigging.

A. C. STOTT.

NEW YORK, July 30.—*Editor Forest and Stream:* In your issue of July 29 you speak of Columbia's mast as being a novelty. The sloop Phantom, owned by the late Dr. L. A. Smith, had such a mast, the topmast housing within the mast, and held in place by a fid when on end.

My recollection of the boat is the more vivid from the fact that when off the south shore of Fisher's Island, with a large party aboard, she carried away her mast near the deck and lay in a jump of a sea for some time, until towed into New London by a launch.

The circumstance led to the replacing of the steel tube by a wooden stick.

WM. COFFIN DORNIN, JR.

Mosquito Fleet Y. C.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, July 29.

THE South Boston Mosquito Fleet sailed a handicap race on July 29 in a fresh S.W. wind, the times being:

	Elapsed.	Corrected
Nonpareil, W. F. Davis	1 20 00	1 33 00
Alda, C. P. Mooney	1 25 00	1 43 00

Lake Yacht Racing Association Meet.

Toronto, Aug. 14-17.

Friday, Aug. 18.—Cruising race, Toronto to Hamilton piers.

Saturday, Aug. 19.—Race for 35ft. Class in lake off Hamilton piers, and for skiffs in Hamilton Bay.

Races at Toronto.

Two Races for Each Class.

First class, yachts over 45ft. racing measurement: First prize, $55; second, $35.

45ft. class: First prize, $55; second, $35.

40ft. class: First prize, $45; second, $25; third $15.

35ft. class: First prize, $45; second, $25; third, $15.

30ft. class: First prize $35; second, $20; third, $10.

25ft. class: First prize, $25; second, $15; third, $10; fourth, $5.

Knockabout class: First prize, $25; second, $15; third, $10; fourth, $5.

Five starters or no fourth prize; four starters or no third prize; three starters or no second prize.

The races for the 45, 35 and 30ft. classes will be sailed on Aug. 14 and 16. For the first, 40, 25ft. and knockabout classes, Aug. 15 and 17.

Friday, Aug. 18.—Cruising Race to Hamilton Piers.—For this race the fleet will be divided into three classes, as follows:

First, 45ft. and 40ft. classes: First prize, $40; second, $20; third, $10; fourth, $5.

35ft. class: First prize, $30; second, $15; third, $5.

30ft., 25ft. and knockabout classes: First prize, $20; second, $10; third, $5.

On Saturday, Aug. 19, there will be a race for 35ft. class over Royal Hamilton Y. C. course, in Lake off Hamilton Piers. First prize, $50; second, $25; third, $15.

In addition to these cash prizes the Royal Hamilton Y. C. will give to the winner in Saturday's race absolutely a handsome silver cup, valued at $100, presented by Messrs. Klein & Binkley.

The first yacht to finish belonging to any of the clubs in the Lake Yacht Racing Association will be awarded the cup presented by Messrs. Hiram Walker & Sons to the Royal Hamilton Y. C. for annual competition.

And the first yacht to finish belonging to the Royal Hamilton Y. C. will be awarded a cup presented by the widow of the late F. S. Malloch to the Royal Hamilton Y. C., for annual competition in the 35ft. class.

Saturday, Aug. 19, in Hamilton Bay, over the Victoria Y. C. course, there will be a race open to all 16ft. skiffs in the L. S. S. A., under the auspices of the Victoria Y. C. First prize, commodore's cup, presented absolutely to the winner of the race by Com. Frank E. Walker; second prize, silk flag and cash prize; third prize, silk flag and cash prize.

Memoranda of Instructions, Guns, etc.

Aug. 14 and 16.—Time gun will be fired at 9:30 A. M. from the Town Club house. Second gun at 10:30 A. M., as signal for yachts to approach the line. Third gun at 10:50 A. M., preparatory signal for 45ft. class. Fourth gun at 11 A. M., signal for 45ft. class to start. Fifth gun at 11:10 A. M., signal for 35ft. class to start. Sixth gun at 11:20 A. M., signal for 30ft. class to start.

Aug. 15 and 17.—Time gun at 9:30 A. M., from Town Club house. Second gun at 10:30 A. M., as signal for yachts to approach the line. Third gun at 10:50 A. M., preparatory signal for first class. Fourth gun at 11 A. M., signal for first class to start. Fifth gun at 11:10 A. M., signal for 40ft. class to start. Sixth gun at 11:20 A. M., signal for 25ft. and knockabout classes to start.

Aug. 18, Cruising Race to Hamilton.—Time gun at 9 A. M., from Town Club house, Toronto. Second gun at 9:30 A. M., as signal for yachts to approach the line. Third gun at 9:50 A. M., preparatory signal for first, 45 and 40ft. classes to approach the line. Fourth gun at 10 A. M., signal for first, 45 and 40ft. classes to start. Fifth gun at 10:10 A. M., signal for 35ft class to start. Sixth gun at 10:20 A. M., signal for 30, 25 and knockabout classes to start.

Aug. 19.—Time gun at 2 P. M. from Royal Hamilton Y. C. house. Second gun at 2:30 P. M., as signal for yachts to approach the line. Third gun at 2:50 P. M., preparatory signal for 35ft. class. Fourth gun at 3 P. M., signal for 35ft. class to start.

The starting gun in each class will represent the preparatory gun for the next class.

N. B.—At the firing of the preparatory gun for each class, the contestants will be amenable to the rules of the L. Y. R. A.

The flag on the judges' boat will be lowered at the time of each starting gun. Should the gun misfire the lowering of the flag will be the signal to start. Yachts crossing line too soon will be recalled by megaphone.

Sailing Instructions.—Each yacht shall carry her Association number on both sides of her mainsail.

Entries according to form prescribed by Rule XI., L. Y. R. A., accompanied by certificate of measurement, must be in the hands of the Association officer not later than noon of the day before the race.

Charts of course will be furnished by Association officer at Town Club on the morning of the race.

FROM all accounts the meet of the American Canoe Association, which began on Aug. 4 at Hay Island, will be one of the largest camps for many years. The energy of Com. Thorne has accomplished much in uniting the Wetsern canoeists, but in addition to this he has worked hard all the year to bring men to camp and to make it so pleasant for them that they will come again without bringing.

Rifle Range and Gallery.

Sept. 4.—Sea Girt, N. J.—Meeting of the New Jersey State Rifle Association. De Lancy G. Walker, Sec'y.

Cincinnati Rifle Association.

THE following scores were made in the last regular competition by members, at 200yds., off-hand, German ring target. Gindele was high on champion target with 214. Roberts was high on the honor target with 69:

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

First and third Fridays of each month.—Watson's Park, Burnsine, Ill.—Semi-monthly contest for Montgomery Ward & Co.'s diamond badges.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Interstate Association's last target tournament of the season, at Portsmouth, Va., is now ready for distribution. Sept. 6 and 7 are the dates. There are ten events alike each day, respectively, two at 10 targets, $1; six at $1.50, and two at 20, $2 entrance. Of Portsmouth the programme sets forth: "Situated on the Elizabeth River, ten miles from Hampton Roads, Portsmouth has, with Norfolk, the largest and safest harbor on the Atlantic Coast south of New York, and through the broad entrance of Chesapeake Bay the commerce of the world is brought to her by steam and sail. Nine railroads extend to all points of the compass, and numerous coastwise and foreign steamship lines carry on immense traffic. The city is rich in historic associations. It was a theater of Colonial, Revolutionary and Confederate struggles, and it was within ten miles of her harbor that the famous engagement between the U. S. S. Monitor and the Confederate ironclad Merrimac (an event which changed the character of naval warfare) was fought in 1862. There is no greater attraction for visitors than the United States Navy Yard at this point, where some of the best types of Uncle Sam's fighting machines—notably the Texas and the Raleigh—have been built. The yard dates back to Washington's time, and some idea of its advantage to Portsmouth can be gained from the fact that more than 2,000 workmen keep up the busy hum of toil. The town's proximity to the ocean gives it additional charm to visitors to whom the sea is a new experience. Eighteen miles away, by rail, is Virginia Beach, one of the principal winter and summer resorts on the coast, and much nearer, on the Bay, are Ocean View, and the queen of bayside health resorts, Old Point Comfort. The waters hereabouts teem with oysters and fish, offering inducements to the lovers of the angle. To sportsmen with a penchant for big game the neighboring Dismal Swamp offers attractions in the form of deer, bear and wildcat, not to mention game of smaller caliber." Shooting commences at 10 o'clock. To reach the grounds, take Columbia Park cars at the foot of High street. Send guns and ammunition to W. N. White or G. W. Mooney, for free delivery to the grounds. Targets 2 cents, included in entrance. Contestants may shoot for targets only. Equitable system. On Friday, Sept. 8, the Portsmouth Gun Club will give a live-bird shoot. Mr. Elmer E. Shaner will manage, as usual. Mr. J. W. S. Butt, Sec'y of the Portsmouth Gun Club, 518 Middle street, Portsmouth, will give pertinent information.

In our business columns this week the Interstate Park Association sets forth its prospectus in full. A column of space is occupied by it, and the reader will find in it much of news interest as well as business advertisement. It recites the pertinent clauses of the Association's charter, gives a list of the officers, describes the real estate owned at present, and enumerates the improve-

ments to be made thereon, and minutely explains the financial advantages of the bonds to investors. The section of land owned by the Interstate Park Association is situated in the fertile and thriving section of Long Island which in future years is destined to furnish homes for the constantly increasing population of New York. New York proper is built to its full capacity already, so far as those are concerned who are not numbered with those of great wealth. The transportation facilities centering at the Brooklyn Bridge favor Long Island to a superior degree, and offer an advantage of great value to home-seekers whose place of business is in the great city. The estimates of minimum revenue of each year will cover the current expenses, and the actual revenue will without doubt far exceed that which was estimated as the minimum. The bonds have already been subscribed for to an amount which assures the success of the enterprise. There are many who need but to know the advantages offered to invest cheerfully. Capt. J. A. H. Dressel, of the U. M. C. Co., is the secretary-treasurer, and this alone is sufficient mention concerning the perfect soundness and sterling integrity of the venture.

The Rummell-Gaston tournament is fixed to be held in Midway Park (between Warren and Miles), Trumbull county, O., on Sept. 26 and 27. Both target and live-bird events will be provided. There are ten events for the first day, eight at targets, two at live birds, one of the latter being at 7 birds, $3, and the other at 10 birds, $4, birds extra in each event. There is one event at 10, three at 15, two at 20 and one at 25 targets, with a total entrance of $14. There are nine events for the second day's programme, of which two are at live birds, as follows: Ten birds, $4, and 25 birds, $10, birds extra in each. The latter, if possible to arrange, will be for championship of Ohio. The target events are: One at 10, three at 15, two at 20 and one at 25 targets; a total of $15 entrance. Four moneys, 40, 30, 20 and 10 per cent. Address James E. Gaston, Mineral Ridge, O.

Mr. A. W. Walls, Sec'y of the Worcester Sportsmen's Club, writes us as follows, under date of Aug. 5: "The Worcester Sportsmen's Club, of Worcester, Mass., will hold an all-day shoot at targets on Tuesday, Aug. 22, at which time the much-talked-of 100-bird race between E. C. Griffith, of Pascoag, R. I., and C. E. Forehand, of Worcester, Mass., will be shot. A good programme of sweepstake events will be arranged, and $25 will be put up for best averages in the programme events. The programme will call for 100 shots from each shooter to be eligible as a winner of average money. The 100-bird race between E. C. Griffith and C. E. Forehand will be shot at unknown angles.

There are fourteen events on the programme of the Hudson Gun Club's shoot, Aug. 21, of which five are at 10 targets, 50 cents entrance; five at 15, $1 entrance; three at 20, $1.50 entrance, and one at 25, 50 cents entrance, the latter being the team shoot, $5 added. Shooting begins at 9 o'clock. Money divided by the Rose system. Take Turnpike car from P. R. R. Ferry to the west side of Hackensack River Bridge. A. L. Hughes, 131 Newark street, Sec'y. The members of the Hudson Gun Club always made visitors welcome.

In a letter dated July 29 from Mr. Wm. P. Hillhouse, counselor at law, Denver, Colo., concerning the prosecution of two distinguished trap shots as the result of a recent pigeon shooting contest in that city, he writes: "I am happy to add that the matter was settled in court yesterday after quite a fight, by the discharge of the gentlemen arrested. The condition of the law here, while unsatisfactory, will probably, under this decision, protect sportsmen until the Legislature meets next fall."

Mr. John L. Chartrand, secretary of the Hackensack River Gun Club, under date of Aug. 5, writes us as follows; "A match at 50 clay birds each, $25 a side, has been arranged between Wm. Hexamer and H. M. Heflich, to take place on Friday, Aug. 18, the day of the H. R. G. C.'s live-bird shoot. As these men are two of the club's best shots, this match should prove close and interesting. A supper will be served after shoot at the club's expense, and an enjoyable time is anticipated. All are welcome."

The Mt. Kisco Gun Club, at its shoot last Saturday, added $15 to the Van Dyke memorial fund, the proceeds of one event in which the prize and targets were donated free. Thus two clubs, the Pawling and Mt. Kisco, in two shoots have contributed $25 to the fund.

We regret exceedingly that the programme of the Central Gun Club, Duluth, Minn., reached us too late to review last week. As this club's tournament is held on Aug. 9 and 10 a review this week would be without benefit to the parties interested.

The Soo Gun Club, Sioux City, Ia., have claimed Nov. 21 and 22 for their second annual live-bird tournament. Added money will be a feature of every event. The secretary is Mr. E. R. Chapman.

Mr. U. M. C. Thomas was in New York for a day last week, en route to Bridgeport from the City of Mexico. The long, fatiguing journey did not seem to impair his health or spirits in the least.

The secretary of the Ohio Trap-Shooters' League, Mr. J. C. Porterfield, informs us that the next tournament of the League will be held at Columbus, O., June 5, 6 and 7, 1900.

In the contest of the Central New Jersey Trap-Shooters' League at Dunellen, N. J., on Saturday of last week the Brunswick Gun Club was first by the score of 93.

The Cherokee Gun Club, Cherokee, Ia., has changed the dates of its tournament, fixing on Sept. 19 and 20 instead of Sept. 13 and 14.

Stanstead proposes a new system for the division of money in shoots and tournaments. It is presented elsewhere in our columns.

BERNARD WATERS.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Aug. 5.—The handicap event, of which a leather gun case was the prize, was warmly contested and required two ties and the toss of a penny to decide it, Mr. B. Amend winning on the combined matter of skill and chance. This was rather a novel shoot financially, as there was no entrance. The scores of it and the ties follow:

Tuttle, 5	1111110111011011101111110—25
Chambers, 4	1111111110011111101101011—24
Smith, 8	0101010110010110001111000—20
Van Allen, 2	1111111111111111111111011—25
Wright, 8	1111101011101001100011101—24

A. L. HUGHES, Sec'y.

Ninth Ward Gun Club.

Hackensack, N. J., July 31.—The scores of the Ninth Ward Gun Club's monthly shoot, held at Heflich's grounds, are as follows. The contest was at live birds, and was open to members only:

W H Faulk	1111011111— 9	P Zeller	1011100011— 6
C Frank	1011001110— 6	C Hunstein	1111000111— 7
F Geppert	1000110110— 5	J Smith	0001011110— 5
F Lounds	1011100010— 5	R J Francis	0011101100— 5
J Smelby	1101010001— 5		

Central New Jersey Trap Shooters' League.

Dunellen, N. J., Aug. 5.—There were four teams present at Dunellen, N. J., on the grounds of the Dunellen Gun Club, victory coming to the Brunswick Gun Club on the score of 93. The edge of the great storm which raged at Coney Island was in evidence, and part of the match was shot in a stiff gale, which blew from the traps to the right of the shooters for a half hour, and then of course there was exceedingly hard shooting. The second squad happened to have the bad inning, and had therefore the worst of it. The next shoot is fixed for Aug. 19, at New Brunswick, on the New Brunswick Gun Club grounds.

Team race, five-men teams, 25 targets per man, Sergeant system:

Brunswick, New Brunswick.		Climax, Plainfield.	
Bunk	22	Pierson	8
Smith	10	Keller	20
McDowell	19	Terry	15
Nichols	22	Swody	18
Randall	20—93	Hunt	21—82
Columbia, South Amboy.		Dunellen, Dunellen.	
Disbrow	15	Osborne	14
J Bloodgood	21	Giles	17
Ivins	15	Fletcher	15
Green	18	Lindzey	14
Leake	14—81	Baron	14—74

Sweepstakes:

Trap at Lyndhurst.

Aug. 3.—No. 1 was a miss-and-out, as follows: Capt. Money, 29, and Harold Money, 30, each 3; Morfey, 29, 0; Moffett, 29, 2; Bender, 28, 0; Dr. Webber, 27, 0.

No. 2 was at 10 birds, $5: Capt. Money 6, Harold Money 9, Morfey 9, Moffett 9, Bender 8, Dr. Webber 8, Dr. Creamer 6, Apgar 10, C. Morgan 8, Fletcher, 28, 6.

No. 4 was at 10 birds: H. Money, 9; Morfey, 8; Capt. Money, 6; Moffett, 7; Bunn, 28, 7; Webber, 8; Creamer, 5; Doty, 10.

The match between Morgan and Moffett commenced at 3:35 and was finished at 4:18. Morgan stood at 28yds. and had 28 birds to shoot at. Moffett stood at 32yds. and had 25 birds. Morgan lost 7 birds. His last one, the 28th, managed to get just over the boundary. Moffett lost but 3, so that the score was 22 to 21 in Moffett's favor. The scores:

Arkansas and the South.

St. Louis Doings.

LITTLE ROCK, Ark., Aug. 4.—Louis Dennig was first to try and wrest the Busch challenge trophy from Griesedick, the holder, in an individual contest. This took place on the St. Louis Gun Club grounds, and was close enough to be interesting, and by virtue of Griesedick losing his last bird dead out of bounds it resulted in a tie, with a total of 22 for each contestant. The shoot-off, however, assumed a different aspect, as Dennig lost his effectiveness, missing 6 out of his first 20, and withdrawing from the contest at this juncture of the match. Griesedick duplicated his previous score of 22. This gives him two wins and an excellent start in the race for permanent possession. However, there are many good pigeon shots in St. Louis, and it is very likely that Mr. Griesedick will have very frequent demands on his time, in order to retain the medal. Scores of the match:

Griesedick	11221*11112212011221112 1*—22
Dennig	12212120 1*022222222112222—22
Shoot-off:

Dennig	11*02200021110121221 —14

Memphis Gun Club.

On Aug. 2 this club held a merchandise shoot and outing, at Raleigh, a local summer resort, about ten miles distant from Memphis. This is a delightful place for an event of this nature, as it is always cool and pleasant there, while there is also an abundance of shade and fine spring water. After the shoot an elegant dinner was served to the participants at Raleigh Inn, and the arrangement of the table proved a very agreeable surprise to all, as targets were used as dishes and Winchester Blue Rival and Leader shells were used as salt and pepper cellars; then three traps acted as holders for appropriate floral designs—all of which added zest to the occasion.

The competition was conducted on a handicap basis, and there were from four to six prizes in every event, the entrance for all of these being $5, providing an entrance was made for all of them at once; otherwise the aggregate entrance amounted to $9.50. Abe Frank, who shot scratch, made high average, scoring 83 out of 100.

The following are the scores of those who took part in all events:

Targets:	10	15	20	15	15	25	Broke.
Frank	8	11	17	13	14	20	83
Vance, 2	8	13	17	9	15	18	80
Schmidt, 5	9	11	15	12	10	20	77
Thompson, 9	3	13	16	11	9	22	74
Edwards	6	13	15	12	11	17	74
Yohnke, 5	9	14	14	10	10	14	71
Brignardello, 6	6	13	14	11	11	16	71
W S Thompson, 5	6	14	16	8	12	15	71
Compton, 12	6	12	16	9	8	19	70
Harris, 8	8	7	13	10	10	17	65
Haggerty, 20	4	9	17	6	13	14	63
Taylor, 6	9	7	8	12	7	19	62

Loeb, Popham, Williamson, Hirsch, Hale and Douglass participated in three or four of the events.

Expansion.

To the best of my knowledge the sport of trap-shooting is practically unknown on the island of Porto Rico, but ere long we may see reports of trap shoots even from this section in FOREST AND STREAM. Lieut. J. W. L. Phillips, who was formerly stationed at the post here, but who is now with his regiment at San Juan, writes me that there are some forty or more officers in and about there who are anxious to indulge in the sport once more, and requests me to advise them what they will need to properly equip a shooting grounds, and furthermore to place him in communication with some firm in New York who handles such supplies.

Among other things, he mentions that they have a very suitable tract of ground for this purpose, and that pigeons can be purchased at 6 cents apiece. It is their intention to fit up for target and live-bird shooting at once.

Gilbert and Budd.

These two well-known shooters will hold a tournament on Aug. 23 to 25, at Arnold's Park, which is about five miles from Spirit Lake, the home of Gilbert, on the beautiful Okoboji Lake. This is an ideal place for an event of this kind, and aside from the attraction of the shoot, possesses many other interesting features, such as fishing and bathing, while good chicken shooting is to be had in this section of Iowa. The season for these birds opens the week following, so those who care to can sojourn at the park for a week, where first-class accommodations can be had at very reasonable rates, and then go after chickens on Sept. 1. There will be $300 added money at this shoot, and the programme will consist of eight 15 and three 20-target events each day. To the former there will be $7.50 added, and the latter events will have $10 added. Two very nice cups will be put up for averages, and these will be computed from the 20-target events. One cup will be for the 90 class and the other for the 80. In the meantime Charley writes he will come to Arkansas and endeavor to get high average.

Capital Gun Club.

The contest for the local club medal was a rather one-sided affair, as Pemberton, who won the medal at the previous shoot, developed such a streak that by comparison the other principals cut but a sorry figure, and none of them shot up their handicap, for even with this they could not get within hailing distance. Pemberton won the medal on a score of 47, and maintained this gait throughout, shooting all told at 115 and having 108 of these recorded. The shooting of the other contestants was below the ordinary, Thibault and Fletcher finishing second with 38. The conditions were all that could be desired, and the traps worked perfectly. All the details pertaining to the State shoot have now been completed.

Pemberton	1111111111111111111111111111111100101111111111111—47

PAUL R. LITZKE.

Mt. Kisco Gun Club.

Aug. 5.—The formal opening shoot of the Mt. Kisco Gun Club on its new grounds took place to-day, with a support which was most gratifying. There were Fanning, Banks and Hallowell, representatives of trade interests, and Dr. Webber, Dudley, I. Tallman, all mighty men with the gun, besides a good support from the club members and home talent.

The weather was sweltering hot, with a glaring light. The targets were thrown quite hard, so that the shooting kept all alert who desired to make good scores. Banks was high man for the day, just beating Fanning out for the average.

The officers of the club worked like beavers to make the shoot pleasant.

No. 14 was made a handicap event, the prize being a leather shell case. The entrance fee was $100. The club donated targets and proceeds to the Van Dyke Memorial Fund, in amount $15. The professional talent shot for targets only. The scores:

Events	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

Trap Around Reading.

READING, Pa., Aug. 5.—The Mt. Pleasant Gun Club, of this city, held a handicap shoot this afternoon on their grounds on Mt. Penn. The conditions of the match were 25 targets per man, with a handicap of targets to be added to the total number hit out of the 25. Score: Rhodes, scratch, 21; Capt. Ball, 4, 18; Yeager, 7, 18; Shultz, scratch, 11; Hunsberger, 4, 16; Gilbert, 6, 15.

Phœnixville, Pa., Aug. 4.—The Phœnix Gun Club held a target shoot this afternoon and twelve shooters shot for the badge. Each man shot at 25 targets, with the following scores: Capt. Erb 18, Stephens 17, L. Ninstead 19, Hodges 21, Dotterer 20, Miller 17, Holman 23, Farley 16, Pierce 19, G. Ninstead 13, Edwards 16, Buckwalter 17.

In a 25-target match between J. H. Miller and J. W. Holman, Miller broke 18 to Holman's 16.

Reading, Pa., Aug. 5.—At a meeting of the South End Gun Club, of this city, a committee was appointed to arrange a date for an all-day target tournament at the club's grounds on Beyer's Island, the principal event to be the team shoot for teams of six for the handsome sterling silver Roman shield, valued at $45. This trophy was won last August by the South End Regulars after an exciting shoot with the Shuler team, of Pottstown. All gun clubs will be invited to send teams and a good shoot can be expected, as the South End boys are very particular what they offer, and whatever they place in competition must be worth what they advertise or no shoot. Arthur A. Fink, of Reading, who managed last year's event so successfully, has again been secured to manage the shoot this year. Any information wanted will be cheerfully given by addressing Peter Texter, Sec'y Reading, Pa.

DUSTER.

Trap at Brockton.

BROCKTON, Mass., Aug. 4.—Brockton is quite alive to trap-shooting, as the following will show. Besides our regular club, the South End has what promises to be quite a hot side-partner—not opposition.

Nelson was first with 78 per cent.; Barrett (visitor) was second with 74; Turner, Clapp and Winslow were close followers of the leaders. Some will be heard from in the near future. There are twenty-five members, and all are very much interested in field sports.

July 29.—The scores of to-day's shoot follow. In the medal events, Worthing and Stork shot very well, and this part of the season's programme is getting quite interesting. Our next shoot will be Aug. 12:

Budd-Gilbert Tournament.

SPIRIT LAKE, Ia., Aug 2.—*Editor Forest and Stream:* Please announce in your Trap Fixtures that C. W. Budd and Fred Gilbert's tournament will be held in Arnold's Park, Ia., on Lake Okoboji, Aug. 23, 24 and 25, and $300 will be added. For further information address Chas. H. Copley, Spirit Lake, Ia.

C. W. BUDD.
FRED GILBERT.

WESTERN TRAPS.

Geo. Roll Wins Montgomery Ward Diamond Badge.

CHICAGO, Ill., Aug. 5.—George Roll, of Blue Island Gun Club, yesterday won the Montgomery Ward & Co. diamond badge in the twelfth and final contest and wears now the last trophy open to the general public in Chicago shootingdom. Mr. Roll was closely crowded by Mr. J. W. Amberg, runner-up, and had the latter won in the day's contest he must have been final winner without an additional shoot, for he was in the ties for first (he was the only scratch man to go straight out of the thirteen entries) and had won the trophy twice before. As it was, Dr. Shaw, Messrs. Simonetti, Amberg, Barto, Hollister and Parker were the only ones in the tie on 15, Roll dropping back to the 14 hole, where he had to kill 12 tie birds to win second place, third going to Elias. All of the men in the 15 tie killed their 5 straight except Amberg, to whom a straight meant more than to any of his rivals. As he was thus shut out, and it was the last remaining chance for a three-time winner, it was decided to save time by discontinuing that tie and going on at once to the final contest, for which three men qualified, each of whom had won the badge twice, namely, Amberg, Sturdevant and Roll. All shot at 30yds. and at 15 birds. Sturdevant showed in poor form and missed 5 birds, withdrawing. Amberg missed his 5th bird, and Roll, not to be outdone, also missed his 5th. The men then ran together up to the 12th bird, which Amberg failed to stop. Roll killed on out and won, the race being decided in the first string of 15 birds and not getting to the tie frames. Both men were warmly congratulated by their friends, and thus the very successful and pleasant series came to an end.

The second capital prize, the high average medal, was won very decisively by Dr. Shaw, who in the ten times he has shot for this badge has gone straight eight times. This, too, is a very beautiful emblem and denotes a very meritorious performance in so large and good a field as these contests have brought out. Dr. Shaw might have found a rival in Mr. Hollister had the latter shot in as many of the contests as Dr. Shaw. Out of five times entered, Mr. Hollister has gone straight five times.

Of the different holders of this badge, Messrs. Roll, Amberg and Sturdevant won it twice each, and it was won once each by Messrs. W. B. Leffingwell, J. L. White, J. O'Brien, J. Elias and Nels. Nelson. There was no winner declared in the twelfth contest. In this last shoot the weather was close and humid—not good flying weather—but the birds did well. Below are the scores of the contest:

Dr Shaw, 30, 2	211211212211122	—15
W B Leffingwell, 30, 2	01101211212221202	—14
Geo Roll, 30, 0	022222122122221	—14
John Elias, 28, 2	120 101222*1*2122	—13
R Simonetti, 29, 3	2110222*1022212112	—15
J L White, 30, 2	21121*20221022222	—14
J H Amberg, 30, 0	112212111112222	—15
J M Gillis, 29, 3	001010211111112120	—13
J B Barto, 29, 2	212221212111222	—15
D Bacci, 28, 4	2021222210000221100	—12
Ed Sturdevant, 30, 0	0022200w	
Hollister, 30, 2	212110211122222011	—15
Parker, 30, 2	212111112121112	—15

Ties on 15:

Shaw	21111—5	Hollister	21212—5
Amberg	22110—4	Parker	120
Barto	12121—5		

Ties on 14:

W B Leffingwell	211112w	G Roll	112222121111

Ties on 13:

Elias	222011	Gillis	12200

Final contest:

J H Amberg, 30	111101122210121—13
Ed Sturdevant, 30	20200222200w
Geo Roll, 30	222202222222222—14

Messrs. Montgomery Ward & Co. will not offer any further medals for a series of shoots, having now shot the year round for the boys and done their share. There is talk, however, at Manager Leffingwell's suggestion, of beginning another series of medal shoots among the shooters themselves, they to put up their own medal and to arrange for a sweep entry on the side in each shoot for all who may prefer, any shooter being allowed to shoot for the medal alone if he wishes. It is not at this writing determined what will be the conclusion in regard to this proposition, but it is likely to be adopted, as the boys will feel lonesome without something to shoot for every other week at least.

Central of Duluth.

Central Gun Club, of Duluth, one of the regulars in our Northwestern country, holds its seventh annual tournament Aug. 9 and 10, $250 added, equitable system, magautrap.

Cherokee.

Cherokee Gun Club, of Iowa, has changed its dates for its third annual shoot from Sept. 13 and 14 to Sept. 19 and 20. J. D. Anderson, Sec'y.

E. HOUGH.
180 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, Aug. 5.—The following scores were made on our grounds to-day, and are not quite up to our usual grade in average, although some good scores were made. Dr. Shaw won Class A medal on a score of 23; W. Northcott and Ford tied for Class B medal on scores of 21, and after a spirited shoot-off Northcott won. Class C Medal was won by Cornelson on a score of only 11—very few members of Class C being present. The weather was very cloudy and threatening rain; in fact, did rain all forenoon and up to 1 o'clock, which accounts for our small attendance. It is a very unusual thing for Garfield to have an attendance of less than twenty-five shooters.

Trophy shoot:

Pollard	0000001001000001010000010— 5

DR. J. W. MEEK, Sec'y.

Eureka Gun Club.

CHICAGO, July 29.—This was not a perfect day for shooting. The wind blew hard from back of the trap, bearing the birds down. In the trophy V. L. Cunnyngham won Class A, Borroff won Class B, R. B. Mack won Class C, Lovell won Class D.

Trophy shoot, 25 targets: Ed Steck 17, A. C. Borroff 19, W. W. Sprague 15, H. B. Morgan 16, J. G. Lovell 20, R. B. Mack 19, J. T. Jones 18, Mrs. Carson 16, G. V. Weart 16, V. L. Cunnyngham 21, Chas. Antoine 19, Dr Arnold 16, H. D. James 8.

Mussey cup, 15 singles and 5 pairs: Ed Steck 17, A. C. Borroff 11, W. W. Sprague 20, H. B. Morgan 24, J. G. Lovell 21, R. B. Mack 17, J. L. Jones 20, Mrs. Carson 16, G. V. Weart 14, V. L. Cunnyngham 23, Chas. Antoine 25, H. J. James 13, Dr. Arnold 6, Dr. Morton 9. In the Mussey cup shoot Chas. Antoine, on 25 out of 27 (15 singles and 5 pairs), handicap, won.

Team contest:

Chas. Antoine 17, V. L. Cunnyngham 15, Hilliard 8, Dr. Carson 12, J. G. Lovell 12, Mrs. Carson 13, Dr. Morton 7; total, 84.

H. B. Morgan 6, Ed Steck 14, E. E. Jackson 17, A. C. Borroff 11, R. B. Mack 10, J. L. Jones 9, H. D. James 6; total, 73.

Team contest:

Chas. Antoine 17, Dr. Carson 12, H. B. Morgan 14, Dr. Morton 9, E. E. Jackson 17; total, 69.

Ed Steck 22, V. L. Cunnyngham 19, J. G. Lovell 19, R. B. Mack 15, Mrs. Carson 11; total 86.

Steck's side won.

Aug. 5.—In the trophy shoot Chas. Antoine won Class A, Dr. Miller won Class B on 25 straight, R. B. Mack won Class C, Mrs. Carson won Class D.

A. W. Morton	11100111011011111011101110—18
R B Mack	01111111111111111011111011—22
W W Sprague	00110110100100001100110ll—12
Capt. Evans	00101100111111011111101011—17
J J Jones	00111111011100010101001l0—14
C Antoine	11111111011011111101110ll—21
Dr Carson	11111101100110101110111l0—18
Mrs Carson	01101011001100000111101l0—14
Dr Miller	11111111111111111111111l—25
A C Borroff	01111111111110010011111ll—20

In a race at 15 singles and 5 pairs, Dr. Miller won from C. Antoine by a score of 21 to 15.

Practice shoot: A. W. Morton 17, R. B. Mack 18, W. W. Sprague 16, Capt. Evans 14, Dr. Carson 17, Mrs. Carson 15, Dr. Miller 20, J. J. Jones 18, C. Antoine 18, A. C. Borroff 19.

Team shoot:

R. B. Mack 15, C. Antoine 14, A. W. Morton 16, J. L. Jones 12, W. W. Sprague 7; total, 64.

Dr. Miller 14, Dr. Carson 17, Capt. Evans 15, Mrs. Carson 13, W. W. Sprague 7; total, 66.

In this team shoot Dr. Miller's side won.

Team shoot:

Dr. Carson 13, Dr. Miller 18, Mrs. Carson 14, J. J. Jones 12; total, 67.

R. B. Mack 17, Chas. Antoine 17, Capt. Evans 14, Dr. Henderson 14; total 62.

Dr. Carson's side won.

Midsummer Tournament at Ocean City.

OCEAN CITY, Md., July 29.—The tournament was notable for the thorough enoyment of all the participants, though they in number were not up to what the management had a right to expect. The management exerted themselves to make the stay of the visitors pleasant.

The trade was represented by Messrs. J. S. Fanning, J. J. Hallowell, J. A. R. Elliott, Capt. A. W. du Bray, Harold Money and H. P. Collins.

Mr. James Malone, of Baltimore, managed the shoot.

Wednesday, July 26.

The handicaps were 12, 15 and 18yds., according to the skill of the shooters. The entrance was based on 10 cents a target, with added money in each event. The weather was not favorable. Fanning led in the total of the day. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

C Floyd	370	309	.834				

Jack Fanning was first, with Harold Money second, a number following close up.

Friday, July 28.

This day and the following were devoted to the live-bird programme. The weather was rather against the birds, no wind blowing to assist them, and the birds themselves were not a good lot. The feature of the day's shoot was the performance of Capt. du Bray and Harold Money, the former missing his first bird and then running 44 straight, losing but 2 for the day; the latter went through the three main events without a miss, a total of 22 birds. In the miss-and-outs he lost 1, killing 44 out of 45 for the day. Fox, Eames, Cartledge, Malone, Fanning, also shot well.

The scores follow:

No. 1, 5 live birds, $5, high guns, three moneys:

Money	22222—5	Hallowell	22222—5
Du Bray	02222—4	Brandenberg	10220—3
Fanning	22220—4	Anthony	11212—5
Fox	11121—5	Coulburn	20222—4
Eames	02211—4	Covington	20022—3
Schultze	12220—4	Floyd	01121—4
Hammond	22202—4	Cartledge	22112—5
Collins	21222—5		

No. 2, 7 live birds, $7, high guns, three moneys:

Money	2222222—7	Brandenberg	2211211—7
Du Bray	2222222 7	Hallowell	2222222—7
Fanning	1222111- 7	Anthony	2212221—7
Fox	1111112—7	Coulburn	1122201 6
Eames	2222220 -6	Floyd	1111122 -7
Schultze	2110221—6	Cartledge	0121221—6
Hammond	2122112—7	Quimby	1022221 6
Collins	1210200—4		

No. 3, 10 live birds, $10, handicap, high guns, four moneys:

Money, 31	1222222222—10	Brandenberg, 26	1221012112— 9
Du Bray, 29	2222212222—10	Floyd, 28	2022122221— 9
Fox, 30	1111112122—10	Collins, 26	1112021121— 9
Eames, 28	1222211212—10	Hallowell, 30	0222212222— 9
Cartledge, 28	2211211121—10	Anthony, 30	2110211220— 8
Malone, 30	1212211222—10	Covington, 28	00w
Fanning, 31	1112120212— 9		

The miss-and-outs were $2, all standing at 32yds. The scores:

No. 1: Money 2, Fox 4, Anthony 4, Eames 3, Du Bray 4, Fanning 1, Hallowell 2, Malone 4.

No. 2: Money 10, Fox 5, Anthony 8, Eames 10, Du Bray 10, Fanning 10, Hallowell 1, Malone 4, Hammond 5 and withdrew, Quimby 3, Cartledge 4, Schultze 10.

No. 3: Money 10, Du Bray 9, Anthony 10, Fanning 10, Quimby 5, Fox 10, Malone 9.

Saturday, July 29.

The shooting opened with a miss-and out, $2, which resulted as follows: Money, Fox, Brandenberg, Anthony and Fanning, 8 each; Du Bray 5.

The 20-bird handicap, 25 to 32yds., 50, 30 and 20 per cent., class shooting, had eight entries. Fanning and Cartledge tied on a straight score and divided first, Hallowell, Fox and Brandenberg tied for second; Money and Malone third. Harold Money was set back to 32yds., a most severe handicap, and a mistaken one.

Money, 32	20222221121221121210	18
Hallowell, 30	02211221221221122221	19

Malone, 30	12111010121112111111	18

Providence vs. Woonsocket.

AUG. 5.—The team from the Providence Gun Club went to Woonsocket yesterday afternoon, and wrested the championship pennant from the latter club after the most exciting and closely contested shoot yet known since the pennant was brought into competition. The fact that the Woonsocket team has downed the crack teams of the State makes the victory a double one for the local shooters. It was a target shoot of nine events, Nos. 4, 5 and 6 being the pennant shoot. It consisted of two 15 and one 20 target events. The Providence team was represented by Griffith, Greener, Root, Inman and Reiner. Woonsocket's end was looked after by Getchell, Campbell, Mills, Banfil and Whitin.

The result of the match at 50 birds was that the teams were tied at 205 birds each. Mills was high with 47 birds, while Griffith was next with 44.

In the shoot-off both teams made better scores, but the Providence shooters were on their mettle, and won out by 8 birds. Greener was high with 46 birds. Mills was high average man. All the winning team broke over 40 targets in the shoot-off.

The pennant will now adorn the walls of the Providence Gun Club's new house, where it will remain until some faster team wins. The scores:

Championship shoot:

Providence Gun Club—Griffith 44, Greener 41, Root 38, Inman 43, Reiner 39—205.

Woonsocket Gun Club—Getchell 42, Campbell 38, Mills 47, Banfil 38, Whitin 40—205.

Shoot-off of tie:

Providence Gun Club—Griffith 41, Greener 46, Root 41, Inman 43, Reiner 43—214.

Woonsocket Gun Club—Getchell 44, Campbell 41, Mills 41, Banfil 39, Whitin 41—206.

Grand totals:

Providence Gun Club—Griffith 85, Greener 87, Root 79, Inman 86, Reiner 82.

Woonsocket Gun Club—Getchell 86, Campbell 79, Mills 88, Banfil 77, Whitin 81.

Miss-and-out: Root 6, Griffith 5, Whitin 5, Mills 3, Darling 2, Banfil 0, Campbell 1.

Nos. 3, 4, 5 and 6 were team race for pennant. Nos. 7, 8 and 9 were shoot-off of tie.

Auburn Gun Club.

AUBURN, Me., Aug. 7.—The weekly shoot of the Auburn (Me.) Gun Club was held Aug. 5. It was an ideal day for target shooting, there being scarcely any wind, and clouds obscured the sun nearly all the afternoon. The scores were exceptionally good. Enthusiasm ran high, and the shooting was kept up until a late hour. Nine men were tied for the gold badge, Libby winning it in the exciting shoot-off which followed. Three teams shot for the challenge cup Satuardy, the challenging teams being Libby and Tukey, White and Fletcher, but Hunnewell and Ashley still retain the cup in their possession. Several of the members of the club will attend the Interstate tournament, to be held in Portland Aug. 9 and 10, and expect to make a good showing. Herewith are the scores for the afternoon's shoot:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	25	10	10	25	10	15	Targets:	10	25	10	10	25	10	15

The programme of the ninth annual shooting tournament of the Arkansas State Sportsmen's Association, to be held at Little Rock, Ark., on Aug. 15, 16 and 17, presents a most attractive list of events for the competition of shooters. There will be $375 added money; targets, 2 cents; Rose system. There are ten target events each day, of which two are at 20 targets and eight at 15. Each event has $10 added, excepting No. 4 of the second day, which has $15. Besides the regular events there are the following: First day, special 25-target handicap for gold medal. Second day, four-men team championship race, for team trophy; 25 targets per man. Third day, individual State championship race; 50 targets. These contests commence at 3 o'clock. Shooting commences at 9 o'clock. Dinner will be served on the grounds. Ship shells to Dickinson Arms Co. Average money, $50. Trade representatives may shoot for targets only, but there is $25 for high averages, $15 to first, $10 to second. Efforts are being made for special railroad rates. Those paying full fare are requested to take receipts for the same, so that purchasers may get the benefit of reduced return rates. Address all communications to the secretary, Mr. Paul R. Litzke, Little Rock, Ark. The Association will hold its annual meeting Aug. 19, at 9:30 P. M.

The N. P. L. System.

Sheldon, Vt.—*Editor Forest and Stream:* Among the many systems in general use for dividing the money in trap-shooting contests there are none that completely fill the bill. They are either too complicated for general use or are in many instances decidedly unfair—as in class shooting, wherein the 90 per cent. men, through dividing ties, often do not receive as much as an 80 per cent. man who stands alone. There is at such times a great temptation for one of the high men to drop for place.

The new N. P. L. equitable system remedies these evils, as it is easy to understand and work, and rewards the winners according to their merits. This system is founded on the basis that if a shooter does not come up to a certain standard he is not worthy of reward, and those who go above that standard to be rewarded as they deserve.

In the inclosed score we have fixed the standard at 65 per cent.—13 out of 20; that is, in an event of 20 birds a shooter must break 13 to become a winner. If he breaks 13 he is credited with one point, called a "count." Those breaking 14 are credited with two "counts," etc. A full score would give eight counts. The amount of entrance money, with the added money, is divided by the total number of "counts" made in that event. This gives the value of each count, and the winners receive according to the number to their credit.

In the inclosed score the pot is $22 and there are twenty-eight counts, making the value of each 78 cents and a fraction over, so those who scored 13 received 78 cents; those who scored 14, 2 counts, 56 cents, and the 15 men, 3 counts, $2.34, etc. The highest in this event are the two 18 men, who receive $4.68. The fractional part of each count makes a total of 16 cents, and is given as a booby prize to the one who made the lowest score.

Of course the standard should be varied to suit circumstances. In some club shoots 50 per cent. would be high enough, while at some tournaments 75 or 80 per cent. would be none too high.

Had this system been used at Buffalo, with a standard of 85 per cent., many a sorrowing shooter would have been made happy.

In printing the score cards for this system the number of the event, the percentage, the amount of entrance and added money, together with the number and price of the targets, should be left blank, to be filled in as required by the management.

First event, 65 per cent. to win, $10 added:

	20 targets, 2c. each.	$1 entrance	Broke.	Counts.	Value.	Total.
A	40	1.00	18	6	.78	$4.68
B	"	"	18	6	"	4.68
C	"	"	17	5	"	3.90
D	"	"	16	4	"	3.12
E	"	"	15	3	"	2.34
F	"	"	14	2	"	1.56
G	"	"	13	1	"	.78
H	"	"	13	1	"	.78
I	"	"	12	0	"	"
J	"	"	11	"	"	"
K	"	"	11	"	"	"
L	"	"	10	"	"	"
M	"	"	etc.	"	"	"
N	"	"	"	"	"	"
O	"	"	"	"	"	"
P	"	"	"	"	"	"
Q	"	"	"	"	"	"
R	"	"	"	"	"	"
S	"	"	"	"	"	"
T	"	"	"	"	"	"
Entrance						$20.00
Added money						10.00
						$30.00
Less targets						8.00
Counts				28		22.00
						.78

and 16 cents over for booby prize. A and B each broke 18, counts 6, and 6 × .78 = $4.68.

Stanstead.

St. Paul Rod and Gun Club

St. Paul, Minn., July 29.—The St. Paul Rod and Gun Club had the largest shoot of the season this afternoon. We called a special meeting and accepted six new members.

Mrs. Lee won the ladies' special prize with a score of 8 out of 10. Wilkinson won first in the merchandise event; Mark second, Morrison third. Danz, Morrison and Perry had a tie on the merchandise shoot-off last week, to settle which resulted in Morrison winning, as was expected. Danz dropped out early in the game, but Perry gave him a run for his money by shooting straight to 15; then they both missed 16th birds. Perry lost his 18th and Morrison scored and won. Wilkinson won senior badge, and Trix the junior.

Badge shoot, 25 targets, unknown angles:

Danz	1010111010111101110111100—17
Chief	1010110101101101011010110—15

Secretary.

Soo Gun Club.

Sioux City, Ia., Aug. 4.—The members of the Soo Gun Club made the following scores at the ninth of the series of shoots for the Schmelzer trophy on the afternoon of Aug. 3.

Langers won the honors with the handsome score of 29. This is Mr. Langers' second season at the traps, and his work is very gratifying to his friends.

Scores, 30 targets, handicaps added:

Boyer, 6	1001101100011101111001011111011—19	—6—25
Boyd	1110101111110111111111111101111	—26
Duncan	1111111111101110111111111111111	—28
Hunter 1	1111111111111111111110101101101—26	—1—27
Langers	1011111111111111111111111111111	—29
Kortright	0111111111111111101011011111111	—26

Wanecha.

EastSide Gun Club

Saginaw, Mich., July 30.—Scores were made to-day as follows at the shoot of the East Side Gun Club:

Practice race, 25 targets: J. B. Baum 19, John Popp 18, Wm. M. Nouggle 13, John M. Messner 22, T. L. Thompson 9, G. Lamb 14.

Club medal: J. B. Baum 21, F. Baumgartner 16, Wm. M. Nouggle 18, F. Schuetzler 14, W. Tremper 13, Frank Lord 14, H. Krogmann 20, Ed Carpenter 23, John Popp 18, John M. Messner 23.

Finley Brewing Co. medal, 25 targets: J. B. Baum 21, J. Popp 19, Wm. M. Nouggle 18, H. Krogmann 21, John M. Messner 24, F. Lord 15, Ed Carpenter 23, G. R. Endert 19, Ed Skotel 15, J. Ditz 22.

Everet House walking match, 15 targets: G. R. Endert 6, J. B. Baum 7, Wm. M. Nouggle 8, W. Tremper 6, H. Krogmann 12, Ed Skotel 8, L. Thompson 4, J. Popp 11, J. M. Messner 8, J. Ditz 5.

Fort Smith Gun Club

Fort Smith, Ark., Aug. 4.—Only six members of the club faced the traps on the occasion of the last weekly shoot of the Fort Smith Gun Club on Thursday evening. The traps worked miserably, and the shooting under the circumstances was far from pleasant.

Mesdames Coffee and Hunt favored the club with their presence and incidentally fired a few rounds just to see if they could not do as well as their husbands. The ladies were also quite useful, one acting as score-keeper and the other as trap-puller, which duties they performed in a manner quite satisfactory to all.

In the medal race, 25 birds per man, Durden missed his first bird, and then ran 22 straight, giving Matthews palpitation of the heart, if such a thing was possible. However, he missed his last 2 and Matthews won the Class A medal on a score of 24 out of 25. In the last two medal contests Matthews has won it twice with a score of 49 out of 50. But as Frank Parmelee, of Omaha, says, "How can you beat a man if he don't miss none?"

Mulraney had no competitor for Class B, and won it without a struggle. Everyone in the club was glad to see him get it, as he is a brand-new shooter.

There will be only one more practice shoot before the State tournament, at Little Rock, on Aug. 15-17, at which, it is to be hoped, a team representing Fort Smith will be present. It is a good advertisement for the town and we have the material if they will only get together and shoot. The fact that there is no man in the State that can shoot over 85 per cent. would give the Fort Smith team a great advantage, as Matthews has shown himself equal to 92 or 95 on badly working traps.

A team composed of Matthews, Leach, Hartwell and Baptiste, or Durden, with Hunt, Coffee and Oglesby substitutes, would have a fighting show in any company that could be gotten together in the State.

Following are the scores—Medal race:

Matthews	1111111111011111111111111—24
Durden	0111111111111111111111100—22
Leach	1111110011111001111110111—20
Hunt	1111101010101011101111111 19
Coffee	0111000111111110101010111—17
Mulraney	0000100000100010100110101— 8

Sweeps were shot as follows:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	15	15	15	10	Targets:	15	15	15	10
Matthews	13	14	14	10	Hunt	..	8	8	7
Leach	13	11	12	5	Coffee	..	9	6	6
Durden	7	14	11	7	Mulraney	..	6	3	7	5

Secretary.

Minneapolis Gun Club.

Minneapolis, Minn., Aug. 3.—The attendance at the shoot of the Minneapolis Gun Club aggregated twenty-eight shooters to-day, and this was somewhat of a disappointment, as a large attendance is expected the balance of the season

Special prizes will be offered in the different events from now on to regain the proper enthusiasm and attendance of the old members, as a club with the membership that the Minneapolis Club has should turn out from sixty to eighty shooters every week.

Nelson carried off the honors, winning three medals and beating Johnston for high average by 1 bird. McQueen finished third, Parker fourth, McKay, Biffton and Mrs. Johnston tieing for fifth position.

A feature of the afternoon's sport was the shooting of Master Willis Monroe, eleven years of age, who shot in the Schlitz badge event, and killed 8 targets out of the last 10 shot at, a wonderful performance for one so young. The following are the scores of the different events:

Val Blatz diamond badge, 15 singles, unknown angles: Biffton 10, Parker 12, McKay 12, Johnston 13, McQueen 13, Sully 4, Mathes 12, Kennedy 11, Mrs. Johnston 13, Woolf 9, North 12, Trapton 4, Chapin 3, Nelson 12, Dr. Bill 11, Stone 7, Cat 11.

Mrs. Johnston won badge.

Schlitz diamond badge, 25 singles, unknown angles: Biffton 21, Parker 19, McKay 20, Johnston 18, McQueen 20, Sully 12, Mathes 13, L. F. Kennedy 16, Mrs. Johnston 19, Woolf 16, C. North 18, Trapton 12, Chapin 4, Nelson 21, Dr. Bill 15, Stone 17, Kat 20, Hays 18, Arbuckle 16, Chamberlain 18, Edsall 16, Willis 10.

Shoot-off, 10 targets: Biffton 8, Nelson 10.

Nelson won badge.

Paegel challenge badge, 25 singles, unknown angles: Biffton 21, Parker 23, McKay 21, Johnston 22, McQueen 21, Sully 13, Mathes 13, L. F. Kennedy 18, Mrs. Johnston 21, Woolf 18, Tramp 12, Chapin 5, Nelson 23, Dr. Bill 19, Stone 18, Kat 22, Hays 20, Arbuckle 13, Chamberlain 13, North 19.

Nelson won badge.

Club badges, 10 singles, unknown angles; 5 pairs:

Biffton	1101111111	10 11 10 10 00—14
Parker	0011111101	11 11 11 10 10—15

Tarb	1010111111	10 10 10 10 11—14

Johnston won senior badge, Nelson won junior badge, Chamberlin won amateur badge.

Arkansas State Championship.

Fort Smith, Ark., Aug. 5.—*Editor Forest and Stream:* Replying to Secretary's communication, of Pine Bluff, in your issue of the 5th inst., beg to say that so far as we knew, never having seen a copy of the rules governing the same, the conditions were complied with in the Sumpter-Matthews match. A formal challenge was written and sent to E. T. Reaves, Little Rock, Ark., with an inclosed check for $10 (which, by the way, we have never been able to get back), as follows:

"Fort Smith, Ark., Aug. 10, 1898.—E. T. Reaves, Esq., Treas., Little Rock, Ark.: Dear Sir: I inclose check for $10 and hereby challenge Jno. J. Sumpter, Jr., of Hot Springs, for the medal representing the individual championship of the State, subject to the rules governing the same.. (Signed.) J. P. Matthews."

I don't remember whether or not the challenge was advertised in the papers, but believe it was mentioned in the Fort Smith papers. Anyhow, the match came off on schedule time and Matthews won the medal by 1 bird in a match that was anybody's until the last bird was broken, so that at best there is nothing but a technicality between Matthews and the medal.

On this occasion I also notified Mr. Duley and Mr. Lloyd, the former of Little Rock, president of the State Sportsmen's Association, and the latter of the Pin Bluff Gun Club, that the match was to take place and inviting them to be present, copies of which letters I have in my possession.

As to Mr. Cole's challenge, I never heard of it. Mr. Sumpter could not possibly accept, as he was not in possession of the medal, and if the State Sportsmen's Association stood between Mr. Cole and Matthews I am not to blame.

I take it that Secretary is either Mr. Howell or Mr. Lloyd, and as he makes the assertion that he expects to have three, possibly six, shooters at the State shoot, Little Rock, Aug. 15-17, that will break more targets than the hard proposition from Fort Smith in the championship race, I will make a wager that he cannot name a man that will break more targets than Mr. Matthews, either in the championship race or in the regular programme events, such a man to be a resident of the State of Arkansas, making the wager from $25 to $100. I would send forfeit to bind such a wager, but it will not reach you in time to permit of Pine Bluff's answer.

I think we should have a medal or trophy emblematic of the championship of the State at live birds, and shall take the matter up at the next meeting of the Association.

I am also of the opinion that a representative from each gun club in the State should be sent each year to the Grand American Handicap, expenses of such representative being borne by his respective town or club.

W. A. Leach, Sec'y Fort Smith Gun Club.

Norwich Gun Club.

Norwich, N. Y., Aug. 1.—The Norwich Gun Club held a one-day tournament on July 28, forty-two shooters participating. Mr. L. C. Palmiter, of Sherburne, N. Y., won the Chenango county championship event with a score of 25 out of 28. The following is the complete score:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

The Norwich Club now has a membership of about twenty-five. From fifteen to twenty turn out to the regular weekly shoots on Saturday afternoons.

S. E. Smith, Sec'y.

Chisholm vs. Whitehouse.

Aug. 5.—A 50-target race was shot in Somersworth, N. H., on Saturday, Aug. 5, the principals being H. A. Chisholm, of Portland, Me., and C. F. Whitehouse, of Somersworth, N. H. Whitehouse has shot a good many matches, and has never been beaten until he met Chisholm, so naturally felt very confident of winning, while Chisholm has a reputation of always going into a race thoroughly confident of coming out on top.

Whitehouse was backed very heavily by the Somersworth contingent, while the members of the Rochester Club placed every dollar on Chisholm. Both men shot a cool, nervy race, and it was not over until the last bird had been shot at.

The race took place at Seavey's Bicycle Park, and was won by Chisholm, with a score of 45 to his opponent's 42.

Match, 50 targets, for a purse of $100; H. A. Chisholm, Portland; C. F. Whitehouse, Somersworth. The score:

Chisholm	1111111111110111111111110111111111100111011111111—45
Whitehouse	1111111111101111101111111111111111111011110001011101—42

The race passed off very pleasantly, and Mr. Chisholm left town thoroughly satisfied with the usage he had received at the hands of the Somersworth Gun Club.

The winner shot a Parker pigeon gun, Smokeless shells and Hazard Blue Ribbon.

Masonville vs. Cannonsville.

July 29.—The team contest, Masonville against Cannonsville, resulted as follows:

Masonville.

PUBLISHERS' DEPARTMENT.

The twin-screw steamer "Fulton Market," which is so well known in New York Harbor, has Roberts boilers of about 700 horse power. She was built about five years ago, and during that whole period she has never experienced an hour's delay which could be traced to the boilers; and no repairs to same have ever been necessary.—*Adv.*

What Will We Do When Dewey Comes Home?

We'll have the grandest two-day celebration the country has ever known. We'll go delirious with enthusiasm! We'll "paint the town red"; and above all we'll consume vast quantities of Heublein's Club Cocktails. Why? Because they are always "just right"; because they satisfy the critical palate, and because the public will have the best.

Some concern has been expressed lest there be a shortage of Heublein Club Cocktails, owing to those two stirring events in the near future—the Columbia-Shamrock yacht races and the Dewey celebration; but we beg to assure our readers that the alarm is unfounded, as the makers, G. F. Heublein & Bro., have anticipated the demand, and will have a full supply of Club Cocktails in all of the various brands—Manhattan, Martini, Vermouth, Holland gin, York, Tom gin and whisky—in every club, restaurant and café, and for sale by the bottle or case by every first-class dealer in the country.—*Adv.*

G. A. R. Encampment, Philadelphia.

REDUCED RATES VIA PENNSYLVANIA RAILROAD.

On account of the thirty-third annual encampment of the Grand Army of the Republic, to be held at Philadelphia, Sept. 4, 5, 6, 7, 8 and 9, the Pennsylvania Railroad Company will sell excursion tickets from points on its line to Philadelphia, at rate of single fare for the round trip, except that the fare from New York and Baltimore will be $3; from Newark, N. J., $2.85; from Elizabeth, N. J., $2.75, and proportionate rates from intermediate points.

Tickets will be sold on Sept. 2, 3, 4 and 5, good to return until Sept. 12, inclusive; but by depositing ticket with joint agent at Philadelphia on Sept. 5, 6, 7, 8, or 9, and the payment of 50 cents, return limit may be extended to Sept. 30, inclusive.

Side Trips.

Tickets for side trips to Washington, Old Point Comfort, Gettysburg, Antietam and Virginia battlefields will also be sold at greatly reduced rates.—*Adv.*

Even now, at my advanced years, I feel the pride of life as an old horse feels ginger.
Charles Hallock.

THE MINNESOTA NATIONAL PARK.

THE Minnesota National Park and Forestry Association was formed in Chicago last week for the purpose of putting into effect the scheme of establishing a great national forest and wilderness reserve in Minnesota. The immediate effort of the Association will be to present the plan at Washington in an effective way by taking the members of Congress to the territory under consideration, that they may themselves view the country and gain an intelligent conception of just what is proposed. Whether the scheme in its final form shall be carried out on the present magnificent scale, or whether it shall be restricted, of one thing at least we may be confident, and that is that the park idea has taken a firm hold upon the country, and the reservation in one form or another will be achieved. The substantial character of the new Association is a sufficient guarantee that the enterprise will not be abandoned.

While the plan of establishing this great national park reserve and pleasure park appeals to the people at large in direct ratio as it is comprehended, there is found in Duluth an opposition to it based upon the fact that to convert the proposed territory into a reserve would interfere with that city's prospective lumbering industry and unfavorably affect its commercial interests. This view was given expression in the Chicago meeting by Judge Morris, who represented that there were still undeveloped resources in the region of the proposd park and tributary to Duluth.

The fact is that the true interest of Duluth in this park project is the interest of the country, and the larger and more lasting benefit will come from the establishment of the park. The history of the forestry resources of the Northwest demonstrates this. While the coal, ore, grain and flour tonnage of the Great Lakes has been increasing from year to year and lake shipping has grown to keep pace with it, the lumber traffic has steadily declined, and after every allowance has been made for the diversion of the traffic to the railroads, and for new systems of milling and marketing, the significant fact remains that the diminution of the lake lumber traffic is due to the exhaustion of the supply. In his report to the Bureau of Statistics of the Treasury Department, Mr. Geo. C. Tunell, of Chicago, says: "The decline in the movement of forest products on the Great Lakes is largely due to the destruction of forests of white and Norway pine on the shores of the lakes and on the banks of the logging streams flowing into the lakes. The enormous drafts that have been made during half a century upon the once seemingly unlimited supplies of Michigan, Wisconsin and Minnesota have in recent years well nigh exhausted the forests near the lakes and on the banks of the streams capable of floating logs. Stream after stream has sent down its last logs."

And what of the future for these Northwestern forests which are so rapidly yielding before the axe of the woodcutter? In a prediction made by the Northwestern Lumberman in January of 1898, respecting the records that would be made in the lumber supplies during the succeeding five years of active demand, it was said:

> The pine of lower Michigan and the upper peninsula of that State will be well nigh gone [in five years]. A few of the old mill concerns at Menominee-Marinette will still be sawing pine, but the majority will either have dismantled their mills or will be keeping them alive by cutting hemlock and the hard woods and working up cedar for shingles. The mills at the lesser points will not be cutting pine five years from now. Pine production will have been driven back to the west end of Lake Superior and into northern Minnesota. The red oak of Wisconsin will have been about cleared out. Scattering mills throughout the northern country from the Mississippi to the Soo will be pounding away on maple, elm, bass wood, hemlock, etc., with such overlooked groups of pine as may be encountered in scraping the land of timber. * * * Five years of prosperity, with the enormous demand which will result, will cause such a melting away of the northern forest resources as can scarcely be realized.

In view of the past, the present and the future of the forest areas of the North American continent, is it too much to ask that now at the close of the nineteenth century we shall save from the wreck this comparatively small bit of woodland in the Northwest, that we may still have something of the primeval grandeur of the forests for our own enjoyment and for that of those who are to follow, so that when men shall yield to a longing for the woods—the real woods—there may be this nature's domain in which they may pitch their tents?

THE STRAYS AND REMNANTS.

IT is human to desire to obtain that which is unusual and difficult of attainment, and the rarer any object and the harder to procure it, the more desirable it seems to be. This well nigh universal trait of human nature becomes deplorable when it is applied to some bird or beast, which instead of being destroyed should be cherished and protected, yet it is true that the rarer any beast or bird becomes the more eager the average man is to secure it. If a passenger pigeon appears in a neighborhood where perhaps none have been seen for years, the whole shooting community is likely to turn out to see if they cannot kill it. If a deer makes its appearance in a New York town, where no deer ought to be, men armed with guns and assisted by dogs do all in their power to destroy the harmless creature, no matter what the season of the year may be. Not very long ago a public spirited individual living in Connecticut near the shores of Long Island Sound turned out for the benefit of the public a number of ring-necked pheasants, and when these made their appearance in the cultivated fields the farmers were eager to neglect their work and to kill these birds in order to discover what the strange fowl might be. It is surely a poor ambition this to kill the last one of birds and animals which have becime practically extinct, or the first of those which are just being introduced, and which can gain a foothold on alien shores only in case their environment is especially favorable. Such struggling colonies have enough difficulties to face in enduring a climate to which they are unaccustomed and in contendnig with enemies unfamiliar to them, and against which they have not the defense of inherited wisdom.

Is it not wiser therefore for the man or boy who loves to shoot or fish to forego the pleasure of securing unfamiliar specimens rather than to put himself in the position of destroying some creature which may be well worth saving?

THE HARRIMAN ALASKA EXPEDITION.

AFTER a long and most successful journey the Harriman Expedition to Alaska, which left New York in May last, has returned. It brought with it large collections in various branches of science, and when these shall have been studied it will be found that not a little has been added to our knowledge of the geography and natural history of our Northwestern possessions.

The expedition was at sea for sixty days, during which time it covered nine thousand miles of steaming and visited many points of interest. It proceeded as far north as the borders of the Arctic Ocean and as far west as the Siberian coast, touching at Plover Bay, and then crossing to Port Clarence in Alaska.

It is only when we remember that the tourist who visits Alaska in the ordinary way reaches merely the southern extremity of that territory, touching at the towns of Wrangell, Juneau, Sitka and Skagway, and visiting the Muir Glacier, that we realize how extensive were the journeyings of the Harriman Expedition, and how much ground it covered that is wholly unknown to Alaska travelers. Some of the wonders visited were the marvelous Fairweather and St. Elias Alps, ranges whose like is not to be found on this continent; Yakutat Bay with its glaciers, its fields of floating ice and its hidden wonder of wonders, Enchantment Bay; Cook Inlet and the snow-covered mountains which overlook it; Kadiak Island, beautiful in its evergreen hills to the east, and to the west its tundra rich with verdure and brilliant with flowers; the Alaska Peninsula with its jagged mountains, its smoking volcanoes and its bright green intervales, the myriad islands of the Shumagin, Sannahk and Aleutian groups. Then came the far Bering Sea, with all its wealth of animal life, its whales, sea fowl and sea lions and seals; its gray skies and placid waters, its bays and inlets where the merry skin-clad Eskimo in their strange boats swarmed about the ship to barter their furs and their curious trinkets for tobacco, knives and food.

On this trip each hour had its own attraction, each coming day promised some fresh and novel interest. The company was of the best, the vessel staunch and comfortable, the weather was what the leader of the expedition would have called for if he had been consulted. So it is no wonder that the trip was in the highest degree successful—from the point of view of the comfort of its members.

The expedition was originated by Mr. E. H. Harriman, of New York, who with rare generosity and public spirit invited about forty scientific men to accompany him as his guests. The excursion was a pleasure trip in one sense, for what could give the members of such a party more pleasure than the opportunity thus afforded of investigation and research, each in his chosen line, in a new and little known region? But it was very difficult from a pleasure trip in the ordinary meaning of the term, for the satisfaction of the student of nature consists in adding something to the sum of human knowledge. Thus pleasure to the members of the party and profit to the world at large were to be combined by those whose training and experience enabled them to make the most of the opportunities so generously set before them. The excursion was unmarred by any disagreeable incident, and was thoroughly enjoyed by all; but perhaps no one of all of them took so keen a pleasure in the trip as the kindly host, who, besides the delights of the journey which he shared with his guests, had the added pleasure of witnessing constantly the enthusiastic enjoyment that he was giving to so many others.

The FOREST AND STREAM will shortly begin a publication of a series of letters written by a member of the party, giving some account of what was seen on the expedition.

PROTECTOR SHRINER.

WE print in its main portions the final report made by Game Protector Chas. A. Shriner, of New Jersey, whose resignation from office took effect on Aug. 1. Mr. Shriner it will be remembered felt called upon to resign his office because of the personal animosity of Governor Voorhees toward him, which was so determined that it controlled the Governor in his dealings with the Commissioners, hampered their work and seriously interfered with the public interests. This valedictory report is worth reading. It is a well timed, dignified and complete answer to the malicious charges made by Mr. Voorhees and other enemies of fish and game protection in New Jersey.

In accepting Protector Shriner's resignation, the Commissioners expressed their high opinion of his official record in the following resolution, introduced by Commissioner Halsey.

> **Whereas, Mr. Charles A. Shriner has this day tendered his resignation as Fish and Game Protector of the State of New Jersey;**
>
> **Resolved, That in accepting his resignation we sever our connection with him with sincere regret and hereby tender to him a vote of thanks for the able and faithful manner in which he has discharged the duties of his office during the past four years;**
>
> **Resolved further, That we hereby express not only our individual appreciation of pleasant official association and regret at losing the services of a faithful employee, but the conviction that in his retirement from office the State of New Jersey has lost a valuable servant, one who has served it with conspicuous fidelity and untiring enerby; and we feel confident that we hereby also reflect the sentiment of all citizens interested in the thorough propagation of fish and game in New Jersey who have watched his course as Fish and Game Protector.**

The new protector is George Riley, of Newark. All that can reasonably be asked of him is that he shall prove as capable and efficient as his predecessor, even though by doing so he may expect to invite in corresponding degree the antagonism of the Governor.

The value and efficiency of Minnesota's forest fire warden system are demonstrated by the fact that of the fifty-one fires occurring in the last fiscal year forty (or 78 per cent.) were extinguished or controlled by the wardens and their helpers. It was largely owing to this systematic work that the total damage reported amounted to only $9,063, an inconsiderable sum when compared with previous years. Of the fifty-one fires, nine are credited to campers and hunters, and this number too must be accounted small, when we consider the multitude of those who camp out and hunt, and the innocent ignorance of hosts of outers about all that relates to fire making and fire extinguishing.

The Sportsman Tourist.

Dellights of Dennysville.

I HAVE been here on the Dennys River two months now, since June 10, and my home is at the little Riverside Inn, from whose porch overlooking the lower salmon pool I can see the big fish leap when they come in on the flood tide, fresh run from the sea. When the tide is out, the clear water scurries over the rocks with a rapid flow, showing whiteness and flecks of foam, but at the full it flows in an even, almost majestic volume ten rods wide, hiding the boulders, and forming a delectable plunge bath and swimming pool for the sportive salmon within an easy stone's throw of the window at which I sit now to write. Opposite, the margin is lined with an exquisite grove of balsams, cedars, spruce, pine and hackmatack—evergreen of seven varieties—massed in shades which vary gratefully to the eye, and are interspersed with dogwood, beech, birch and maple, whose crimson and yellow tints must make charming contrasts when "autumn turns the leaves of nature's book," as some poet has Hudibrastically remarked.

Of course, the angler can fish only when the tide serves; so that it happens that I have on occasion answered the wakening tap of the rod-tip on my window pane at 4 o'clock in the morning. But the day, or daylight, in this far Eastern longitude, is by that time two hours old in midsummer, as I happen to know from personal observation made at 2 o'clock A. M., when the dawn was already in evidence. How different in the Northwest! For instance, in Winnipeg, where the evenings are long and the mornings short. There I have seen misses rolling baby carriages at 10:30 P. M., and loungers gazing into shop windows almost as if it were noon. To be sure, it would be twilight, but one could read a paper then all the same as well as at any time of the day.

This Dennys River is the only one of three rivers in the United States east of the Rockies which affords rod fishing. The Aroostook used to do it fifty years ago, but the only others are the St. Croix and the Penobscot (at the Bangor Pool). I threshed the Aroostook below the falls in 1859, but the day of that river had then passed. I got no rise. Here the Rev. Dr. Bethune, Walter M. Brackett, Ed. Prime (of Prime, Ward & King), and Marimer A. Wilder used to fish with satisfaction and enviable results full thirty years ago; and there are people living here, and elsewhere, who remember them well and watched them fish. "I tell you," says old man Cook, aged seventy, "that Mr. Brackett could jerk a handy fly!" And Walter is seventy-six! I received a letter from his camp on the Marguerite, postmarked at Tadousac on last July 28, in which he declares that he is as well as he ever was, and "good for a dozen salmon per day," which would be a severe test of endurance for any man. He has a record of fourteen salmon taken in Dennys River in a single day. It was certainly a good river away back. But fish were capricious even then as now, and Marimer Wilder's widow writes to me on July 7, just past, that she remembers how Ed. Prime fished all day at the pool near the present railroad crossing (two miles above the head of the tide) and got no rise. Then she "went down to him at sunset, and threw in a stone, which he said drove off his fish; and oh! how mad he was!" It was her ancestors who helped first to settle quiet Dennysville, with its tranquil inn, its single church spire and somewhat noisy sawmill. I shall be loath to leave it at the appointed time, but the salmon have ceased to run, and I must run now. I understand that there is a late run of salmon in October, as there is in New Brunswick rivers. However, and "whatefer" (as Walter Blochett's little Princess of Thule used to say), we have had fresh salmon from Dennys River on the superlative table of the Riverside Inn every day for ten weeks, with hardly an exception. All hail to Landlady Allan, whose husband's knightly great-grandfather, Sir John Allan, first saw daylight in Edinburgh Castle.

It is not every river on the Atlantic coast that is as accessible as this. It does not require a fortune or a long voyage to reach it. The Washington County Railroad sets one right down at one of the very best pools on the river, after crossing the iron bridge near the station. As for the St. Croix River pool at Calais, I saw anglers in boats fishing as I looked out of the car windows when entering the city. Later on I drove along its margin on the St. Stephen side. It is called the "Union Pool" because it divides the neighboring counties, and rod-fishing has never been restricted there. Rod-fishing in Maine is all free, but few are they who are aware of the fact. During July the sport there is excellent, and on one given evening of last month Mr. Albert French caught two salmon within the space of an hour, one of which weighed 16 and the other 19lbs., and Mr. Frank Todd took one weighing 17lbs. Other fishermen on the same evening had numerous rises, and hooked several, but failed to land their fish. All of which is of public record. This pool is 500yds. long, and at times is full of leaping salmon, attracting spectators by the score to see them play. But it is of no use to cast flies then. Salmon are modest; they won't bite, won't display their voracity in the presence of a crowd. Mosquitoes and black flies never annoy one at this pool.

Deer tracks are abundant everywhere in the woods on the line of the railroad between Dennysville and Eastport Juntion, and one or more are seen daily at the edge of the cover gazing at passing trains. At the flag stations they look to see who gets off. If it is a Sunday school picnic they are not shy. If it is a man with a gun they take to the woods. Partridges or timber grouse are equally abundant. They are as numerous between Dennysville and Eastport Junction as they are anywhere. When they once tree they are like a cat on a fence—it is hard to make them move. A noose at the end of a pole will snatch 'em; but this is said to be an illegal mode of capturing them, though less cruel, in my opinion, than any other. Law goes off on Sept. 15. No hounding for deer. Brooks winding through grass meadows, with dense cover and tamarack swamps all around, make this an ideal habitat for deer. Herbert Allan is licensed as first-class guide.

CHARLES HALLOCK.

P. S.—Clambakes are the order of the day at Hurley's Point this month.

DENNYSVILLE, Me., Aug. 12.

A Stage Coach Incident.

WHEN the old-fashioned balloon stage coach Ivanhoe from little Washington drew up in front of Griffiths' hotel on Wood street, Pittsburg, one evening toward the end of May, 1830, one of the passengers who got out was a man to whom some interest attaches, both on account of his own personality and for his little misadventure of the following morning. The passenger in question was a bold Briton, Mr. James Stuart, who was making an extensive tour of "the States," and who, as all British tourists did in those days, published an account of his rambles upon his return to his native island.

But Mr. Stuart is to be discriminated from the herd of tourists of the type of Thomas Ashe, Basil Hall and Mrs. Trollope. He finds much to praise in America, and corrects with an unsparing hand many of the untruthful and ungenerous statements of his predecessors. His book is calculated to give a generally fair character to the American people.

On his return trip from the Southwest, Mr. Stuart came up the Ohio River from Cincinnati on the steamboat Reindeer, Capt. Burnet, as far as to Wheeling. From this point he went by stage to Washington, and from Washington he came to Pittsburg by the same mode of conveyance. The road between the two latter places he says is rough, but he speaks in high praise of the beauty of the country. The latter part of the road he found to be very interesting, and the views of Pittsburg and of the Ohio remarkably striking. He enters into some historical and statistical details; says that the town contains about 17,000 souls; that on the Monongahela side is a manufacturing village called Birmingham, and on the Allegheny side there is a town called Manchester; and that the habits of the people are industrious, frugal and economical, without show. "There is nothing remarkable about the public buildings of the town," he observes. "Some of the streets are wide, and there seemed a considerable number of churches. There are nice looking villas in the neighborhood of the town." The Pittsburg of 1830 was the Pittsburg of our fathers, and not of our remote ancestors. The equestrian circus, as he calls it, was open at the time of his visit; the performers, especially a lady performer, were very good, "quite as wonderful, I thought, as those at Astley's," which no doubt was meant for very high praise indeed.

But Mr. Stuart's stay in Pittsburg was of the briefest. He put up for the night at Griffiths' famous hostelry, and being anxious to proceed on his way he engaged passage in the stage coach for Chambersburg for the following morning. The fare was $8. Through the mediation of the hotel clerk he secured particularly the rear seat in the coach, as being the most comfortable, a matter which, in a sixty-hour ride, was worth attending to. The next morning Mr. Stuart climbed into the ancient vehicle, seated himself cozily in the hindermost seat, and set out, as he thought, from the smoky city. The town had already for nearly half a century been distinguished by the smokiness of its atmosphere; and our present tourist observes that Pittsburg "would be a very delightful place of residence but for the clouds of coal smoke which cover it and give a gloomy cast to the beautiful hills which surround it, and to all the neighboring country."

From the hotel, however, the coach proceeded through town to pick up the passengers, and at one house a gentleman and two ladies and two or three children had secured passage. The ladies sent out word that they desired the back seat in the coach. When the driver so informed Mr. Stuart that gentleman very firmly declined to surrender his comfortable quarters. They then declared they would not go if they could not have the desired seat. The driver expostulated, but in vain. Our traveler was decided. He had arranged for the back seat, he was in possession and would not give it up. Griffiths, the hotel proprietor and stage agent, was then appealed to; but to his representations Mr. Stuart was equally unyielding. He informed Griffiths that he had stipulated with the clerk particularly for the hindmost seat, and that the principal was bound by the act of his agent. By this time quite a crowd had been attracted by the altercation, and between Griffiths and the crowd, who were very free to express their opinions, Mr. Stuart had his apparent character very clearly set forth for his future contemplation. When at length all appeals in behalf of the ladies had been tried in vain, Griffiths informed his obstinate passenger that there was another coach in the yard; that he might occupy his seat, and probably added, "and be double-deed to him"; that the horses would be unhitched and put to the other coach; and it was not until they had actually begun to carry out this threat, that, with the prospect of sitting in the stage coach all day in Griffiths' wagon yard before him, the haughty Britisher at last yielded the point. "It became indispensably necessary for me," he says, "to change my plan of proceeding with what grace I could; and accordingly to the no small amusement of the bystanders, removed to the front seat in the stage." But he was very properly punished for his want of courtesy. "When I got the first glimpse of the lady who occupied the seat which I had endeavored to retain from her," he gallantly observes, "I could almost have wished myself under the earth."

The party in controversy with Mr. Stuart consisted of Mr. Biddle, a brother of Nicholas Biddle, of Philadelphia; his daughter, a young widow with an infant child, and her friend, Mrs. Fisher with two children. There was, as might be expected, a good deal of frigidity in the coach for some little time after starting, for all it was a delightful May morning; but gradually the coolness departed, and by the time that they had come to the end of the first stage, ten miles from Pittsburg, they had so far established a friendly understanding, that when Mr. Biddle invited our tourist to take a glass of "spirits and water" with him he consented, with a view to convince him that there was no lurking ill-humor on his part, "though I would far rather have declined the offer," he says, which seems a strange circumstance, seeing he was a Scotch gentleman, unless it was the water he objected to. The young widow for whom Mr. Stuart was smitten with such a sudden admiration had been married less than a year before. She had accompanied her husband to Texas, whither he had gone in hopes of recovering his health; but he continued to decline, and lived only long enough to get back to Tennessee. She was now going to Philadelphia with her infant in company with her father. Although the beginning of their acquaintance had been so inauspicious, quite a warm friendship grew up among the stage coach company, and when at Chambersburg Mr. Biddle and his daughter separated from the others, going on to Baltimore, and again when at Harrisburg Mrs. Fisher and her children departed for Hagerstown, there seemed to be real regret at the parting.

"Two of three miles after leaving Mount Pleasant," he says, "we began to ascend what is called the Chestnut Ridge of the Alleghany Mountains, from its being partially covered with the sweet chestnut tree. I was agreeably disappointed in finding the ascent of this hill, as well as of the Laurel Hill beyond it, so exceedingly easy. The stage is a very heavy machine, but the driver never asked any of the passengers to get out of the stage and walk in order to lighten the burden of the horses. When we walked, it was on our own account, with a view to exercise and amusement. The surface of the road was smooth. It was more the length of the hill than its steepness which fatigued the horses.

"The Laurel Hill," he continues, "is covered with various descriptions of laurel, and other shrubs, but chiefly with rhododendrons of great size, growing most luxuriantly. The blossoms of that species upon the hill are of a pale pink color, and gave a pinkish color to the landscape. There is also a great quantity of the Virginia strawberry all over the hill."

This Mr. Stuart was that James Stuart, of Dunearn, in Scotland, who slew Sir Alexander Boswell in a duel at Auchtertool, in April, 1822. Sir Alexander was the eldest son of James Boswell, the biographer of Dr. Johnson. He was a man of rare character, the friend of Sir Walter Scott, a soldier, an antiquary, a poet, the author of the popular Scottish songs "Jennie dang the Weaver" and "Good Night, and Joy be wi' You A'." The quarrel grew out of a political squib, in which Sir Alexander by a pun on the word "cowherd" described the "stot-feeder Stuart" as a "fat cow-art." Mr. Stuart could not stand any imputation on his courage, and at once prepared a challenge. Sir Alexander, as he declared beforehand he would do, fired his pistol into the air; but Stuart, who must have known of this, in that spirit of meanness which displayed itself in the stage coach affair in Pittsburg, fired straight at Sir Alexander, who fell mortally wounded and died the next day, universally regretted. Stuart, in order to divert his mind from the haunting memories of the field of Auchtertool, traveled extensively through both hemispheres. My copy of his book is a presentation copy to one J. C. Stuart, London, 1833, and bears the autograph of "James Stuart." That signature has a strange interest for me, when I reflect that it was subscribed by the same hand to the fatal note which was in the keeping of the Earl of Roslyn that chilly March night in 1822 when his lordship's letter was handed to Sir Alexander Boswell as he descended from the London coach, and which he opened and read "under the nearest lamp post" in the street of Edinburgh.

T. J. CHAPMAN.

"'Way Down South in Dixie."

WHEN the outing season is drawing to a close for the world of fashion, and wives and daughters are welcomed home by the weary *pater familias,* who has borne the heat and burden of the day in his city office—whose holiday is not yet—when others are returning by every boat and train to the city, warned by a cool hint from the well-known artist tourist Mr. Frost—then the tired business man lets his thoughts stray far afield, out into the cool woodlands, just freshly grained in every charming hue and tint by that wonderful colorist before mentioned and familiarly known to us as Jack Frost!

He draws his trusty Parker out of its long confinement, polishes its smooth barrels with affectionate care, and smiles at each scar on its shapely stock—records of many a hard-fought field, where, like Saul, he had "slain his thousands"—or said so on his return.

Again, the sweet call of the Bob White is in his ears, the whir of swift wings. He raises the gun to his face and finds himself almost pulling trigger, so vivid is the recollection of last year's pleasures and the picture the gun calls up. He suddenly remembers his dog Scamp, chained round at the stable; he needs exercise, and has been neglected of late in these hot "dog days."

As he watches his dog's wild antics, and evident enjoyment of his freedom, he promises him "a real good time soon" and begins to wonder where he shall go this season.

In such a quandary, the writer would like to lead him in fancy "'way down South in Dixie," or, to be more exact, to Sussex county, Virginia. In this unfrequented corner he would find nestling deep in the pine forest a little hunting lodge made of sweet new pine—no paint, but cozy and full of comfort and content for the weary sportsman. It stands near an old vine-clad farmhouse, quaint and picturesque. Here the visiting sportsman learns something of Southern customs and cookery, and much of Southern hospitality. For be he boarder at the lodge or guest at the farmhouse, no difference is made, the sons of the house will act for each as "guide and counselor and friend," and the daughters will cater to his appetite, stimulated by many a tramp "over the hills and far away."

Then at night, around the great cavernous fireplace, piled high with blazing logs, the talk will be of many a wild chase after fox or deer, or of some unusually heavy bag of small game or quail.

Undoubtedly there is a charm about the Southland, and the simple cordiality of its people, especially in the capacity of hosts, is pleasing to the new comer, and makes him feel that he must have been here before in some state of existence! Constantly coming and going, we were never a numerous party—at times two, at most four sportsmen, with several brace of fine dogs and the whole country to shoot over, some days hearing no other guns but our own. An early breakfast, game, two or three hot breads, coffee, tea, fresh eggs, butter, milk and honey—a lunch in our pouches—and away for a long, delicious day, tramping over the sedge with our tireless guide, who knew the haunts and habits of every covey in a radius of ten miles. Such shooting! Before our staunch dogs covey after covey would rise to our guns, and then, after a flush, the single birds would keep us shooting till, weary with the long tramp and the weight of our bags, we would trudge home willingly to a 6

o'clock dinner, hot and bountiful as even our sharpened appetities could desire.

Or perhaps, leg-weary, the next day we would saddle a couple of stout hunters and ride over to some distant cover, tie our horses and shoot over a field, ride on to another, and so on, till dusk; then instead of a weary tramp a brisk canter would bring us speedily back to bed and board. On one such expedition—a two days' hunt—the sportsman was rewarded by a bag of eighty-five fat quail.

When the pleasures of quail shooting grew monotonous there was always a deer hunt or a fox chase by way of variety; and if the sportsman was a "tenderfoot" or tender elsewhere from the unwonted exercise of horseback riding, or if for any other reason he preferred a sedentary sport, he had but to creep out in the cool hush of early dawn to the dark woods, ensconce himself in a blind made of fallen logs and brush, and await the coming of the wily wild turkey to the bait. The extreme shyness of this magnificent bird affords that element of uncertainty and necessitates the craft and caution which lend to sport of all sorts its greatest charm. When at last the glistening bronze of a great gobbler is seen shining in the first rays of the rising sun, like a burnished coat of mail the cautious watcher takes careful aim through the loop hole in his blind,, fires, and the next moment finds him shouldering a 20lb. gobbler and tramping home just in time for the early breakfast! Amid the plaudits of his friends he forgets the weariness and painfulness of the long vigils gone before—sitting in cold, hungry and cramped in the narrow confines of the blind, while happier mortals slumbered in their beds. It is their turn to envy him now. He has caught the "early bird."

I shall be at the lodge again next season, and I trust for many more to come, and I have a "reasonable hope" of meeting every man of the jolly party of a year ago on this "happy hunting ground."

LUMBERTON, Va.

Natural History.

Antelope Catching for the Zoo.

YELLOWSTONE NATIONAL PARK.—*Editor Forest and Stream:* You ask me to tell the story of the young antelope. I wrote: "I went out and captured ten, raised six and took them to Washington, along with some elk." The above story you think too short, and that I must go into details for the FOREST AND STREAM.

Early in May of 1897 I started from the Spring with part of my outfit by Government teams, and from Gardiner with my pack and saddle animals and one man—Sam Yancey—to help me care for the young animals I proposed to catch. We moved out over the old Turkey-pen trail on our twenty-mile ride to Uncle John Yancey's. Soon after crossing Blacktail Deer Creek we saw one very young elk—the first of the season. It was so young and weak that it could but just stand or stagger along a few feet in an awkward way, with its legs braced out at all angles. It was quite close to the trail. Its mother, a very large cow, showed great anxiety about it, running off a short distance and calling her calf, which would stand weaving around more like a drunken man than an animal. Then she would come back, poke it along with her nose a little ways, then trot around it and be off again away from us. We did not stop, but watched her maneuvers as we rode along. I thought she would cache it and go away; but no; she did not follow the band she had been with—some 300 cows, yearlings and spikes. This band went to our left toward a high butte and crossed our trail again just ahead of us. The calf was the only one we saw for several days, and possibly the first dropped that season. We could not take it along with us.

At Yancey's we located ourselves in the old cabin I had used on a former occasion while catching game.

Knowing this time what I had to do, I had come better prepared for the work, with everything I thought necessary. I was particularly anxious to get a number of young antelope and raise them. I had been out several times for young animals for the Zoo and had captured more than ten antelope; but none had ever lived to reach Washington. A dog killed the first two after they were several months old; the others died young or were killed by hurting themselves. The last one was hurt by an elk, whose inclosure it entered one day when the gate was left open accidentally for a moment. I had concluded that the only way to save any was to give them constant attention until they were turned over to the superintendent of the park in Washington. I had talked of corraling full grown animals, but was discouraged, because they are "such excessively timid animals" that they would kill themselves in an inclosure.

Yancey's is at the center of the breeding ground for large game in the Park, and the best point to secure and care for the young.

I must not forget to mention another valued assistant—my old dog Leo, "the black pup" who has helped me so many times and is such a faithful companion. He has assisted me in all kinds of work, from making scientific collections to catching young animals. His zeal in catching some things I had to discourage. He was apt to muss butterflies, millers and insects of that kind, but he would not hurt a young deer, antelope or elk, but was always kind and friendly to them. His great fault was that he would snore; not that it troubled me, but it did my friends when camped with me. His snoring soothed me to sleep. If by chance he stopped or left my bedside I would awake, wondering what was wrong, until Leo returned with his music.

It would be useless to mention all the articles I took with me. I had bottles, nipples, tubes and brushes for cleaning them, soda washes, sacks, panniers, buckskin for strings, wire netting and anything I could think of that would be of use. I had also powerful field glasses and the use of Uncle John's telescope. We cleaned out the old cabin, made bunks and inclosures we could reach from one of the doors of our sleeping room, and including another for shelter for the elk. The antelope I intended to keep in the room with me nights.

We commenced operations by riding out every day, sometimes leading a pack animal with sacks, ropes, strings and canvas, and taking a lunch along, for we were often out until dark. We would ride to a prominent point, from which we could see game and command a view of as large an extent of country as possible. Then we would look for antelope. The bands did not interest us much, but only single individuals, or two at the most. After locating a female, it would not take long to decide if she had young; not that we would see them, but we could tell by her actions when she was moving around. We would decide on an animal to watch; then with field glasses and telescope watch her every movement. Sometimes she would lie down for an hour; then we would look for other animals until she got up. At times the first view of the antelope we would get was when she was resting. When she got up, if she had young cached she would commence feeding a little, then run to the top of a

ANTELOPE OR ROCK?

little hill, looking all around; then quarter back and forth across the wind, but keeping watch for danger and coming up on the wind. We would try to locate the place where her young were by her action, but this I never succeeded in doing very closely. We could not tell if she was within 50ft. or 200yds. The mother would often walk around for more than an hour, sometimes running off quite a ways and be gone so long we would give up if she went out of sight. Then again she would run up against the wind and past the point we thought it possible her young were hid. Sometimes a coyote would show up; then we knew the game was up for us, because she would never go near her young to show the coyote where her babies were sleeping. When the antelope thought everything all safe, and no watchful eye of coyote, lynx or other animal was on her, she would circle around a few times more, then stop as though to eat and put her nose to the ground; and then in the field of the telescope or field glass would appear a small object with its mother. She would let it have a little dinner, then make it stop nursing, and go to her other kid, putting it up the same way—with a poke of her nose—the first kid playing around while its mate had its dinner. The young of the antelope go down on their knees when feeding, like a lamb. After the young have been satisfied the old one moves off slowly with them. They play around, running in circles, stopping suddenly and running the other way, jumping to one side, up in the air, whirling around and going through all kinds of antelope gymnastics, unconsciously practicing every trick that it will resort to to escape from its enemies when it has to shift for itself.

I have watched them play until something alarmed them; then down they would drop, as if shot, never stopping to fold a leg under them, but flattening themselves on the ground in an instant, there to lie until called or poked up by their mother, unless picked up by an eagle, coyote, lynx or Smithsonian hunter. I think very few of them are found when properly cached by their mothers unless they are seen moving around with her and the point is marked where they disappeared, so that one knows about where to look. There are very few chances of their being seen.

When I had found an antelope to watch and then seen her young with her, usually in a place I would not have picked out, the next question was to get as close as possible before she saw me. Getting on my saddle horse and leaving Sam to bring on the pack if he was with me, I would approach as near as possible unseen and always tried to get sight of the doe before she saw me. If she saw me first she would give some signal to her little ones to hide and run off a few yards, sometimes running toward me and quartering to one side. Then it would be very difficult to find the young. I often had to ride over a mile. This gave her time to change her location, so that it was not an easy thing to do to find the antelope again and see her first. I never saw the little ones with their mother when I was close by. They disappeared before I could see them, either from having seen me or in obedience to a warning stamp or snort from their mother. If I saw her first I would mark the spot by some bush or other object and then ride to it. The doe would be off out of sight quickly. Then I would commence a very careful hunt, looking over every inch of the ground and at every object, whether it looked like an animal or not. Sometimes I would find the doe's trail and go back on that if possible until I found the tracks of little ones, then turn the other way again and stand still, look over the ground again and again, then go forward a few feet, look over a little new ground and the old, at every rock, bush or lump of dirt, and peer under every sagebush looking for an eye or ear or some little thing that could be part of an antelope.

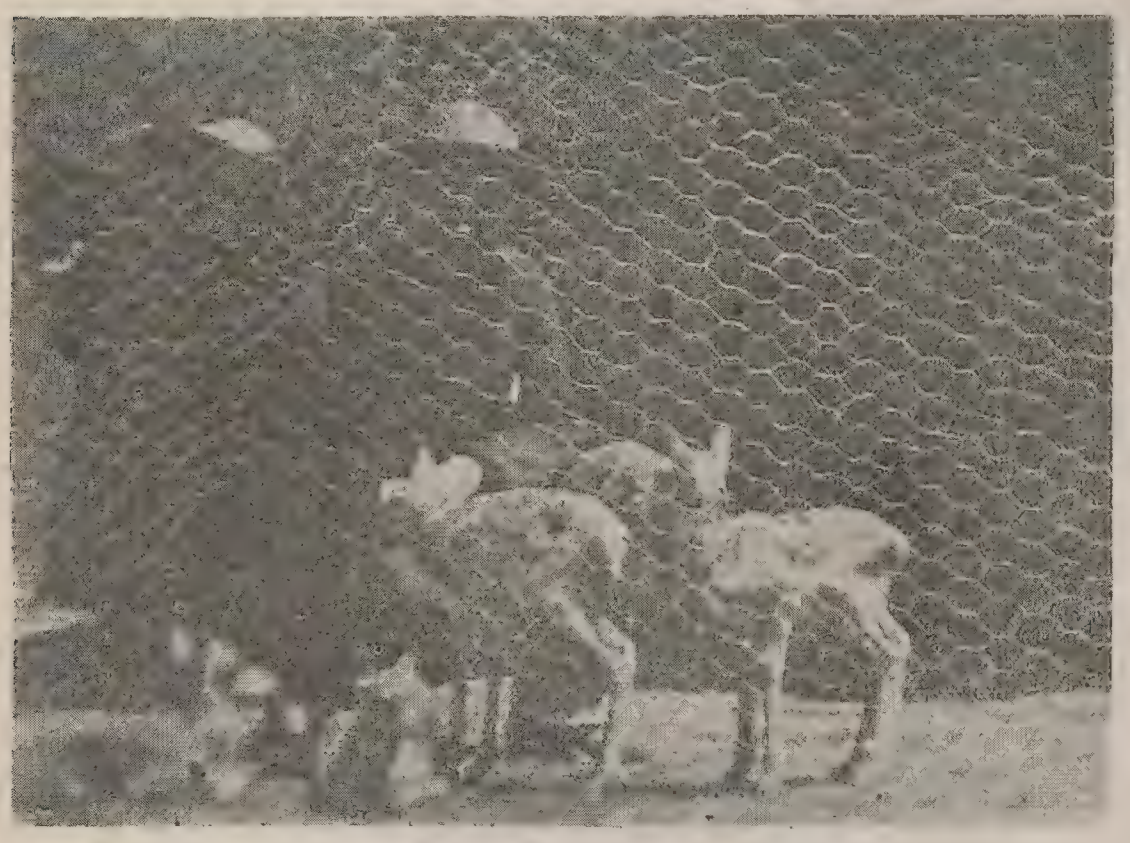
The first two I captured I saw at a distance of three-fourths of a mile, but I had to ride fully a mile to get to them. I got off my horse and led him along when I got close to where I had seen the antelope. Approaching under cover a slight rise in the ground close to her, I got within 50yds before she saw me. The little ones were not in sight, but they could not be far off, as she had only moved a short distnnce from where I had first seen her. I saw the tracks of the young ones in the trail along the edge of a swampy piece of ground. Going ahead of the place where I had first seen the old one, I looked the ground over carefully from my feet all around; then going ahead a few feet further, did the same, and at last I saw one by a rock which looked as much like an antelope as did the animal itself. I picked it up (it never offered to escape, for it was quite young), put it in a sack and then looked for its mate. This I saw about 20ft. up a little hill in some gravelly ground where there was not a bit of grass or cover. This I put in another sack. Cutting the sacks so that I could put them over my shoulder, and having them swing in front of me high enough to support them with my arms if I wished, I got on my saddle horse and put the lines over the horn of the saddle. I did not have to guide him for home; he took the trail and soon got there, while I paid all my attention to the little ones.

At another time, watching from the same hill, I saw an antelope about a mile and a half off on quite a steep side-hill partly covered with clumps of rye grass and low bushes. There was a heavy trail along the hill out on which she came. Further on the hill dropped off to a bottom about five acres close to the river. This could not be seen until one was right on the edge of the hills that inclosed it, all of which were quite steep. I had watched this antelope for two hours or more. At times she would disappear toward the bottom, be gone some few minutes, then come back again on to the trail. At last she went out of sight for twenty minutes; then I thought it my time to get close to the edge of the hill. I hurried along the trail on a 'lope where I could, and as I came to the edge of the hill, looking down to the little bottom, I met the doe coming back. I knew she would not have her young very close if they were small enough for me to catch, so I rode down to the bottom, and picking out the kind of a country I though proper to cache

MODE OF PACKING IN THE GAME.

young antelope in, commenced looking over the ground very carefully. I had not gone far before I found one that looked rather large, but I got it safely in my hands. While putting it in a sack it bleated a few times. Leo started off on a run, and looking to see what he was after, I saw the other young one getting up. It dropped again, but started off before Leo got to it. I did not stop to put the one I had in the sack, but with the sack in one hand and the antelope under my arm I started after the other, encouraging Leo to catch it. It ran around a bit and the mother, coming down the hill on a run and going close to the dog, tried to attract his attention from her little one to herself. The little one soon fell, and Leo commenced to lick it and nose it all over. The poor thing was making the most pitiful noises. Its mother was running around frantically and trying to get Leo to go for her. I got hold of the frightened animal and put it and its mate in sacks. I felt very sorry for the poor mother antelope, but consoled myself for my cruelty to her in robbing her of her young by telling myself that the coyotes would have gotten them if I did not, while they would have a chance for their lives with me and as good treatment as man could give them. Yet it was rough on the poor things to deprive them of their babies. They seem to feel so badly about it, too.

Whenever I was after antelope I always saw coyotes prowling around. It appeared to me that there were very few chances for any number of the young ever to reach maturity, there were so many of these despicable little wolves.



I took my two antelope to the ranch and put them with others we had captured. Sam had found quite a number, once getting one while he saw a lynx going off with its mate. We had ten to care for, which were almost as bad as ten human young. We had to gauge the quantity of milk for each one, reduce it with boiled water, and later with rice water, sterilize the milk, wash everything we used about the milk with soda water, wash the babies' faces, jaws and mouth, and dry them carefully to keep them in a healthy condition. Each antelope, as we got it, we marked with a string around its neck. They got names, too, from their marks and actions. The one with a green ribbon became Pat, the one with a black string was Nig; then there was Old Two String, Blue String and Mike and Wild Bill. Wild Bill never became tame—he killed himself. All the others soon learned to know us, and came around as soon as we called. They would crowd around for their turn at the bottle, try to push each other away and get hold of a fellow's buttons, watch chain, fingers or ears while he was busy with the one he was feeding. Both Sam and I became very much attached to them. Either of us would wake up in the night if one of them moved about, and often we would get up, light a candle, count them and see that they were all well and comfortable. We used to feed them from six to eight times a day—early in the morning and late at night.

In hunting for elk there was not so much trouble to find the young. We got hold of six and could have taken any number up into the hundreds had we wished. They cache themselves, the same as all young animals of the deer kind, but are not so well provided by nature to conceal themselves unless they are in timber in the kind of country they blend with, while an antelope is very hard to distinguish from almost any object. I photographed an antelope and two rocks on smooth green sod where a mother would never hide or attempt to hide her young. Hundreds have seen the picture, but very few ever see or notice the animal, even when their attention is called to the fact that there is one there. A photo of a young elk shows much better, only if it were at the foot of a large tree it would be hard to see. The elk did not give us much trouble in caring for them. They were very stupid about learning to drink, but at last I found a way to teach them at once, so I had no further trouble about that, only I had to hold the pan out of which they drank with all my strength, for when they butted they would throw milk all over me. We carried the young elk in in pack bags, hung from the pack saddles. Some of them weighed 60lbs. or more, and a horse with two young elk on looked like some new kind of three-headed animal. We never had the affcetion for them we did for the antelope. They are ugly and show no affection for their keepers.

We did not lose one elk, but after we had had the antelope a few weeks one of them became ill. I did everything possible, even sending to Fort Yellowstone to the doctor for something to help the poor thing. The stage brought out some medicine, but it gave no relief. I felt as bad over the loss of Little Boy Blue as if it had been a child. I found I was becoming so attached to them that I would not want to give them up to the Government, so I thought best to give them up at once. Teams came from the Springs and moved all my family to new quarters. There I left them in Sam's care until my return from a hunting trip late in November. Then I took them to Washington, D. C., turning them over to Dr. Frank Baker, Superintendent of the National Zoo. I hope they will like their new home and thrive there. While they were in the Yellowstone Park they were photographed hundreds of times. Many of the pictures have been published and some are very interesting, two particularly, taken by Sergt. Van Buskirk. Sam is filling their bottle, and the babes are as much interested as so many children.

I hope one or two of the pictures I have taken will be good enough to be reproduced for publication. Any reader or friend of the FOREST AND STREAM will see the little fellows—now more than two years old—by calling at the National Zoological Park. Please don't feed them peanuts or tobacco. I don't wish them to learn bad habits.

E. HOFER.

BRINGING THEM UP ON THE BOTTLE.

IN THE WASHINGTON ZOO.

Midsummer Bird Notes.

THESE humid days are trying alike to men and birds. The "bird-bath" on the lawn—always kept brim full—is thronged from dawn till dusk with hundreds of panting woodfolk, whose splashes and sputterings are good to see, so plainly do they testify to the intense delight of the little bathers. A robin with open bill deliberately squats on a convenient bit of flagstone and proceeds to soak himself in the shallow water that covers it, while all about him are his fellows, together with a motley horde of starlings, sparrows and odds and ends. The somber duns and grays that prevailed in the coverings of the bedraggled bathers are occasionally relieved by the gorgeous livery of an oriole, as he sprays himself in the genteel manner of a bird swell. Again a highholder puffs and sputters in clumsy fashion, while his rich colors show in pleasing contrast among the bobbing heads and fluttering wings that crowd the "bath." Save at their bath the birds seem listless. Vireos swing about the twigs with a querulous chirp, while orioles show their discontent in harsh chatterings as they peer about the leaves in search of insects. A near-by mountain ash whose berries are just beginning to turn to gold serves as a lunch counter for the fruit eaters, and at all times of day I am sure to find thrush, robin, highhole, in company with lesser friends of several kinds, gorging there.

A day or two since a new arrival, in the person of a mockingbird, appeared at the feast, and with the proverbial pugnacity of his family at once proceeded to drive away from the tree everything that wore feathers. This done, he mounted a berry cluster, where, with drooping tail and head thrown well back, he burst into such an ecstacy of song that his unstable perch actually trembled under the impulse of his intense emotion. I have often watched these unrivaled songsters in their native Virginian haunts go through these same performances in some tree or copse they had pre-empted, but here, right in my own home, it was as pleasing as it was unexpected. The nerve of the fellow was absolutely refreshing. Although an unusual visitant with us, an interloper I may say, he just took possession of everything in sight and made himself perfectly at home. Presently he flipped off into an oak that towered above, and silently watched for the return of the hungry crowd he had so unceremoniously put to flight. Furtively they began to come by ones and twos and settled down again to their interrupted feast. A fat old highhole had just alighted with a rustle when I saw the mockingbird raise the feathers on his shapely head and run swiftly to the end of the limb on which he had been silently standing. Here he halted, and with head to one side peered down at his unconscious victim, extending his wings with the quick graceful flirts so characteristic of the mocker in moments of mischievous excitement. Suddenly, with a startling squawk he dropped plumb at the poor old highhole, who fled with wild screams of terror from this strange attack, with the mocker all a-flutter close at his heels. Having once more cleared the tree, he again mounted the same berry cluster and sang a wild rollicking jumble of notes as though laughing in impish glee over the success of his deviltry.

Our native birds are utterly unused to such antics, and I am curious to see just what the upshot of his crazy gambols will be. At present he seems to have everything his own way. But wait! Evidently he has not met the imperturbable English starling yet. I must try and be there when this occurs, for I fancy my nervy young friend has a surprise in store for him. * * *

I left him yesterday at sundown, singing on his trembling perch of clustered berries.

WILMOT TOWNSEND.

BAY RIDGE, N. Y., Aug. 7.

A Nest on a Swing.

ESSEX, N. Y., Aug. 10.—*Editor Forest and Stream:* The hummingbird's nest on a wire illustrated in FOREST AND STREAM some time ago had its counterpart in the nest which a barn swallow constructed in our carriage house this summer. Ignoring available sites under eaves and in open outbuildings, this swallow selected a piece of doubled 3-16in. cord suspended from the ceiling and used to support the tongue of one of the carriages, and built its nest from that. The nest was attached at a point about 18in. from the ceiling, and part of the time, when the carriage was used, there was nothing to steady the cord, and the nest swung backward and forward something after the manner of a pendulum. The cord passed through one side, and the hollow of the nest was in no way obstructed; yet the nest was perfectly balanced and did not tip. It would have proved a safe repository for the eggs if they had ever been deposited, but unfortunately some one passing through the building accidentally knocked the nest down shortly after it was completed.

The male and female swallow worked at the nest almost continuously, and showed no fear of the men who were going in and out of the building all the time. I have stood watching them with my head within 3ft. of the nest without interrupting their work. The tongue of the carriage was taken from its support at least once every day, but the swallows only waited till the carriage was out of the way to resume their work. Though they had been building with the cord anchored and nearly stationary, each time the tongue was removed the nest was found to be in stable equilibrium, thus demonstrating engineering ability of a high order for the birds.

J. B. BURNHAM.

The Coon Must Subsist or Subside.

Editor Forest and Stream:

There lingers in my memory a classical fragment that seems to strum as follows:

"Came a lorn and weary printer
With his bundle on a splinter,
On his back——"

I would like to know where I got that, and to have some one either take it away or send on the balance of the hymn.

I desire more particularly, however, to put on record that evidently the printer could not make out a word in my recent disquisition upon the "Coon's Whicker." The circumstance is in evidence, thanks to the art preservative, on page 83 of the journal for July 29.

In the fourth paragraph, in the instance to which I refer, I did not write "The raccoon must *submit* or subside," but that "The raccoon must subsist or subside," as must all creatures here below.

And so, with proper consideration and respect for him who is most always blamed and rarely praised, the fault is mended.

RANSACKER.

SHASTA MOUNTAINS, Cal.

The Rattlesnake's Bite.

DEVALL BLUFF, Ark., Aug. 2.—*Editor Forest and Stream:* In a recent issue of the FOREST AND STREAM a Boston correspondent asks if it is true that the bite of a rattlesnake is always fatal between October and February. Arkansas has her full quota of rattlesnakes; indeed it is claimed that the home of the rattler is in Arkansas, and that it is located in a succession of red bluffs overlooking the beautiful White River, some ten miles away from this little city. Certain it is that countless numbers of them winter there. As late as the middle of November huge rattlers, travel-stained and dust-begrimed, can be seen wriggling their slimy bodies in the direction of these bluffs.

Some years ago in December I was hunting bear, and

a committee to have full charge of the same, viz.: Col. John S. Cooper, Chairman, Chicago; Thomas H. Shevlin, Minneapolis; Hon. Thomas Lowry, Minneapolis; Hon. James Gray, Minneapolis; George R. Finch, St. Paul; George C. Squires, St. Paul; Charles Cristadoro, St. Paul; W. C. Brown, General Manager C., B. & Q. Railroad, Chicago; T. P. Shonts, Chicago; B. Thomas, Chicago; Capt. J. B. Clow, Chicago; C. I. Peck, Chicago; John H. Witbeck, Chicago; Otis R. Glover, Chicago; Marvin Hughitt, Jr., Chicago; Wesley M. Lowrie, Chicago; Henry S. Fitch, Chicago, Hon. O. W. Nixon, Chicago; George E. Cole, Chicago; L. W. Pitcher, Chicago; Harry G. McCartney, Chicago; Dr. Frank Billings, Chicago; Jas. J. Hill, President Great Northern Railroad, St. Paul; Chas. S. Fee, General Passenger Agent Northern Pacific Railroad, St. Paul; C. A. Pillsbury, President Brainerd Northern Railroad, St. Paul.

The above resolution was promptly carried. It was followed shortly by the courteous action suggested by Mr. Ross Clarke, of St. Paul, who handed in a resolution of thanks to the Federation of Women's Clubs of Minnesota, who were the real inaugurators of the movement for acquiring a large public park in Minnesota. This resolution was passed, and adjournment followed.

The Convention.

The session of the convention or regular meeting followed at once upon adjournment of the Committee of the Whole, the same officers being continued, on the motion of Mr. Johnson, of Minneapolis. On motion of Col. Graves, of Duluth, the names of all present as organizers were taken, the list being as given above. The minutes of the first meeting were read and adopted. The report of the committee on organization was again read, so that all arrivals might be acquainted with the organic law of the body. Mr. Glover's resolution and also Mr. Clarke's, as read in the Commmittee of the Whole, were also formally adopted. Mr. Graves thought that the names suggested in Mr. Glover's resolution would need to be referred to the Executive Committee for approval, but the chair ruled that the above names were approved by the body in the acceptance of the resolution as a whole.

Election of Officers.

The chair appointed as a committee on nominations for officers of the organization Col. Cooper, of Chicago; Dr. R. O. Beard, of Minneapolis; Mr. Charles Cristadoro, of St. Paul. These brought in the name of Dr. Northrop, President of the University of Minnesota, for president of the Minnesota National Park and Forestry Association. Dr. Northrop was elected by one ballot cast by secretary. Mr. Nelson, of St. Paul, suggested that there should be one vice-president, each from Chicago, St. Paul and Duluth, the same to be elected by vote of local delegations. Col. Graves seemed to be fencing a little bit when he deprecated this action for Duluth, which might awkwardly identify that city with the movement proposed. Mr. Johnson, of Minneapolis, thought the idea should be widened by electing vice-presidents from the South and from the West. Col. Cooper said: "Mr. Chairman, not wishing in the least to force the city of Duluth into any unwelcome attitude, I move you that Governor Theodore Roosevelt, of New York, be our first vice-president." This was carried with a rush of applause, for Governor Roosevelt is nowhere more popular than in the West. On the motion also of Col. Cooper, Judge Horace H. Lurton, of the U. S. Circuit Court, Nashville, Tenn., was elected second vice-president, and Judge Hubbard, of Cedar Rapids, Ia., the well-known railway counsel, was chosen as third. By one ballot Mr. John H. Witbeck, of Chicago, was elected treasurer. Mr. Witbeck is a prominent lumberman and banker of this city. On motion of Mr. Ross Clarke, of Minneapolis, Col. John S. Cooper was by one ballot elected corresponding secretary, and in similarly prompt fashion Dr. H. M. Bracken, of St. Paul, was chosen recording secretary. Col. Graves, of Duluth, now moved that the Committee of Nominations report names for an Executive Commmittee of fifteen. Dr. Beard, of Minneapolis, moved to substitute that said Executive Committee should be chosen with three members from Chicago, three from Minneapolis, three from St. Paul, three from Duluth and three at large. This motion prevailed, and the chair appointed as Commmittee on Nominations for such members G. M. Nelson, of St. Paul; Dr. Bell, of Minneapolis; Col. Graves, of Duluth; E. Hough, of Chicago. After due deliberation the above Committee on Nominations reported the following names for members of a permanent Executive Committee, the report being unanimously adopted. From Chicago: Hon. Carter H. Harrison, Mayor of the city; E. W. Blatchford, Charles S. Dennis. From St. Paul: Dr. Henry Hutchinson, Ross Clarke, G. M. Nelson. From Minneapolis: Hon. James Gray, Mayor of the city; Dr. R. O. Beard, Dr. Leo Crafts. From Duluth: G. G. Hartley, A. H. Comstock, Dr. C. A. Stewart. At large: F. M. Stephenson, of Menominee, Wis., a prominent lumberman; W. B. Mershon, of Saginaw, Mich., a prominent manufacturer and ex-Mayor of his city; ex-Senator F. W. Leavitt, of Litchfield, Minnesota.

Additional Action.

During the progress of the committee work a fine address was made by Dr. O. W. Nixon, of Chicago, who pointed the usefulness of educating the youth in full respect for the life of the forest and the lake. Dr. Nixon said that we should use every agency possible to attain the success of this admirable enterprise. Chairman Fitch also ably addressed the meeting, as did the able representative of the Board of Trade, Mr. Sam Johnson, of Minneapolis. It was moved and carried that the Executive Committee should appoint an advisory council and publish names of the same. Dr. Beard wanted a committee on entertainment, but Col. Cooper opposed this, thinking that it would be unwise to have too unwieldy a machinery, and that this work might be included under that of the committee having in charge the Congressional trip. Committees on press and finance will be appointed by the Executive Committee later. The funds of the organization will be raised by voluntary contribution. In a gracefully worded speech Mr. Johnson, of Minneapolis, extended to the Association the invitation of the city of St. Paul to be its guests on the north-bound passage through that city, and to be the guests of the city of Minneapolis on the return from the trip over the region concerned. These invitations, of course, cover the Congressional party, and it need not be said that the hospitality of the Twin Cities will be princely, after their usual fashion. Mr. Nelson, of St. Paul, brought up the question of quorum for the Executive Committee, and it was determined that five members should constitute a quorum. Mr. Johnson in a few well-chosen words moved a vote of thanks to Col. Cooper for his work in this enterprise, in which he had traveled much and spent much of his private funds. This was carried by rising vote and with obvious satisfaction. A vote of thanks was also extended to the Chicago Athletic Association. Col. Cooper now coming in from a committee meeting, moved a vote of thanks to the "public spirited gentlemen of Minnesota, who had come all this way to attend this meeting and to show their approval of this work." This was carried and adjournment was then had, late in the afternoon.

The Opposition.

The first clearly defined opposition to the Minnesota Park proposition was developed yesterday during the progress of the convention. During the absence from the hall of some one of the committees, the chair on request called upon the Hon. Page Morris, of Duluth, to present his views upon the matter. Judge Morris, of Duluth, represents in Congress the Sixth District, located in the pine and lumber region of upper Minnesota. It has been distinctly understood all along that the city of Duluth was hostile to this reserve idea and would in all likelihood fight it bitterly in Congress, as it has by medium of the local press, and Judge Morris has been tacitly recognized as the leader of this active opposition, representing, as he does, a constituency composed largely of persons interested in the undeveloped resources of a country for most part still virgin and of unknown wealth. Therefore, the members present looked forward with great interest to seeing and hearing Judge Morris. They saw a man of medium stature, with a shock of dark hair and the face of an actor, clean shaven, keen, handsome, and they listened to a man perhaps politician, but none the less possessed of a clear and convincing habit of thought and a lucid method of presenting his conclusions. Judge Morris talks ably. His constituency need not fear that he was renegade or that he misrepresented in any iota the trust they have imposed in him. Judge Morris may return home with a clear conscience, feeling, as it is gladly accorded that he has a right to feel, that he presented with elegance, with fervor, with apparent personal convicition, the side of the selfish, the short-sighted, the narrow-minded,, the material side of things, as opposed to the side of breadth, of unselfishness, of foresight, of public spiritedness. Judge Morris is an able man, and he is a thinker. He represents a constitutency, and does it ably. It is for him to say if he throws into this form of representation the real ardor of a nature which could certainly feel deeply and act strongly. It is for him to say whether he will in the future look back with unalloyed personal and inner satisfaction upon his share in this work, handsomely and ably as he has carried on his share.

Judge Morris said that he would be "brutally frank," realizing fully his position at this gathering. He felt that he might not be en rapport. "I am here," he said, "not as a member of your body, but as a representative of a committee of Duluth citizens." He said he had come not to act, but to observe. "This is in my district," he said, "and, gentlemen, I admit we have been alarmed at what you propose to do. You are intruding upon the natural resources of the people whom I represent." Judge Morris said that three different holdings covered the lands in the region concerned—the Government lands, the Indian lands, the lands held by private settlers. The Indian lands alone under the act of 1889 were worth perhaps $5,000,000 for the pine lands alone, valued at $3 per acre. The other class of lands—the agricultural lands—were worth at least an additional million. How much the private lands were worth he did not know, but he did know that a great body of land which could be filed upon under public entry for homesteads would under this reserve idea be held back from the country. This meant to block the wheels of progress. In Beltrami county alone there were to-day 2,000 more settlers than there were two years ago. "Now, gentlemen," said he, "the city of Duluth taps all this region, and it is naturally tributary to her. I say we are alarmed when you wish to take all this possible wealth away from us, this lumber, this agricultural land, this possible mineral wealth. I regret that I cannot favor this scheme. My judgment is against it."

Judge Morris said that the pine was the most valuable product of this regioin, but that after it was cut off the other woods, like the poplar, etc., grew up after it. Much of the region, he thought, could be farmed with profit. Now, if it was the purpose to preserve this pine uncut, he was bold enough to say that the people of Duluth were not in favor of this idea; that the people of Minneapolis were not in favor of it; that the settlers of the region itself were not in favor of it, and certainly he himself was not in favor of it. "Even if you should cut this pine under certain restrictions, you would be robbing the present settlers of that region. I thus frankly outline the thoughts that pass through my mind," said he. "Twenty years ago all that land north of Duluth was a wilderness. To-day St. Louis county produces more wealth than any other single county in the United States. In one year her output of iron ore was over $8,000,000. Our people think there may be some such hidden wealth in this region you propose to sequestrate. If you can preserve for our behoof this possible wealth of natural resources, very well, but I do not see how you propose to do so under your scheme."

Following Judge Morris' able address, which was given in good humor and convincing fashion of itself, there was no applause. He did not meet with rseponse among those present, nor did he expect it, but he had done what he conceived to be his duty. It was a delicate and difficult thing to reply to so able an exponent of the other side, but Col. Cooper did this with tact and force. He said: "I wish to thank Judge Morris for coming here to meet us. I know that he feels he is a trustee for his people, and indeed he is one of the trustees of us all, for he is one of the members of Congress. That is all I say, and all I ask. Judge Morris will not object to this trip, I am sure, in which his colleagues of Congress will be enabled to see actually what there is in this entire situation. He has done his duty, and he will be willing to abide by what Congress may say after becoming possessed of all the facts through personal investigation. Judge Morris is going to be with us on this trip of exploration and investigation. Let him do that, let him then go back to Congress and vote, and I will back his vote, and so will we all, and we will not complain. We do not pretend to be all-wise. We only say we want to leave this to the Congress of the United States, and to give that Congress all the facts at first hand. We only want the jury and the court to be there, and to have jurisdiction. We have no set lines established. Let Congress attend to that. If we get but part, if we get nothing, we shall have had a grand trip, and you will see men up there in your country that you would never see again in all your life otherwise."

Judge Morris replied pleasantly that the visitors would see the most hospitable people in the world, and one of the best and richest regions in the world.

Mr. Cristadoro, of St. Paul, made somewhat of a reply to Judge Morris' speech, stating that he could not agree that after the pine was gone other timber of value took its place. He showed the history of decaying lumber towns, and pointed out the alternative of a great tract of land under Government control and management. He thought Duluth would be the natural beneficiary if this park should be established. Her place at the head of the Great Lakes would make her the inevitable entrepot for a heavy travel.

Col. Graves, of Duluth, sprang another form of fight for the opposition when he suggested that perhaps another tract might better be chosen, further north than this pine region mentioned—for instance, west of the Vermilion Lake. In such case, he said, he trusted his people would be willing to co-operate with the movement for the park. Col. Graves said that he could not stand out for the keeping of the pine uncut, but as to reforestration, he was very much in favor of that, to say nothing of his keen instincts as a sportsman.

Mr. Ross Clarke, of St. Paul, made a rattling good talk, showing a map of the different regions mentioned. He said it was true that some of the cut pine lands could be farmed, and there was a tide setting in for such cheap lands. The question was whether we could stem that tide—whether we could maintain this last stand for a forest reserve which should leave a little of the scanty forest yet standing. He recognized how difficult was this fight, for even in getting the little Itasca Park about the head springs of the Mississippi River they had to fight their own State Legislature. There was admittedly a vast local prejudice to be contended with. "And yet," said he, "if we do not win this fight, and if we fail to save any of this land, our children, even those of the Sixth District, will blame us most of all that we allowed this destruction of our forests. The lumbermen have a right—yes, but has not also the nation a right?"

Mr. Clarke paid his respects to Col. Graves, but thought that the region he proposed to set aside—that in Cook and Lake counties—could not by any imagination be called a forest reserve, for it held no forests. It was useless to waste time there. The aspect of the region would constitute its own chief protection, for it was undesirable as a public park, just as logged-over country was undesirable. Mr. Clarke said he wished to see this idea carried out as first projected. He said that even should we fail we should have done a work of education, and he thought that when the result was known it would be found that much of the public would be with us. Mr. Clarke's remarks were greeted with applause.

Spirit of the Minnesota Press.

I have before me at this writing clippings from over fifty Minnesota papers, including the most prominent journals of the State, and especially those of St. Paul, Minneapolis, Duluth, Grand Rapids and many towns situated in the upper portion of the State. In brief, one may say that St. Paul seems to be in favor of the enterprise, perhaps under certain limitations which would not set aside so much land as was at first designated. Minneapolis is more guarded or half hostile. Grand Rapids considers the matter an "outrage, a "steal," a "robbery." Duluth is simply hysterical. The press of the smaller communities is divided, some papers thinking the matter subject for levity, others for protest, many for commendation. The bitterest objections, of course, come from Duluth and a small section thereabout, from which come all sorts of protests and resolutions to kill this matter in one way or another.

All this comment simply goes to prove that the Minnesota park topic is a very vital and absorbing one, and has held a most prominent place in the mind of the population of the State. It will not serve to call this a "steal," a "robbery," a "sporting scheme," a "game preserve," or the "enterprise of a few rich men." Better arguments than that must be advanced. The most valid reasons yet noticed are those of papers which think the reserve should be established, though demurring to one of extreme size. As to the rabid method of mere assertion, this sort of thing will hardly serve the "Zenith City of the Unsalted Seas," and it might be well for the local newspapers to attain a more dignified and convincing manner of advancing their own cause. Very admirable is the position of the Albert Lea Tribune, which says: "The attitude of Minnesota toward the park scheme should be that of approval to the underlying idea, but of great conservatism and caution in putting it in practice."

The Herald, of Howard Lake, Minn., says: "It is quite probable that Congress will do something on the matter at the next session. The land is not valuable for agricultural purposes, and so would be of little use to the people."

The Sheaf, of Warren, Minn., says: "The movement deserves to have all possible encouragement."

The Journal, of Taylor Falls, Minn., says: "The proposition is attracting much favorable comment."

The Telegram, of Breckenridge, Minn., says: "We sincerely hope the project will be carried out."

The Argus, of Long Prairie, Minn., says: "Our conviction is that where there is one quarter section suited for farming there are two or three sections that are good for nothing else than park purposes."

Perhaps the most amusing feature of all the newspaper comment, which has reached notable extent in the last few weeks, is the grave assertion on the part of the Review, of Grand Rapids, Minn., which remarks sagely: "The Chicago and Eastern papers have been full of it,

and it is plainly apparent that the space occupied in the more prominent journals has been generously paid for. A syndicate to carry on the preliminary work is evidently already in existence, and is very likely composed of members from the wealthy sporting clubs of Chicago, New York and other cities."

That is surely a fine example of detective journalism! If the writer of it can point out a dollar that has been given by any man or club at this date, he can do better than anyone known here. As to pay for the space used, you could not take $50,000, or twice that, and buy one-half the space that the Chicago papers alone have expended on this enterprise. It is plain to any but the jaundiced eye that all these many great organs have done what they have done just as the FOREST AND STREAM in its less extended but no less ardent fashion has done its task, namely, from enterprise, from thoughtfulness and broad mindedness. When the entire press of Minnesota can become a unit in the belief that there is not the first selfish or personal motive in all this proposition, not the first personal scheme and not the first unfair intention, it will have gone far toward arriving at that justice which should be dear to everyone, resident or non-resident, and as regards this or any other "scheme."

Real Objects of the Proposed Park.

In view of the distorted views which seem perforce to be taken by some persons in regard to this Minnesota reserve, it might be well to offer the following little list of intents and purposes, which have seemed appropriate in the opinion of a Chicago gentleman, who hands them to me:

First.—The preservation of the head waters of the Mississippi River.

Second.—The preservation of as much of the now standing timber as is possible without interfering with existing ownership.

Third.—Prevention of destruction by fire of all trees within this district.

Fourth.—The setting apart of this district for all people for all time, for their free use either for health or pleasure.

Fifth.—The preservation of fish and game.

The idea of a "steal" for a "few sporting men" seems not to be quite just in view of the above balancing motives and reasons for this park. The FOREST AND STREAM is a sporting paper, and much concerned with fish and game and their preservation; but perhaps the FOREST AND STREAM may claim to be run by thinking men and men who try to be fair minded. No doubt the result of this movement, in so far as it shall be reached by thinking and fair minded methods, will satisfy this journal and all those who have given up time and money to the pursuit of what seems fairly and on a thinking basis to be a desirable and important movement. There has been no piece of outdoor news of similar interest and magnitude in the last ten years of Western progress.

Killing Summer Deer.

I can see no especial use in making up the contributions for the Hottentots and Eskimo so long as we have so many heathen near at home. The residents of the region near Glen Flora, in Barron county, Wis., have been steadily killing deer for the last six weeks. Deputy Stone, of that county, this week took out warrants for several citizens and is now after them. It stated that over 100 deer have been killed this summer in that vicinity. One gentleman by the name of Billings went out hunting on Sunday and killed a doe which had a fawn three days old, which was following her, and which died soon after the doe was killed. Mr. Billings has been arrested, and his trial should by this time have been completed. I hope he got the limit of the law.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Sportsman Again.

Editor Forest and Stream:

If you and Ransacker want to get up a wordy war over the definition of that indefinable word "sportsman" I have no right to stick my finger in the pie, but I see a bit of fun lurking in it, and I want to keep it going. Now Ransacker knows bees from head to tail, and when he sets about monkeying with those little California sharptails I can almost hear them buzz. His experience would qualify him to define a bee hunter to a dot, but when he gets through with his definition of a "sportsman" may I be alive to see it! I don't want to rub his hair the wrong way, for he might stick me with his pointed wit worse than the bees stuck him. The common definition of "sportsman" is "men who shoot," and I would let it go at that; but it doesn't seem to satisfy Ransacker, and he'll be likely to spread over a dozen sheets of paper before he settles on anything to satisfy himself.

Definitions, like charity, begin at home, and I call myself a sportsman because from my youth up I've been considered an expert in all kinds of small game shooting; and no man this side of the North Pole has enjoyed the pleasures connected with it more than I; but elephant and lion hunters would scorn to apply the name of sportsman to me.

Many of the finest shots I've ever known could only now and then find time to go afield; but must I refuse to call them sportsmen because they're not unceasingly at it? Shall we call that most contemptible exterminating loafer, the market-hunter, who makes it the business of his life and gets no real pleasure from it, a sportsman? What must we call the professional pigeon slaughterers, whose chief delight is in winning money from each other and who in difficult cover would probably be no shots at all? They are certainly not sportsmen.

Now I don't want to see the pages of FOREST AND STREAM stuffed exclusively with either truths or lies pertaining to fir, fins and feathers, for many such contributions, unless well written, bore me. A certain article about Shasta Mountain bees may not have been written by a sportsman, but I don't remember anything in the columns of FOREST AND STREAM that has tickled my fancy more, unless it was the "Boyhood Days" of Podgers.

I don't know whether Ransacker would be willing to apply the title of sportsman to the always interesting Fred Mather, or to the equally entertaining Rowland Robinson, but I hope their articles will continue to grace the columns of FOREST AND STREAM, though all the moose and bear butchers of Maine be crowded out.

DIDYMUS.

ST. AUGUSTINE, August.

Quebec Game for Paris.

BOSTON, Aug. 14.—Dr. Heber Bishop now has in his hands an unique commission. He is to collect for the Canadian Commission specimens of the big game of that region for the Paris Exposition next year. The text of the permit is as follows: "Quebec, July 18, 1899.—Dr. Heber Bishop is hereby authorized to kill, in all seasons and in any part of the Province, one moose, one caribou and one deer, for the Quebec exhibit at the Paris Exposition. L. Z. Joncas, Superintendent of Forests, Fisheries and Game for the Province of Quebec."

The commision could scarcely have fallen into better hands, since Dr. Bishop is thoroughly familiar with the big game of the Canadian Province, as well as Maine. His record of game shot already includes fifteen bull moose and twenty-four caribou, besides innumerable deer. His last bull moose will be remembered to have been on exhibition at the New York Sportsmen's Show last spring. The monster was reported to have weighed 1,500lbs. The specimens for the exposition are to be as large and fine as possible; one each of moose, deer and caribou. It is deemed necessary to show the horns in the velvet; hence taking the animals in close time is permitted. The Doctor starts on the 15th inst. to make the collection. He will take the deer from the Megantic preserve, where the animals are very plenty. The moose and caribou will be secured later. Dr. Bishop has probably slain more moose than any other sportsman now living, and doubtless more than any other hunter in the world who has hunted for sport only. His moose and caribou hunting will be done at Temiscouata Lake, and at Gaspe on the southwest shore of the St. Lawrence Gulf.

Chatham gunners are reported to be having very fair sport. The late storm sent in some good flights of yellowlegs, but not many large birds have yet appeared. A couple of Boston gunners returned Saturday from a successful shoot in the vicinity of Ipswich Bay. They had about thirty yellowlegs, mostly summer; several grass birds and five chicken plover. They found the shooting good Wednesday and Thursday, especially the latter day. The birds responded freely to calling, in the fog and rain. Plum Island gunners are also getting a fair showing of birds, though they say that large birds are not yet present in abundance. Reports of partridges in Maine continue to be the best for many seasons. SPECIAL.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Fishing for Muskalonge.

THE irrepressible man who is never tired of fishing, the genius who has the patience and enthusiasm to wait for trout among the mountain streams, should for once try fishing for muskalonge. And then, as the little girl said in her prayer, after she had asked the Lord to make her a good girl, "If at first you don't succeed, try, try again."

"And what is the attraction at Grand River?" I asked of two Pittsburg men whom I had casually met before. I wish I had asked this question in an unsuspecting manner. Such was my intention.

"Lived there, ten miles from the river, all your life, and never caught a muskalonge!" exclaimed one. "Why, I've been there every summer for ten years."

I felt it was a time for discretion as I quietly assented, while I recalled how in my early married life I had regularly for three summers left my wife to visit in Geneva while I went, as it were, in search of a golden fleece. I remembered her facetious allusions and those of her relatives the last time I announced in the simplest manner compatible with my feelings that I believed I would take a few days over to the river and try for a muskalonge. I recalled too at the same time the fact that I didn't get a muskalonge, and that there were some more funny things said, and several jokes at my expense about muskalonge—all of which was very entertaining for the family, and made a jovial atmosphere that lingers about me still. But the old word, like a battle cry, aroused feelings that had been suppressed for years.

"And do you think, gentlemen, there are any muskalonge in Grand River?" I inquired incredulously.

"Think it, man! Do you suppose I would be such a darn fool as to go there every summer if there wasn't?"

That was enough. The river was full of them, hungry and eager for bait; so at their urgent invitation to join them I wired to my wife that "Unexpected and important business would detain me a few days," and gave myself entirely to the matter at hand.

Arriving at Geneva, Ohio, on the evening train, we were met by a man from Mechanicsville, who had agreed for a moderate compensation to furnish the three essentials—beds, board and boats.

The nights were nights of suffering, owing to mosquitoes, from which we had no protection; but the days passed in the hot sunshine and the vigorous exercise did as much for bodily health as a trip to Canada.

To fish for muskalonge one must put aside all thought of languid ease and restful loiterings. It is not to sit on a shady bank and bait one's hook in quiet, disturbed only by busy flies and warbling mosquitoes. There is the constant rowing for one man, while for the other to see he keeps clear of snags. This is not possible in Grand River, as in spite of great care and familiarity the trolling hook will catch snags, and it is always more or less trouble and time is lost.

We had two boats, with two men for each boat, and took our turn at rowing. It is one thing to get one of these strong members of the pike family on the trolling hook and quite another to get him up to the boat, gaff him and draw him in without falling overboard yourself or losing the fish. They are ugly creatures, and they fight for their lives.

The first day there was no luck for anybody. The second day one of the Pittsburg fellows caught a 10-pounder, but nobody envied him, for we all expected a bigger one. The third day the same man got in two smaller ones. The fourth day the other Pittsburg man got a 15-pounder, which he had to shoot before he could get him into the boat. On the fifth day we had no strikes at all, and were ready to quit.

I felt my evil genius had followed me, as was her custom on similar occasions. Evening found me sitting pensively on a wash bench in front of the shanty, with beard of a week's growth, a sun-burned face, blistered hands and altogether miserable. I thought I would buy my wife a diamond ring before I went home, and perhaps she might for once forget her little jokes about the expense of fishing tackle. I was very humble.

The sixth and last morning of our stay I took my place in the boat. "You're no Jonah," said the Pittsburg fellow; "other people can get fish in the same boat with you, that's something to be thankful for," adding as he pulled the boat into the stream, "let out your line there."

Perhaps I had let out 30ft., when a sudden pull on the line made me exclaim, "That's no snag! Great Scott! I never had a muskalonge on my line, but if this isn't a muskalonge it's a whale." The boys, good fellows they were too, helped me get the line in, but for myself I gaffed the creature in genuine savage delight.

There it lay, at last, a helpless victim of my ambition. It weighed 30lbs.—the largest fish taken out of Grand River in ten years. All the disappointments of former years were as nothing. I threw up my hat and yelled.

That night I laid my "golden fleece," as it were, at the feet of my wife. I hardly know what greeting I looked for; but what do you think she said?

She said it was "unexpected," but it did not strike her as being very "important." You will notice I had forgotten about the diamond ring.

The little boys, God bless 'em, they were as proud of me as though I had bought out Barnum's show. They really loved me for it, but what was a great deal better it made me love myself. F. L. WRIGHT.

ANGLING NOTES.

Profits from the Water.

FROM time to time some one asks the value of the fisheries product per acre of water, or how it is computed or some other question akin to it, and always I reply with the utmost frankness, "I do not know." All these questions arise, doubtless, from a statement printed years ago that the value of the product from an acre of water was greater than the value of the product from an acre of land. The statement was alleged to have been made by Prof. Baird at the time he was Commissioner of Fisheries of the United States, and he might with truth have said that one acre of water would produce in value more than five acres of land, and selected the water of an oyster bed for one and a sand barren for the other, but Prof. Baird was not that kind of a man. He may have said something like what he is credited with, but I have searched industriously to find it, and so far have found nothing. We know that all land is not good land, and some land is cultivated and some not, and this is true of water, and I doubt if Prof Baird or anyone else that knew anything about it ever said that all water would produce a product of greater value per acre than land, for without doubt there was some qualification to the statement, whoever made it, for there are so many ways in which it could be qualified. Interesting as the subject is, it would be most difficult to arrive at figures of value by which land products could be compared with water products and make one general statement of comparison such as usually sought, but I recently found in a newspaper an article about the value of the fisheries of the North Sea, which seems to be reliable and gives a good idea of the value of sea fisheries where there is probably no aid from artificial cultivation. The item is quoted from an article by Prof. Heusens, in the German geographical periodical Globus, and gives the yearly catch of fish in the North Sea as never below the value of $37,500,000, and never above $45,000,000, and the area of the sea is 225,884 square miles; "therefore, the average value of the North Sea fisheries each year is $18.15 per square mile." The article continues: "Thus all the natives around the North Sea share in the wealth it yields, and it gives some idea of the direct monetary value of this great watery waste to know that every square mile of it adds over $18 a year to the production of the nations living along its edge." Indeed, a goodly portion of the sea must be a watery waste so far as furnishing fish is concerned, but the figures quoted give a better idea of the value of sea products when reduced to fixed area than anything I now recall.

This year I stood on the shore of a pond on Long Island which covered, I should say, about three acres, and the owner said that last year he sold from it trout for which he received over $1,000, and every year he received about that sum, sometimes a little more and sometimes a little less, for the trout he sold from the pond. In my judgment the pond lacked spawning grounds for the trout to keep the supply up to the standard the owner had evidently set for his annual supply for market, but he said he had put in but very few fry from outside sources.

The chief labor in connection with his trout rearing was to supply the pond with fish food in the form of salt-water minnows, and as the tide came up nearly to his pond this was a small item of expense.

Lac Goddard.

The Triton Club, of Canada, has a large tract which has been explored only in part, and when a new lake is discovered on the territory controlled by the club it receives the name of the discoverer, if he be a club member, or if the lake should be discovered by a club guardian or guide it is named after some member. Last year it happened that Mr. Warren N. Goddard, of New York, of fly-casting fame, and Mr. Walter C. Witherbee, of Port Henry, two officers of the club, and the writer, were fishing on the club waters at a time when there was a Lake Witherbee and a Lake Cheney, but no Lake Goddard. In the fall of the same year Mr. Goddard and the writer returned to the club with the intention of going

back beyond trails and blazes to find Lac Croche, which was somewhere "over beyond Moise Lake," and Moise was two days by canoe and portage from the club house. When we got to Lac Moise we found Dr. Spencer F. Nash, of New York, in camp, and he told us how nearly he succeeded in reaching Lac Croche earlier in the year by way of the Batiscan, and the outlet of Lac Croche. Mr. W. F. McCormick, on his way out to the club house, told us how nearly he had reached the lake by way of Belle Rivière a short time before meeting us, discovering Lake McCormick on the trip. Both of these gentlemen furnished all the information they had gained in regard to the lake which we had heard about around camp-fires from guides and Indians, but which really no one on our visiting list had ever seen. We had all heard marvelous stories about the trout of great size that some Government exploring party had taken through the ice of Lac Croche, and after my first visit to Moise and its trout I was prepared to believe most anything about the trout of the lake beyond, for it seemed to be a case of the further you went the larger and more numerous the trout were, so that the legendary lake in the somewhere over beyond Moise seemed a proper mecca for anglers. At Moise we found rain a-plenty, and I found fever and a cough, and lost my appetite, and there in a wet camp I saw my finish as an explorer. When my diet got down to cigars and tea, there was a rebellion, and Goddard was for taking the back track with guides, Indians and camp outfit, but as a compromise I went back and he went on to Lac Croche alone, making a forced march as it were, and making a portage to visit the lake again this year.

If I digress here it is because the only amusing thing which occurred on my back track is recalled to mind and causes me to smile now, although nearly a year has passed since it happened. Goddard and I had six guides —four French habitants and two Indians from Lake St. John—and almost from the start we discovered that our old guides seemed to feel that the introduction of the Indians was an innovation which did not entirely commend itself to them, and my head man on several occasions spoke slightingly of the skill of the Indians as canoemen. To save my strength for a portage that must be walked, and as the water in the Moise River was high, I started down stream in a canoe, light, while the Indians took my baggage in another canoe, which arrangement saved me a portage of five miles. It was snowing when I started, and Mr. Goddard came over the first short portage to see me off, and it was with difficulty that I persuaded him to remain behind, as he feared that I was more ill than I really was. The men did not know of any sportsman having run the rapids down to the Fullerton portage, but it was safe enough. I had to get out several times, and we took in some water and broke a few holes in the canoe, but on the whole got on nicely and came to a little fall with rapids above and below. The Indians, who were ahead, took out the baggage and carried the canoe around, and when my canoe came up they were seated smoking below the fall and rapids, watching us. My bow man took my rod case and walked down the rocks, and I followed, leaving Morasse, as I supposed, to follow me with the canoe over the rocks. The Indians stood up and looked up stream as though something unusual was happening, and I too looked back to see Morasse in the rough water with the canoe, relieved of the weight of two men, pointing skyward and turning as if on a pivot in spite of the guide's efforts with the paddle to keep the bow pointed down stream. Nearer and nearer he was drawn to the fall, and the look on his face was one of hopeless despair, for he could not get the canoe in a position to make the jump bow on. Up to this moment he had been on his knees in the stern, but he ceased paddling long enough to crawl over the crossbars and resume his paddling amidships, but in spite of everything he could do, over he went broadside on, and to my astonishment, and his own, the canoe struck on the bottom and remained right side up, when I did not think any power on earth could save him from an upset. He paddled to the shore and for the first time saw me laughing, for I would have been obliged to laugh had he gone over wrong side up, and with a knowing wink of his eye he said: "I show the sauvage how to jonip rapide." Then Morasse, having found his voice, began to sing.

In the spring when the ice was gone he started once more, and this time Mr. Witherbee was his companion. They made the circuit to Moise, up Belle Rivière to Lac Croche, and down the outlet to Lake Batiscan, and on this trip some new lakes were discovered. Mr. Witherbee wrote me on his return, and this evening I have read his letter again, and make some extracts from it, as it conveys information pleasing to us both:

"Lac Goddard is no longer a myth, but a sure enough lake, with its name cut on its sentinel tree at the outlet. It took us four days from Moise to reach it. It is one and one-half miles long, and has a beaver dam at its inlet, making another lake, which I called Lake Warren. We photographed everything, including moose at 75yds. twice, caribou, etc. Lac Goddard can now be done from Moise in a day and a half, as we cut portages and blazed well. Lac Croche is out of the question from the Batiscan, but vice versa it is a fine canoe trip in very swift water. In my opinion Lac Croche is the lake of the tract, being large and affording fine views of some grand mountains. You cannot fish with more than one fly, as you would catch too many trout, for two or three rise at a fly at every cast and jump clean out of the water. Game? Well, I never saw gamier trout. What we got were not particularly large, but very fine and handsomely colored. We slept in the same camp twice for two nights each time. Every other night of the sixteen we were in the woods we made a new camp. There are lots of beaver on the tract, and moose, too. The largest trout—5¾lbs.—I caught out of Trois Caribou on the first day out from the club house. I lost my whale out of the landing net when the fight was over, so I will not tell you how large it was. Edward" (the steward at the club house) "told me that L. C. Smith sent out a trout from the Batiscan weighing 8½lbs. Further details I will have to tell you as they are too numerous for a letter."

Rainbow Trout.

Ever since the rainbow trout came over the great divide from the West and found more or less transient lodgment in Eastern streams opinion has divided in regard to the desirability of the stranger fish in our waters.

Confession is good for the soul, and I can admit it right here, that for a long time I thought the rainbow a mighty poor substitute for our native trout, even when he would stay where he was put and not run away and disappear forever the second year after he was planted in the fry stage. That the rainbow is a game fish on the hook, and in taking the fly, jumping as the *fontinalis* rarely does after it is hooked, no one will deny, but as a table fish the rainbow must be in the very pink of condition to equal the native trout when it is not quite up to its best condition. Perhaps the greatest fault to be found with the rainbow is that it will not stay put when it is planted, and it is more difficult to propagate than the common brook trout (but that has been overcome recently, so that it is now possible to get nearly as high a per cent. of impregnated eggs as with the native trout), and being a spring-spawning fish it does not arrive at its best estate as early as the native. Giving due weight to all the objections raised against the rainbow in Eastern waters, I have come to like the fish more and more the better I know it, and for some waters I think it a better fish than the *fontinalis*.

In Europe the rainbow has done better than the *fontinalis* (which over there has acquired a habit of running away for good and all when planted in streams with the gates open), and I think is more highly esteemed, particularly in Germany, and the European fish breeders have, I must confess, studied the peculiarities of the fish and tried to understand him as we have not, chiefly because we think we have something better. In searching for information concerning the rainbow, Mr. Marston obtained a letter from Mr. Livingston Stone which is well worth printing here after its journey across the sea, but I quote it only in part.

Before writing Mr. Marston, Mr. Stone communicated with Mr. Myron Green, for several years superintendent of the United States trout station on the McCloud River, California, from which station all the rainbow trout that have been distributed by the United States were originally obtained (it was from this fact, by the way, that we got in New York waters what were termed McCloud River trout), and Mr. M. L. Dunning, employed by the U. S. Fish Commission at Baird station on the McCloud River, who has fished many California streams for this fish. Mr. Stone says that these two men having had unexceptional opportunities for studying the rainbow, he considers that they can hardly be excelled as authorities on the subject, and they tell us some of the very things that are very desirable to know, and speak from personal experience. Here is the extract:

"Both Mr. Green and Mr. Dunning agree that the rainbow trout are not cannibalistic in their habits. They also both agree that at certain times and at certain ages the golden band is absent; that the smaller variety of rainbows inhabiting the smaller streams very often do not possess the golden band at all. Mr. Green does not wish to express a decided opinion concerning their tendency to go to the ocean, as he has never been among these trout near the ocean. Mr. Dunning is quite of the opinion that they do go to the ocean under some circumstances.

"Please allow me to quote a little from the letters of these excellent authorities. Mr. Dunning writes as follows from Baird, Cal., under date of Jan. 30, 1899:

"'Three years ago about 300,000 young salmon were fed here in the troughs until the latter end of May, when they were planted in the McCloud River. For the next seven or eight days after the planting I caught over forty trout, of 1½lbs. and upward, and opened most of them immediately, and in no instance did I find any of the fish or remains of the fish we had planted. At other times while fishing I have often examined the stomachs of trout caught, and it was a rare exception that anything was found that would indicate that they were feeding principally on young fish. My opinion is that rainbow trout are not natural cannibals, though when driven to it by hunger they might become such.'

"Mr. Dunning continues: 'In fishing the waters of Hatchet, Roaring and Montgomery creeks, mountain streams and tributaries of Pitt River (the Upper Sacramento), I have caught as high as twelve dozen in a day, many of them fully matured and parent fish, and none of them showed the golden band. If these are the real rainbows, my opinion is that they do not show the golden band in all waters.'

"In regard to these fish going to the ocean, Mr. Dunning says: 'I was sent to Olema, Marin county, Cal., about one year ago this month, to assist in hatching out 2,000,000 salmon eggs. While there we spent part of our time seining in Paper Mill Creek at a place called White House. This was in tide water (we often having to wait until the tide went out, in order to seine), about four miles from the ocean. We caught a large variety of fish, but by far the largest number were rainbow trout, which I should say were about a year old. As these trout were miles below their spawning beds, I was strongly of the opinion that their course was downward, and that they were on their way to the ocean, and in quite large numbers.'

"Mr. Green writes as follows on the same subjects: 'I have opened a great many rainbow trout on McCloud River, but have never found any fish in them except young salmon that were very young. I have never seen the large trout trying to eat the small ones, and I do not think that they are destructive to other fish. I have kept large and small trout together in the same pond, and the large ones did not disturb the small ones, but if they were starving, perhaps they would.'

"About the golden band on their sides, Mr. Green says: 'I do not think it shows much on the young fish at one year old. I think it shows but very little at two years, and not very much until the fish is full sized. Full-grown trout carry the golden stripe all the year round, but it shows plainest and is brightest at the spawning season. The trout in small streams do not grow as large as in the river, and show the red stripe but little. In the river the large males show the stripe the most, but I have seen large females that did not have the stripe at all.'"

Large trout of all species become cannibals, and the large rainbow is no exception to this rule. The big fellows in a stream establish themselves in a "hole" and wage war on their kin—after the manner, I suppose, of a man-eating tiger, having obtained a taste of the flesh that gives them their name, they seek that chiefly; anyway it seems to be so with a big trout in a stream. A rainbow trout weighing 9lbs. established himself in a hole in one of the State hatchery streams and lived on trout until he was netted out of his lair; but it was an exceptional case. I might say here that I have been slowly coming to the belief that all large trout, exceptionally large trout, are trout-fed. It has been claimed that the large *fontinalis* of the Rangeley Lakes grow to their great size on a diet chiefly of the small Oquassa trout, or bluebacks, and the large trout I have caught in Canada showed conclusively that they lived largely on smaller trout, for they had trout inside of them when caught in a great many instances. The big trout that inhabit a hole and prey upon this species are generally old male fish, and are of far more use knocked on the head than when left alive in the water, but they must be knocked on the head in a legal manner, and so they escape the end they deserve when fishermen know just the destruction they are working in a trout stream, for they are wary beggars and know all the legitimate lures used by anglers.

In one lake where the rainbows have been planted, they remained and multiplied, but they will not rise to the fly, nor take bait during the day. In the evening and far into the night they will rise readily to the fly, and are so taken through the season.

Another lake was planted, and it was supposed the rainbows had disappeared forever, until splendid large fish were found running up the inlet stream to spawn.

The late Rev. Dr. Reese caught a large rainbow while trolling for lake trout in the spring of last year, and he told me it was the gamest fish he ever hooked. This was in Lake George, N. Y., and no one supposed that there was any of the trout in the lake, and other lakes that have been planted may prove to have the rainbows, and I believe there is a future for this fish in Eastern waters after we become better acquainted with him, and plant in suitable waters, for they will live and thrive in warmer waters than the native brook trout, and are a good table fish fresh from the water in their season.

Size of Trout Best for the Table.

During the winter a correspondent asked me the size of trout I considered best for the table, judging from personal experience. I was very busy at the time, and I replied, "5½lbs." He did not fancy my reply altogether and was inclined to think I was making light of a serious question. Certainly I had no desire to treat a serious matter with levity, and I explained that my reply answered his question fully and to this I was prepared to make oath. Of all trout I ever ate, that one of 5½lbs. stands out above all others, for it was very fat and well flavored, and I was particularly hungry, for we had no other meat in camp. It would have been good at any time, and in any place; but in camp on that occasion it was the best I ever ate; besides, I caught it.

Now a lady has asked me practically the same question, and I cannot be quite as abrupt as I was with the man, for she does not put the question wholly as a matter of personal taste. Taste in eating is such a queer thing anyway, and there are so many millions of people in this fairly good world with different tastes in regard to what solids go down their throats, that it is rather presumptuous for one man to even attempt to tell what a lot of other men like best.

I have known of men, brought up under Christian influences and the enlightening forces of modern civilization, who have openly confessed that they loved trout best when they were 3 or 4in. long and fried crisp. To me such a taste appears to be like infanticide with no extenuating circumstances; therefore, I cannot judge this question impartially, for the larger trout—brook trout—if it is in good condition, and I caught it, the better I like it. There is no literature of any moment to guide me in answering this query, but Mr. J. J. Armistead in his admirable book, "An Angler's Paradise," has something to say on the subject. Referring to Mr. Siegfried Jaffé's fish-breeding establishment in Germany he says: "Mr. Jaffé tells me that a very large number of trout are sent to market in a year for eating purposes, and they are only grown up to a comparatively small size, as they are thus more valuable as articles of food, being younger and more tender, and possessing a finer flavor. In regard to the eating qualities of trout, for which purpose a large number are killed annually at the Solway fishery, I can quite bear this out, the best flavored trout being those running from ½lb. to 1lb."

My own opinion of wild trout is that the flavor depends not so much upon size as upon condition.

A. N. Cheney.

The Bass that Jumped Into the Boat.

The Lockport, N. Y., Union-Times has this to say of the incident of forty-seven black bass jumping into boats on Oak Orchard Creek:

On the word of Senator Pound, corroborated by Prof. Fessenden, we accepted the Oak Orchard story about jumping black bass. Some of our contemporaries are not so fortunate as to have the personal acquaintance of these gentleman and their word-of-mouth testimony on the most profound piscatorial sensation that has occurred this summer season of 1899, and which far exceeds any fish story so far pressed upon an incredulous public; so we can pardon any exhibition of incredulity on the part of our fellow editors.

Senator Pound has reached a stage where he feels compelled to vindicate his veracity and that of his friends by letter writing. Here is what our esteemed townsman has to tell the doubting editor of the Rochester Democrat and Chronicle:

To the Editor of the Democrat and Chronicle.

Sir: I find that one tells fish stories, no matter how truthful, at the risk of one's reputation. Your little editorial paragraph to-day implies that the account of black bass jumping into boats on Oak Orchard Creek last week was the product of stimulated imagination and nerve. I was unfortunate enough to be a witness of the occurrence on two or three trips of the Ray, on which it happened. I think that I have convinced a few people of its truth. But I wish very much that it could be treated seriously, for it deserves the consideration of students of natural history.

No ordinary fact, to be established by the evidence of credible witnesses, can be more easily proved than this, for at least 150 people can testify to some part, at least, of the occurrence. It is not a fisherman's story. There is no credit in taking fish in that manner. It is not an advertisement of Oak Orchard. The bass are not biting there and it is not probable that they will continue to jump as they did on the nights of July 27 and 28. While I do not care to appear solicitous about it personally, I do earnestly wish that you would at least take my word that it is not a joke nor a fairy tale. Yours very truly,

Cuthbert W. Pound.

Lockport, N. Y., Aug. 5.

Tickling Trout.

Editor Forest and Stream:

A friend has been telling me that when a boy he caught trout by gently inserting his hand beneath them as they lay in the water, tickling or caressing them, and suddenly closing on them. Was he stuffing me, or can the thing be true? J. B. W.

[It is possible to take fish in this way; we have printed accounts of it before now.]

Fishing Up and Down the Potomac.

Pennyfield's.

In Tait's Magazine, in 1836 (n. s. 3, p. 625), is a review of Jesse's "Anglers' Rambles," in which the reviewer pays his compliments to penning rodsters in the following doubtful strain:

"The brethren of the rod are beyond contradiction the most amiable and amusing literary twaddlers going." As the reviewer was without doubt a lover of the angle, he makes it all right with himself later, for after thus slithering them up, he proceeds to slather them down by saying: "They are all naturalists in the beautiful and popular sense; landscape painters as far as words can embody the forms and hues of nature; and no contemptible pastoral poets. No one shall tell you better than the angler, because no one knows half so well, where 'the old willow dips into the brook,' where the kingfisher has his haunts, or when and where the primroses will first peep forth and the swallows arrive."

He can discourse you of echoes and fairy rings, and unfold the whole phenomena of the honey dew and the gossamer. He can talk of plants and trees from the stone crop in the cottage window sill to the cedars of Lebanon."

He leaves the guilty reader in doubt whether his cue is to swear or bow. The expression "most amiable" would, however, seem in any event to require some modification, for few men do more sytematic kicking than your steady-going angler as he is met; and evidences are not wanting of record to show that he is seldom without a grievance on paper.

Sometimes, it is true, their plaints sound like the wail of the Sybarite who could not sleep because of the crumpled rose leaf. But when one reflects upon how many elements are required to make the angler's perfect day; of wind and weather and water, sunshine and shadow; tackle and dress and fish; the people he meets; the food he gets; the boat—if he uses one—and the skill of its motorman; his own health; how can they always be all that he would have? He has license often to find fault with his surroundings, and that he does so vehemently, the ancient proverb proves, for of all occupations only fishermen are cautioned against profanity on pain of disappointment.

Then, when he thinks on the desrtuction of famous fish preserves, the disappearance of the trout and salmon where once they were plenty, why may he not rail at fortune and poachers; at the pollution of streams and the destruction by nets; at the indifference of Solons and the general depravity of selfish butchers who know no seasons and no limits? He has reasons plenty to keep him out of the category of "most amiable," but there are real troubles enough to contend with, it would seem, without becoming hysterical over expressions or language used by someone in trying to put on paper some of the pleasures of his holidays. Think of a book on angling being condemned by a reviewer because the author had used "brethren of the rod." The reviewer quoted above was not infallible in that regard.

It is an idiosyncrasy, to put it mildly, that anyone should feel outraged by an expression that is appropriate enough to be be in common use. It would be well for the critic to be positive he has not in past years been himself guilty. The bitterness of the criticism will depend, it will be found, something on the personality of the indiscreet author. We shut our ears to time-worn tunes when discoursed by the street organ and applaud the orchestra that offers us the self-same melodies.

But even in this view there is need of caution. As one may entertain an angel unwares, so one may unjustly condemn a genius who through inadvertance or design has used a tool which is common property. After all, is not criticism of style a waste of effort when rules are applied to a fisherman's notes? They are little more literary than a ledger and rarely make more pretense. What they seek to give and what at least some readers want is, "Where did you go, and what may I expect if I get a like chance?"

Truth in an angler's report is a mater of far more importance, or ought to be, than the language in which he describes his neighbors, his surroundings, or his catch.

Four miles above the Great Falls is Pennyfield's, a place long famous among local bass fishermen; one of the few points honored by a President. Presidents have been guests of clubs and individuals, and gone with some noise and ceremony to a few other places on the Potomac, but this is one of the very few to which a Chief Magistrrate has gone uninvited. Perhaps its out-of-the-way charms attracted, for it has little but its loneliness and its bass. But Pennyfield's entertained the President, and the old man who has given his name to the spot still exihibts with some pride a meerschaum as a souvenir of the occasion. There are some people ill-natured enough to say that the bass were so embarrassed by the unexpected honor they lost their appetites, and others that the only string taken was by the host, who has long enjoyed a reputation of seductive methods with the fishing pole. Slanders like these are part of the price of greatness.

The easy way to reach the fishing grounds is to get a boat at Great Falls and have it placed in the canal; to this a horse is hitched and trots up the towpath, or the boatman throws a loop of the towline over his shoulder and cordelles the skiff with its occupant and baggage, without much effort. This is much easier on the fisherman than bumping over the rocky hills of the long, roundabout drive which must be taken in order to reach this place with a "fix."

For many years the old man was boatman as well as host for his guests, and when skill and strength and spirits were younger had more than once gone down the falls at the foot of Seneca Breaks, standing in the stern, with glad shouts, while the passengers clung for dear life to the gunwale and wished themselves well out of it.

It was our fortune once to be caught at the foot of these falls by a storm, in which the wind so long preceded the rain cloud as to take us by surprise. It was straight down the river, and we started for the house with wind and current and were entirely satisfied with our gait, the oars doing no more than keeping the boat headed before the gale. The water was black in front of us, save where the flounces showed on the crests, and the way seemed clear, for not a rock was visible, but presently there was a grinding crunch, as if the bottom were coming through and we ran high and dry on a ledge. There was no moving the boat till all hands were out and lifted, and then no easy matter to get back. It was a scramble, a touch-and-go, to reach the landing, for the skiff was a wreck. However, we beat the rain by a minute or two, which was some satisfaction, though if we had taken it we could have been little wetter.

The fishing at this point extends from the foot of the Seneca Breaks to Black Riffles, three or four miles below. The river for much of the way looks like a miniature copy of the Thousand Islands, being full of grass-puds and islets, only three of which are large enough to bear even a local name—Big Island, reaching from above Pennyfield's nearly to the moss beds just above Black Riffles; between that and the Virginia shore is Long Island, neither so wide nor so long as the first, and at its lower end Adam's Island, the smallest of the three. There are bass plenty in any part of this stretch to be had with fly or bait. Ideal water for fly-fishing may be found at the foot of the islands, where the coves are filled with a dark moss that does not come to the surface, and through which the stronger currents cut channels clear of the moss that makes the cove look like long flags of dark green and light gray stripes waving in the sunlight. Casting into the light streaks and dancing the fly across the current, the bass rush out from their lairs in the moss, and not half so long casts are required as in the open water, where they can see our shadow half way across the river.

Drifting down the river on a quiet midsummer morning at sun-up is a ride so full of delightful surprises as almost to compensate for the lack of bass, which never swarm at so early an hour. From the surface of the water rises a gray mist that dissolves again a foot or two above and looks in the distance like a flat of waving silvery sedge. Where the sunglints strike through a rift in the foliage the yellow sheen upon the water that flames up through the spots of smoke reminds one of the sacred fires of Baku; and presently the sun peeps over the trees upon the border, and strikes the river full; the cool stratum of air which has been condensing the rising vapor is suddenly warmed, the mist fades away, and the dark waters once more reflect the green hills that have cradled them for lo, these many centuries. The wood duck, most gorgeous-hued of all the birds that swim, has here a home, and twice to-day we have frightened a brood into veritable duck fits, drifting past the corner of a bushy islet behind which they were enjoying the privacy of a family chat. There were only half a doezn of the little ones. One was probbably killed getting down out of the tall sycmaore in which the nest was built; a cruel hawk swooped down and took another when the mother duck was off guard; a fox caught one sunning itself on a stranded log, and two or three swimming over the moss mysteriously disappeared below, swallowed up by a great bass that lay in wait for anything that came his way.

A great white crane on stilted legs stands knee deep near a shallow eddy, and the industrious way in which he plies his mandibles gives token that he has found a kindergarten. If it is not a little school of bass it is robbing the bass of feed, and a pellet is sent after him to warn him the bass has friends, perhaps as cruel, surely more selfish than himself, but who will not at any rate permit any Herod to decimate the nursery. He flew away with a croak that sounded like "Mañana."

A boat with a good boatman here commands $2.50 with beer and luncheon, and though willing to make it a long day, with an early start and a late finish, they are rarely called on for both. Good luck is satisfied early and bad luck is disgusted even sooner. Anglers unaccustomed to the waters can hardly manage the heavy boats at all, and most of them object to wading and dragging the boats over the rocks, as is sometimes necessary. The consequence is that these waters are really very little fished, and it is therefore one of the surest places on the Potomac for a good catch when the water is right.

Henry Talbott.

New England Anglers.

Boston, Aug. 12.—The attention of anglers is being drawn more and more toward the far North and East for salmon and trout fishing. Newfoundland is believed to be most desirable for salmon anglers, and promises to soon be opened up to that sport. Indeed a number of angling camps are already established on the Gulf of St. Lawrence side, or the southwesterly portion. Mr. C. S. Newcomb, of Boston, has just returned from a salmon angling trip to Newfoundland, where he had great success. He was absent from home only ten days, and got four days of fishing, taking some thirty salmon. His party went by water to Prince Edward Island, and thence by rail to the northmost point of that island, where they took a water passage across Fortune Bay to the extreme southerly point of Newfoundland. They went first to Port Aubascan (I am not positive about the spelling of these names), thence to Corduroy. Their fishing was done on the rivers in this vicinity, not far from the salt water. The coast is described as remarkable, with the scenery peculiar. There are numerous lakes and rivers, and these are stocked with salmon and trout. A number of sporting camps are located along the southwest coast of the island, on the Gulf, both for fishing and hunting, and some of the fishing privileges are already controlled. A couple of Boston sportsmen have a trip planned for this region, soon to come off. From them I hope to get more information about the country and the fishing there. Mr. Newcomb did not have to pay any duty on his fishing tackle.

Messrs. C. Ridley, Albert Channey, William Austin, Ralph Perkins, E. V. Collins, H. Palmer and others, of Boston, have gone on a trip to Lake Cobbosseecontee, for an outing and for bass and pickerel fishing. Alvin R. Flanders, Jr., of Newton, a boy of only eleven years of age, is on a fishing trip to Stanstead, Canada. He is in company with two or three older boys, cousins, and all fishermen. They are camping, and young Flanders writes home glowing accounts of the trout they are taking. He says that there are a good many mountain streams in that section, all supplied with trout. His party got over thirty trout on one day's trip. The boys are full of courage and self-reliance, and are longing to be old enough to own rifles and shotguns.

Special.

Protector Shriner's Last Report.

The report for the month of July is the last one to come from Fish and Game Protector Charles A. Shriner, of New Jersey. One novel feature is that it is issued at the protector's own expense. Full return for the expenditure will be had in the satisfaction Mr. Shriner must have at thus putting the case before the public, for following the record of prosecutions for the month is a discussion of the charges which have been made as to Mr. Shriner's conduct of his office, and in particular of the attitude of Gov. Voorhees, whose hostility to game and fish protection led him to oppose the protector and hamper the work of the Commission. The report runs in part as follows:

And now, gentlemen, I desire to reply to the charges which some persons have so indiscriminately made during the past few weeks. When I handed to you my resignation I presumed that would end all the discussion as to my office. When some newspapers began to make insinuations as to my conduct in office, I at first determined to pay no attention to them. Since that time, as these charges and insinuations have multiplied and some of them are based on the authority of State officers, I have concluded that it is a duty which I owe to the public, to you and to myself to make such explanations as will satisfy the public that the duties of office as far as they appertain to yourselves and myself have been propertly attended to. To yourselves is due the credit of whatever has been accomplished in the work of protecting and propagating fish and game; my duty was to obey your orders, and this was a pleasant task to me, as our views in regard to this work were in perfect accord. For this reason, whatever of blame may attach to anything done falls upon you, and it was this argument principally which has led me to the conclusion to reply to the critics who have been so energetic of late in finding fault. I have waited until all have had an opportunity to throw stones, until the storm of vituperation has exhausted itself and until the most diligent of fault-finders can apparently discover nothing more. This enables me to consider all criticisms properly and in an orderly manner, and in one answer to reply to all.

In an interview, published in a number of newspapers, Gov. Voorhees says:

> It is true that I requested Mr. Shriner's retirement as Game Protector. My first acquaintance with Mr. Shriner dates from the time he attempted to have passed by the Legislature an expenditure by the State of $4,000 for a book which he had compiled. I was in the Senate at that time and opposed the passage of the bill. It appeared upon investigation that the book called "The Birds of New Jersey" had been printed and published by the Commission at the expense of the State. There seemed to be no reason to my mind why the State should spend $4,000 for something that was already State property. Mr. Shriner seemed to take particular umbrage at my hostility to his bill.

There has been so much said about "The Birds of New Jersey" that perhaps a short account of how the book came to be published may best explain adverse criticism. Shortly after I had accepted the office of Fish and Game Protector, there was a discussion in the Board of Fish and Game Commissioners as to what constituted insectivorous birds, the killing of which is prohibited by statute. Nearly all birds are more or less insectivorous; it was suggested that a book indicating the comparative value of birds would disseminate such information as would result in the better protection of birds. Many other States had published works of that kind. A resolution was passed providing for the publication of a book on the birds of New Jersey, showing their value to agriculture and containing such information as might be necessary to a thorough understanding of the subject. I was employed to do the work of compiling, and did so under the direction of a committee appointed by the Board. An edition of 2,000 was printed, the illustrations being taken from the specimens in the Museum of Natural History, or prepared expressly for the work. The first edition was soon exhausted, the demand for the work coming principally from school teachers and superintendents. In a number of schools the book was used as a text book and is still so used. In order to discourage a demand for the work outside of the State a price of $1 per copy was fixed upon it for persons residing out of the State. Several superintendents of county schools asked for a sufficient number of the books for introduction in the schools, and it was this demand that caused the introduction of a bill in the Senate providing that the State Superintendent of Schools might have printed 2,500 copies of the work at a cost not to exceed $2,000—not $4,000 as the Governor inadvertently puts it. I was not at the time acquainted with the State Superintendent of Schools, nor am I to-day; the copyright of the work had at that time been assigned by me to the Board of Fish and Game Commissioners, so that in no way could I have any interest in the passage of the bill except in so far as its distribution might further the work of protecting birds. It is true that the Senator from Union opposed the passage of the bill in the Senate, and it there received four negative votes. I was in Trenton on the evening of the passage of the bill in the Senate, but thereafter I did not return to Trenton at any time until long after the Legislature had adjourned, nor did I take the trouble to ascertain who voted for or against the measure.

> There were a number of matters connected with the iternal affairs of the Commission which did not suit altogether. A boy was arrested in Middlesex county for spearing a black bass and fined. Such representations were made to me regarding the case that I ordered the fine rescinded. It was clear there was no willful violation of the law.

The arrest in this case was made by B. W. Brown, then one of the wardens. In his report to me he stated that the defendant had been warned by Mr. Newman, of Cranford, that it was contrary to law to spear bass, to which the defendant replied: "To h—— with the law; I am going to spear all the bass I want. I am going home now after my spear and get more bass." Mr. Newman sent word to Mr. Brown, who caught the defendant in the act of spearing a bass and placed him under arrest. The defendant laughed and declared he would not pay the fine. All these circumstanmes were subsequently corroborated by Warden Kerr, whom I sent over the ground in order to satisfy myself of the exact truth in the matter. According to Mr. Brown's report, made to me at the time, Gov. Voorhees called him up by telephone and inquired about the matter, and after

having been placed in full possession of the facts declared that he would not interfere. On the following day the Governor ordered the release of the defendant. I do not see that I had anything whatever to do with the case.

Then a letter of mine to Senator Foster regarding the shooting of rabbits by farmers in certain cases where rabbits were destructive to fruit trees caused adverse comment.
I refused to sign certain proposed fish and game laws.
I was accused of being hostile to fish and game laws.

I trust I may be pardoned for being led to believe that a Governor is hostile to fish and game laws who pardons violators of the law, who writes letters that he will pardon other violators, who refuses to approve fish and game bills which provide some measure of protection to fish just introduced and who signs bills which extend the open season for netting fish and killing birds. I also considered the fact that last year no appropriation was made for stocking purposes as rather significant, when I remember the fact that this is the first year since New Jersey had a fish commission that no appropriation was made for keeping up the supply of fish. However, I may be mistaken in regard to the real attitude of the Governor on these matters.

The straw that broke the camel's back was the slurring comments he made regarding the members of the State Tax Board, whose duties required them to act in his own bailiwick up in Passaic county. It seemed to me that it ill became a State officer to make personal comments about members of a State board, some of whom at least Mr. Shriner could not hold a candle to. I wrote to Mr. Frothingham, of the Fish and Game Commission, that Mr. Shriner must be relieved from duty.

I fail to see exactly what connection there is between protecting fish and game and making comments on the doings of a State board. My comments were made on general principles and were exactly in line with a plank in the platform of the last Republican county convention of Passaic county, which strongly advocated the abolition of the State Board of Taxation; consequently my comments could not be construed as having been actuated by partisan motives. If it is contrary to public policy for one State officer to criticise another, then the resignations of Comptroller Hancock and Custodian Bonnell are in order, for both these officers had no hesitation in criticising the Board of Fish and Game Commissioners.

This completes the quoted interview with Gov. Voorhees, as given to the newspapers. I notice, however, that he has stated in other newspapers that he objected to the present administration of the affairs of the Fish and Game Commission because too much attention was paid to the interestes of sportsmen, he preferring that the State money should be spent in the protection and propagation of shad and sturgeon. The Legislature every year appropriates money for the Fish and Game Commission, but specifies to what uses this money is to be put. The Commission is required by law to appoint twenty-five wardens, and sums are appropriated just enough to cover the salaries and expenses. Then the Commissioners have an allowance of $800 annually for their individual expenses. In addition to this, the Commission has a revenue from the receipt of menhanden licenses and fines; but this money is used in the payment of litigation, costs of justices and constables where convicted offenders are either acquitted or sent to jail, and for other necessary expenses for which the Legislature has made no provision in the appropriation bill, the balance being used for stocking purposes. In addition to these sums of money, the Legislature has annually up to last year appropriated $5,000 for stocking purposes. In no year has the Commission ever had enough money to either acquire or maintain a hatchery. The reports of the Fish Commissions of New York, Pennsylvania and other States show that the cost of maintaining a hatchery averages over $5,000 a year. Fortunately the State of Pennsylvania and the United States Fish Commissioner have taken good care of the Delaware River, and the New Jersey Commission has always allowed the wardens along the Delaware double the usual quota for expenses, and during the shad season wardens from others parts of the State have been sent to the assistance of the Delaware River wardens.

As to the artificial hatching of sturgeon, if Gov. Voorhees has devised some means by which this can be done, especially without an appropriation, he will confer a great favor on mankind generally by giving such information to the Fish Commissioner in Washington. The last report of the Pennsylvania Commission says: "The great expense involved in the propagation of the sturgeon renders it out of the question for any one State to undertake it, and even for the United Stated Fish Commission."

The claim has also been made that the Commission has stocked private waters. I have had exclusive charge of that work, and I know just what has been done. The act under which the appropriation has annually been made is Chapter 42 of the laws of 1892, and the appropriation act of 1896 and of other years distinctly provides that the money shall be expended under the provisions of the 1892 act. This act provides in plain language that the Fish and Game Commission shall in each and every year furnish to every incorporated association for the protection of fish and game not less than 1 per cent. and not more than 10 per cent. of the total fish product of the year. Such associations generally control private waters, and there are so many of them in New Jersey that all the fish received by the Commission might with legislative warrant have been placed in private waters. But the Commission has always objected to stocking private preserves, and for the purpose of keeping within the law of 1892 and still subserving the best interests of the public, the Commission has prepared blanks for applications for fish and one of the requisites for the granting of these applications is that the public shall be permitted to fish in the waters to be stocked. These applications must first be signed by the applicant; then the nearest warden investigates the answers to the various questions, and finally the signature of the Senator representing the county where the water is located is necessary before further action is taken. If private individuals have succeeded in evading all these precautions then the Commission has been imposed upon, but I feel confident that this has been done in exceedingly few instances. In further answers to this claim I will say that every application for fish, excepting such as referred to private waters or to waters where it was apparent the fish could not possibly live, and a few applications I still have on hand, has been filled; the number of fish placed depended altogether upon the size of the water, and the apparent probability that the fish would thrive. The same policy has been pursued in the distribution of game. As soon as all the applications were in the number of birds to be distributed was divided by the number of applications, and on this basis was the distribution made.

I have now answered all the charges and insinuations made, with the exception of one, and this is of a general character and to the effect that the laws have been too stringently enforced. As to the desire of the Commission on this subject, I will quote the following from the book of general instructions furnished to all the wardens and others interested in the enforcement of the fish and game laws:

The laws are not to be used for the purpose of oppressing any person. Where habitual violations of the law have occurred through ignorance of the offenders, common justice dictates that these persons should be warned of the fact that they are violating the law before the rigors of prosecution are resorted to. Whenever leniency is indicated by the circumstances it should be exercised, and that in many cases where the letter of the law has been plainly violated.

I have always endeavored to carry out these principles, and in nine cases out of ten in prosecutions I myself conducted I have turned over my lawful portion of the fine to the convicted; and I know that this has also been done frequently by the wardens in my charge. The records of the Commission show numerous cases in which sentences were suspended on payment of costs, and this was done in every case where an application to that effect was based on the poverty or ignorance of the offenders. I can say without the slightest fear of successful contradiction that no laws have ever been enforced with more regard for clemency than have been the fish and game laws during the past four years.

CHICAGO AND THE WEST.

Fly-Fishing on the Mississippi River.

CHICAGO, Ill., Aug. 5.—I have recently made mention several times about the sport of fly-fishing for bass on the Mississippi River near La Crosse, Wis., and opportunity offering early this week, I was able to put the matter to proof very fully. I am ready to say that this branch of our Western angling has not been over-estimated, and will go further and state emphatically that I never had so good sport in angling for bass in any part of the country whatever. I have caught bass in the several forms of bait fishing and with the fly in almost every State of our Western country where the bass is native. I have taken them in the best running streams of the Middle West and in the cold lakes of the North, both the big-mouth and the small-mouth bass, and I confess I thought I had about run the gamut in the area of the bass. I am willing to admit now that I never knew before how gamy a fish the black bass can be. The best bass of the cold Northern lakes that I have ever taken are in fighting quality to be compared with these Mississippi River small-mouths about in the ratio of one to three. I took bass on my little trip which fought me harder than many a 12lb. pike I have taken in our pine woods lakes. I killed one bass which weighed less than 3lbs., which for a long time I felt quite sure was a large pickerel, and I told my boatman that I thought the fish would weigh between 12 and 15lbs. For absolute savage wildness, for power, activity and staying quality, I never knew such fish as these. My little experience has nearly spoiled me for the tamer forms of bass fishing in this country. Indeed it might well spoil one also for trout fishing. Of course no sort of trolling is in the same class with it. Unless it be salmon fishing, I question if there is any angling sport on this continent which can beat this small-mouth fishing on the upper waters of the Mississippi. Of course the strong current of the great river makes the fight the harder, but the water is also so cold and deep that the bass are big and lusty and full of ginger to an extent hitherto undreamed, at least in my philosophy.

If you go to La Crosse for bass fishing, you will find there a distinct cult of the fly. Bait fishing is at a discount, and you will see but few minnow pails or frog bags. The fly is the popular form of lure, and indeed in July and August it is perhaps as killing a lure as any that could be used. Your boatman might perhaps allow you to take along a bait rod, but you would probably sink rather low in his estimation if you insisted on using this. You will discover very early that you are in a country where the fly-rod is the practical and approved weapon for killing bass, and where the bass will take the fly. Anyone who has the least knowledge of the strength of this fish can imagine the quality of such sport under the circumstances. At least he can imagine it as it would be anywhere else but here. In order to get any idea of the actual thing as it is found at La Crosse, you will need to go there and learn for yourself.

So far as I can discover, the art of fly-fishing for these Mississippi River bass was introduced about sixteen years ago by one John Reed, who lived at La Crosse, and who died some years ago. Mr. Reed is described as a very decent sort of fellow, and very much of a sportsman. He conceived the notion that these bass could be taken on the fly. He began with the customary light tackle of the East, small flies and bright colored, with light gut. In time he began to strengthen and coarsen his tackle and to use very large and dark-colored flies. One of these flies, the Reed, tied with dark wing and peacock hurl body, is to-day a popular one in that neighborhood. Mr. Reed used to fish the Mississippi all the way from Lake Pepin to points far below La Crosse. He often employed a certain boatman by the name of Asher Spicer, who is now a man fifty-five years of age, and who is perhaps the best-posted and most popular guide in the city of La Crosse. It was Spicer, or "Ash," as he is commonly known, who took me out on the river.

From time to time others took up Mr. Reed's example and began to use the fly along the big river. Mr. Tom Watson, of Chicago, says that he has been fishing there for fifteen years and has not been anxious to give the thing away. Mr. McCarthy and Mr. McFarland, both of this city, have been going out there for some years. Mr. J. J. Hogan, of La Crosse, Fish Commissioner of the State of Wisconsin, has been fly-fishing along these waters for very many years. Now and then I have heard of others here and there, and always with such reports that I was very anxious to look into the matter myself as a new and distinct sort of Western sport.

I speak of La Crosse as being the point for this fishing on the Mississippi River, and really it is the proper point toward which to head. The fishing itself is some miles below that city. It is all boat fishing, and the distances to be covered are necessarily very great. The customary way is to take a boat and boatman from La Crosse and go up by rail to some such point as Trempeleau, Fountain City or Alma, all points on the C., B. & Q. Railroad, which runs along within a biscuit toss of the edge of the river at the foot of the great sharp-faced bluffs which make the distinctive feature of the scenery in that region. Without a good guide one might not have so much success, for sometimes there are stretches of river of four or five miles where a good boatman will not stop at all, knowing that those reaches offer no fishing worth stopping for. The bass lie along the sharp-faced banks of the river at this season of the year, and I was told that it was not much worth while to hunt for them in any other locality. Moreover, these banks must be mud or clay banks, running down sharp into deep water, and preferably with a good current along the face. A sandy bank will show no fish, and a good guide will not stop at such a place. Spicer explained the matter very perfectly to me when he said that the bass came into these cut banks to hunt crawfish. Of course there would be no crawfish along the sand banks. There were some sharp outcrops of bog iron or clay with iron stain, and these usually would show some bass, for some reason or other. Once in a while a bass can be picked up on the riprap of the many Government wing-dams which are thrown out from shore in the work of keeping open the channel. The riprap fishing is better later in the fall.

Spicer and I put our boat on the train at La Crosse early in the morning and went up stream about fifty-five miles, starting in above Minneiska and below Alma. We made the run thence down to La Crosse in two days, which is one day less than we should have given to it. One ought to fish about twelve or fifteen miles a day comfortably, and he will find a town every four or five miles of the river on the one bank or the other, so that he can stop at night about where he pleases. We made our first stop at Fountain City, a quaint little old place on the "Q" road, nestled at the foot of one of the big bluffs, and here we found a very decent little hotel and passed a comfortable night. On the following day we went down the old "Betsey Channel" and through a cut-off into the Trempeleau River. We left Trempeleau town at about 2 o'clock, I should think, and got into La Crosse at about 8 o'clock that night.

Before starting on this trip I had a talk with Fish Commissioner Hogan, at La Crosse, where I also saw Mr. Watson, of Chicago, and General Bryant, President of the Wisconsin Fish Commission. I talked also with Mr. Frank Walker, who had recently put in half a day at Alma. The latter told me that he had caught thirty bass in his half-day's fishing. Mr. Watson on his last day caught twenty-six bass, and other catches of the like seemed to be not uncommon. The largest catch ever made on this river was 105 bass in a day with one fly-rod, and that happened seven years ago, Spicer rowing the man who did this work.

All the gentlemen above mentioned smiled when they saw the outfit I had brought along. They told me that it was no use using double leaders, as they were not strong enough, and they told me that my largest bass flies would be of no use whatever. I had them up to 3 and 3-0 hooks, but they said these would be of no use in the world. "I will tell you what I will do," said Mr. Hogan. "I don't like to see you have your trip for nothing, and I will help you out." He gave me a leader of twisted salmon gut, strong enough to hold a horse, and some flies the like of which I had never seen. These flies, of the Raven, Reed and Onondago patterns, were all tied on 4-0 hand-forged O'Shaughnessy hooks big enough to hang up a quarter of beef on. (The Onondago is the best and most popular fly now—a dark wing with gray tip, white body, gold ribbed.) In general appearance and weight one of these flies resembled a flatiron as near as anything I can think of, and it casts about as well. I was skeptical of this tackle, and these gentlemen were skeptical of mine, but I thought it was better to take their advice and fish as they said. There is no question that this is the most killing sort of tackle, and I used it altogether, although I am disposed to think that one could use an ordinary bass leader and fly and kill fish on this river. With a 4 or 5oz. rod it might take him half an hour to land one of the biggest bass, but it would offer better sport than this powerful gear which gives a fish so little show to break away. I remarked something to this effect to these gentlemen, but they said that they had been all through that stage of the game themselves. My boatman was all the time telling me that I took too much time in killing my fish, though I think I played none over five minutes or so. I think the boatmen do not like to row up stream in the swift water, and they like to try for more than one fish along a bank, since they may not strike another bank for a mile or more.

I had along with me three rods, a 4oz., with which I am sure I could in time kill the biggest of these bass; a heavy fly-rod of 10ft. length, and a rod which I think was of about 7oz. weight, a spliced rod, hand-made.

I found that the method of fishing is to row along shore not more than 15 or 20ft. from the bank. The casting is done directly in shore, and of course it is not really casting at all, but simply slapping in the fly on a short line, though it needs some skill to keep out of the roots which lie on the bank, and yet to cast close enough in. Spicer told me that the fly ought to be delivered right against the bank, as the bass lie very close in and just below the surface. He said the bass were not very shy, and this seemed to be the case, for time and again I saw them rise and take the fly almost under my nose, with the boat scarcely a dozen feet away from them. If one would use tackle like this and casting like this in the ordinary bass fishing of the Western country, he would not catch a bass in a hundred years, but every locality determines its own methods, and I found the above the practical method here. It ought not to work, but it did, and I was contented to follow the advice given to me by those who had lived and learned there before me.

The first bass that struck my fly made a swift run directly toward the boat. There was a high wind blowing, which bellied out the line far to one side. The bass did not improve this, but made it worse, as he ran directly toward us, and by the time I got to the place where I could strike him he was a mile away down stream. I have never seen anything slicker and quicker than this particular bass. Spicer did not say anything, but he looked a bit thoughtful when the same thing happened over again a little further along. This time I did not think the fish was pricked, so I asked him to put me in there again, and at the next cast I raised the fish a second time and hooked him fair. He went for deep water like a flash, and at once I was in one of the prettiest fights I had ever seen. Spicer, a bit concerned at first, as all guides are as to the quality of their charges for the time, watched the circus quietly for a few minutes, and then remarked: "Well, I see you have fished bass before now," a matter which apparently hitherto had been in doubt in his mind.

I fought this fish all over the river for a long while. He jumped seven times, high out of the water, of his own accord, not counting the times he sprang when we tried to get him in the landing net. He went deep and far, and was still full of fight when I yielded to Spicer's urging and forced him within reach of the net. In the whole two days I never did get one of these bass worn out, or get him to roll over on his side and give up. I was hurried and anxious to get along, and did not take the time that I should on another occasion to fight each fish to an actual finish. I am sure it would be better fun to use lighter tackle and to take longer time. The bass are too grand fellows to be hustled through and hauled out, as they practically would be on a bait rod.

After my first bass had been triumphantly landed—and to my surprise I found he would weigh less than 2lbs.—I missed four strikes in succession, the bass coming to me so quickly that I could not strike them. We were fishing up stream then, and the motion of the boat, combined with the wind, made the line belly out badly. The best way is to cast at a little angle down stream, keeping the line straight, so that the fish may be struck quickly. At last we came to a nice looking bank, which we fished two or three times back and forth. We tied up here and ate our lunch, and as we sat there we saw minnows jumping along the bank, and noted the surges where the bass were working close in shore. At last I saw some minnows jumping in a little pocket just inside of a submerged bunch of willows. I cast in here, and we plainly saw a grand bass take the fly. I struck and fastened him, and like a flash Spicer shot the boat back, so that the fish swung free of the willows. This was before the bass knew what had happened, and when he found out what it meant he was a plenty mad fish. He led out directly for the deep water and swift current, and there, in midstream, we fought it out, absolutely the hottest and prettiest fight I ever had with any fish in all my life. I disregarded Spicer's advice to get the fish close to the boat, and fought him 40ft. away. He sprang clear of the water seven times, and each time keeping the tip close down to the water, as one does in muscallunge fishing, I forced the spring of the rod to bring his head down when he sprang, so that he could not shake free. I do not know how long I played this fish, but he was by no means whipped when Spicer caught him in the net as he swung by the boat. This was sport to set one on fire, and I admit I never saw its like on any water. We could see that this bass was a large one, and were not surprised when we got him in the boat to find his weight just short of 4lbs. He was thick, fat and smooth as a seal, a grand fish in every way. I think I shall remember that bass about as long as I live.

I need not repeat the story of the many encounters of similar sort which we had during our hurried trip, but I need only add that the sport is there and it is magnificent in every particular. Spicer tells me that the bass seem to be about as abundant as they ever were, although there is more and more of this fly-fishing every year. We had a great deal of wind and bad weather in our two days on the river, and Spicer complained that the fishing was very poor, but I had quite enough fun to satisfy me, and saw that the sport of this favored locality has not been in the least exaggerated in the few stories that seem to have gotten out about it. It seems to me that I would like to try it again some time with lighter tackle, just to see those bass smash me up and have fun with me, but as it was I did not break a leader and did not lose a fly. Had the fishing been a little better I would have asked Ash's permission to use the little rod, but he begged me not to do so, as I would surely break it, and as moreover he wanted to get some fish to show at the dock when we went in! "You fight them fish too blamed long," said he. "I ain't no steamboat, to pull half a mile up the river every time you catch a bass. There's more bass lost on a long line than a short one, and the right way to do is to get 'em close in. They won't hurt you if you do reel them close up." The philosophy of all this will appeal to different persons according as they are in a hurry or not, whether they want a good many bass or not, and whether or not they like to lose a bass now and then, just to show that the game is an even one. However one may choose to fish that water, whether with light tackle or strong, I simply want to say that I believe it is the best bass fishing in America to-day.

At La Crosse I met Mr. Bacon, of the John Fall Lumber Co., who was the host of Mr. Bissell and Mr. McFarland, of Chicago, last summer. He told me that he expected to see both of these gentlemen the latter part of this week, and since my arrival home with the report of the sport I had, I have heard of three other gentlemen who have expressed an intention of going out there. Granted any ordinary sort of luck, they ought on almost any day for the next month to have good enough sport to satisfy any reasonable man.

Movements of Western Anglers.

CHICAGO, Ill., Aug. 12.—For some unaccountable reason the muscallunge of the Minnesota 'lunge district seem to have waked up this past week, and there is hope that the season will now prove more favorable. I am in better touch with the Woman Lake region around Kabekona Camp than with any other of the Minnesota 'lunge country, and word just at hand from that locality states that the fun for the fall seems about to begin. At present there are sixteen guests at the camp, and this week Messrs. J. D. Adams and Geo. F. Davie, of Chicago, and W. Peppard and family, of Kansas City, are going out for a trip of some days. Messrs. Callahan and Clendenning, of this city, earlier mentioned as having gone out to Kabekona, made a little side trip this week, and had something in the nature of experience. The former killed one 'lunge weighing 28lbs., and the latter got one of 18lbs. On the next day they got into trouble and lost all their tackle on fish so big and strong that they could not stop them. They report great disgust over their hard luck, and by the same mail that brings the story, sent back to Chicago for a dozen No. 9 spoons, with a lot of extra strong line. It would appear that they got among the big ones and were received with joy.

Mr. Francis T. Simmons, a prominent wholesale glove merchant of this city, with his son, Master W. B. Simmons, and his friend, Mr. Wm. Dickinson, are lately back from a trip after bass on Butternut Lake, in the Eagle Chain district of Wisconsin. They took in a short time 126 small-mouth bass which weighed 192lbs., replacing all fish that weighed less than 1lb. They had one bass that scaled 4lbs., three of 4lbs. each, two which weighed 3½ and 4lbs., and very many over 3lbs. each. They were all the red-eyed small-mouth bass.

Rev. W. A. Horan, of Freeport, Ill., outfitted here this week for a Northern trip.

Mr. D. Schilling, of Morgan Park, Cook county, is absent North on a little trip.

Mr. E. L. Caldwell, of Chicago, is absent at State Line, Wis., after bass and what else may offer.

Mr. W. H. Whitehead, of this city, and also Mr. H. S. Dale, have gone up to Gaylord Club house, in Wisconsin, after trout and bass.

From Colorado.

Mr. Jos. Irwin, of Little Rock, Ark., writes me under date of Aug. 4 from the South Fork of the White River, fifty-eight miles north of Glenwood, Colo., where he seems well located and improving in health: "I am enjoying the mountain air and catching all the trout we can use. Heavy snows last winter have made the fishing late, and it will not be at its best for two weeks yet. Myself and friend caught sixty beauties yesterday in about two hours, supplying our camp for a day or two. The royal-coachman is the most killing fly by day and the brown-hackle at evening time.

"I am splendidly located here—plenty of milk, cream, butter, eggs and a fine mineral spring at our door. Letters from home say it is 95 in the shade. Here I sleep under blankets at night and wear winter clothes at all times."

I have to-day at hand, too late for verification, the following clipping sent by Mr. D. J. Hotchkiss, of Fox Lake, Wis. It is very interesting to note these increasingly numerous accounts of the appearance of the wild pigeon, some of which have been proved to be accurate and truthful, though no doubt others are loose and inaccurate. This time the telegram comes from Coldwater, Mich., and reads: "Thousands of pigeons roost nightly among the tamaracks on Cedar Point, on the river just north of the cemetery. Beginning an hour before sunset, a steady stream of the birds pours into the Point from every direction, but principally from the northwest. A peculiar feature of the evening flight is the apparently identical route taken by each flock as it wings toward the roost. From the manner of their flying some of the older residents think perhaps it is a return of the wild pigeons which at one time visited Michigan in countless millions, darkening the sun with their numbers. Their roost on Cedar Point is impregnable to hunters, as it is surrounded by swamps and quicksands, impassable except in the most rigorous winters. Wild pigeons have also reappeared in Minnesota after an absence of many years. No one seems to know where they came from and consequently where they have kept themselves."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

The Fish We Did Not Catch.

JUST as we were ready to go out, large drops of rain began to pelt the black surface of Long Pond. This, our guide remarked as we disposed ourselves in the two rowboats, was just what Cleveland liked when he came over from Gray Gables to fish for bass. To look upon the rain as a sportsman did was impossible, however, for my two girl cousins. I passed a mackintosh to Marian, and in the boat ahead the young Doctor wrapped a rubber blanket round Edith. The guide pulled doggedly at the oars until the two boats, which he had roped together, drew up alongside a little wooded island; then he cast anchor and baited our hooks.

Marian got the first bite; but she was so intent at the time on impressing me with the fact that her sister had found in the Doctor the best husband in the world, that she failed to hook her fish. Consequently our boat lost the honor of the first catch, for a moment later Edith pulled in a perch of about a hand's length. The guide took the hook from the mouth of the perch, and stuck it into its back and then threw the poor fish overboard. Its sides gleamed like silver as it carried the line 15 or 20ft. down into the black water. In a little while each of us had caught a perch and was watching it tug the line deper and deeper. The guide told me to let the perch go to the bottom and to wait for a bass to strike. This novel way of using bait that was almost large enough to fry, made me realize that even if I had landed many a bass on the Musconetong River, there were still tricks in the angler's art for me to master.

Despite this fact, my eyes wandered from the tip of my rod to the Doctor. He a few years back had been the Harvard pitcher. I love an athlete as well as I do a sportsman. I wondered whether he would handle a rod as well as he did a baseball, and so, agog with curiosity, I watched him. With one eye riveted on his rod, he was answering most explicitly the eager queries of his wife as to how a bass should be hooked and how he should be played. He told her to be sure not to pull a mite until the bass had swallowed the perch.

Just at this point, however, the lesson ended and the demonstration began. Plash! went the tip of the Doctor's rod into the water. "Give him all the line he wants, Edith," he cried, switching the brake of the reel so that the line ran out by the yard. "He'll stop in a moment and swallow the perch." Scarcely a rod's length of line remained on the reel when the fish did stop. The Doctor gave a gasp of relief, and telling the guide to be ready with the landing net, waited for the final struggle as calmly as on the diamond after two strikes and three balls he would have waited the return of the ball. "See, Edith," he said, giving his rod a spasmodic upward twitch. "This fixes the hook in the king of American fishes." Then the tussle began. The fish made for the boat. I knew only too well that if he gained enough to double the line it would be good-by bass. The Doctor whipped his rod over to the opposite side of the boat, thus taking up several yards of slack, and then began to reel in at the top of his speed. On and on came the fish—ran under the boat. The tip of the rod kissed the reel. "What's to be done now, Ned?" cried Edith. "I'll catch my fish first," said the Doctor, quickly, "and explain later, my dear." The rod snapped back straight again. Away went the bass; the reel sang like a shrill-voiced harvest fly, and then screamed as only a reel can scream at a black bass. At a distance of several boat lengths the fish turned about and made a lightning spurt toward the boats. "You've done lost him," the guide grumbled, as the bass sprang into the air. "He'll get the slack now." But the Doctor had jumped over his wife into the bow of the boat. At the same instant the splash of the bass sent a spray into Edith's face, and she uttered a faint cry, thinking that her Ned had gone overboard. But there he stood in the bow working the reel like mad, while the fish circled round and round, making the water fairly boil at the boatside. "Ye gods," he cried, "but my wrist aches as it used to in the ninth inning of a Harvard-Yale game! Thank heaven, though, the bass is getting weaker. There! Now for the landing net." The guide laid down his pipe deliberately, made one sure scoop and lifted the fish out of the water. Just as he was about to swing it in to the Doctor, snap! went the handle, and splash! swish! went the bass to the bottom of Long Pond.

S. D. J.

WASHINGTON, D. C.

Hunting the Finback Whale.

DR. FREDERICK W. TRUE, of the Smithsonian Institution, has just started for Newfoundland, where he is going to hunt finback whales. His object is to secure specimens of these interesting cetaceans for the National Museum, but incidentally he will see some of the most tremendous sport that can be had in the world. Persons who have had an opportunity to take part in this species of chase declare that tiger hunting is tame by comparison. Besides, it has the advantage of being something entirely new.

Recently a fishing station has been established on the Newfoundland coast for carrying on the finback hunting industry, and it is thither that Dr. True has gone. The importance of this fact is realized that hitherto this species of whale has not been recognized at all commercially. While it yields a valuable oil, as well as other useful products, it is such a formidable creature to tackle that the pursuit of it has been regarded as hopelessly unprofitable. Besides being one of the largest whales—it reaches 70ft. in length and a weight of 30 tons—it is enormously powerful and almost incredibly active. From a sportsman's point of view, therefore, it is typically a game fish, and as such it is now sought.

Fishermen who have been so lucky as to catch a tarpon never tire of telling about the exciting experience. Imagine a tarpon 70ft. long and weighing 30 tons, and you have a notion of the finback whale when it is cavorting on the end of a line. Fortunately, the species is very numerous, having not been an object of pursuit by man until lately. The chase of it in boats is practically out of the question, by reason of the formidable character of the animal and its extreme activity. Only within the last few years has a method been found by which it may be taken without too much risk and at a cost of labor and material so low as to render its capture commercially profitable.

Last summer Emperor William went to Norway for the purpose of hunting finback whales, and he declared that it was the greatest fun that he ever had in his life. It was more than exciting; it was stupendous. No small boats are employed for the capture of the animal, which is shot with a lance fired from a sort of cannon on the bow of the whaling steamer. To this lance a line is attached, and the whale, immediately on being struck, starts off for the other end of creation at the rate of about sixty miles an hour, dragging the vessel after it. If the lance holds and the line does not part, there follows some simply gorgeous sport, the fish keeping on until its great strength is exhausted.

Now it dives to the bottom of the sea, sinking like a stone and bringing an enormous strain upon the bow of the steamer, which is actually dragged partly under the water, so that the waves break over her in foamy sheets; again the enraged quarry rises to the surface with incredible velocity, and leaps clear into the air, exposing the whole of its great body. This sort of thing goes on until the beast is utterly exhausted, when it lies helpless and floating, so as to be easily dispatched. This is the sort of sport that Dr. True is going to engage in on the Newfoundland coast, and, incidentally, he will secure at least two or three of the finbacks for scientific purposes. One of them may be shipped to Washington entire; if not, a cast in papier-maché will be made of it. The skeletons of the others will be carefully divested of flesh, disarticulated, and packed in boxes for shipment.—Washington Post.

Duly Stamped.

NORTH TARRYTOWN, N. Y.—*Editor Forest and Stream:* I have just read Mr. A. N. Cheney's account of the trout taken in the Adirondacks by Dr. W. M. Aldrich (FOREST AND STREAM, June 10) with a one-cent postage stamp sticking to its body near its tail. A similar incident occurred to Mr. F. Ahrens, photographer, of Tarrytown, N. Y., who caught, last fall, a blackfish in the Sound near Mamaroneck, N. Y., with a revenue stamp sticking to its side. Mr. A. photographed the fish with the stamp, and it can be seen at his art rooms in Tarrytown.

JOHN A. LANT.

Black Bass at Henderson Harbor.

Mr. H. H. Gill, of the Gill House, Henderson Harbor, N. Y., writes under date of Aug.10: "Yesterday was a very good day for bass and pike. Mr. J. D. Woods, of New York city, caught about fifty bass. Twenty of them averaged 1¾lbs. each, the rest were returned to the lake for future use. Mr. Burgoyne brought in seventeen as good bass as one could wish for. His total catch was fifty-one bass. Prof. Roucher and wife, of Oswego, caught thirty-six bass weighing from 1 to 3lbs. each. This is the way the angler whiles away the time at Henderson Harbor. Mr. John Hart, of New York, caught seventeen pike yesterday, largest 7½lbs., smallest 3lbs.

"The fishing here never was better. The catches made are all the law allows, and most of the fish are large ones, ranging from 2 to 4lbs. A singular thing occurred Monday. Mr. J. D. Woods caught four bass in one-half hour that weighed 13lbs.; the wind came up so that he had to leave the fishing grounds, and they were the only fish he caught. I do not want you to think that we get no small bass, for we do, but the singular part of it is that he got only the four fish. H. H. Gill."

Lake Ontario Fishing.

Mr. J. L. Davison, writing from Lakeside Park, N. Y., says: "Last week here we had splendid black and silver bass and perch fishing. Monday morning I rowed the boat for my nephew, who, by trolling, caught eight silver bass, two black bass and one perch before breakfast. Tuesday morning he caught eight perch, two silver and one black bass. Wednesday fifty-three were taken of the three different kinds. Thursday he took forty-five, and Friday morning about a dozen, six of which I carried on my wheel to Lockport, thirty-four and one-half miles, before 2 o'clock P. M., having left here at 10 A. M. Of all the fish taken, we used but eight; the balance I cleaned and gave to the neighbors—summer residents.

"Forest and Stream knows that I am no angler, as I am too lazy to fish; but will row a boat all day for another to do the fishing, if they will use the trolling bait, that I may keep the boat in motion. J. L. Davison."

Chicago Fly-Casting Club.

Chicago, Aug. 8.—The sixth competition resulted today in the following scores:

	Long Distance Fly, Feet.	Distance and Accuracy, Per Cent.	Accuracy and Delicacy, Per Cent.	Bait Casting, Per Cent.
J. D. Belasco	90	70 2-3	93 1-6	82 1-5
I. H. Bellows	119	91 2-3	95	96 14-15
H. Greenwood	92	78 1-3	93 1-2	85 3-5
H. G. Hascal	...	93	93 1-3	91 14-15
E. Letterman	...	.....	.....	86 8-15
H. Newkirk	...	83	95 2-3	89 1-15
F. N. Peet	115	84 1-3	94 5-6	91 7-15

Holders of Medals.—Long-distance fly, I. H. Bellows; distance and accuracy, H. G. Hascal; accuracy and delicacy, H. A. Newkirk; bait-casting, I. H. Bellows.

An Exhibition Bass.

New Point, Amityville, L. I., Aug. 13.—The largest striped bass ever caught in this vicinity was on exhibition for a time at the New Point Hotel. The fish was 45in. long, 9in. thick and 12in. deep. Its weight was estimated at 40lbs. The monstrous fish was caught by Captain Naff in the South Bay, near Fire Island.

Quahaug.

Mrs. Burger's Ouananiche.

Roberval, Que., Aug. 11.—Mrs. Henry P. Burger, of Long Island, has been favored by good luck. On a day's outing down the famous rapids at Roberval, she caught one round dozen of the famed ouananiche, those land-locked salmon of the North, using rod and fly. The feat is very remarkable for a lady.

Long Island Fishing.

Queenswater, L. I., Aug. 15.—Fishing during the past week has been good. No phenomenal catches are reported, but the parties who went out to the wreck of the Iberia and the fishing banks made good average catches.

Quahaug.

Camp-Fire Flickerings.

"That reminds me."

It is strange how things change about in this world of ours. Yesterday I was fishing off the rocks on the end of Croton Park, unmindful of everything but a certain commotion at the hook end of my line, when kerswash! a big swell from the Mary Powell bowled me off the slippery rock on which I was perched. My rod happened to get underneath, and the results could be ascertained very handily by equations in this manner: 9oz. rod : 200lbs. :: gravitation : ×.

Anyway, I have part of the butt and the ferrules left.

The other incident occurred some years ago. We were on the way home from a trip to the Thousand Islands in a 60ft. launch. We were obliged to run under one bell through the Erie Canal. Our old engineer, Ben Davis, being of rather a humorous turn of mind took upon himself every once in a while the responsibility of letting out another notch. Just before we reached Rome an old man was espied sitting on a low beam fishing. He was totally oblivious of everything but the fish which was dallying at the end of his line. Ben opened her up, and there was a vision of a tangle of white whiskers, arms and legs, a flying fish-pole surmounted by a flying chubb. The old fellow slowly crawled out from the wreck, and shaking a bony fist in our direction, said: "You are too dod ding fresh."

Chas. G. Blandford.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 4-7.—Toronto, Can.—Toronto Industrial Exhibition Association's eleventh annual show.
Sept. 12-15.—Milwaukee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.
Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Aug. 31.—Emmettsburg, Ia.—The Iowa Field Trial Association's second annual field trials. M. Bruce, Sec'y.
Sept. 4.—La Salle, Man.—Western Canada Kennel Club's annual amateur field trials. A Code, Sec'y.
Sept. 6.—Morris, Man.—Manitoba Field Trial Club's thirteenth annual trials. William C. Lee, Sec'y.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ———, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Irish Setter Club Prizes.

Philadelphia, Aug. 11.—*Editor Forest and Stream:* The Irish Setter Club of America offers $40 to the first Irish setter winning an undivided first, second or third prize in th eall-age stakes in any of the following trials: Iowa Field Trial Association, Western Canada Kennel Club, Manitoba Field Trial Club, Monongahela Valley Game and Fish Protective Association, Ohio Field Trial Club, Michigan Field Trial Association, Independent Field Trial Association, International Field Trial Association, Eastern Field Trial Club, Illinois Field Trial Association, Missouri Field Trial Association, Continental Field Trial Club, United States Field Trial Club and Alabama Field Trial Club.

Geo. H. Thomson, Sec'y.

Field Trial Winners.

Mr. R. S. Waddell, the Cincinnati general agent of the Hazard Powder Company, is sending out on request a handsome booklet, illustrated with excellent engravings of the leading field trial winners of the country. The engraving on the front cover shows an etching effect, and is taken from a very celebrated painting by the late J. M. Tracy, illustrating the closing part of a field trial, where the judges have directed one of the handlers to endeavor to kill the bird and test the pointing dog on retrieving.

An Unusual Litter.

Mr. E. E. Millard sends us a photograph of Mr. A. J. Gers' cocker spanial bitch Daisy, and her litter of eleven pups, all of them dogs, a record quite unusual.

Canoeing.

My Old Canoe.

When the morning sun peeps o'er the hill,
And the summer air is cool and still,
When the river currents swiftly glide
Without a ripple from side to side,
Then over the waters clear and blue
I gently paddle my old canoe.

Many a happy hour has fled
While on and on I'm gently led
By Nature's soft, resistless hand,
Along by shores of sparkling sand,
Or past the banks of tempting shade
With now and then a cooling glade;
There in the reeds still wet with dew
I stop and anchor my old canoe.

The gray November skies hang low,
And chill winds whisper of coming snow;
No more along the grassy brink
I list to the merry bobolink;
No more green fields and summer skies
And shady woodlands greet my eyes,
But stretching meadows brown and bare
With a dreary aspect everywhere.
The days grow short, and the chances few
For me to paddle my old canoe.

My thoughts go back as I behold
The frozen river bleak and cold,
And still remember the last sad day
That my little craft I laid away.
Despite its age, 'twill ever be
What it has always seemed to me;
A friend, companion—good and true—
And ever I'll long for my birch canoe.

J. S. Seabury.

American Canoe Association.

Twentieth Annual Meet.

HAY ISLAND—ST. LAWRENCE RIVER.

Aug. 4-18.

After many beautiful places visited by the American Canoe Association within the past twenty years—Lake George, its birthplace; Lake Champlain, Long Island Sound, the Hudson River and the different points on the St. Lawrence—none will compare in convenience and natural beauty with Hay Island, the site of the present camp. The general location is open to one objection, it is within full view of a town, barely half a mile distant, its houses, factories and wharfs being always within sight. The sense of solitude and isolation which is one of the great charms of the two weeks' outing to the city man is to a great extent impaired by this constant proximity of brick and wooden buildings, but at the same time there are many things to offset this disadvantage of the site. In the first place, the town, or city, is an old friend, the spires of Gananoque are easily visible from Grindstone and Stave islands, and the trip of half a dozen miles has always been a favorite one, not only with those who took a scientific interest in the nature and construction of Canadian whisky, but with the ladies from the original Squaw Point on Grindstone in 1884 and the following years. The quaint little Canadian town was always visited by campers from the States, whether intent on sampling the drinkables or shopping for articles of a solid, rather than liquid, nature. It has been in every way the least objectionable city neighbor that the meets have ever had, its inhabitants are hospitable and used to camp life, the hotel and transit element is small, it offers very convenient transportation facilities by rail or steamer, and it is a good base of supplies.

Apart from its close proximity to civilization, Hay Island is beautiful and convenient within and without. It can be reached more readily than either Stave or Grindstone, even from Clayton, and apart from that short row in a skiff there are several small steamers between the island and Gananoque. As it happens, the absurdities and inconsistencies of the U. S. Treasury impediments to travel among the Thousand Islands are less when the meet is entirely on a Canadian island than when on the American side of the line. Coming from New York and Boston, the general arrangements are the same as in former years, while the many clubs in Ontario and the St. Lawrence River between Buffalo and Montreal have been able to secure very reasonable transportation by steamer.

The location of the island, surrounded by other small islands near at hand, all rocky and wooded, and with Stave and Grindstone plainly visible, is one of the most picturesque on the river. By turning the back on Gananoque, to the northwest, one can command a most beautiful outlook over river and islands in all other directions, with no suggestion of civilization except an occasional cottage among the trees. The rocky formation of the islands, the smallest rising to a height of 30 to 40ft. in the center, with low beaches and abrupt walls of rock in alternation and an abundance of trees, with the broad stretches of blue water everywhere, makes a picturesque outlook on every hand.

Hay Island itself is a typical one, differing from its immediate neighbors only in its size and in natural beauty It is formed practically of two large rocks, situated about 100yds. apart, the western one being some six or eight acres in area, and the other about double the size. These rocks are in some places 40ft. above the water, while in others they slope to banks 8 or 10ft. high, or to sandy beaches. The west rock is covered with thin veneer of soil, just enough to support a thick grove of evergreens and large deciduous tres, offering plenty of shade for the main camp, which is located on the S.W. shore, where the ground slopes gradually. While oak trees of good size find secure footholds in the numerous crevices of the rocks, there is in no place soil enough to hold more than an occasional tent peg, and most of the guys must be anchored to the abundant small boulders or made fast to convenient trees. The northerly shore of the island rises abruptly in rocky walls 10 to 15ft. high, fringed with cedars, while to the west the rocks are lower, the beach being covered with large boulders on which the sea from a long stretch of the river breaks in big waves with a fresh westerly wind.

The larger island boasts of enough soil to carry fields of grain on its easterly end, where the ground has a pleasant sunny slope; but to the west the rocks rise in one place to a sheer height of 30ft. or more above the water. The ladies' camp is located on this wooded ridge, on the Gananoque side, while the mess tent and kitchens are toward the southerly shore. The ground is elevated, it pitches in all directions, shedding water quickly after a rain, and the soil itself is loose and sandy. Apart from the minor difficulty of driving tent pegs, the whole place is an ideal one for a camp of unlimited numbers, so far as the A. C. A. is concerned.

From the appearance of the ground, there has been at some far distant date a clear channel about 100yds. wide between the opposing rocky walls of two islands, but at the present time the two are joined by an isthmus of earth some 7 or 8ft. high, about 80yds. across. The center of this space is open, but the sides, along each rocky bluff, are wooded, and in the shade in the west side are the headquarters tents, arranged in the usual order—commodore, secretary-treasurer, camp site committee, regatta committee, hospital and signal officers. Opposite to these, under the rocks of the ladies' camp, are the camp store, barber's tent and a large tent for meetings.

On the Gananoque side of the isthmus is a beautiful little bay, the high rocky promontories on either side being joined by a semicircle of sandy beach covered with canoes. The main wharf is at one extremity of the beach, quite close to headquarters, which is, as it always should be, between but close to both the main and the ladies' camps. One can get from the wharf to either camp, to headquarters or to the mess tent with a walk of a very short distance.

The southerly side of the isthmus is part of a little bay ending in a rocky point of the main camp, and from all of this shore the sailing and paddling courses are visible. The sailing courses are by no means satisfactory, the winds being broken and flurry, and long shoals extending

from either shore. As it happens, this is but a minor evil, as through several circumstances the sailing promises to be a complete failure this year.

The first man on the ground was Mr. John S. Wright, of Rochester, Chairman of the Camp Site Committee, who arrived on July 30 and at once began the arrangement of the camp. It may be said that there is but one opinion throughout the camp as to the manner in which the work of this committee has been carried out by Mr. Wright. Those who took the trouble to write in advance specifying their wishes could have a tent floor in place and a tent pitched over it ready for occupancy on their arrival.

Com. Thorn and Sec'y-Treas. Forbush came in a few days later, and on Aug. 4, the date of formal opening, a number arrived. The attendance far exceeds that of all recent years, 240 members being registered up to Aug. 14. Among the old A. C. A. men are Paul Butler, E. H. Barney, F. C. Moore and Capt. Ruggles, who has given up canoe building to look after a very successful rotary snow plow for electric roads which he has invented. Mr., Mrs. and Miss Seavey are also in camp. A large part of the attendance comes from the Lake and St. Lawrence cities—Buffalo, Rochester, Toronto, Montreal, Kingston and smaller places. New York and Brooklyn are well represented, and there is a scattering of men from various points in each division. Among the new men at an A. C. A. meet are Messrs. F. B. Huntington, of Milwaukee; W. C. Jupp, of Detroit, and E. B. Nellis, of Wyandotte, all of the new Western Division just formed through the efforts of Com. Thorn and Vice-Com. Morse.

The different beaches show a number of canoes, many of the ordinary open Peterboro type, some of the new open racing machines, and about a dozen decked sailing canoes. The only new boats in the latter class are those designed by Capt. Ruggles at the request of Messrs. Morse and Smythe, of the New York C. C., and built by Fry, of Clayton. They are racing machines, with no sheer, the deck line being straight with a uniform freeboard of about 6in. from bow to stern. They have the high and long deck seat and small bath tub of the modern racer. Mr. Archbald has his Mab in camp, as well as an open canoe.

The race programme is already published, as well as the Regatta Committee, of which two members, Messrs. Brown and Huntington, are in camp, have come in for a great deal of harsh criticism at the hands of the racing men, objection being made to the scheduling of important events on fixed days and prior to the second week, always observed as race week in the past; to the preference given to paddling races, the small number of sailing races and the omission of a trial race for the sailing trophy.

What is called the "Sailors' Union," including the New York and Yonkers men and a few others, has objected strongly to the arrangements for the races, and a meeting of the Executive Committee was held on Aug. 11 at which the following resolution was offered by Mr. Quick, recorded by Mr. Smythe:

Resolved, That the Executive Commimttee recommends to the Regatta Committe that it hold the sailing trial race, and that the date of sailing the trophy race be postponed from Saturday, Aug. 12, until next week.

The motion was carried. A copy of the resolution was sent by the secretary-treasurer to the Regatta Committee, to which no reply was made, but an official notice was posted on the bulletin board, stating that the trophy race would be started at 10 A. M. on Saturday.

On Saturday there was a fine sailing breeze and the race was called as per programme, the only starters being Mr. C. E. Archbald, in Mab, and Mr. A. G. Behn, Rochester. During the race the members of the Sailors' Union gathered about the New York camp and drew up a protest to the Executive Committee. A group photo of the Union was taken and all hands united in cheering the contestants derisively as they finished each round. Mr. Behn withdrew on the second round, and Mr. Archbald finished alone and was declared the winner of the trophy.

A meeting of the Executive Committee was held next morning at headquarters, with Com. Thorn in the chair, the immediate purpose being to consider the question of payment of the camp dues by the members of the various war canoes, which came to camp for one day only for the war canoe races. After discussion the matter was referred to the commodore and the secretary-treasurer with power.

After this business was disposed of, Mr. Smythe presented the following:

A. C. A. Camp, Aug. 13, 1899.—C. P. Forbush, Esq., Secretary-Treasurer A. C. A. Dear Sir: Please place before the Executive Committee as soon as possible the following copy of the protest addressed to the Regatta Committee, and the copy of their reply, and the balance of this letter.

Aug. 12, 1899.—Al. T. Brown, Esq., Chairman of Regatta Committee. Dear Sir: The following undersigned members of the American Canoe Association respectfully protest against the action of the Regatta Committee in calling the sailing trophy race contrary to all precedent and contrary to Rule V. of the Sailing Regulations by not having a trial race; and beg to protest against the delivery of the sailing trophy until a trial race has been held or until the Executive Committee have interpreted the meaning of the rule.

(Signed.) HENRY H. SMYTHE,
F. C. MOORE,
L. G. PALMER.

Hay Island, Aug. 12, 1899.—Mr. H. H. Smythe, Mr. F. C. Moore, Mr. L. G. Palmer. Gentlemen: We own the receipt of your letter of even date. The committee having in their judgment complied with the By-Laws and Sailing Regulations so far as they concern the sailing of the trophy race, we most respectfully decline to consider your protest.

Very truly,
The Regatta Committee, by F. B. Huntington.

I now hereby make the same protest to the Executive Committee against the action of the Regatta Committee in calling the sailing trophy race contrary to precedent and contrary to Rule V. of the Sailing Regulations before having sailed the trial race; and beg to protest against the delivery of the sailing trophy until the trial race has been called or until the Executive Committee have interpreted the meaning of the rule.

Yours truly,
HENRY H. SMYTHE.

Mr. Quick made a motion, seconded by Mr. Smythe, that it was the sense of the Executive Committee that the final clause of Rule V. should be interpreted to mean that a trial race *must* be sailed prior to the trophy race; which was carried. Com. Thorn withdrew from the meeting, resigning the chair to Mr. Smythe, who in turn called to it Rear-Com. Waterbury, Eastern Division. Mr. Quick offered the following resolution, seconded by Mr. M. D. Wilt:

Resolved, That the trophy race sailed on Saturday be annulled and that the Regatta Committee call a trophy race in accordance with Rule V. as interpreted by this Committee. This was carried by a rising vote—ayes, Messrs. Smythe, Quick, Hall, Sparrow, Allen and Wilt; nays, English, Forbush and Stephens. The meeting then adjourned.

On Sunday the register was swelled by the arrival of several war canoe crews for the big race of Monday, eight crews being entered.

Yachting.

Fixtures.

AUGUST.

16. Annisquam, open, Annisquam.
17. Newport, ladies' day, Newport, Narragansett Bay.
17. East Gloucester, open, Gloucester, Mass.

27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

The Canada Cup.

Royal Canadian Y. C. Trial Races.

TORONTO—LAKE ONTARIO.

Aug. 7-8-9.

THE trial races for the selection of a defender for the Canada cup in the coming matches with the representative of the Chicago Y. C. on Aug. 21 were sailed off Toronto last week, beginning on Aug. 7, and continuing for three days.

The races were sailed over the same course as that agreed on for the cup races, located on Lake Ontario, just outside the island which forms Toronto Bay. A triangle with three-mile sides was laid out, with permanent buoys, two sides being divided by intermediate buoys to make a one and one-half mile course. For the windward and leeward races another buoy was set by the committee tug. The sum of $1,000 was offered in prizes, divided as follows: First, $300; second, $225; third, $175; fourth, fifth and sixth, each $100. The conditions were as follows:

The cash prizes will be awarded on the results of the first races to be sailed on Monday, Tuesday and Wednesday, respectively. Points will be given for these as follows:

First boat in each race 7 points, second boat in each race 5 points, third boat in each race 4 points, fourth boat in each race 3 points, fifth boat in each race 2 points, sixth boat in each race 1 point. No points will be awarded to a boat not finishing.

Prizes will be awarded on the aggregate of the points. In case of a tie the prizes will be added together and divided equally. The result of these races will in no way prejudice the judges in selecting the cup defender.

Additional races will be held on each day (weather permitting) over such courses as the judges may see fit. The selection of the cup defender will be made on the result of all races. First races on Monday and Wednesday mornings to be once round nine-mile triangle. First race on Tuesday to be four miles to windward or leeward and return. The time limit in these races will be 2½ hours, and if any race is not finished within the time limit the judges will decide as to when it will be re-sailed.

Signals.—Five minutes before preparatory signal the judges' boat, Augusta, will give three (3) long blasts, and hoist a red or blue flag to denote the course to be sailed.

Preparatory Signal.—Five minutes before the start a gun will be fired from the judges' boat.

Starting Signal.—The starting signal will be one gun and the lowering of the flag.

Four long blasts will be the signal for all yachts to return to the judges' boat to receive instructions.

Start for the first race each day will be at 11 o'clock.

The course was a very good one, on the open lake, free from currents and with a clear sweep to the wind from west, south and east. From the beach of the island the entire triangle was plainly visible, and one could watch the race without going afloat.

The competitors were six, three from Toronto and three from Hamilton, the dimensions being approximately as in the following table:

	Type.	Designer.	Builder.	Owner.	Helmsman.	Length over all.	L.W.L.	Beam.	Draft.	Sail area.
Minota	Keel	H. C. McLeod	James Andrews	R. C. Y. C. Syndicate	H. C. McLeod	40.00	30.00	9.00	6.00	1415
Beaver	Fin-keel	A. E. Payne	James Andrews	R. C. Y. C. Syndica e	Æmilius Jarvis	45.06	29.00	9.03	6.03	1300
Toronto	C. B.	G. H. Duggan	H. F. Hodgson	Geo. P. Reid and syndicate	J. Wilton Morse	49.06	28.06	12.00	2.00	1600
Hamilton	Fin-keel	Wm. Johnson	Wm. Johnson	R. H. Y. C. Fernside Syndicate.	J. H. Fernside	48.00	25.06	11.00	7.00	1580
Myrtle	Fin-keel	Wm. Barnside	Robertson Bros.	Walker Syndicate	Wm. Burnside	47.06	24.00	12.00	7.00	1650
Weir	Fin-keel	Hugh Weir	James Weir	Builders	James Weir	47.06	26.00	.....	6.06	1500

Minota is in all respects the best yacht of the fleet, a handsome little cutter with an S section, but well hollowed below. She was designed for speed only, and her netted surface has been cut away fine, but with a cabin house she could be converted into a serviceable yacht. She was designed by H. C. McLeod, Esq., of Halifax, N. S., an amateur. She is rigged as a pole-masted sloop, without topsail, merely a big mainsail and jib, 1,400 sq. ft. in all. Her spars are hollow and her fittings, which were specially made in the Halifax dock yard, are very light. She is owned by a syndicate of R. C. Y. C. members, including Messrs. G. A. Cox, W. G. Gooderham, H. C. McLeod, F. G. Cox, E. R. Thomas, A. E. Kemp, W. E. H. Massey, A. E. Ames, J. W. Flavelle and Frank Walker.

Beaver was designed by Arthur E. Payne, of Southampton, Eng., and built by Jas. Andrews, of Oakville, who built Canada and Minota. She is a fin-keel, but the fin is of wood down to the lead. Her bow is not handsome, but apart from it she is a very nice looking little ship, to all appearances when afloat of the ordinary S section. Her sail plan is similar to that of Minota, but with 1,300 sq. ft. The two are fitted and rigged alike, the gear being very simple and well arranged and the fittings very light. The blocks are of bronze, specially designed and made for these boats in Toronto.

In each boat a plank about 12in. wide and 3in. thick runs across at the mast, which passes through it, the plank being about 18in. above the floor. All halyards lead through the deck, some of them being made fast on belaying pins in the plank, while others lead through fairleads on the plank and to cleats on the cabin floor. The wire halyards make up on ballards about 4in. in diameter made fast to the plank. The crew is below, with mainsheet led in from aft and halyards as described from forward. The sails were made in Toronto, the mainsails crosscut. Both boats have small hatchways amidships, steering cockpits aft, and steer with tillers, the rudders being of the ordinary cutter type. Shortly before the trials they were christened Minota and Beaver, having previously been known only by the names of their designers. Minota is white and Beaver black. Beaver is owned by the same syndicate as Minota.

Toronto was designed by Mr. G. H. Duggan for a syndicate including Messrs. Geo. P. Reid, George Gooderham, A. A. Allen, C. Cockshutt, Geo. H. Gooderham, J. H. Horsey, W. R. Johnston, G. Plunkett Magann, A. E. Massey, R. Millichamp, W. D. Matthews, Wm. Mackenzie, Fred Nichols, E. B. Osler, H. Pellatt, J. M. Taylor and H. D. Warren. She was built under the supervision of Mr. J. Wilton Morse, who sailed her. She is practically a big Glencairn III., with a full bow, an immense area of deck on a shoal hull. She had a watertight cockpit drawing into the centerboard trunk, with no room below. Her centerboard is about 6ft. wide and 4in. thick, with 560lbs. of lead on the bottom; it is fitted to drop as in the 20-footers, and to slide fore and aft in the slot, a powerful tackle being necessary to handle it. The rudder is narrow and deep, just as in the 20-footers; and the tiller is about 6ft. long, with the "dog's-leg" extension used by Mr. Duggan on the twenties.

The construction is very clever, the big shoal raft being a series of trusses, fore and aft and athwartship. The rig is a pole-masted sloop or cutter, a staysail being carried at first, but later being replaced by a single big jib. She carried a full outfit of club topsails, jib topsails, jibs, etc. The spars were hollow and very light, being made under Mr. Duggan's direction at Dorval. The shrouds set up with wire rope lanyards. In the thunder-

storm of July 29 Toronto proved that she was practically non-capsizable, lying over under the full force of the wind until her mast was parallel with the water, and coming up safely.

The three Hamilton boats were of a type peculiar to that city—wide, powerful fins, very much like the ordinary centerboard yacht with a wood fin and lead bulb added. They were all cutter rigged—Myrtle and Hamilton with topmast and the Weir boat with polemast. The latter had a fixed cabin trunk, but the other two had open hatches amidships, the cabin house originally on Myrtle having been removed. The crews were mainly amateurs, one professional being carried on some of the yachts.

The rather difficult task of selecting one from the fleet was assigned to a special committee including Messrs. E. H. Ambrose, Royal Hamilton Y. C.; A. F. Riddell, Royal St. Lawrence Y. C.; Com. Owain Martin, Queen City Y. C.; Sidney Small, R. C. Y. C., and W. Q. Phillips, Association Timekeeper.

Monday was a clear bright day, and being Toronto's Civic Holiday, a great many people were out to witness the race, either from yachts and steamers or from the island shore. The large triangle was selected, to be sailed with buoys to port, or the first leg up the island shore. The wind was blowing about eight miles, and S.E., making a reach to the first mark and a beat over the second leg. Mr. Duggan had been up to try Toronto himself, and sailed in her in the thre races. Beaver was over first, with Myrtle and Toronto close after. Minota had a poor start, being busy with her balloon jib and losing 1m. 22s. Toronto reached out, with her big balloon jibtopsail drawing, and was ahead at first mark, with Beaver second. The two made a good fight to windward, Beaver coming out ahead. They ran in under spinakers, Toronto setting a very large one. The elapsed times over each leg were as follows, counting from the actual time of crossing. The prizes were awarded on the basis of a start from the gun in the first race of each day, but in all races the times were also taken as the yachts crossed the line. The competitors were also requested to avoid as much as possible all luffing matches and other maneuvers which would tend to hide the true merits of the boats:

First Race—Start, 11 A. M.

	1st Leg.	2d Leg.	3d Leg.	Course.
Beaver	0 26 26	0 36 47	0 30 16	1 33 13
Minota	0 26 27	0 38 20	0 30 31	1 35 18
Toronto	0 25 55	0 39 47	0 30 12	1 35 35
Hamilton	0 26 53	0 38 20	0 30 31	1 35 18
Myrtle	0 27 50	0 39 37	0 30 20	1 37 47
Weir	0 28 00	0 47 24	0 31 10	1 45 35

The first race finished at 12:40, and the assembly signal was at once given for the second over the same course, the wind being lighter. Beaver led over the line with Minota second. Toronto started with a handicap of 1m. 45s., but outran the fleet, and was first at the western mark, where they come on the wind. Toronto still held her place, though the wind was light and there was a lift to the sea. It was a reach in, though Beaver set her spinaker. Minota traveled very fast and caught Toronto, the two doing some luffing, the finish being practically even. The times were:

Second Race—Start, 1:00 P. M.

	1st Leg.	2d Leg.	3d Leg.	Course.
Toronto	0 54 53	0 24 15	0 33 12	1 51 09
Hamilton	0 55 17	0 25 11	0 33 21	1 52 49
Minota	0 55 52	0 25 04	0 31 47	1 52 53
Beaver	0 56 08	0 25 15	0 31 37	1 53 24
Weir	0 57 17	0 25 11	0 35 14	1 57 42
Myrtle	1 03 30	0 24 35	0 32 18	2 00 23

The race finished at 3 P. M., and there was still time for another, so the start was given at 3:25, over a short course, one and one-half miles to windward and return. Before the start Mr. McLeod went on board of Beaver, while Mr. Jarvis took the stick on Minota. Beaver took the lead over the line, with Minota second. They beat out and came in with spinakers to starboard, the times being:

Third Race—Start, 3:25 P. M.

	Windward Leg.	Leeward Leg.	Course.
Hamilton	0 25 10	0 18 19	0 42 29
Beaver	0 25 30	0 18 58	0 44 28
Minota	0 26 03	0 18 47	0 44 50
Toronto	0 26 27	0 18 50	0 45 17
Myrtle	0 28 22	0 18 56	0 47 18
Weir	0 28 28	0 20 05	0 47 33

A late start put Hamilton in the middle of the fleet, and only the times show that she made a very good race, being first out and in.

The weather on Tuesday was fair and pleasant, with a little more wind, still S.E., and a lumpy sea. The course for the first race was four nautical miles to windward and return. Toronto and Beaver were over the line smartly, but Minota had a bad blanketing under the lee of the three big Hamilton rigs. As on the first day, Toronto, Hamilton, Myrtle and Weir carried club topsails. Minota footed off to get clear of the boats to windward and then began to work out after the leaders. In the moderate breeze and easy sea she went very fast, and long before the weather mark was rached she had cleared off her bad handicap. At the turn Beaver was very quick with her spinaker, but Minota was slow, losing a couple of minutes before it was set. They ran in with a light breeze, being timed:

Fourth Race—Start, 11:05 A. M.

	Windward Leg.	Leeward Leg.	Course.
Minota	1 03 45	0 46 16	1 51 01
Beaver	1 05 39	0 48 32	1 51 11
Hamilton	1 10 00	0 46 13	1 56 13
Toronto	1 10 26	0 46 02	1 56 28
Myrtle	1 13 15	0 47 15	2 00 30
Weir	1 17 06	0 51 33	2 08 59

The second race of the day was sailed at 1:45, over the same course, Minota leading over the line. The windward work was slow, with little wind and some sea; but under these unpromising conditions Toronto did comparatively well, as the sea seemed to have no particular effect on her.

Fifth Race—Start, 1:45 P. M.

	Windward Leg.	Leeward Leg.	Course.
Beaver	0 57 11	0 40 22	1 37 33
Minota	1 01 59	0 37 55	1 39 51
Hamilton	1 07 56	0 39 41	1 43 37
Toronto	1 04 34	0 39 17	1 43 51
Myrtle	1 09 14	0 39 50	1 49 04
Weir	1 10 30	0 42 45	1 53 15

As it was nearly 4 o'clock a short race was called over the four and one-half mile triangle, buoys to port.

SHAMROCK.

From the Illustrated Sporting and Dramatic News.

Beaver started first, on a reach, and covered the leg with a good lead. It was also a reach on second leg, with a breeze of seven to eight miles per hour and little sea, Beaver still gaining. They ran in under spinakers, Beaver losing some of her lead, the times being:

Sixth Race—Start, 3:55 P. M.

	1st Leg.	2d Leg.	3d Leg.	Course.
Beaver	0 18 39	0 11 40	0 22 10	0 51 27
Minota	0 19 21	0 12 38	0 21 16	0 53 15
Toronto	0 20 32	0 44 25	0 21 16	0 56 13
Hamilton	0 23 15	0 14 50	0 19 47	0 57 52
Weir	0 22 54	0 16 25	0 21 50	1 00 59
Myrtle	0 23 39	0 18 00	0 21 45	1 03 24

On Wednesday there was a fresh breeze from the east, with quite a sea on the lake, but the seas were long, the result of a blow down the lake, and not the short, lively chop kicked up locally by a strong breeze. The six yachts were out at the line in good time, and at 11 A. M. they were started over the large triangle, with marks to port, making a run to the west mark and a beat to the offshore mark. Minota turned in a single reef and Toronto crossed the line under lower sails, but soon set a sprit topsail, the three Hamilton boats carrying club topsails. On the win on the second leg there was a breeze of upward of 15 knots, with a sea that jumped the committee boat about to a lively tune. Toronto did not seem to feel the sea to her detriment, but at 11:40 she struck her sprit topsail. She seemed to need the sail to drive her, though she made fair time over this leg. Just at noon Weir carried away her mast just below the hounds, one man being alost at the time, but escaping without injury. Her crew refused assistance from a tug, and set to work to lash blocks aloft, on which they set a close-reefed mainsail and storm jib and resumed their course to the second mark, finally rounding it and finishing some time after 2 P. M.

The last leg was a reach under balloon jibs. The times were:

Seventh Race—Start, 11:05.

	1st Leg.	2d Leg.	3d Leg.	Course.
Beaver	0 25 09	0 34 39	0 21 35	1 21 23
Minota	0 26 50	0 37 29	0 24 08	1 28 27
Toronto	0 27 36	0 39 29	0 22 22	1 29 27
Myrtle	0 25 55	0 43 23	0 22 56	1 31 14
Hamilton	0 25 56	0 44 12	0 23 07	1 33 15
Weir	0 27 20	Not timed.		

The choice now lay between Beaver and Minota, but the committee was unsatisfied as to the better, especially as Minota was known to be very fast in extreme light weather—lighter than on either of the three days. The three—Toronto, Hamilton and Myrtle—were notified that they need not start again unless they wished. Mr. Jarvis and Mr. McLeod were requested to change boats, and a new race was started over the same course, the wind being a little lighter. Minota shook out her reef before the start, and crossed 4s. after Beaver, both with spinakers to port. The running was very close, Minota rounding the west mark a little in the lead. The windward mark showed a steady and gradual gain for Beaver, she making 1m. 4s. in the three miles. The times were:

	1st Leg.	2d Leg.	3d Leg.	Round.
Beaver	0 25 47	0 34 30	0 21 26	1 21 43
Minota	0 25 32	0 33 26	0 21 54	1 23 52

This race ended the formal trials, the record by points standing:

	Points.	Prize.		Points.	Prize.
Beaver	19	$300	Hamilton	9	$100
Minota	16	225	Myrtle	7	100
Toronto	12	175	Weir	3	100

In the afternoon the committee held a meeting, but came to no decision between Beaver and Minota. While the former had made the best showing in the three days of trial racing, the latter was known to be very fast in lighter breezes than on the three days; and in the races preceding the trials she had shown herself very close to Beaver. Mr. Jarvis, after repeatedly sailing each boat, was himself in doubt as to the better for the cup series with a long time limit.

It was decided to try the two more thoroughly, and on Thursday afternoon they sailed two short races inside the bay, Mr. Weir, at the request of Mr. Jarvis, steering Minota. There was a moderate east wind, with a light rain. The times were:

First Race.

	1st Leg.	2d Leg.	3d Leg.	Course.
Beaver	0 10 13	0 10 20	0 07 32	0 28 05
Minota	0 10 46	0 09 45	0 07 44	0 28 15

Second Race.

Minota	0 07 20	0 11 40	0 10 02	0 29 02
Beaver	0 07 29	0 11 23	0 10 26	0 29 18

Though short, these two races under very even conditions show how closely the two boats are matched.

SHAMROCK.

From the Illustrated Sporting and Dramatic News.

The final races for the cup against the challenging yacht Genesee will be sailed over a triangle of 21 miles from the same start as in the trial races or a windward and leeward course. The syndicates owning Beaver, Minota and Toronto have decided to sell the three at auction at the R. C. Y. C. house on Thursday evening, Aug. 17.

Detroit Y. C. Free-for-All.

THE Detroit Y. C. will give the annual free-for-all sweepstakes Sept. 11, for prizes: First, $200 in gold, championship flag and possession of Hotel St. Claire cup for one year; second, $100 in gold; third, $50, and fourth, $25. Prizes will be increased $25 for each yacht over eleven entered. In addition to cup, cash prizes and flag, there will be a time prize for 45 and 40-footers, and one for 35 and 30-footers.

Entrance fee, $25. All yachts must enter and receive sailing number from the regatta committee at the club house before 6 P. M. Sunday, Sept. 10. Each entry will be accompanied by a measurer's certificate from the home

club. Entries received before Sept. 10 by Wm D. Moebs, 92 Woodward avenue, Detroit, Mich.

Yacht Racing Union Rules govern, with exception of Paragraph 3, Section XIV. Crews struck out. All boats under 30ft. racing length must accept 30ft. racing measurement.

Course.—Triangle, three and one-half miles on each leg, twice around, making twenty-one miles in all. Start—One and one-quarter miles east of Fourth Crib Light, three and one-half miles E.S.E.⅜E., thence three and one-half miles N. by W., thence three and one-half miles S.W.¼W., twice around.

New York Y. C. Cruise.

RENDEZVOUS, NEW LONDON.

Monday, Aug. 7.

THIS year's cruise of the New York Y. C. was the most successful, in the matters of interest and attendance, ever given by that club. The attendance was far greater than at any previous cruise, and great interest was manifested in the racing, particularly in the duels between Columbia and Defender. The prizes offered were numerous and valuable. The programme of the cruise was as follows:

Tuesday, Aug. 8.—New London to Gardiner's Bay.

Wednesday, Aug. 9.—Gardiner's Bay to Newport.

Thursday, Aug. 10.—Newport to Vineyard Haven.

Friday, Aug. 11.—Squadron will remain at anchor in Vineyard Haven.

Saturday, Aug. 12.—Vineyard Haven to Newport.

Sunday, Aug. 13.—Squadron to remain at anchor at Newport.

Monday, Aug. 14.—Races off Newport for the Astor cups.

Tuesday, Aug. 15.—Races off Newport.

Wednesday, Aug. 16.—Meeting of the captains on the flagship at noon.

Second Day, First Squadron Run.

NEW LONDON TO GARDINER'S BAY.

Tuesday, Aug. 8.

Tuesday morning promised well. There was a good whole-sail breeze from the west, which became stronger as the race progressed. Interest, of course, centered in the racing of the sloops of Class G, in which were entered Columbia, Defender, Vigilant and Navahoe. Columbia finished first, four minutes and one second ahead of Defender, who beat Vigilant by fifty-four minutes. Navahoe withdrew. The course was thirty miles. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Schooners—Class A.				
Hildegarde	11 05 00	3 41 55	4 36 55	4 36 55

Third Day, Second Squadron Run.

GARDINER'S BAY TO NEWPORT.

Wednesday, Aug. 9.

On Wednesday the race was started in a light, fluky breeze, which increased until a good wind blew from the S.W. The racing was not as spirited as that of yesterday. The course to-day was forty-three miles. Columbia defeated Defender by 22m. 55s., probably the worst beating Defender has ever received. The schooner Hildegarde grounded near Goat Island, Sistae lost her topmast and Quissetta her spinaker. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Schooners—Class A.				
Hildegarde	10 40 00	4 42 11	6 02 11	6 02 11

Fourth Day, Third Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Thursday, Aug. 10.

The start on Thursday was made from the Brenton's Reef Lightship, and the course was thirty-seven miles to Vineyard Haven. The wind blew hard from the south and there was a heavy sea and rain. The starting signal for the sloops was given at 11 o'clock, and a few seconds after Vigilant crossed the line. Next was Syce, Gloriana and Navahoe closely bunched and well to windward of the others. Next followed Lotowana, Queen Mab, Sayonara and Katonah. Sistae was next over, followed by Acushla II., the sloop Hildegarde, the yawl Petrel and sloop Hussar.

The starting signal for schooners was given at 11:05. Amorita crossed the line at the crack of the gun, followed by Alcea, America, Iroquois, Quissetta, Katrina, Colonia, Latona and Shamrock. Priscilla II. led the small schooners, followed by Rusalka and Neara. Mayflower, the old Cup defender, started next, leading Hildegarde, Grampus, Glendover, Newalia, Marguerite, Ariel, Wayfarer and Gloriana. At 11:20:16 Defender crossed the line, Columbia following at 11:20:37. Vigilant finished in the lead, with Navahoe second. Columbia beat Defender one minute fourteen seconds, elapsed time, their times being:

	Start.	Finish.	Elapsed.
Columbia	11 20 37	2 21 15	3 00 38
Defender	11 20 16	2 22 08	3 01 52

Fifth Day, Fourth Squadron Run.

VINEYARD HAVEN TO NEW BEDFORD.

Friday, Aug. 11.

The weather on Friday was not propitious for a race. Rain continued to fall, and the light wind shifted from one quarter to another. Defender was becalmed for nearly an hour, and was finally towed in. The day's racing was unsatisfactory and uninteresting. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Sloops—Class G.				
Columbia	11 15 45	4 59 22	5 43 47	5 43 47
Defender	11 15 30	Not timed.		
Vigilant	10 54 30	2 08 41	3 14 11	3 14 11
Navahoe	10 53 52	3 02 03	4 08 11	4 07 25
Sloops—Class H.				
Hildegarde	10 51 17	4 15 03	5 23 46	5 23 46
Queen Mab	10 55 00	4 06 37	5 11 37	5 10 26
Sloops—Class J.				
Gloriana	10 50 52	3 25 32	4 34 40	4 34 40
Sayonara	10 54 20	5 10 40	6 16 20	. .. ..
Petrel (yawl)	10 55 00	5 09 07	6 14 07	. .. ..

Sixth Day, Fifth Squadron Run.

VINEYARD HAVEN TO NEWPORT.

Saturday, Aug. 12.

The conditions on Saturday were not much better than those of Friday. The wind continued light and fluky, and at one time the entire fleet was becalmed. The course was twenty-two miles, and the race was started in a light N.E. wind. Defender led Columbia over the starting line by nineteen seconds, but Columbia passed her on the first leg and finished nineteen minutes and four seconds ahead. The times were:

	Start.	Finish.	Elapsed.	Corrected.

Seventh and Eighth Days, Astor Cups.

NEWPORT.

Sunday and Monday, Aug. 13 and 14.

The fleet lay at anchor at Newport on Sunday. Most of the yachtsmen went ashore. There was a heavy fog, which lifted about noon, but shut in again later in the day. On Monday the races for the Astor cups were sailed. The fog cleared off during the night and a good wind blew from the N.E. The start was from Brenton's Reef Lightship and the course was thirty-six miles. Columbia beat Defender by thirteen minutes and seven seconds, and won the $500 cup. Amorita won the $1,000 cup by the narrow margin of twelve seconds. On Tuesday the races for the wind-up cups will be sailed, and on Wednesday the owl and gamecock colors will be rowed for. The times of Monday's races were:

	Start.	Finish.	Elapsed.

Horseshoe Harbor Y. C.

LARCHMONT—LONG ISLAND.

Sunday, Aug. 13.

THE Horseshoe Harbor Y. C. sailed its annual regatta on Aug. 13 in a fair east wind. The sloop Pyxie carried away her throat halyards, but finished the race. The course was fifteen miles for sloops, knockabouts and cabin cats, and ten miles for the open boats. The times were:

Cabin Sloops—36ft. Class—Start, 2:15.

	Elapsed.
O Shima San, H. J. Pratt	2 10 40

Cabin Sloops—30ft. Class—Start, 2:05.

Alerion, A. H. Alker	2 16 30
Pyxie, C. E. Griffin	2 52 20

Cabin Sloops—25ft. Class—Start, 2:05.

Song and Dance, L. J. Bowry	2 37 15

Open Sloops—20ft. Class—Start, 2:05.

Fidget, T. H. Burch, Jr.	2 14 45
Crawler, Robert Jacob	2 04 40
Edwina II., J. N. Gould	2 31 30
Nike, Guy Forbes	2 16 35

Knockabouts—25ft. Class—Start, 2:15.

Midge, F. W. Boyer	2 47 10
Kittie, Hazen Morse	2 26 20
Spindrift, S. C. Pirie	2 18 50
Mongoose, Simeon Ford	2 21 30
Thelga, A. P. Thayer	2 40 30

Knockabouts—15ft. Class—Start, 2:15.

Nora, Lewis Iselin	1 57 00
Ethel B., Charles E. Bewer	2 09 00
Fiddler, N. P. Voltz	2 11 30

Cabin Catboats—30ft. Class—Start, 2:10.

Sconce, A. V. Smith	2 55 55
Wenaumer, E. C. Center	Withdrew.

Cabin Cats—25ft. Class—Start, 2:10.

Win or Lose, J. S. Appleby	2 36 55

Open Cats—25ft. Class—Start, 2:10.

Fairy, Frank E. Towle, Jr.	1 54 10
Marguerite, S. G. Poole	2 03 20

Open Cats—20ft. Class—Cruising—Start, 2:10.

Miriam, J. M. Price	2 19 20
Iris, J. L. Roberts	2 22 20

Open Cats—20ft. Class—Racing—Start, 2:10.

Ox, Robert Bavier	2 04 00
Spunk, C. E. Silkworth	1 52 20
Kazaza, T. J. McCahill, Jr.	1 51 05

Open Cats—15ft. Class—Start, 2:10.

Lobster, T. J. S. Flint	2 03 00
Scout, H. C. Hall	2 06 35
Bouncer, Arthur D. Price	1 58 50
Old Squaw, S. F. Carstein	Withdrew.

The winners were O Shima San, Alerion, Song and Dance, Crawler, Spindrift, Nora, Oconee, Win or Lose, Fairy, Miriam, Kazaza and Bouncer.

The 30-Footers at Newport.

THE 30-footers sailed a race on Aug. 8 over the Briggs Ledge course in a N.W. wind, the times being:

Start, 3:30:	Finish.	Elapsed.
Asahi, Loyd Warren	5 22 59	1 59 32
Vaquero III., H. B. Duryea	5 23 32	1 53 32
Esperanza, H. O. Havemeyer, Jr.	5 24 40	1 54 40
Wawa, R. Brooks	5 25 14	1 50 14
Carolina, Pembroke Jones	5 25 50	1 55 50
Dorothy, H. P. Whitney	5 27 14	1 57 14
Veda, C. Vanderbilt, Jr.	5 31 16	2 01 16
Pollywog, A. H. Paget	5 33 55	2 02 55

On Aug. 10 a race was sailed in a strong S.E. gale and heavy seas, the times being:

Start, 4:01:	Finish.	Elapsed.
Vaquero III., H. B. Duryea	5 49 00	1 48 00
Wawa, R. Brooks	5 39 31	1 48 31
Hera, R. N. Ellis	5 49 46	1 48 46
Veda, C. Vanderbilt, Jr.	5 53 57	1 52 57

On Aug. 11 a sweepstake race was sailed over a six-mile course, in a light N.E. wind. The times were:

Start, 3:14:	Finish.	Elapsed.
Carolina, Pembroke Jones	5 35 54	2 10 54
Veda, C. Vanderbilt, Jr.	5 37 04	2 23 54
Vaquero III., H. B. Duryea	5 38 18	2 24 54
Hera, R. N. Ellis	5 41 20	2 27 20
Pollywog, A. H. Paget	5 41 25	2 37 25
Asahi, Lloyd Warren	5 41 51	2 37 51
Esperanza, H. O. Havemeyer, Jr.	5 42 03	2 28 03
Raccoon, John R. Drexel	5 42 26	2 28 26
Dorothy, H. P. Whitney	5 44 13	2 30 13
Wawa, R. Brooks	5 48 22	2 34 22

White Bear Y. C.

ST. PAUL, Minn., Aug. 6.—In the White Bear Y C. regatta yesterday, over a course of eight knots for the 20-footers, six knots for others (except the larks—four knots), a light breeze prevailed. The feature of the race was the close sailing of Wierdling and Keewaydin, which came in from center to the home buoy side by side, Wierdling round the buoy one second in the lead. The times were:

20ft. Class—Start, 3:10.

	Finish.	Elapsed.
Cavite	4 51 58	1 41 58
Yankee	4 54 37	1 44 37
Mahto	Withdrew.	

20ft. Specials—Start, 3:15.

Harriet E.	4 37 33	1 22 33
Wierdling	4 41 50	1 26 50
Keewaydin	4 41 51	1 26 51
Torpedo	4 45 29	1 30 29

17ft. Class—Start, 3:15.

Xenia	4 39 36	1 24 36
Goblin	4 41 17	1 26 17

21ft. Sloops—Start, 3:20.

Falcon	4 46 58	1 26 58
Jennie R.	4 47 22	1 27 22
Pastime	4 48 15	1 28 15
Hornet	4 52 08	1 32 08

Larks—Start, 3:20.

Chippy	4 51 30	1 31 30
Gypsie	4 52 43	1 32 43
Broncho	4 53 02	1 33 02
Starling	4 57 45	1 37 45
Mudhen	4 58 26	1 38 26

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Aug. 15-17.—Little Rock, Ark.—Arkansas State Sportsmen's Association's ninth annual tournament; $375 added; two-cent targets; Rose system. Paul R. Litzke, Sec'y.

Aug. 16.—Elkwood Park.—All-day sweepstake shooting.

Aug. 17.—West Chester, Pa.—First of intercity contests between ten-men teams of the Phoenix Gun Club, the West Chester Gun Club and the Shuler Gun Club.

Aug. 18.—Hackensack, N. J.—Hackensack River Gun Club's live-bird shoot at Heflich's grounds, Hackensack River Bridge, Paterson Plank Road. John L. Chartrand, Sec'y.

Aug. 19.—New Brunswick, N. J.—Central New Jersey Trap-Shooters' League contest, on grounds of Brunswick Gun Club.

Aug. 19.—Elkwood Park, Long Branch, N. J.—Pennsylvania Club cup, 25 birds, $25; 12:30 P. M.

Aug. 20.—Jersey City, N. J.—Opening shoot of the Hudson Gun Club. A. L. Hughes, Sec'y.

Aug. 22.—Worcester, Mass.—All-day target shoot of the Worcester Sportsmen's Club; $40 added. A. W. Walls, Sec'y.

Aug. 23.—Atlantic City, N. J.—Elliott-Crosby contest for E. C. cup, emblematic of target championship.

Aug. 23.—Elkwood Park, Long Branch, N. J.—West End handicap, 20 birds, $20, birds included; 12 noon.

Aug. 23-25.—Spirit Lake, Ia.—C. W. Budd and Fred Gilbert tournament; $300 added.

Aug. 25-26.—Chicago, Ill.—Tournament of the Eureka Gun Club; $100 added. Dr. C. W. Carson, 3872 Cottage Grove avenue, Sec'y.

Aug. 26.—Elkwood Park.—Grand national handicap, 50 birds, $50; 10 o'clock.

Aug. 30.—Elkwood Park.—Dewey handicap, 15 birds, $15; 1 o'clock.

Aug. 30-31.—Auburn Me.—State tournament on the grounds of the Auburn Gun Club. L. A. Barker, Sec'y.

Sept. 2.—Elkwood Park.—Country Club handicap, 20 birds, $20; 11:30 o'clock.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 4.—Brooklyn, L. I.—Fulton Gun Club's Labor Day shoot.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 6.—Lyndhurst, N. J.—John Wright's live-bird shoot.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 19-20.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.

Sept. 19-22.—Detroit, Mich.—Jack Parker's eighth international tournament; live birds and targets; $500 cash added.

Aug. 23.—Canton, Ill.—Annual tournament of the Canton Gun Club. J. C. Thompson, Jr., Sec'y.

Sept. 26-27.—Midway Park (Between Warren and Miles), Trumbull County, O.—The Rummell-Gaston tournament.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

On Wednesday of this week the Connecticut State League will hold a shoot on the grounds of the Parker Gun Club. Shooting commences at 9:30. The magautrap will be used. All shooters are invited. There are twelve events on the programme—165 targets—with a total entry of $10. The team race takes place immediately after the business meeting of the League. The club will give $15 to the winning team. Four moneys—40, 30, 20 and 10 per cent. Refreshments will be provided. To reach the grounds take electric cars at Hanover street, near depot, to Hanover Park, Meriden, Conn. Mr. Geo. B. Thorpe, Sec'y.

The tournament of the Michigan Trapshooters' League, at Bay City, Mich., Aug. 2 and 3, was the occasion of many significant wins, the expert championship of the State going to H. Waruf, of Kalamazoo, both the semi-expert championship of the State and the live-bird championship of the State going to Frank Shearer, and the three-men team State championship was won by Messrs. Parker, Cox and Wolf, of Detroit. The best average of two days and the longest straight run was to the credit of Mr. Waruf. All used Peters cartridges.

Mr. John Parker's eighth annual international tournament, Sept. 19-22, at Detroit, Mich., is an international event, toward which the good will of all shooters centers. "Jack," as the boys endearingly address this popular manager, always has some novel feature which adds interest to the shooting. This year the programme is arranged as follows: The Peters Cartridge Company adds $500. There will be three days at targets, one day at live birds. Each target day $100 is added to the programme events; and $100 is added to the international live-bird event, which is at 25 birds, entrance $25, and international trophy, value $150, to winner; three wins are necessary to constitute a title. For the four days' general average there are $100 set apart, divided 35, 20, 15 and 10 per cent. Of the ten target events each day four are open to all without a handicap; in six events the experts are handicapped as follows: A special set of five traps is arranged for them; two of the traps 16yds. from the score and 5ft. apart; two traps 21yds. from the score and 11yds. 2ft. apart, and one trap 45yds. from the score, used to throw incoming targets. The amateurs shoot on traps arranged after the Sergeant system. There will be contested each day at targets the individual target trophy, the individual team trophy and a free trip to St. Clair Flats, where there is shooting and fishing galore.

The programme of the Lake City Gun Club's sixth annual tournament, Warsaw, Ind., Aug. 23 and 24, is alike for each day. There are twelve events, of which six are at 10, two at 15, two at 20, and two at 25 targets. Shells and guns shipped care of the secretary, J. S. Campfield, will be delivered at the grounds free of charge. Shooting commences at 9 o'clock. Events held open for shooters arriving on forenoon trains. Targets 2 cents. Purses in 10-target events, 50, 30 and 20 per cent.; all other events 35, 30, 20 and 15 per cent. Ten per cent. will be deducted and divided each day among the five high guns shooting through the day's programme. Shooting for price of targets not allowed until after the regular events are finished. Magautrap and bluerocks. The programme sets forth the following: "Reduced fare can be secured on all railroads by purchasing your tickets to Winona Assembly grounds, which is only a short distance from Warsaw. Ask your ticket agent for rates."

The programme of the Worcester Sportsmen's Club, Aug. 22, can be obtained of the secretary, Mr. A. W. Walls, Worcester, Mass. There are ten events, of which the first four have 50 targets, three at 10, one at 20, with a total entrance of $3.50. The remaining six events have a total of 100 targets, with a total entrance of $10, and in these events (5 to 10 inclusive) Mr. A. B. F. Kinney will give $25 to the six highest averages, as follows: $8, $6, $4, $3, $2, and $2. At 2 o'clock a 100-target race will be shot, known traps, unknown angles, between Messrs. E. C. Griffith, of Pascoag, R. I., and C. E. Forehand, of Worcester. Sweepstake purses divided 40, 30, 20 and 10 per cent. Take Greendale cars; stop off at Huntington avenue.

There is an old saying that if one cannot eat oats one must eat hay; but that saying probably was in vogue before the carriage was horseless, or rather before the horse was carriageless. In either case the matter has nothing to do with lambs. On Sept. 4 the Parker Gun Club at its Labor Day shoot offers, in addition to the regular events, a sheepbake. This absolutely solves the intricate problem of an equal division of everything in sight among the men who cannot shoot or who can shoot, inasmuch as what a contest loses at targets he can in percentage make up on lamb, and what he gains on targets he can still more make up on lamb. This is an event in which the lambs will get the worst of it, for they will be cooked to a turn and eaten. Paste the date in your hat.

The Fulton Gun Club's all-day Labor Day shoot, Sept. 4, will commence at 10 o'clock. Targets thrown at 1½ cents. Optional sweepstakes. Handicap shoot for loving cup, entrance $1; 50 targets. Refreshments on grounds. The shoot takes place on Mr. Richard Oseing's farm, Crescent street and Plunder's Neck road, old Farmers' Club grounds. Take King's County L to Crescent Station. A ten minutes' walk toward the old mill, or the stages at the station, fare 5 and 10 cents, will land the visitor at the grounds.

Mr. J. S. S. Remsen, the president of the Brooklyn Gun Club, is spending the latter part of his vacation in Clinton county, New York, a month having nearly elapsed since he began his outing. With his father and mother he enjoyed a charming ride on the St. Lawrence from Montreal, Quebec, and up the Saguenay. In a letter to a friend Mr. Remsen naively adds: "You may tell the boys that the two most distinguished presidents, Mac and J. S. S. R., are ruling the northern portion of the State of New York."

Jas. Cowan, of Philadelphia, defeated Ed Johnson, of Atlantic City, N. J., in a match at 100 live sparrows per man, 21yds. rise, last week. The match took part of two days, as on the first day there were not enough sparrows; the second part of the match was shot on Friday, Aug. 11. Cowan won by 92 to 86. Cowan lost 7 dead out, only one bird of his 100 getting away. The match was for $250 a side—bona fide—with the addition of several fat side bets, as both parties were confident of winning.

Atlantic City, N. J., is likely to have a happy quarter of an hour before this month ends, for in addition to the E C cup dialectic debate between Messrs. Elliott and Crosby there is to be a matter of definition between Messrs. Elliott and Young anent the cast iron trophy. This will take place on Aug. 24, the day after the E C cup contest. The man who can go through this test without leaving any of his epidermis on the barbed wires is worthy of being hailed as great.

The Marlin Fire Arms Co., New Haven, Conn., is building a new power house, which will supplement the direct belted steam engine with a new up-to-date electric power plant. It will accommodate two compound high-speed engines, rated at 120 horse power each, with a corresponding battery of boilers. The firm expects to have the new work completed in October.

In our trap columns Mr. Edward Banks makes an expert criticism on the "N. P. L." system of division of purses at trapshoots, holding that the new system is but a perversion of the Rose system. If shooters are in good faith looking for a sterling equitable system, there is no improvement to be made on the Rose system. On this subject we are ready for debate.

On Sept. 4 the Parker Gun Club at its Labor Day shoot offers in addition to the regular events a sheepbake. This comes nearer to solving the intricate problem of a division of everything in sight among the shooters, for what a contestant loses in per cent. at targets he may make up on lamb, and in this case the lambs are literally cooked to a turn. Paste the date in your hat.

On Saturday morning, Aug. 12, Ed Johnson's backers posted with Sporting Life $50 to bind a challenge to shoot Mr. Harold B. Money a match at 100 live birds, 30yds. rise, 50yds. boundary, for $250 or $500 a side. The only stipulation made was that the match should not be shot on Tom Morfey's grounds at Lyndhurst, N. J., as Mr. Johnson was not in favor of it.

Mr. T. W. Morfey has made a serious error in providing birds of such high quality that a gun, good eye and first-rate skill are necessary to snatch them out of the realm of goose eggs in the scores. And yet Messrs. Doty and Money made a pretty score on them. The real shooter should not hesitate to accept the hardest that can be presented.

At Washington Park, Kansas City, on Aug. 5, there was an excellent team race at 50 live birds, between Messrs. J. D. Sweet and C. S. Gottlieb on the one side and Messrs. N. Beach and W. S. Allen on the other. The first two killed 24 each; of the second two, Allen killed straight, while Mr. Beach got 23, the teams thus tieing on 48.

Mr. E. Hough, in "Western Traps," mentions that the Eureka Gun Club, of Chicago, has violated some of the solemn traditional dogmas of the trapshooting world, inasmuch as it will give a tournament entirely free from the usufruct of the sandbag. You may read all about it in "Western Traps."

John Wright has considered that as chief functionary of the Brooklyn Gun Club his many pupils, who enjoy a course of instruction at his Polytechnic Shooting School, need a little diversion on live birds, so he has fixed on Sept. 6 as the date He will announce the curriculum later.

The Portland Gun Club, of Portland, Me., devoted to the Van Dyke memorial fund the proceeds of No. 3 event of the first day at its interstate tournament last week. This generous act netted the fund $15, and exhibited on the part of the club a measure of good will deserving of all praise.

Dr. W. L. Gardiner, of San Antonio, Texas, will be a visitor in New York for some weeks, and the competition at John Wright's shoots for the gun and free entry to the G. A. H. will be correspondingly warmed up. The Doctor is a warm shooter when in good form.

Mr. Jack Parker, of the Peters Cartridge Company, was a visitor in New York on Monday of this week, and reports business as being first rate. His firm's new shotgun shell, Peters Ideal, he describes as being up to date in every particular.

Messrs. Fanning and Hallowell are contemplating a race of endurance and skill, 500 or 1,000 targets in an afternoon. There are others who have an eye on this event, which is likely to take place in the near or remote future.

The secretary of the New York State Association for the Protection of Fish and Game, Mr. Henry L. Gates, informs us that the first week in June, 1900, is fixed upon for its forty-second tournament at Utica, N. Y.

The next contest for the target championship, of which the E C cup is the emblem, is fixed to take place at Atlantic City, N. J., at 11:30, between Messrs. Elliott the holder, and the challenger, respectively.

At the monthly shoot of the Stock Yards Gun Club, Kansas City, Aug. 5, Mr. R. K. Campbell was the winner, with a straight score of 25 kills, 18 of which were made with one barrel.

Mr. G. W. Stockwell killed 24 out of 25 birds at the medal shoot of the Veteran Gun Club, Kansas City, Aug. 5.

BERNARD WATERS.

Philadelphia Trapshooters' League.

Aug. 12.—There was rather a light attendance to-day at the fourth tournament of the series of the Philadelphia Trapshooters' League. The shooting was inferior to the real capabilities of those present. In the team race, three-men, 25 targets, unknown angles, the scores were as follows, that of the Independent Gun Club, 63 out of 75, being the winning score:

Independent Gun Club—Ridge 23, Wolstencroft 18, Longnecker 22; total, 63.

Florist Gun Club Team No. 1—Anderson 21, Cartledge 19, Hallowell 21; total 61.

Glenwillow Gun Club Team No. 1—Cowan 20, McFalls 17, Free 22; total, 59.

Silver Lake Gun Club Team No. 1—O'Brien 22, Winchester 17, Edwards 15; total, 54.

Southwark Gun Club Team No. 2—Downing 12, Fox 20, Peden 21; total, 53.

Keystone Shooting League Team No. 1—Johnson 19, Henry 19, Franklin 12; total, 50.

Clearview Gun Club—Fisher 16, Senat 16, Miller 17; total, 49.

Southwark Gun Club Team No. 2—Burt 13, Fisher 16, Woodstager 17; total, 46.

Florist Gun Club Team No. 2—Harris 18, Bell 13, Smith 15; total, 46.

Florist Gun Club—Hancock 10, Eziah 12, Mills 20; total, 42.

Southwark Gun Club Team No. 1—Wilert 8, Felix 14, Ford 19; total, 41.

Individual membership handicap, 30 targets, 15 known, 15 unknown angles, the results were as follows:

Back score: Hallowell 27, Longnecker 25, Franklin 24, Park 23, George 17.

Regular score: Ridge 28, De Houpt 25, O'Brien 25, Ford 26, H. Fisher 24, Longnecker 24, Smith 24, Cartledge 24, Senat 24, Redifer 23, Edwards 23, Winchester 23, Park 21, Russell 21, Felix 21, Hallowell 20, Anderson 20, Bell 19, J. Fisher 19, Burt 19, Franklin 18, George 17, McFalls 16, Miller 14, Puff 13, Morrison 14.

Banks was the only contestant who shot through the sweepstake events, and he outshot his competitors.

Trap at Baltimore.

BALTIMORE, Md., Aug. 10.—At Westport to-day there was a race in which was displayed extraordinary skill, the event being the contest for a gold medal given by the management. There were sixteen contestants, and the conditions called for 100 targets. At the end of the first 50 Schultze was high man with 49, Malone second, 48; Fox third, 47; Lupus fourth, 46; Storr fifth, 45, and Hawkins had 44. At the end of the 75th round Schultze led with 72, Lupus second with 70, Storr third with 69 and Malone and Fox fourth with 68. Hawkins withdrew. The finish was exciting, the three leaders going thereafter to the end without a miss. Schultze won by the high score of 97 out of a possible 100. Schultze, who arrived late, shot his last 25 under great difficulty, the rain falling in torrents.

The longest run of the day was made by Capt. Malone. He broke 78 straight. A peculiar thing about the medal shoot was that all high men had one bad round of 25, with the exception of the winner. The winning of the event, a popular one, stamps Schultze as one of the finest trap shots in the State. The first four events in the annexed table constitute the 100-target medal race. The fifth, sixth, seventh and eighth events were races at 10 targets:

Targets:	25	25	25	25	10	10	10	10	Targets:	25	25	25	25	10	10	10	10
Schultze	24	25	23	25	..	..	..	10	Billy	20	19	19	19	7	8	..	9
Storr	24	21	24	25	..	..	..	10	Higgins	18	18	18	21	..	..	..	..
Malone	24	24	20	25	..	..	6	10	J M Reef	15	19	19	21	6	7	7	..
Fox	24	23	21	22	9	8	9	10	Hawkins	22	22	22	..	..	..	9	..
Leland	22	22	22	24	10	9	9	..	Hill	24	21	..	..	..	..	..	..
Lupus	23	23	24	19	8	..	..	..	Stansbury	20	19	..	..	..	..	..	..
Stanley	21	20	20	24	..	..	..	..	Baughman	19	..	..	..	..	..	..	..
Reef	17	19	23	20	7	..	..	..	Rooney	19	..	..	..	..	..	..	..

The order of the three leaders was: Schultze 97, Storr 91, Malone 91.

On the 29th ult. I had a unique experience on Loch Cama, Sutherlandshire. I was trolling a 4in. trout on a No. 8 hook with two large triangles. I was winding in my line, and when there was about 20yds. out a sea gull pounced down upon the bait. I reeled in quickly, whereupon the gull flew about 20ft. in the air with the bait in his mouth. Continuing to reel up, I pulled the fish out of his bill, but he swooped down upon it and seized it almost as soon as it touched the water and again bore it aloft, when my reeling up dragged it from him once more. The gull took the bait for the third time, and only decided to abandon the chase when I had reeled up to within 10yds. of the boat. The trout was, of course, very much torn, but I think the gull kept clear of the hooks. The common gull on Loch Cama breeds in great numbers on the largest island. They are very determined birds, and drive all intruders (including cattle, which daily swim from the mainland) very summarily away. Last year I saw a rook, which had evidently been too close to the nests, being driven away from the island by over a dozen gulls. The victim tried his utmost to escape from his pursuers; but they stuck closely to him and beat him down into the water, frustrating every attempt he made to rise. They continued attacking him for about a quarter of an hour, and did not leave him until my boat was close upon them. When I picked the rook up it was quite dead.—London Field.

WESTERN TRAPS.

Eureka First Annual Target Tournament.

CHICAGO, Ill., Aug. 12.—That enterprising and progressive shooting company Eureka Gun Club, of Chicago, has this week determined to take one more step forward in the way of progress. Meetings have been held by the board of directors, and it has been determined to hold a two days' target tournament, one of more than usual importance, the dates being Aug. 25 and 26. The club will add $100 cash, and will do this out of its own resources, and will not solicit a single sporting goods house for a dollar or a favor, being eminently able to stand on its own strength when it gives a shoot. This will be a first-class shoot; of that everybody may be assured, for Eureka does not do things by halves. The grounds at Seneyty-ninth street and Vincennes avenue are amply outfitted to take care of the crowd, and there will be hot refreshments, hot ammunition and a hot time guaranteed. Please let all shooters paste Eureka date in their hats.

This movement of Eureka Club in holding a target shoot just upon the eve of the opening of the fall shooting season is one requiring a certain determination, for by that time the target season will be drawing to a close, or at least to a brief pause. Yet it is quite sure that this club will give a good shoot, and that it will be well patronized, both by local and non-resident talent. The intention is the unselfish one of stepping into the breach of a dead time in Chicago shooting and giving the boys something to stir things up a bit. We have nothing on our shooting strings of special interest at this moment outside of the club events. Our celebrated Cook County League is defunct, our live-bird medals are all shot out to a finish, and things are too dull to be desirable. Eureka wishes to whoop matters up a bit, and it is to be hoped and believed that she will do this in her usual successful and thorough-going fashion. The boys will do well to come and bring their knitting with them. There will be a magautrap and a set of five expert traps on the side.

The secretary of Eureka Gun Club is Dr. C. W. Carson, 3872 Cottage Grove avenue, Chicago, and he will mail programmes of Eureka tournament on application. It should be borne in mind that this tournament is proposed as the first annual shoot of the club, and it is the intention to make a fixture of this summer target shoot; so it is hoped that the patronage will be such that the matter shall at the first step go beyond the stage of experiment.

Chicago Badge Shoots.

The movement to continue in effect the lively live-bird series which is now closed and retired is taking form rapidly, and will probably result in an extension of the open medal idea. The boys are taking up subscriptions at $5 apiece for the purpose of purchasing a suitable championship medal, which will be contested for in open shoots much after the rules governing the Montgomery Ward medal shoots. There will be the opportunity to shoot for the medal alone or for the purse, as may be desired, as has been earlier mentioned in these columns. This series, if established, will give the local gun lovers something to keep them busy. Just at this writing there is but little on the shooting boards of this town.

Canton.

The twenty-fourth annual amateur tournament of the Canton Gun Club, of Illinois, will be held Aug. 23. Sergeant system. Bluerocks. J. C. Thompson, Sec'y.

Don't Have to Travel.

Lovers of the tournament game may perhaps miss now and then at the score the familiar face of Harvey McMurchy, of the Hunter Arms Co. It seems that Mr. McMurchy is not traveling very much because he does not have to travel, and indeed is afraid to travel, lest he be troubled with too many orders. This is more like good times, though it is rough on the firm, as well as the shooters. Mr. McMurchy advises me as below:

"I am pleased to write you that we are very busy indeed, and simply covered with orders. We shall be compelled to refuse orders for at least 1,500 L. C. Smith guns this year. We are enlarging our plant, and hope to increase our production one-third next year over anything we have ever turned out heretofore. I shall no doubt be in your city this fall; at present do not travel any, as can receive no orders except for special guns."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, Aug. 12.—The following scores were made on our grounds to-day. The weather was fine, but quite sultry. The targets dipped badly, and the scores were somewhat disappointing as a consequence. Dr. Shaw won Class A medal on the splendid score of 24. John Wolff and A. Hellman tied on 20 for B medal; which was won by Wolff in the shoot-off. Smith, Cornelson and J. Fanning tied for Class C medal on 14, which was finally won by Cornelson in a shoot-off.

Quite a number of visitors were present, several ladies being among the number, and all seemed to enjoy themselves.

Team shoot:

Hicks' team: Hicks 15, Dr. Meek 13, J. Wolff 12, N. Ford 11, Mrs. Shaw 10, Dr. Mathews 9, S. Young 8, Workman 0, Pollard 9, Stricklik 10, L. Wolff, Sr., 8, L. Wolff, Sr., 3; total 108.

Dr. Shaw's team: Dr. Shaw 15, Richards 12, Hellman 12, Smedes 7, Parker, Jr., 9, Cornelson 12, Fanning 12, Smith 13, Dr. O'Byrne 5, Thomas 7, L. Wolff, Sr., 3; total 107.

Trophy shoot:

Eureka Gun Club.

Chicago, Aug. 12.—This was a perfect day for shooting. In the trophy event W. D. Stannard won in Class A with 24. H. B. Morgan won in Class B. Dr. Morton won in Class D.

In the Mussey shoot Mr. V. L. Cunnyngham won with a score of 24 out of 26, 15 singles and 5 pairs.

On Aug. 25 and 26 the Eureka Gun Club will give a two days' shoot, with $100 added money; no one barred.

In the first event scores were made as follows: F. P. Stannard 22, Mrs. Carson 13, H. B. Morgan 21, E. Steck 19, V. L. Cunnyngham 22, W. Sprague 23, J. L. Jones 19.

The scores in the trophy event follow:

F P Stannard	1111111111110111111101011—22
Mrs Carson	0011101101110100111111100—16

W. D. Stannard, 19, Ed Steck 18; J. L. Jones 12, Mrs. Carson 15; total, 64.

Match:

V. L. Cunnyngham, 15, F. P. Stannard 18, H. B. Morgan 16, Dr. Morton 14; total 63.

W. D. Stannard 19, Ed Steck 18, J. L. Jones 12, Mrs. Carson 12; total, 61.

ON LONG ISLAND.

Brooklyn Gun Club.

Aug. 12.—A pleasant afternoon shoot was that of the Brooklyn Gun Club to-day. The weather was exceedingly sultry, through the absence of wind, and the consequent calmness was favorable to good scores.

Dr. A. A. Webber created something of a sensation by appearing on the grounds in his new automobile, accompanied by Mr. E. A. Apperson, of Kokomo, Ind., the manufacturer of the carriage, and one of the crackerjack shots of his own section.

The main contest was for the merchandise prize, a fine shell case, hung up for competition by John Wright after the shoot had begun. The scores were good, and seven tied for it. In the shoot-off there were three left, and of these Dr. Smith withdrew, which left the finish to Dr. Webber and Apperson, the former winning on a straight score of 15 by 1 target. This was a handicap event, with misses added as breaks. The scores:

Waters	1011111111011111111101111—22—3—25
Dudley	1111111101111111111111111—24—2—25

IN NEW JERSEY.

Hudson Gun Club.

Jersey City, Aug. 13.—The scores of the Hudson Gun Club's last shoot are appended. There was a fair attendance of members, although the day was exceedingly hot. Charley Dudley and Mr. Pape were shooting new guns, and this accounts for their seemingly poor scores. Everything will be in readiness for the shoot of Aug. 20, and the club as a whole will try to make visiting shooters at home.

A. L. HUGHES, Sec'y.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., Aug. 11.—The number of shooters at yesterday's shoot of the Minneapolis Gun Club was thirty-five, which is the best attendance for several weeks, but still not up to what it should be.

The shooting was extremely difficult, owing to the strong, puffy wind, the scores not being up to the usual standard, although fair, the conditions considered.

The club offered as a prize in the Schlitz event an elegant couch robe, which was won by Remington with a score of 19 and a 4-bird allowance, thereby beating Mrs. Johnston and Biffton by 1 bird.

In the Paegel badge the club offered a handsome imported German stein, which was won by Johnston, the entrance money in this event going to the Humane Society. Mrs. Johnston did the best shooting, taking first average Johnston second, Shattuck third, Neeley fourth, Jones fifth, and Remington sixth, the balance being well bunched for positions.

Among the visitors were two ladies who shoot, Mrs. Melick and Mrs. Adams, both doing excellent in the practice shoots. The club will give prizes next week, and desires a full attendance of the members. Visitors are invited to shoot next week, as a large number of spectators were much interested yesterday, but failed to bring guns and ammunition, as they did not know they would be permitted to participate. The following are the scores of the afternoon's regular events:

Val Blatz diamond badge, 15 singles, unknown angles: Johnston 11, Biffton 10, Neeley 13, Dr. Bill 13, Jones 10, Mrs. Johnston 14, L. F. Kennedy 11, Morrison 4, Black 11, Gilfillan 10, Remington 12, Nelson 13, Sully 12, Wood 8, Melick 10, Mrs. Melick 4, Cooper 9, Willis 3, Moore 4, Simcox 9, Trapton 9, Stone 12, Shattuck 13, Wintersohn 3, Noerenberg 9, Gerber 6, Chamberlin 6.

Mrs. Johnston won badge.

Schlitz diamond badge, 25 singles, unknown angles: Johnston 20, Biffton 22, Neeley 21, Dr. Bill 18, Jones 20, Mrs. Johnston 22, L. F. Kennedy 12, Morrison 10, Black 10, Gilfillan 16, Remington 19, Nelson 21, Sully 14, Woolf 15, Trapton 11, Simcox 12, Shattuck 20, Wintersohn 11, Moore 6, Willis 8, Chamberlin 15, Bryant 16, Noerenberg 14, Gerber 16, Gallaher 16, Melick 12, Cooper 16, Stone 14, Daniels 11, Barber 5.

Remington, amateur, had 4 birds allowance. He won badge and couch robe.

Paeger challenge badge, 25 singles, unknown angles: Johnston 21, Biffton 19, Neth 17, Dr. Bill 15, Jones 17, Mrs. Johnston 19, L. F. Kennedy 15, Black 15, Gilfillan 16, Remington 17, Nelson 16, Sully 16, Woolf 16, Trapton 9, Stone 15, Shattuck 16, Adams 15, Bryant 15, Fox 12, Chamberlin 15, Noerenberg 19, Gerber 13, Melick 13, Mrs. Melick 10, Cooper 15. Johnston won badge and German stein.

Club badge, 10 singles, unknown; 5 pairs, known angles:

Johnston	1111111111	11 10 10 10 00—15
Neeley	1111100111	10 11 10 01 10—14
Dr Bill	1111100010	11 00 10 10 10—11
Jones	1111111111	10 11 10 10 11—17
Mrs Johnston	1111011111	10 11 10 10 10—15
L F Kennedy	1111010000	11 10 00 01 10—10
Black	0101111011	10 11 00 10 10—12
Remington	0011101011	01 10 01 10 00—10
Shattuck	1111111111	11 01 11 10 10—17
Chamberlin	0011001111	10 00 10 01 00— 9

Noerenberg and Gerber withdrew.

Jones and Shattuck tied for senior badge and Jones withdrew.

Shattuck won senior badge, Black won junior badge, Neeley won amateur badge.

Fort Smith Gun Club

FORT SMITH, Ark., Aug. 11.—It was 104 in the shade, but it didn't keep the cranks at home, and the regular weekly shoot was run off as usual Thursday afternoon. Those present had an enjoyable time, as the traps worked well and the hardest birds of the season were thrown, which had a tendency to cut down the scores.

Matthews won the Class A medal in hollow fashion on 23 out of 25, none of the shooters being within 6 birds of him.

Walter Mulraney won Class B medal for the second time, on this occasion, however, having good strong competition in the persons of Judge Oglesby and Messrs. Trobridge and Boyd. Walter wasn't a bit scared at their chaffing, and shot steadily along. When the smoke cleared away he was found to be a two-time winner of Class B medal, which, according to the rules, places him in Class A, where he will have trouble.

Mrs. Frank Coffey and her guests, Mr. and Mrs. Healy, of Fayetteville, honored the club with their presence, and seemed much interested in the shooting. Mrs. Coffey again gave the club her time and attention as scorekeeper, at which trying position she has become an expert.

Frank Coffey and Judge Oglesby got tangled up in a side bet, and contrary to custom the Judge lost, but it didn't seem to affect his spirits much, judging from his happy effort later in the evening at the banquet given in honor of Lieut. Eberle, of the Oregon.

As several members will be away next Thursday attending the State tournament at Little Rock, there will probably be no shoot here on that day.

A team composed of Matthews, Leach, Durden and Hunt or Oglesby will probably represent Fort Smith at the State shoot at Little Rock in the four-men team race for a trophy representing the team championship of the State. The Fort Smith contingent expects to bring home the individual and the team championship medals.

We can also have the annual tournament here next year if we want it. Do we want it?

Following are the scores. Medal race:

Matthews	0111111111111101111111111—23
Leach	1110101101110101111010011—17
Hunt	0110011010111110101101111—17
Coffey	0001100111101110100111011—15
Mulraney	0110100011101101001011111—15
Boyd	0110000111011001011011011—14
Oglesby	0001100001011011111001111—14
Trobridge	1010110101010111100100100—13

Team race, 25 birds:

Matthews team—Matthews 22, Oglesby 13; Hunt 11, Trobridge 10—56.

Boyd's team—Boyd 10, Leach 21, Coffey 16, Mulraney 12—59.

Boyd's team won by 3 birds. SECRETARY.

Concerning the N. P. L. System.

NEW YORK, Aug. 14.—*Editor Forest and Stream:* In your issue of Aug. 12 I notice a communication from Stanstead, in which he describes a system of dividing purses at trapshooting contests. This system he calls the "N. P. L. System."

The N. P. L. system, while quite equitable, is not new, as it is after all nothing but the Rose system slightly elaborated. The elaboration is not, to my way of thinking, any improvement. It makes the difference between first and second moneys too small, in that respect very slosely resembling the Equitable system, the chief defect of which is that it draws so slight a distinction between the winnings of first and fourth or of first and second.

In the example quoted by Stanstead the N. P. L. system shows up well for the reason that it is an extreme case. I have carefully gone through a lot of scores and cannot find any that resemble even slightly the suppositious case he quotes. In his example there are twenty entries, and only eight of the twenty score 13 or better—that is to say, there are twelve contributors who are out of the money. Such a case might have happened five years ago, but nowadays the boys shoot too well—that is, those who shoot for "the money." Those who can't shoot well enough to break 65 per cent. or better every time, shoot "for targets only." They are wiser than they used to be, having learned wisdom by reason of experience.

No system at present devised is more equitable than the Rose system, and no system is more easily handled in the cashier's office. In these two respects I claim it is the best of all, and by changing the ratio points to suit, the system is well adapted for tournaments, or for club shoots where local wolves stick their teeth into the fleeces of local lambs—for a time. EDWARD BANKS.

East Side Gun Club

SAGINAW, Mich. Aug. 10.—The day was of the best weather, and there was a large crowd of spectators. There were five events, 15 targets each, and shooting commenced at 10 o'clock. Best averages were made by Fred Meidlein and J. Cotter.

The following are the scores in the five events:

	1	2	3	4	5		1	2	3	4	5
Events:						Events:

WANEGHA.

Catchpole Gun Club.

Wolcott, N. Y., Aug. 5.—The midsummer shooting tournament of the Catchpole Gun Club, held on Aug. 3 and 4, was a success in every way. The attendance was good, although some shooters who always attend the tournaments given by our club were detained by business matters.

The weather was very fine for trap-shooting, and everything passed off like clockwork. There was as fine a lot of gentlemen present as can be found in the State. Among them were Messrs. Tuttle, Knapp, Knox and Brigden, of Auburn, N. Y.; McCord, Mosher, Borst and Norton, of Rochester, N. Y.; Denny, Whitney and Tallett, of Watertown, N. Y.; Dalley and Morris, of Baldwinsville, N. Y.; Hunter, Chapman and Wayte, of Fulton, N. Y.; Wride, of Sodus, N. Y., and many others from adjoining towns. Mr. J. R. Hull, of Parker Bros., Meriden, Conn., came in afternoon of Friday, and shot finely in a few events. The programme called for eight events on Thursday, Aug. 3, and twelve events on Friday, Aug. 4. Event No. 8 on Friday was the merchandise event, of 20 targets. There were twenty-seven shooters entered in this event, and a list of thirty-two prizes was presented to the club by the business men, so every shooter was sure of capturing a prize. Mr. Chapman, of Fulton, N. Y., was high, breaking 20 straight, and had first choice, closely followed by Mr. Denny, of Watertown, N. Y., and Mr. Fowler, of the home club, with 19 each to their credit. The targets were thrown hard from the magautrap, and the shooting was very even. Mr. F. McCord, of Rochester, was high man for the entire programme, closely followed by other shooters, as by referring to the averages as shown here one will see that among the ten shooters who shot through the entire programme there was only a difference of 24 targets from the leader to the lowest, or a difference of 9 per cent. shooting of the 260 targets, the highest man breaking 229 out of 260 shot at, and the lowest breaking 205.

Following is the general average of those who shot through the programme, also the full score:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
McCord	260	229	.880	Wride	260	212	.810
Dalley	260	227	.870	Morris	260	212	.810

Re Pigeon Shooting.

There has been more or less agitation in the matter of cruelty in pigeon shooting, chiefly by members of prevention of cruelty societies, and in view of this, the following decisions, rendered by able jurists, may be of interest and value to those who suffer from the mistaken zeal of such men as imagine that their personal whims and vagaries are true standards of what is cruel and what is not.

The first case is from the records of the Quarter Sessions Court of Allegheny county, Pa., 1892, and was quite an important one, being the Commonwealth vs. Denny et al. The defendants were acquitted. The judge's charge was as follows:

"Gentlemen: Each of these defendants is separately indicted for cruelty to animals, in that he did unlawfully and wantonly shoot, wound, abuse and ill-treat one pigeon each, belonging to said J. O'H. Denny and E. H. McWhorter. This was on the 21st day of April last. The pigeon shooting was out in the Eighteenth or Nineteenth Ward of this city, in the rural part of the city. The case is founded on the Act of Assembly passed in 1869, which I do not think very greatly differs from the one of 1860, that 'Any person who shall, within this commonwealth, wantonly or cruelly ill-treat, overload, beat or otherwise abuse any animal, shall be guilty of a misdemeanor.' It is a statute law providing against evils that are supposed to exist. A rule in the interpretation of statutes, and an old one, well established, is that in order to determine what a statute means you must know what the law was prior to the passage of the statute, and then see what evil was to be cured. Our common law is modified by the statute law very largely. There is a common law in regard to animals and their treatment by man that is very old, and it is of record in one of the oldest books that we have, and one of the best law books that we have. It was promulgated at the Garden of Eden to Adam and Eve:

"'God blessed them, and God said unto them, Be fruitful and multiply and replenish the earth, and subdue it, and have dominion over the fish of the sea, over the fowl of the air, and over every living thing that moves upon the earth.'

"There are passages of the same general import that have been governing mankind ever since. The fish of the sea and the fowl of the air and the beasts of the earth are for man, rather than man for the beasts. They are to be used for his sustenance, to aid him, for his comfort and his pleasure. Now in usuing them he must not unnecessarily cruelly treat them. The act of Assembly is intended to prevent brutal men and women from unnecesarily and wantonly causing pain, where it is not necessary in the using of animals for legitimate purposes.

"These defendants are sportsmen belonging, as I understand, to an association; and at this particular time they were shooting, as a test of skill, to see who could kill the most birds, each having 50 shots at 50 birds. That was a legitimate, lawful use of the birds. The pigeons were put in a trap one at a time, and let out, and they would shoot them on the wing. If there were need of an authority, and I do not think it ought even to have required one, the Supreme Court has decided that that is a legitimate use of pigeons; that it is not cruel to shoot them for sport or as a test of skill. The Commonwealth concedes that the defendants cannot be convicted simply because they shot the pigeons in this way for this purpose, but alleges that they were guilty of cruelty in this case because certain birds, or a bird shot by each of these defendants separately, did not fall before it got beyond the limits of their bounds of 50 or 60yds. away, and that it was cruelty not to have it brought in at once and killed. The defendants allege, on the other hand, that was done, and that every reasonable arrangement was made for getting the wounded birds and killing them, and they even killed some birds that they could not tell whether they were wounded or not, to a certainty. The birds were brought in and were intended to be used for food. But assuming for the purposes of this case that Mr. O'Brien's inferences were all correct, that there was no such provision as the defendants testified to, I am disposed to think, and so instruct you, that it is not the cruelty that is intended in the act of Assembly, for them to neglect to kill these birds that had escaped. I know that a great many humantarians, and especially professional humantarians, regard it as their duty to kill a wounded animal at once. If a horse gets a leg broken, it is to have no chance of being cured, but must be shot; and if a bird is wounded it must be killed immediately! I have never yet heard any well-authenticated case of a man or association having communication with horses or pigeons or chickens to know whether or not they desire to be shot at once; and I find myself often wondering when I see accounts of these summary proceedings, and the manner in which, as a matter of humanity, animals are put out of the way when injured, whether the horse could not sit in judgment over a wounded or crippled man, or an old man that has become infirm and incapacitated from doing anything and taking care of himself, and decide that he should be killed! I am rather inclined to think that, when a bird has gotten away a reasonable distance, it is not necessary to assume that it will, as a matter of course die, and it is a great relief to it and a great advantage to it and a piece of humanity to at once put it out of its pain. We do not know whether a wounded bird wants to be put out of its pain and existence or not. I do not think it does, but I do not know; neither do these gentlemen know. The matter depends a great deal on sentimentality, on whim, on education, and on what we have been accustomed to.

"I instruct you, gentlemen, that your verdict in each of these cases should be for the defendants. It is a misdemeanor, and you have the right to say who shall pay the costs. It is your duty to say who shall pay the costs, and you will determine whether the county, the prosecutor or the denfendants shall pay them, or the prosecutor and defendants, and in what proportion. I might suggest this to you, that in this case, which has been brought as a test case, I have no doubt the prosecutor and those around him, and those whom he represents, honestly think that this is cruelty. I do not. I do not think you would, if I were to submit the matter to you; but it was brought as a test case and upon good motives, and I suggest to you that the costs should not be put on the prosecutor; and I do not think they ought to be put on the defendants, because they have not been guilty of anything that was unusual or anything that has been declared a crime, and I suggest that in this case you put the costs upon the county. It is able to bear them."

THE CATCHPOLE GUN CLUB.

The following is a reprint from Forest and Stream of Feb. 26, 1891, and as the matter will show, it deals with a case of special importance and significance, as follows:

In 1887, at which time A. Nelson Lewis, a member of the Philadelphia Gun Club, was indicted before the Bucks County Court under the act of March 29, 1869, which makes it a misdemeanor to wantonly or cruelly kill or ill-treat, overload, beat or otherwise abuse any animal.

On Dec. 14, 1887, the Philadelphia Gun Club held a pigeon shooting match at their grounds on the "Old Brinkley Homestead," Andalusia, the other contestants being the Tuxedo Gun Club, the Westminster Kennel Club and the Riverton Gun Club. The club members and their friends went to the grounds by way of the Pennsylvania Railroad. Upon the same train from Broad Street Station were two uniformed officers of the Woman's Branch of the Society for the Prevention of Cruelty of Animals, who openly avowed their intention of making arrests if the match should take place.

The grounds were filled with people, the contest became very exciting and a large amount was staked on the result. Shortly after the shooting began the officers of the woman's society approached the gates and were met by members of the club, who stated that they had intended to meet the issue, and would allow an arrest to be made. They did not raise any question as to the right of the officers to enter the grounds, because it would not be agreeable had any of the visitors or members of the club been arrested. In that case, as far as all present were concerned, the day would have ended in disappointment.

Then came the question of who would allow himself to be arrested. None cared to come up to the scratch, although several were approached. Finally General Grubb, the president of the club, expressed his determination to throw himself into the breach if no one else could be found courageous enough to do so, was appealed to. Without a moment's hesitation he gave his This, for several reasons, was undesirable, and A. Nelson Lewis consent, resolving to be sacrificed in friendship to his club members, and that the purpose and pleasure of the guests might not be marred.

Mr. Lewis was then technically arrested and taken before a justice of the peace. He was defended by General Dechert. Subsequently the club presented him with a resolution of thanks, highly extolling him for the way in which he had stood up for the interests of the club.

The late Lewis C. Cassidy was to have defended Mr. Lewis, but died before the case came to trial. On the trial the jury returned a special verdict, in which they found that it was the custom of the Association to hold matches for skill in marksmanship, that Mr. Lewis participated in the match in December, 1887, and "for the purpose aforesaid fired with a gun upon certain pigeons, liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon as its wounded condition was discovered it was killed by a member of said club, for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The bird so killed was immediately sold for food, according to the rule and custom of said club."

Judgment was entered in favor of the Commonwealth and a fine of $5 imposed on Mr. Lewis. From this came the present appeal.

Judge Paxton, as Chief Justice, delivered the opinion of the Supreme Court, which is as follows: "The specific charge in the indictment was that the defendent did 'unlawfully, wantonly and cruelly shoot, wound, torture, abuse and ill-treat a certain pigeon,' etc. The jury found a special verdict, upon which the court below entered judgment for the Commonwealth. We are, therefore, limited to the facts as found. From the verdict we learn 'that the defendent was a member of the association called the Philadelphia Gun Club; that on Dec. 14, 1887, he attended a pigeon shooting match and fired with a gun upon certain pigeons liberated from a trap, killing one and wounding another. The bird so wounded alighted upon a tree, and as soon as its wounded condition was discovered it was killed by a member of said club for and on behalf of said defendant, according to the custom of said club in regard to wounded birds. The birds so killed were immediately sold for food, according to the rule and custom of said club.'

"We have thus the finding of the jury that the object of this Association was to test the skill of its members in marksmanship. In other words, it was a training school for sportsmen, in which they could acquire skill in shooting on the wing. This being the object of the association, the jury further found that the defendant attended for the purposes aforesaid. It was conceded that had he killed his bird he would not have been liable under the act of 1869. But having merely wounded it, he was guilty of cruelty under said act. So that the crime consisted, not in the fact of the shooting, but in wounding instead of instantly killing it. From the facts found by the jury, the defendant has merely been punished for want of skill.

"It is doutbless true that much pain and suffering is often caused to different kinds of game by this unskillfulness of sportsmen. A squirrel badly wounded may yet crawl to its hole and suffer for many hours and days and die. It was not pretended that the act applied to such cases. The sportsman in the woods is not responsible for the accuracy of his aim under the act of 1869. At the same time it is manifest that much suffering would be spared wild game if sportsmen were better trained. Skill in shooting upon the wing can only be gained by practice. It is not so with inanimate objects. There accuracy of aim can be acquired by shooting at a mark. It is conceded that the sportsman in the woods may test his skill by shooting at wild birds. Why, then, may he not do the same with a bird confined in a cage and let out for that purpose? Is the bird in the cage any better or has it any higher rights than the bird in the woods? Both were placed here by the Almighty for the use of man. They were not given to him to be needlessly and cruelly tortured, and were there anything in the finding of the jury to show that the object of this association was to torture pigeons we would not hesitate to sustain the judgment of the court below. But no such purpose appears, nor is there any finding that the defendant was guilty of needless and wanton cruelty. The bird was immediately killed as soon as its condition was discovered.

"A distinction was pressed upon the argument between the case of a captive bird and one at large in the woods. In the latter instance there is a necessity to shoot it in order to capture it for food or other lawful purpose; and if wounding results, it is an unavoidable incident; while in the case of a captive bird, no necessity exists for putting it to death in this way. Some force may be conceded to this as an abstract proposition, but we do not see its application to the facts of this case. The right to kill the pigeon was and must be conceded, and there is no finding of the jury that its suffering was greater because of the manner of its death than if it had been killed in some other way. This is a scientific question which I do not feel myself competent to pass upon. Nor do I think the average juryman is any better qualified to do so. It may be that science in the future will discover the method of killing a pigeon with the least possible pain. So far as other animals are concerned, it is, perhaps, an open question, and the attempt of well-meaning humanitarians in a sister State to reduce the sufferings of condemned criminals by putting them to death by electricity instead of by hanging has produced a long controversy which can be hardly regarded as settled. An attempt has been made, so far unsuccessfully, to show it is unconstitutional because of its cruelty.

"We do not say there might not be a violation of the act of 1869 at a shooting match, but in our view the facts found by the jury do not bring this case within it. The judgment is reversed."—Philadelphia Times, Feb. 23.

Omaha Gun Club.

Omaha, Neb., Aug. 8.—In the weekly shoot of the Omaha Gun Club to-day Townsend was high with 19, Bersheim second with 18. The scores:

Kenyon	11101100001001111110—12
Grant	11111111111111111110—19
Parmelee	11111111111110101101—17
Bates	11101101101111111011—16
Townsend	11111111111111111101—19
Burgess	10111011111111101101—16
Johannes	11111111111011011110—17
McFarlane	11110100100011101111—13
Loomis	11111110100111111011—16
Bersheim	01111111011111111111—18

Grant shot at 160 targets and scored 155.

E C Cup.

New York, Aug. 11.—*Editor Forest and Stream:* I have to-day received from Mr. J. A. R. Elliott his acceptance of Mr. Crosby's challenge for the E C cup, representing the inanimate target championship.

Mr. Elliott names Atlantic City, N. J., Aug. 23, 11:30 A. M., as the place, date and time for holding the match.

Edward Banks,
Sec'y American E C & Schultze Gunpowder Co., Ltd.

Arkansas and the South.

Kaw Town Cullings.

LITTLE ROCK, Ark., Aug. 11.—Kansas City, Mo., Aug. 5.—A two-men team race of no little interest was shot at Washington Park to-day. The principals in this were J. D. Sweet and Chris. Gottlieb on one side and W. S. Allen and Newt. Beach on the other. This quartette are members of the O. K. and Washington Park clubs respectively, and the keenest rivalry exists between them, these organizations being composed of the younger generation of shooters. So that naturally whenever they clash in friendly competition the greatest interest is manifested in the result.

As the outcome will show, this proved to be a highly interesting contest, owing to the closeness of the score. Ultimately it had to be declared a draw, as each team put up a total of 48 out of 50. Allen made the high score of the day and saved his team from defeat by scoring straight, while the O. K. pair each had a total of 24, though Sweet was unfortunate in losing his last bird, which also prevented his team from winning. Beach made the low score, 23, but lost one bird dead out of bounds.

The conditions of the race were 25 pigeons per man, loser to pay for the birds and the supper for the party. The birds for the occasion were stipulated to be selected, and the supply of these having been exhausted it was agreed to leave the decision until some future date.

Sweet-Gottlieb vs. Allen-Beach.

Sweet	2122112111122211112221220—24
Gottlieb	2222022122222222212222222—24—48
W S Allen	2212112121111111212122111—25
Beach	1121111202122222*221212221—23—48

Stock Yard Gun Club.

On the same day, Aug. 5, the members of this club also met to contest for club honors, but owing to the warm weather only six members took part. Of these, R. K. Campbell showed the best form, and finished with a clean score. G. M. Walden's performance was also good, as he accounted for 23 out of 25. The conditions were 25 live birds per man:

R K Campbell	1111112111212111121122112—25
G M Walden	2121121102201212212212121—23
Fletcher	1011212222122121010121222201—21
C I Mills	0212220202122222012222222—21
R P Barse	2011201211211221022220220—20
R G Hewdley	2220122002221202021120100—17

Veteran Gun Club.

But three members of this club showed up, so that it was conceded at the very start that Geo. Stockwell would prove the winner, which he did, though not without a contest, as Thompson all but tied him, losing his last bird. Stockwell ran 23 straight and then slipped one, thus finishing with 24. This club's contest also consists of 25 birds.

G W Stockwell	2211111111111221111211102—24
F A Thompson	2212121111021112211111220—23
D A Williams	0200201220211112101120021—17

St. Louis Doings—Busch Medal.

St. Louis, Mo., Aug. 5.—Dr. Smith is the second one who tried to wrest the Busch challenge medal from H. C. Griesedick, the holder, but, though he put up a great race, was not quite equal to the occasion, as Griesedick too was in winning form and accounted for all of his birds but one. The race was a capital one throughout, for it was not until the 15th round that either of the principals lost a bird. It was, however, at this juncture that Dr. Smith failed to negotiate his bird. He failed again on the 20th bird, and this gave Griesedick a lead of 2, but he finally missed his 24th, while the Doctor killed out; so that the former's margin was but 1 at the finish. In disposing of the Doctor, Griesedick defeated one of St. Louis' very best pigeon shots, and must henceforth be classed among the good ones himself. Of late he has been shooting a great clip, and his recent performances must always rank as first-rate. He won the medal in open contest two weeks ago, and has since then defended it against Louis Dennig and Dr. Smith. He also has a tie with Collins and Chase for another trophy with a straight score of 25, which has never been decided. In order to gain permanent possession of the Busch medal he must win it three more times.

The following are the scores of to-day's race:

Griesedick	1112112222221222221202222—24
Dr Smith	2222222112222102212021112—23

New Organization.

At Columbia, Mo., the sportsmen of that town have recently organized a gun club, and its members expect to engage actively in the crockery shattering business and have already begun operations. At a meeting held last week a permanent organization was effected and the following officers were elected: R. L. Lockridge, President; E. R. Tillery, Treasurer, and W. A. Vivion, Secretary. The club will hold weekly shoots each Thursday, and later on will endeavor to arrange team contests with clubs of nearby towns.

Memphis Gun Club.

The weekly contest of this club takes place every Saturday and is conducted on a handicap basis. At the last shoot A. H. Frank won the medal, but only after a prolonged shoot-off with Fred Schmidt, who, with his handicap, tied him in the original contest and again in the shoot-off, but was finally beaten in the third trial. Frank shot from the scratch, and is conceded to be one of the best shots of the club. At present he is the possessor of three medals which the club has put up for competition. It will be remembered that he won the club live-bird medal in the final contest last May.

Jack Parker's Shoot.

Jack Parker writes me that he is just off for the South in the interest of the Peters Cartridge and Kings Powder Co., which company he represents, but that everything was progressing nicely with his approaching shoot. The programme will be out about Sept. 1, and this will consist of both targets and pigeons. Of late years Jack's tournaments have been target shoots exclusively, but now that pigeons can be legally shot at the trap in Michigan he will have a number of these events. When Jack held his shoots at Des Chree Shos Ka his pigeons were always a feature of the shoot, and did much to increase the attendance; so now that when he will again be able to offer this kind of attraction he looks for a large entry. There are a host of good fellows connected with the shooting interest in Detroit, but the prince of them all is Com. Scoten, and it is safe to say that he will again be chairman of the entertainment committee, which will assure a royal reception for all who attend.

Leavenworth Tournament.

Messrs. W. H. Koohler and J. W. Sexton announce a tournament under their management, to take place at Leavenworth, Kan., Aug. 23 to 24. The programme for this reached me this week. It will consist of ten 20-target events each day, with an entrance of $2, while there will also be $10 added in each event, making a total of $200 added during the tournament. Rose system of division will prevail at this shoot, there being five moneys, the ratio being 7, 5, 4, 3, 2. Magautrap and bluerock targets will be used, while the National Hotel will be headquarters.

The promoters of this shoot are well and favorably known to the shooters of the Central West, and have often figured as principals at other tournaments; both have contributed something toward making shooting history. Jim Sexton is well known as the two-time winner of the Schmelzer cup, or reverse-angle champion, while Koohler has acted as pacemaker at several tournaments, though he is probably better known under the nom de plume of Jap. One thing is certain, that under their fostering care the shooters will be well taken care of, and will be given a rattling good shoot. For the past two years Jim Sexton has shot but little, and it will seem like old times to find him facing the traps once more.

Capital Gun Club.

Little Rock, Ark., Aug. 10.—The attendance to-day was the best that has graced a local club shoot in many a year, for there were no less than twenty shooters present. The surprise of the day was the great shooting of Weigel, who won the medal on a score of 46 out of 50. Heretofore he had displayed no marked ability, and to some extent is practically a novice, but his performance of to-day was the subject of much comment; and it is possible that hereafter he may cut some figure in the shooting game. He had a handicap of 10, but it was conceded by Duley, the only one who had a chance to exceed his score with his handicap, that he would readily break 4 of these, and thereby give him a total of 50, 1 greater than the latter could possibly reach; so that no one shot his allowance. The win was a popular one, as it will do much to encourage others of this class to try. The conditions were not favorable to high scores, as there was a very high wind blowing diagonally across the traps, which played havoc with the chances of many. It was particularly trying on the slow shot.

PAUL R. LITZKE.

Interstate at Portland.

PORTLAND, Me., Aug. 10.—The Interstate Association tournament, given for the Portland Gun Club, Aug. 9 and 10, at Portland, Me., was a gratifying success, whether we consider it from the standpoint of the number of contestants, the good fellowship which prevailed, the smooth working of the management, or all combined. It was a record breaker of the State, and has never but once been excelled in the whole country. The accommodations were ample. Shooting commenced at 9:30 A. M. and was continuous until 7 o'clock P. M. The entries numbered fifty-five and over 8,000 targets were thrown. Mr. Elmer E. Shaner was manager and the programme was run out without a hitch of any kind to mar the enjoyment, as was a foregone conclusion. The following clubs were represented: Auburn, Waterville, Gardiner, Bath and Lewiston. Visiting sportsmen without the State were Schortemeier, of New York city; Griffith, of Pascoag, R. I.; Eager and Howe, of Marlboro; Wheeler, of Worcester; Lilly, of Indianapolis, and Puck, of Boston. The local talent made a good competition, creditable alike in itself and relatively with the high class talent against which it was competing, as the following scores will show:

Wednesday, First Day, Aug. 9.

The weather was fine. The average entry for this day was forty-six. On this day the excellent record of 8,045 targets were thrown from one set of traps. The proceeds of Event No. 3 of this day, amounting to $15, were donated by the club to the Van Dyke Memorial Fund. A large percentage of the shooters shot through the entire programme. The scores:

Thursday, Second Day, Aug. 10.

It was an all-day of rain, a condition highly unfavorable for bringing shooters to the score, notwithstanding which the average entry was 36 3-10, and there were 6,325 targets trapped, so that while the competition fell short of what it would have been with good weather prevailing it was far from being a bad day. The programme was shot to a complete finish, though the last event was completed only just before 6 o'clock, amid the darkness and rain, and it had twenty-two entries. Fanning and Leroy were the two leaders in the contest for the possession of the handsome engraved gold watch charm presented by the club for the high average for both days. Leroy won, breaking 169 out of 175 shot at.

Of the Maine amateurs, Arthur, of Portland, was first, closely followed by Hunnewell, of Auburn, and Rich, of Portland, who ran 72 straight. Portland Club's first team in event 9 the first day broke 73 out of the 75 targets shot at.

A delicious clambake at noon was an appreciative feature.

The club was a beneficiary under the will of the late Capt. B. J. Willard, who was one of the founders and for many years a prominent and honored member. He directed that the sum bequeathed should be expended for clams, and a portion of this money was used on this occasion.

The corps of assistants contributed much to the success of the shoot. They at all times promptly and cheerfully performed their exacting duties. The blackboard scorer was Frank P. Patterson; Harry White kept the score tabs, and Bob Fisher was trapper.

Treasurer Neal, assisted by Lou Waldron, ran the cashier's department most satisfactorily. They were highly praised for their work. The scores:

Events:	1	2	3	4	5	6	7	8	9	10

Rifle Range and Gallery.

Rifle at Hartford, Conn.

AT Hartford, Conn., the Schuetzenverein ended Aug. 7. It was held in Schuetzen Park. Hartford won the team shoot. Scores: Hartford 995, Springfield 981. Oscar Buchholz won the honor shoot, the prizes of which the King medal and a silver loving cup. His score was 66. T. R. Geisel was second with 61, and won a silver set. H. M. Pope, of Hartford, won first prize of $20 at the ring target with a score of 212, and Oscar Buchholz was second with 209 and won $15. George Joiner, of New York, won $1.50 for the first bullseye shot Monday, and T. R. Geisel the same sum for the last bullseye that day. Mr. Geisel won the same for the first bullseye yesterday, and H. M. Pope, of Hartford, for the last. Mr. Pope also won $3 for the most bullseyes shot, T. R. Geisel for the second most shot, and George Joiner, of New York, for the third. The scores:

Ring target, 17 prizes, $1 to $20:

H M Pope, Hartford	71	70	71—212
O Buchholz	72	68	69—209
C S Axtell	69	69	68—206

Answers to Correspondents.

No notice taken of anonymous communications.

J. A., Saratoga Springs.—Would you kindly let me know if I will be able to obtain a general hunting license for Quebec by forwarding a check of $25 to one of the game commissioners, or will I have to purchase it in person? Ans. As the applicant to whom license is issued must indorse it we assume that it must be applied for in person. Hon. S. N. Parent, Quebec, is the Commissioner.

A., Prince's Bay, Staten Island, N. Y.—This morning a boy that works for me came and asked me if I ever saw any white cranes. I said no, and then he said he saw three around the pond back of his house. Then I went into particulars with him. This is what he said: "They stand about 2ft. high, perfectly white body, shape of crane, and when they fly are a little quicker in their movements than bitterns, herons, cranes, etc." Can you tell me what they are? Ans. They were probably the little white egret or snowy heron, which occurs rarely as far north as Connecticut.

H. C., South Bethlehem, Pa.—Please can you inform me where the frog farms are situated? I understand there is one in New Jersey somewhere, another in Ohio and one in Montgomery county, but I cannot find out about their respective locations. Are there are any books published on frog and terrapin raising? Ans. We have no information of any frog farm, though we have repeatedly endeavored to discover such institutions. The U. S. Fish Commission publishes a "Manual of Fish Culture," in which frog farming is discussed. It may be had on application to the Fish Commission. We know of no book on terrapin farming.

PUBLISHERS' DEPARTMENT.

Fox's Spat-Puttee Leg Protector.

Fox's patent spat-puttee or leg protector would seem to be just the thing gunners, fishermen and sportsmen generally are looking for. It strengthens and protects the legs without in any way interfering with the circulation of blood or the use of the limbs. The puttee—a leg bandage—owes its origin to India, where it has long been used by natives and others to protect their legs. As its name indicates, the spat-puttee is a spat and puttee combined, so that they form one continuous piece. By an ingenious arrangement for fastening, the same pair of spats will fit shoes or shooting or fishing boots, while the puttee will fit any leg.

They are made of all wool, without buttons, and can be worn with or without stockings, are waterproof and can be worn over trousers. They are used by both men and women with equal benefit and comfort. Bale & Manly, Wool Exchange Building, New York city, are the agents, and they will gladly send illustrated pamphlets and other particulars to any reader of FOREST AND STREAM.

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

In these forests I was struck, as I often have been, by seeing lying on the ground numerous decayed trunks of trees of the same species which belonged to a former generation. Some of these decayed trees had been lying there nearly a century. While walking amid majestic living trees one actually walks over the graves of trees. Many of these remains have so shrunk by age as to be no higher than the little mounds in an old church yard. The presence in a pine forest of such remains, together with a young growth, as can be seen in so many instances by anyone who cares to see, abundantly refutes the error which obtains to some extent that there is not a second growth of pine on the same land. Keep out the fires, and the natural reproduction from seed will be perpetual.—C. C. Andrews, Chief Fire Warden of Minnesota.

CONCERNING PEN-NAMES.

IT has been the custom from time immemorial for contributors to sportsmen's journals to write over pen-names instead of using their own signatures. Most of the writers who have attained popularity and fame in the past have done so over their pseudonyms. To go back no further, Frank Forester may be cited as one of the best known examples. All of his contributions to the old Spirit of the Times, Porter's Spirit and other publications in which he dealt with field subjects, were signed Frank Forester. His novels and historical works were given to the public with his own name, Henry William Herbert; and as a commentary upon their slight vogue at the present day may be cited the fact that nine persons out of ten who know Frank Forester would, if asked, be unable to tell whether he was Henry William Herbert or William Henry Herbert. For Forester has proved far more successful than Herbert as an author, and this in direct contradiction of Herbert's own ambition and conviction. Forester was the pseudonym signed to writings which were regarded by their author as ephemeral; Herbert was the name on the title pages of works which he fondly imagined would be long remembered and cherished. There may have been also in this something of a pride not less mistaken than was the literary judgment evinced; for Herbert the scholar doubtless considered that his heavy volumes were more creditable than the random sketches Forester the sportsman threw off for the entertainment of his sporting clientele. It is certain that he believed that his fame as a writer rested upon these other works rather than upon his stories of the fields and woodlands.

There was, by the way, another Forrester pen-name known to the readers of a generation ago, that of Fanny Forrester. The real name was Emily C. Chubbuck, and this was the signature appended to the earlier effusions of verse, which did not take so well with the public as their author thought they should. Upon her complaining to N. P. Willis, it is recorded, the poet said to her: "How can you expect anything better?' Your genius is not of a kind to affiliate with your name. Who will read a poem signed Chubbuck? Sign yourself Fanny Forrester and you will see the change." His literary acumen appears to have been justified by the event; Fanny Forrester achieved wide popularity; had she followed Frank Forester into the topics of the field and woodland she might be known even to-day.

But what we set out to say was that writers who contribute to the FOREST AND STREAM over fanciful pen-names have good and sufficient precedent. The example set by the earlier writers has been followed to the present day. Our files testify to the fact that in largely preponderating majority contributors to our columns have made use of pseudonyms instead of their own proper names, and among those who have thus veiled their identity are numbered many who have found lasting popularity with their readers. Of the various reasons which might be given for adopting a pen-name rather than using one's own signature many are good ones; and no sound criticism may be made upon the custom, provided only the signature chosen be one which is not lacking in dignity, and the writing to which it is appended be not unworthy. One's pen-name is not unlike his fishing togs or his hunting rig; in the old clothes he feels more at ease and with the pen-name less of restraint. When we go into the woods we leave our titles and dignities behind us and are no longer on parade with eyes front and attention on the alert to catch conventionality's sharp order to "Dress right"; so when we come to write of woods themes the recourse to a pen-name gives to some of us a grateful sense of freedom.

There are, we repeat, so many good reasons for using a pseudonym under these circumstances that the custom is by common consent approved. Nor is the one who uses a pen-name to be accounted an anonymous writer in the usually accepted invidious significance of the term. No one would have regarded as anonymous an article signed "Frank Forester" in the old Spirit of the Times, nor one signed "Nesmuk" in the FOREST AND STREAM, though both might have been engaged in heated controversies with other writers either signing their own names or themselves using pseudonyms.

DON'T SHOOT UNTIL YOU KNOW.

THE deer hunting season in the Adirondacks opened on Aug. 15. Four days later followed a tragedy. Two brothers were camping on the Eighth Lake of the Fulton Chain. For the younger, a youth of seventeen years, it was the first season of camp life, and like all youngsters in the woods in their initial experience he was aglow with ardor to get his first deer. About sundown last Saturday this younger brother left the camp alone and shortly after was followed by the other. When the elder of the two came to the Durant road, he saw a movement of the brush such as is caused by a deer. On the instant he raised his rifle, took quick aim at the moving brush, fired, then rushed in to see what he had shot at, and found his brother, who had been killed instantaneously by a shot through the breast.

A human life cut short in the flower of youth. Another life clouded by the anguish of the hour and by life-long regret and self-reproach. A home desolated. And all as the fruit of one foolish moment with a deadly weapon in the woods.

If we did not read the stories of such accidents, year after year, and from time to time meet the bereaved fathers and mothers and wives and children of the victims, it would be impossible to conceive that grown men could be found to bring this woe upon themselves and upon their fellows. And yet season after season the record grows. Now it is a farmer who shoots a neighbor by mistake for a groundhog, now a Maine moose hunter who kills his guide for big game, and now the Adirondack camper who does to death his brother for a deer. Before the season shall be over and the rifles put away we shall hear probably of a score of such tragedies.

And it is all so cruelly heartrending because so unnecessary. The observance of one simple rule would have saved this young life, as it would have saved the scores of lives sacrificed in the past—*Don't shoot until you know what you are shooting at.*

It is a good rule for the old to preach to the young, the young to the old, and all of us one to another. There is at this hour in the whole realm of the teachings of sportsmanship no other injunction approaching it in importance.

ISAAC McLELLAN.

THE placid life of Isaac McLellan drew to its close on Monday of this week, Aug. 21, at his home in Greenport, Long Island. Of him it might have been said as his friend and angling companion, Daniel Webster, said of the Revolutionary veterans of Bunker Hill, that he had come down to us from a former generation. Born at Portland, Me., in 1806, he had attained the ripe age of ninety-three years, and his long life was a connecting link between the present and a past which because of the developments and changes of modern times was very remote. In his later years the venerable sportsman poet was fond of reviewing the distant years and recalling the comrades and companionships of earlier life. There were numbered among these friends many who in after years attained fame in varied fields. Among schoolboy friends were Charles Sumner, Horatio Greenough, Lothrop Motley and Wendell Phillips; at Andover Phillips Academy he knew N. P. Willis and Oliver Wendell Holmes; and at Bowdoin College his associates were Henry W. Longfellow, George B. Cheever, J. S. C. Abbott, Nathaniel Hawthorne, Franklin Pierce and S. S. Prentiss. Shooting and fishing comrades were Daniel Webster, Frank Forester, Genio C. Scott, Porter, Wilkes, Skinner, Benson, S. C. Clarke and Charles Hallock.

He was a sportsman from early boyhood, his first experience in the field being with the wild pigeon at that time abundant throughout New England. When at college, he has told us, Stephen Longfellow (a brother of the poet) and S. S. Prentiss were his companions in pursuit of the pigeon, and the trio would tramp for hours in the woods about Brunswick. In later years he spent some seasons on the Massachusetts coast at Marshfield, the home of Webster, with whom he fished for cod and haddock and bluefish; and of whose famous chowders he made test. It is a testimony to the lovable nature of the man that these early friendships matured and strengthened and were abiding through life.

Mr. McLellan developed in early life that facility of writing verse which has given him a place among the poets of America. His earlier published collections were "The Fall of the Indian," "The Year" and "Mount Auburn," slender volumes, containing among other poems the well-known verses on the Death of Napoleon, beginning

> Wild was the night; yet a wilder night
> Hung round the soldier's pillow—

a favorite with thousands of schoolboys for declamation. The fields and streams and forests and prairies and their wild dwellers were ever chosen themes for his verse, and no man in America has written more extensively in this field; he almost literally took all animated nature for his own. He was one of the "Old Spirit Crowd," as the contributors to the early Spirit of the Times delighted to call themselves, and when the FOREST AND STREAM was established in 1873 the salutatory poem in the first column of the first page of the first number bore his signature. From that time for a quarter of a century Mr. McLellan contributed to these columns. In 1885 his outdoor verse was collected in a volume entitled "Rod and Gun, or Sports by Flood and Field," and some years later this was supplemented by another volume, "Wild Game in its Haunts."

SNAP SHOTS.

Some years ago we noted the interesting enterprise of transplanting our American quail to China, and indulged in a bit of sentiment over the grateful note of Bob White when it should come to the ear of an American in those foreign parts. Unfortunately the sentiment was wasted, for Bob White's call may not be heard in China. In response to our recent inquiry respecting the success of the experiment, Dr. Geo. A. Derby, U. S. Marshal at Shanghai writes:

As far as I can learn, a few hundred quail were shipped in 1891, but I think none reached China alive. In 1893 several hundred were shipped, of which from sixty to sixty-five arrived alive, but in very weak condition, and when put out they were hardly able to take care of themselves, and with very few exceptions have never been heard of since.

The great difficulty has been in the shipping. The climate and surroundings are certainly well adapted to the propagation of the Bob Whites, and it is a great pity that they arrived here in such very bad condition. There seems to be no talk of again attempting their introduction. There is no game bird here that can in any respect compare with them. The native quail lies well to the dog, but is too small and flies too slowly, and is hardly considered "game" here. I think there would be no difficulty whatever if the birds arrived here well and strong, but that seems impossible.

The length and hardship of voyage should not prove insuperable obstacles; and we trust that those who have interested themselves in the project may give it another trial.

In one of the essays of "The Doctor," published 1834 to 1837, Robert Southey tells us of a certain hunger emaciated dog which was so weak that it had to lean against a wall to bark. Bernard Romans, the British surveyor, whose "Concise Natural History of East and West Florida" is one of the greatest rarities of Florida books, relates of the Choctaws that they were "very fond of dogs, in so much as never to kill one out of a litter, and it is not uncommon in the nation to see a dog very lean, and so sensible of his misfortune as to seek a wall or post for his support before he ventures to bark." Romans' book was printed by "R. Aitkin, Bookseller, opposite the London Coffee-House, Front Street," New York, in 1776, or more than fifty years before Southey. Was "The Doctor" indebted to the Florida explorer for the original of his hungry dog? was Romans himself perhaps drawing on some earlier writer? or did both of them simply embody in their works a bit of the common folk-speech of their times?

The Sportsman Tourist.

Crayfishing up the Vaivasa.

Talolo was responsible for the trip into the bush for crayfish. In general it may be said that Talolo's hunger for unearned coin was at the bottom of almost all my opportunities to become on intimate terms with the woods and rivers of the Samoan jungle. Talolo was my own boy—at least, he had adopted me in the beginning, and there was no escape from his wheedling artifices; he was only twelve or so, really handsome, and as graceful as a kitten, and with all a small cat's moral irresponsibility.

It was not permitted to every Samoan to come within the compound; they would simply overrun the premises if not checked, and it would be equivalent to running a restaurant for the surrounding village. So there was penciled on the gate post a notice or "nusipepa" carrying the information, "Ua sa lenei lotoa," or, in English, "This yard forbidden." Patu, the fat chief of the neighborhood, had done that; as Talolo interpreted the action, "Patu he fix taboo here for me for you." But as Talolo was Patu's son, he felt entitled to disregard all such restrictions and to join me on all occasions when I was in sight in the broad side of my roomy veranda. In this way he was able to add to his scanty stock of English and I was able to study Samoan from original sources. It was a liberal education to listen to the ever varying reasons why Talolo should have a shilling; even by letting him have a sixpence about once in every twenty times I fear I acquired a reputation for being an easy mark and a spendthrift.

One morning a girl with a basket leaned over the fence with something to sell. Then followed this conversation, the type of many others.

"Fa 'akau?" (Buy?) whined the girl, for they never seem to think it necessary to specify the article for sale.

"Langoa?" (What's its name?) was my reply.

"Ula," she said.

I did not recognize the word—at least, I did not recall which one of a dozen things the word means might be peddled in this way. But I followed it up with the further question, "Pe fia le totongi?" or "What's the price?"

"Seleni" (a shilling), the huckster drawled.

'Talolo e," I asked the lad, "what are ula?"

"Big bug," he replied; "good for eat for me for you." And he strolled down to the gate and began to look over the girl's stock in trade. The answer was not entirely clear, nor was it complete. I knew by experience that there were many things "good for eat" in Talolo's way of thinking which I could never bring my palate to tolerate, and his description of the article as a big bug was not at all appetizing after living in a community where the cockroach grows from 4 to 6in. long and seems possessed of an insane desire to commit suicide by drowning himself in every dish of hot soup. Talolo talked with the girl and then sent her away. When he came back to me he laid on the floor before me two of his bugs, which I had no difficulty in recognizing as the crayfish of the South Sea Islands generally, which I knew to be indeed excellent eating.

Talolo said: "You no give shillings to Samoa girl; all Samoa girl beggars; you give 'um shilling, bimeby shilling all gone, uma, finished. 'Pose you want ula, catch plenty in the bush up the river for you for me; no give Samoa girl shilling." The possibility of the working out of his own particular silver mine represented such a dire calamity to Talolo that he was willing to do anything—almost even to work—to avert such a catastrophe. If I had proposed such a bush trip to Talolo there would have been many obstacles, and it would have cost me many tins of beef and salmon to smooth out the difficulties. But having proposed it himself, I grasped the opportunity for yet another trip in to the bush with the lad, for despite his laziness he knew the secrets of the jungle and never failed to give me information of all sorts as I followed his easy step along blind paths.

The crayfish were good enough excuse for a day of forest scrambling. They range in length when extended up to 7 or 8in., not including the first pair of claws, which are always as long as the body and frequently longer. Their maximum limit of length falls only a little short of the minimum established for our lobsters, yet the crayfish are far more slender and even at their largest do not begin to approach the diameter of our smallest lobsters, seldom being of greater girth than a man's thumb. The claws are normally slender, and with long intervals between the joints they have not any of the strength which enables the crayfish of Louisiana to do so much damage by its levee borings. The South Sea crayfish does not burrow at all, not even to get under the rocks in the bed of the streams in which it lives. Large numbers of this edible crustacean are taken for food by the Samoans and for sale to the white settlers. Still greater numbers are washed out of their mountain pools by the frequent freshets after the sudden deluges of rain on the mountains and are either smashed by contact with the rough stones of the streams or reach salt water only to die and be the food of marine fishes. Yet despite the enormous destruction which must go on there never seems any diminution in the numbers. There seems to be no particular breeding season, for I have found just as many females carrying their ova in one month as in another. For my own part I returned all such to the water, but even such a slight beginning toward game conservation I was never able to impress on my Samoans. It would be at best only a drop in the bucket, for the freshets do the most damage, and yet they seem to have no effect on the supply of crayfish.

By the time I had changed into my serviceable bush suit Talolo had almost changed his mind about going, but a threat to buy a shilling's worth from some Samoan girl soon brought him to time. I knew that the crayfish were found in the brawling streams of the mountains, and I had reason to know that it was rough work to follow where Talolo led, for he was not hampered by any great amount of clothing and mud and rocks were all one to his calloused feet. It was all right for him to get up from his seat on the floor and give himself a shake just like a puppy and say, "Ta te o" (Let us two go). He may have been ready according to his own idea, but I had to know what to take for the sport. Were rods needed? Were nets needed? How about the bait? What sort of a creel should be taken?

If anything could upset the placid calm with which Talolo met the cares and responsibilities of life, such questions as these would come the closest to doing it. For the tenth time he explained that nothing need be taken; that the Samoan bush itself provided all its own resources for the taking of the things that lived therein. "The bush of your island," he used often to say, "it must be the bush of devils, for it does not help you to take the bush creatures that walk and swim and fly and creep, but you must take things into the bush. We Samoans take nothing into the bush, we bring out much." This was a thing I never could explain to this wild child—how it came that we had outgrown all our old woodcraft and had to depend on man's inventions when we went a-forest. Nor could he be brought to understand how we have driven our bush so far out of our lives that it is only seldom and through many trials that we can win back the bush at all.

When Talolo and I set out for crayfish we had not more than a hundred yards to go before we reached the bogs of the taro plantations and the hummocks of sugar cane where the path lay along a narrow dike cut by ditches, which in turn were bridged by tree trunks scarred with cuts to give firm footing. Not a mile from my house we found tall timber and unbroken solitude. Up to this point the path had been clear and distinct, a sort of 10in. Broadway, where the never-ending tread of bare feet had hardened the soil. But at the hill where now we rested the one broad path split at the parting of the ways and each was no more than an obscure trail. On the flat land could be seen the mangrove swamp which inclosed the course of two small rivers. The local river of Vaiala, the Fuesa, I had followed through its sluggish windings in a canoe until it vanished in a tangle of the stilted roots of a mangrove clump where it could be followed no longer. The other river in the swamp, the Vailo, I had also followed in its course behind Moota and Matafangatele, and had traced it up to its source in a bubbling spring. Here they say that eels were created long ago in the beginning of time. Be the myth as it may, there can be no gainsaying the fact that this river is filled with eels along that part of its course where its fresh water mingles with the salt tide. Neither of these streams was a fit spot for crayfish, which must have cold water and clear water and always sweet water. Having explained this natural history of crayfish and geography of Vaiala, Talolo led the way up the steep hill where eyes less sharp than his would not have been able to discover any sort of trail. It was difficult going—the slope was very steep, the footing was insecure and it would have been easy to turn an ankle on the jagged blocks of lava or the slippery roots of trees. Sometimes the lianas lay along the slope in such a way as to take the place of a rope with which to help out the climb. Both of us were breathless when we reached the summit of the hill, but Talolo showed that his confidence in the resources of the bush was not a vain hope. A few moments' search disclosed what he was looking for, a pendent liana about 2in. thick. With a quick wrench he snapped it apart above a well-defined knot on the stem, and again below another knot 2ft. lower down. This node he gave me, first poking a hole in the joint, and told me to drink. The joint was a reservoir of sap, holding at least a pint, and it was a most refreshing drink, being both cool and slightly acid.

From this point on the path lay along the crest of the ridge. It is characteristic of all the South Sea people to run their paths along steep ridges, thus avoiding the possibility of being caught by some enemy who has the advantage of the superior position. Easier going might be found in the hollows and along the streams, but the Samoan is bound by custom as though it were fetters and will never willingly alter anything that has come down from his fathers. That the fathers had something to do with this path on the crest is clear from the massive stone fortifications along which it runs. The path itself is rudely paved with lava blocks, a sure sign that it formed part of the old system of war roads of antiquity.

The bush was not obtrusively noisy, but there was noticeable variety of sound. In the distance could be heard the voice of the pigeon like the long roll sounding far away calling soldiers to the alert, the gentle cooing of the manutangi dove, the sharp scuffle of the lizard dashing away when the foot is almost descending on it, yet seen only as a flash of indigo. Now the sound of dashing water is heard from the depths of the left hand declivity, and Talolo declares that the Vaivasa stream is below. We cannot descend just there, says Talolo. It is not that the slope is too steep—in fact it seems to be as open a spot as can be found. It is a little difficult to find out why the path to the river is closed at that spot, but piecemeal it comes out that there is a dangerous "aitu" or ghost-devil on that slope. Of course, Talolo knows that the old heathen devils cannot hurt those who "lotu" in the white man's religion, but now he remembers that he did not go to church last Sunday, and it might not be safe to venture within the special province of this malignant demon. The truth of it all is that all Samoans retain their old gods along with the new, and the old faith has become the superstition of the new era.

At last we come to a slope which is theologically satisfactory to Talolo, and there slide and scramble down to the bed of the stream, at present a shallow brook only a yard wide, but showing on the gorges that there are times when it flows in flood 20 and 30ft. deep, floods which are all the more to be feared as they come in a moment with a wall of water roaring down the mountain and are past in an hour.

Talolo has put me on the spot. He binds a spicy leaf of ginger about his head and as he seeks a springy clump of ferns on which to recline, tells me that there are plenty of crayfish here. In vain I peer into quiet pools among the rocks. Talolo says there are crayfish, he even points them out to me, but I can see nothing in the green shadows; even when the boy stirs them up with a stick all I can swear to is a sudden flash through the water. But Talolo has to make good his claim that nothing more is needed to catch the crayfish than is afforded by the bush itself. He is never stumped in any such question of practical woodcraft, yet each new instance of his ingenuity is just as interesting to me as all that has gone before.

The problem in this case was to catch the crayfish, which can almost conceal themselves, which go so swiftly as to elude the most rapid grasp of the hand. The only materials which the lad is to use are those to be found in the woods about him. His only tools are his own bare hands. I am very careful not to let the boy know that I think there is anything unusual in what he is doing or that I could not do as much myself. But to myself I must confess that under these conditions I would be lucky to get one crayfish an hour.

Talolo first rolled together a lot of stones from the bed of the stream, making two wingdams in the direction of the current and approaching each other by an interval of little more than ½ft. The upstream side of the dams was faced with a revetment of grass and leaves, held in place by the outer course of rock, Talolo explaining the purpose of this by the remark that the crayfish now could not slip through the walls. His next step was to bend down a slender bamboo and beat it with a sharp stone. As soon as the tube split beneath these blows the boy wa sequipped with a bunch of knives as sharp as razors, for every split bamboo leaves a cutting edge of pure flint that may soon wear dull, but is very sharp to begin with. One of the knives thus obtained served to peel off the outer bark of a hibiscus close at hand, exposing the lace-like inner bast. This was carefully removed in a single piece about 1yd. long and anchored in the brook. When the boy had collected three or four of these strips of bast he rubbed them carefully on a flat stone in the running water. This removed the mucilaginous sap. The next step was to draw the strips over the edge of one of the bamboo knives, which broke them up into so many hanks of soft, white, fiber-like cord. Making a loop in one of the cords, Talolo hitched it over a toe as he sat cross-legged, and then, working toward him, plaited or wove a net about 1¼yds. long by about 1ft. in diameter at the open end. This he put in place at the gap of the wingdams, and so adjusted it that it completely filled the opening. All these preparations were completed in less than ten minutes, and the boy had shown the superiority of his own woodcraft. Even if I had brought nets I could not have set them any more rapidly or effectively than this twelve-year-old boy who marveled at the white man's need of making preparations for the bush.

Then he assigned me a place where I could watch the stream and the net and cautioned me to make no noise and see that my shadow did not fall on the water, for the crayfish were very wise and would surely escape up stream in case anything of this sort happened. He then announced in a loud tone that it was time for him to go down to the sea, and rather ceremoniously took his departure. This little play was to deceive the crayfish into thinking that he had gone. They are so wise that if it were not for the trick no Samoan believes it possible to drive them into the net. Talolo then climbed the hill and disappeared. He descended to the river bed about a quarter of a mile above and worked down stream slowly. He waded down the brook, stopping to roll back up stream the larger rocks and keeping up a great splashing for the purpose of driving the shy crustaceans before him. From time to time he struck stone on stone under water, his belief being that the crayfish would hear that sound and fear to try to escape against the current. For some time there was nothing to be seen at the net, but as Talolo came nearer more and more flashes were seen darting about the stream. By the time he was only a few yards away the net was filling rapidly, the smaller animals finding their way out through the mesh and escaping down stream. But the larger ones could not squeeze through, and when the drive was over there were many more than the net would hold.

This self-reliant young woodsman clambered up a high tree—a niuvao or so-called bush cocoanut, which is not a cocoanut at all, although the leaves are somewhat similar. Throwing down one of these monstrous leaves, the creel resolved itself into a mere matter of weaving a basket of sufficient size to hold the catch. When the basket was woven Talolo dumped into it the contents of the net and the fishing was over. All the way on the trip home I found Talolo shucking the live crayfish and eating them with evident relish. That is a taste that one would have to be educated up to. Since there is no objection to live oysters there should be no more to live crayfish. I have essayed crayfish raw in Samoa, just as I have experimented with live shrimp on the Island of Hawaii, and in each case my objection is the same—the flesh is not as tender as when cooked, and the natural juices are unpleasantly gummy.

How many Talolo até alive there is no telling. When he emptied out the catch on my veranda there were just 101, all of good size. Talolo ate the odd one, so that there would be for me an even hundred. Then he remarked that that was the number the Samoan girl would have sold for a shilling, and in a general way was he not entitled to that shilling. In a moment of weakness I cut him down to sixpence and let him escape rather than undergo the length of his arguments why he should have money. But in return for the sixpence I had several hours in the bush, I had a mess of crayfish for our dinner and I had witnessed another demonstration of the ease with which savage man turns his surroundings to his own advantage.

Llewella Pierce Churchill.

"There used to be an eccentric old character in our neighborhood," said a planter, reported in the New Orleans Times-Democrat, "who went by the name of Doc Johnson. He had never been forty miles from the settlement in his life, and was barely able to read and write, but he was naturally a sort of jack of all trades, and somehow or other he acquired a tremendous reputation for sagacity. Whenever an argument arose among the country folks Doc Johnson was pretty certain to be called in to decide it, and as he would rather have died than to have admitted ignorance on any subject, some of his statements of fact were amazing in the extreme. One day a farmer in the vicinity received a letter from his son, who had moved up to Iowa, saying, among other things, that the corn crop was looking badly and the country was being overrun by immigrants. The last word stumped the old man, and after puzzling in vain over its meaning he happened to see Doc and called him in. Johnson knew from the peculiar warmth of his greeting that he was going to be asked to solve some knotty problem, and at once assumed his wisest air. 'Doc,' said the farmer, pointing to the mysterious passage in the letter, 'what in thunder does that boy mean by immigrants? What are they like anyhow?' Johnson spelled through the paragraph, and noting the reference to the bad corn crop began rapidly to put two and two together. 'Immigrants!' he exclaimed, to gain time. 'Why, I thought everybody knowed what they was!' 'Air they critters?' asked the farmer, curiously. 'They is,' replied Doc, 'a kind of er cross between a possum and a coon, and I'll tell you what!' he added impressively, 'they're just simply death on corn.'"

Pioneer Days.—XIII.

Hubbardton.

WARNER'S and Francis' regiments were now drawn up in line of battle across the road and adjoining fields, taking advantage of every sheltering tree and log heap that offered. Hale's regiment drew off and gave no help.

Heralded by the shriek of fifes and the sharp rattle of brass drums that shook the woods with quick reverberation, Frazier's troops came marching down the road in gallant array, and deployed in line opposite the Americans. The latter at once opened fire, every gun leveled with that deadly precision of aim which was the constant complaint of the English. Their fire was returned with less effect, for the aimless bullets hurtled over the heads of the Americans, and there were ghastly gaps in the line where scarlet coats and white cross-belts were such fair targets.

"See if that red rooster drops when I fire!" said Torrey to Josiah, and aimed at a British major who stood upon a great stump reconnoitering the position of the Americans. At the report of the rifle the brave officer fell headlong from his perch. "Lord, forgive me! That's tew much like murder!" Torrey cried, in swift contrition for the deed. "I shall ketch it tu pay for that!"

"They come here tu kill us, an' if we git the fust chance it is aour good luck," Josiah said. "You haint done no more 'n your duty."

Torrey shook his head. "I shall ketch it afore the fight's over. You'll see. An' what's goin' tu be become o' my poor women an' childern's more 'n I know. Josier Hill, you promise me if you git aout o' this alive you'll go up tu that haouse an' git 'em away an' safe inside aour lines. Will ye?"

"Nonsense! You'll come aout o' this all right," said Josiah, trying to make light of the other's forebodings.

But Torrey shook his head sadly, "No, I'm sure on't as I be I see you, an' you must promise me tu ta' keer on 'em. Promise!"

"Yes, yes, I promise—if you don't come aout all right."

"Thank ye, an' gi' me your hand on't," said Torrey, stretching forth his hand as they left their corner to move forward.

The forest shuddered with sharp echoes, the spiteful crack of rifles, the sullen roar of volleyed musketry, the shrieks and groans of wounded men.

The British line wavered, then broke under the galling fire, and fell back until it received the support of Reidesel's advancing Brunswickers. Still the Americans pushed gallantly onward until victory seemed almost attained, when their Col. Francis, though sorely wounded, yet leading his regiment into the thickest of the fight, fell, pierced by a mortal wound.

At that a sudden panic swept the Americans into confusion and retreat. In vain Warner commanded, entreated, led on, and then realizing the hopelessness of it all, he sank down upon a log and poured out a storm of curses after the scurrying rout. Quickly recovering his self-control he called loudly to his men to rally at Castleton, and himself vanished in the maze of the woods. St. Clair, only six miles away, heard the battle raging, yet moved not to the rescue of his brave subordinate.

It was everyone for himself now, and Josiah, availing himself of every sheltering tree trunk, had scarcely noticed the absence of his comrade, when he almost stumbled over him lying among the rank ferns in the hollow of a cradle knoll. The blood was streaming from a wound in the breast, his life quickly going with it.

"You see!" he gasped, as Josiah dropped beside him. Remember—ta' keer—of—Hanner—an'—an'—the childern. Good-by," and his spirit passed.

Josiah knelt a moment beside the dead man, then composed the stiffening limbs, laid the hat over the motionless face, and stole away to more secure hiding until the flush of pursuit and pillage was over. Then keeping the cover of woods, fences and inequalities of the ground, he made toward Torrey's house, approaching it cautiously from the rear.

There was no sign of life to be seen about it, and it was only when he drew quite near that he heard the sound of suppressed weeping. Looking in at the door a sad sight met his eyes. The dead body of a woman lay upon the floor, the disheveled head lying in a pool of blood that oozed from a scalp wound and cleft skull, the savage sign of Indian slaughter. Beside it, crouched in an attitude of grief and despair, was a girl of eighteen, silent and tearless, her soft, dark eyes denied the relief of tears, while she suppressed the piteous lamentations of four younger brothers and sisters.

"My girl," said Josiah, gently, making his presence known. She looked up with a startled, hunted look. "Is it your mother?" he asked.

"Yes, yes," she answered.

"And you are Tom Torrey's family?"

"Yes. The Indians killed mother this morning. I hid the children under the washtubs in the cellar and myself behind the chimbley. They tried to burn the house, an' I put it aout. They killed the cow an' pig, an' took everything."

The body of the murdered mother was placed in a hastily prepared grave, a rude burial lacking in all form of service, but not in solemnity.

Josiah now lost no time in leading away his sorrowful charge by the most secret ways that tended toward the shifting frontier where comparative safety was to be found.

The Indians had plundered and destroyed everything in the house, except a little meal and a few pounds of salt pork, which had escaped their notice. These Josiah put in his knapsack, and when, at nightfall, he made camp for the homeless orphans in a dense thicket of evergreens, where he ventured to kindle a small fire, he set forth the scant rations. He mixed the meal with water in a vessel of birch bark, and saw Ruby Torrey spread it with housewifely care—though she protested it would be good for nothing without salt—on a johnnycake board which he hewed out with his ranger's tomahawk.

"When d'ye s'pose we'll see father?" she asked, looking up at him from her task and not a little confused to find his sharp, gray eyes fixed steadily upon her.

"See your father?" he repeated, starting as if from a dream. "I do' know—I can't tell ye."

"Is there anything the matter with him?" she asked with a searching look, and a white palor upon her face. "You'd better tell me true."

"You've be'n a brave gal, Ruby, an' you must keep on bein' one," said he, struggling to swallow a choking lump in his throat. "Oh, my poor gal! Your father was killed in the fight to-day! I promised him the last word he heared, I'd ta' keer on ye—you and your brothers an' sisters an your mother—we didn't know 'baout her—but he's with her now. I'll keep my promise faithful, Ruby."

She bowed her face upon her knees in grief too great for tears, until she felt a rough hand laid gently upon her head, when she wept silently. She drew the children to her and soothed their sobbing, but Josiah checked it more effectually with the admonition, "You mustn't make no n'ise or them praowlin' divils 'll ketch us," and presently got them engaged with the johnnycake and frizzled pork, and then to sleep on fragrant beds of hemlock.

"I guess I'll resk a flash more of fire," he said, and carefully mended the flickering blaze. "The Injins won't be a-shootin' 'raound much afore the crack o' day."

He bent his ear to catch a faint tremulous wail borne from far away on a waft of night breeze—a sound too elusive for the girl's less trained sense. The shrug—that was his silent recognition of it—was almost a shudder, for he knew it was the rallying cry of the wolves, gathering to the battlefield.

"You must eat a mou'ful," he said, proffering a morsel of johnnycake and a slice of pork, carefully frizzled over the coals. "Yes, you got tu," he urged. "You'll want all the strength you can muster tu-morrer."

She took the food, wondering to find herself yielding such ready obedience to him. He assigned to her a bed of twigs beside the sleeping children, and covered her with his blanket, saying: "Naow sleep saound, for I got tu wake you afore the young uns an' talk over things." The last she saw between lids that weariness closed in spite of the pain of grief was the silent, motionless form of her protector sitting in the fading firelight in intent abstraction, with his rifle across his knees.

ROWLAND E. ROBINSON.

Natural History.

Nicaraguan Experiences.—III.

Snakes and Things.

IF snakes can be happy anywhere on earth it would seem to be in the woods of Nicaragua. Summer lasts all the year round, no time need be wasted in hibernation, and opportunities to get walked upon, and then to bite somebody, are only limited by the sparsity of the human population. Vines, bushes, limbs, leaves and briars not only hide the ground from view, but they make a regular ocean of foliage in which the snake may be as easily overhead as underfoot, and equally invisible. It results that a stranger in the woods is apt to populate them with about a thousand imaginary snakes, and all venomous, for every real one. And to keep out of the way of so many is a task to make one nervous and unhappy, until he makes up his mind to stand his chances of snakes as he does of lightning, simply by trusting to luck—for nothing else can save him. When he has taught his nerves to do that, as soldiers teach their nerves to stand chances in battle, he can get a great deal of comfort in reflecting how very few people actually get bitten. The statistics of the small numbers bitten, as compared with the great number of snakes, and the chances per snake to bite somebody, would amply support a theory that the snakes have some sort of game law restrictions upon the privilege of biting people.

For, I am sure, they could soon exterminate the population, as we have done the buffalo and the wild pigeons, if they were "game hogs," and bit at every chance they could find. Of course, it is only a working theory, suggested for the comfort of the tenderfoot in the woods, by one of themselves, as its results seem to accord with experience. A simple form of such a theory would be that the snakes allow an average of so many miles of travel in the woods for each bite. I feel sure that the allowance is at least a thousand miles. That is, a thousand men could go at least one mile, or one man a thousand miles, or ten men a hundred miles each for every bite. So if I take a scramble through the jungle for a quarter of a mile I run a chance of just one in four thousand of getting a bite. It is always a great thing to get numerical expressions for just exactly what we are doing. Figures, we know, cannot lie. When we say the multiplication table we are telling the truth, the whole truth and nothing but the truth. On all other occasions we are only approximating.

In the matter of varieties of venomous snakes Nicaragua has at least two of the three which we have in the United States, and four of her own besides. She has the rattlesnake, and the elaps, or coral snake, but I doubt if she has our copperhead or moccasin, which are practically the same snake, and I think interbreed. At least I have found no specimen of either in several good collections made in this vicinity. The books, however, say they are found in Mexico, and there is no reason apparent why they may not be here as well.

The elaps here is very abundant. I have been curious to know if his disposition is as inoffensive as it is in the United States, where the country folk often consider him harmless, and select him to handle and to scare timid people with; though the fatal percentage of his bites is higher than the rattlesnake's. But the natives here all recognize him as deadly, and believe him as quick to bite as any other.

Of the four native species, which are unknown in the United States, one is a dark backed and yellow-bellied sea snake, found only on the shore of the Pacific, called pelamys in the books. His tail is flat, like an eel's, his nostrils are on top of his nose, and his fangs are permanently erect, like elaps. Of each of the other three native species there are several varieties, differing sometimes widely in color and markings, so as to make some eight or ten quite different looking snakes. Among these the natives distribute, very much at random, three names—tamagas, tertiapello and toboba. Generally, however, tamagas is applied to the species called in the books teleuraspis. Its salient features are the excessively broad head, near about three times the width of the neck, and the possession of miniature horns over its eyebrows. One variety is uniform bright yellow, with a few fine black specks; one is an olive gray with some faint white spots, and a narrow stripe down the back; and one is a pale green with white, black, yellow and brown irregular spots specially adapted to conceal him from notice when up in the bushes.

The tertiapello of natives I generally identify with the trigonocephalus of the books. The salient feature is the very sharp-pointed, high, angular nose, and the top of the head covered with ordinary small scales, instead of the sort of plates that we see in our copperhead and moccasin. The scheme of color and marking is generally very suggestive of the copperhead, with reddish brown tints, and V-shaped marks, but there is great variety in this species, and greenish and olive and yellow all appear. This species in some of the books is called bothrops, and it includes the noted "fer de lance" of Martinque and Santa Lucia, said to be particularly aggressive. The third variety of the natives is toboba, but all the specimens shown me of that name turned out to be non-venomous snakes. The third variety of the books is lachesis, and I am sorry to say I have not yet found a specimen of him. He is the only snake in the world to whom the books will concede a horny end to the tail. He is akin to the rattlesnake, but not having enough bone on his tail for a rattle, he is said to have it in a "terminal spine well developed." I am still on the hunt for him, but I take it that he likes drier localities than the delta of the San Juan. And from the Pacific side, which is dry, the natives tell of having a "Toboba con unya," or toboba "with a claw." The book descriptions of their markings and coloring read much like those of the rattlesnake, and the crown scales are small, like tregonocephalus.

There is one more snake for which I have hunted faithfully, but which I never expect to find, although he is the most dreaded of all, both by natives and American settlers here. He is called the blood snake, and was mentioned and described in your columns in a letter from Costa Rica about two years ago, by a very intelligent correspondent, who spoke of him as resembling a "swollen vein." The descriptions vary a good deal, but generally agree that he is a small snake, and is red or bluish red or red bellied. I have seen some half-dozen collections of snakes, each of which had one or more so-called blood snakes. But every one, upon examination, proved to be some small, harmless snake. If any such snake exists he has heretofore escaped the observation of any naturalist. That is so unlikely that I am satisfied none can exist. There is, however, no doubt at all that, not infrequently, the symptoms ascribed to the bite of the blood snake do follow the bite of some snake. But it must be one of the three kinds above named. The symptoms are that all the mucous surfaces of the body, external or internal, will bleed, and sometimes even the natural skin is said to ooze or sweat blood. Evidently, in such cases, the patient has a very large dose of a poison containing an unusual proportion of what Dr. Weir Mitchell called "venom globulin." The "pit vipers" are supposed to be richer in that ingredient than other snakes, and all the snakes I have mentioned belong to the pit vipers, except the elaps and pelamys.

So there seems no need to conjure up a new snake to give a bite which will affect the blood in that way. But it would be very interesting to identify the snake and the circumstances under which it happens in an actual case. Physicians who have treated cases (which generally recovered, too) have described the cases to me, but they knew nothing about the snakes. All of these snakes, except the coral, seem to grow to great size, probably 7ft. or more, sometimes. I once saw the fangs of a monster rattlesnake in Florida, a fellow with near twenty rattles, and they were about ¾in. long. I have the fangs of a tamagas 1in. long, and I have heard of others very much larger.

A medicine called curarina is put up in Cartagena, Colombia, and is largely used all through Central America, and remarkable cures are ascribed to it. Its preparation is, of course, a secret, but the Indian arrow poison from South America, called curari, is well known, and is derived from plants which yield nux-vomica and strychnine. A plant of the same family, *Strychnos colubrina,* on the coast of Coromandel, has been in use for generations as an antidote for the bite of the cobra. And strychnine is now coming to be recognized as the physiological antidote for snake venom, as I recently wrote in your issue of July 8.

Unfortunately, snakes are not the only things in the woods here which bite. Ticks and mosquitoes I need not mention, for we are not guiltless of them ourselves in certain localities of the United States, and they are not restrained either in their biting by any game laws in any country. But I have found here a new way to catch the little bits of ticks, almost too small to see with the naked eye. A little half-warm lump of shoemaker's wax picks up all it is rubbed over, even though they cannot be seen. Scorpions and tarantulas are also to be found, but there are many more imaginary ones in the woods than real. The jigoe is very common in sandy localities, and must be amphibious, from the way in which he survives overflows. He is easily located and picked out when he finds a lodgment. But many deaths from lockjaw have been known to follow jigoe bites, and the natives are usually careful not to wash the place with water, believing that the germ of the lockjaw is in the water, and will find lodgment. They often apply a little kerosene to the spot.

The most horrid of all the parasites is known as the mosquito worm, the natives believing it to be deposited by some sort of a mosquito. It is really the grub of a variety of the œstris, a large, hairy fly, belonging to the same family as that which breeds the grubs found in the head of deer, and in rabbits and squirrels. The bot fly, which infests horses, is also of the same family.

This fly must either watch to catch people asleep, or else his grub-laying is an entirely painless operation, for I have heard of many cases on the face and hands, and of one in the eyelid. The grub has to breathe and keeps the hole open behind him, and can be seen to move. He can be squeezed out without much trouble, if first suffocated and killed. If squeezed while alive he is able to hold on to some extent and may be torn apart. The usual treatment is to plaster wet tobacco over him, which

cuts off his air and poisons him as well. Twelve to twenty-four hours are allowed for him to die, and then he is squeezed. They are not very common, but our tenderfoot in the woods traveling for snake bites will average getting at least two or three grubs for every bite. Carbolic or mercurial ointments might be better applications than tobacco.

While on the subject of pests, I will mention one in the vegetable kingdom which easily takes the prize over all competitors. The natives call it pica-pica, which means a double-barreled itch. It is a bush growing in the woods and waste places, often in patches and thickets. It bears a profusion of downy pods, and it is in the down that the trouble resides. Each filament of that down, though fine as gossamer and so light as to float in the air like dust, is a tiny arrow, covered with barbs, which seems to have the property of wriggling itself into the pores of whatever it touches. It will work through ordinary clothing and reach the skin beneath, and then the trouble begins in earnest. Each little arrow gets its tip into a pore of the skin and at once takes a grip and begins to wriggle in deeper. Scratch it and you find it possesses two rare qualities in perfection. The first is of adhering to the fingers and being transferred to infest all sympathetic places which are scratched. The other is that quality of the-more-you-scratch-the-more-you-have-to-scratch. These two qualities combined form a regular blue-print device for distributing the pica-pica to the remotest sections of one's cuticle in the shortest possible time. There is no natural selection about it; it is blue-print pure and simple. Even unimaginative people grow eloquent and picturesque in describing the itch which pica-pica generates. Fire is one of their mildest comparisons. The only relief is a few hours of rubbing in oil. On dry days this down detaches itself from the pods, and infests the breeze to the leeward of the bushes, and should one jar or shake the bush a cloud of it disperses like smoke in every direction.

A gentleman told me of a tragic occurrence in connection with this vegetable, though having its root, as all tragedies do, in human depravity. He was invited to supper and a dance at a hospitable home near an interior town, to meet a number of the loveliest young ladies of all that section. The young lady who was hostess had two younger brothers, who were evidently degenerates. She had been so unfortunate as to offend these brothers that afternoon. What should these wretches do but scatter pica-pica on the ballroom floor while the guests were at supper! When the dancing began, naturally the swirling skirts of the señoritas generated ascending eddies about their flying feet, sucking the fatal weed upward from the floor, and soon filling the whole air with it. Not one escaped! There was but a single dance! What those poor girls endured will only be known at the last day, and then, it is to be hoped, we shall all know and actually see and applaud what is to be done to those boys.

But let us turn to more cheerful topics. The Atlantic Sea beach is mostly of shifting sands, and very few shells are found, but many pretty and curious "sea-beans." The most common is the ox eye, or borrichia, which is often borne by the Gulf Stream as far north as the Carolinas. It is often carried in the pocket as a preventive of rheumatism and other troubles, as the buckeye sometimes is in the States. A flat, black, four-lobed seed, doubtfully identified as an ipomea, is called contreveneno, and is said to cure snake bites. A sort of pear-shaped, grayish, polished nut, the size of a filbert, is called "hembra y macho" or "female and male." It is much prized as a charm, to be worn by children among their beads. It keeps off all evil eyes, and especially a sort of sunstroke often given to young children by the eyes of persons who have been working in the sun. It is doubtfully identified as *Cæsalpina bonducelli*. It is said to be called female and male because the seeds grow in pairs on a single stem, but that is not sure.

Of native birds, I have been most interested in the jacana. Black-green head, shading into red-purple body, the wings when spread of pale gold, and when he lights he holds them open for a few seconds as if for you to admire. Slender, delicate and graceful, with long toes and toe nails like cambric needles, for walking over floating grasses. A stout golden bill, a clover leaf, cut out of gold leather, above his bill and lying back on his forehead like a little skull cap, and sharp and elegant golden spurs on his elbows. He is very tame along the edge of the town, and is said, with his elbow spurs, to whip off all chickens which trespass in his vicinity.

Another very interesting bird is a large oriole, which builds hanging nests over a yard long, as large as one's head. Sometimes fifty or more hang on a single isolated tree. The colonies seem to be polygamous, but I am not sure.

Still another oriole, like our Southern mockingbird, makes himself most at home of all the birds in the country. He is always in evidence in the most conspicuous place he can find, and whistling as if he owned the town. For a repertoire he has at least fifty sentences, about a third of them good English, and the others, apparently, good something, but I don't know what. I call him "Charlotte's bird," for I first noticed him whistling "Who kissed Charlotte?" Afterward I recognized many English calls such as "Come here, sweetheart," "Please don't deceive me," "She never will forgive you," etc., and there are scores which I cannot translate. I hear very many strange bird calls in the woods, which excite my curiosity, but tall trees and dense foliage make it very difficult to see the birds. And between my limited knowledge of Spanish and the limited knowledge of birds by the natives, I net but little information by questions. By the way, as we are taking so much Spanish now into our happy family, some of your readers may find it useful to know how to ask in Spanish what anything is called. Point at the object and say: "Come and see Emma?" The Spaniard will think you said in beautiful and correct Castilian, "Como se llama?"—how itself calls that?

Let me ask space for one thing more. There have been several letters in your columns recently discussing whether animals have reason. The question seems to me much like discussing whether dawn is daylight, but I am not proposing to debate it. I only wish to call attention to the fact that the numerous instances of intelligent animals, made famous by your correspondents, are all dogs! Blood is thicker than water. Please record the following instance of intelligence and other equally admirable qualities in another race, somewhat nearer to us on the family tree. Dogs are only mammalia. Monkeys are primates.

A friend who was encamped in the woods recently witnessed the following occurrence: A troop of monkeys, which seemed to be a picnic party, under the charge of chaperons, came to cross a creek by his camp. They came along, traveling as usual, from tree to tree by interlacing limbs, and at the creek side soon found some vines which made a suspension bridge. There was considerable skylarking going on in the procession, but the chaperons marshaled all across the bridge except two. These two had dodged behind trees and palpably and deliberately got left on purpose, and when the rest of the picnic was safely out of sight they selected a nice narrow seat, where they sat extremely close together, apparently deep in conversation and as happy as could be. After some time the larger one spied a fruit hanging not far below him, and began to reach down to try and get it. His reach proving too short, he took a twist with his tail around the limb and swung for it. But even his tail was too short, and the fruit still hung a foot or more out of his reach. His smaller comrade saw the difficulty, and solved it at once. She grabbed the tail firmly, loosed it from the limb, while at the same time her own tail took a turn around it, let her comrade's tail twist about her wrist, and then, all securely braced and anchored, she reached down until she had lowered him in reach of the fruit. He gathered it, and in a minute was back by her side, and they were eating the fruit together. What dog could have ever figured through a problem like that, beginning with getting left by the picnic? And what dog would have failed to eat the whole prize himself, only growling at his comrade to keep off? But blood will tell! JACK HILDIGO.

An Animated Steel Trap.

A HOT summer day; a party gathering apples under the shady trees of the old orchard; a sound of a chicken in distress, and the exclamation of a visitor, "A hawk!" But the lady of the house, with the air of one worried with the recurrence of an old vexation, said: "No, it's that old turtle again!"

I had heard of the turtle which by his industry distanced the hare, but to learn that the cries of the fowl in the distance were occasioned by its capture by a turtle was a revelation to me. I ran for my rifle, for certainly this turtle justified the use of a gun.

We hurried down to the spring branch at the foot of the orchard, and saw a chicken of "frying size" being dragged down into the mud by some irresistible invisible agency. It was disappearing slowly, and I fired to one side, having detected a slight movement in that direction of the surface of the mud hole.

I chanced to choose the right side, and a spot of blood showed on the surface of the slough, and the chicken was released and hobbled away.

I got a fence rail and reached in and pried up the turtle and shot it through its ugly looking head. The first shot was through the shell. The two shots killed it in an hour. I had given the animal credit for more vitality, and also that when it closed its jaws on an object it would not let go until it thundered.

The victim was a mud or water turtle about a foot over its shell. It had claimed several chickens as its own by waiting around until, unconscious of danger, the fowl ventured near enough to be snapped and dragged under. I proposed a terrapin stew, but the suggestion not being well received by my hostess, the matter was laid on the table. ANDREW PRICE.

MARLINTON, W. Va.

The Rattlesnake's Venom.

HILLSGROVE, R. I.—*Editor Forest and Stream:* I note in your paper of July 15 the question of Fred Skinner in regard to the rattlesnakes being poisonous between October and February. I deal quite largely in reptiles and have done so for four years, and sometimes have as many as fifty rattlers on hand; and in my opinion, as well as personal experience, the rattlesnake is deadly poison if he gets a good snap at his victim. That is, the diamondback. I find the banded and the black rattlers are not so quick to kill. I have put chickens in a box for a diamondback to feed on, and the reptile would be vexed by the fluttering of the chick, whereupon the snake would strike it and the chicken would die quicker than it would if its head had been severed. But in the same cases with the banded and black, I have had them live for hours. We have twenty-seven distinct species of the rattlesnake in the United States, and the diamondback is the one most dangerous. I do not think a person could live an hour after being struck by this species at any season of the year. I have a few fangs over 1in. long taken from some of these snakes. If Mr. Skinner would like some of them I will look them up and send them to him.

W. W. BUDLONG.

Wild Pigeon in New York.

MICHAEL HEALY, of the Bolivar (N. Y.) Gun Club, killed a wild pigeon in the woods on Aug. 10.

The New York Sun says that Inspector Frank W. Pierce, of the State Forest Preserve Board, reports that a crane was shot near Moose River in the Adirondacks which had forty-five trout in its stomach.

The photographs of the Vermont deer McKinley, which were published in our issue of June 24 should have been credited to the camera of Dr. W. K. Draper, of New York.

DON'T SHOOT

until you SEE your deer—and see that it is a deer and not a man.

Game Bag and Gun.

Maine Bear Trappers.

THE Maine hunter stands neither in fear nor respect of the black bear. He knows him to be a tricky customer, only dangerous when cornered, something like a big, overgrown rat, but not half as courageous as the rat. He has a contempt for the bear, savored only by the knowledge that the animal is powerful and armed with teeth and claws that may work mischief under certain fortuitous circumstances, and also by the ever-present consciousness of the money value of the beast. A Maine man always has a warm spot in his heart for any proposition involving dollars and cents. The bear is worth, when dead, $5 in bounty and several times that amount in the proper season for its robe. Consequently at the bottom the Maine man has a feeling not altogether unfriendly toward the sheep-stealing, cowardly vagabond of the woods. Get one of the Maine trappers to tell of his bear hunting experiences and sooner or later he will certainly come around to the money value of his catch and dwell on that as the principal feature of the story. Personal danger is touched upon lightly, or left out when not essential to the narrative, and sensations are never mentioned—except perhaps the sensation of disgust that the bear has gotten some temporary advantage as a result of the narrator's short sightedness. Warren Wing, of Flagstaff, and John Cushman, of Sherman, are two typical Maine trappers, and both their stories hinge on the number of bears killed in a certain period, and the money value received for the lot. I shall tell them as nearly as possible, as the men told the stories themselves.

"Four years ago," said Mr. Wing, "I made $120 in ten days' time trapping bears. I got four old bears and two cubs. One of the cubs was alive. On this trip I got a bear every other time I looked my traps over.

"I started from home and went into my camp on Pray Hill in the northeast corner of the town. It was about the 1st of May. I went out and sot four traps and then went home again. In about a week's time I went back to look at my traps. The first trap I came to was gone. I hunted for it for two hours and couldn't find it. The trail was an old one, and it had rained since it was made, and I couldn't follow it good.

"I was looking off through the woods uncertain which way the trail went, when I happened to see a bear's head cocked up looking at me. I knew well enough the bear was in my trap, and I walked right up to it to get a good shot. I saw a couple of small animals that I took to be rabbits run off in the bush, but I didn't pay much attention to them, being so hard upon the bear. I got where I wanted, and knocked my bear over, and then I sot to to skin her. When I turned her over I see that she was suckling cubs, and that reminded me of the small animals I had seen run off, and I knew well enough then what they were.

"After I took the old lady's hide off I spent the best part of an hour looking for the cubs, but I didn't find them, and I had to give it up as I had the other traps to look over.

"The next trap I visited was gone, too, but the bear had got into it since the rain, and left a good trail, and I soon found him.

"The bear kept head on and would not give me just the shot I wanted, so I gave him one through the head and knocked him down. When I worked the gun for a new cartridge there was nothing there. For some reason or other my magazine was empty, and I could find no more cartridges in my pockets. About the time I found this out the bear rolled over and got on to his feet and stood there looking at me to see what I was going to do next. It was kind of aggravating, and I says to myself, 'Your hide's going back with me to Flagstaff, Mister Bear, some way or 'nother.'

"You can bet I wasn't going to lose my bear just because I had run out of ammunition.

"I looked around for something to kill the bear with, but couldn't find anything till I got clear back where the trap had been set, a matter of a couple of hundred yards or so. There I got a chunk of wood 6ft. long and 3in. through that I'd used setting the trap. It was heavy rock maple, and I says to myself, 'This is good enough for a cartridge, and it won't play out.'

"When I got back to the bear he set there winking and blinking and showing his teeth, telling me he didn't want me trying no more experiments on him. I crept up behind and swung my club, and the very first clip I drove the skull right in, and after that I had no more trouble taking off the pelt. The rifle ball had hit him in the nose and missed the brain, and only stunned the bear temporarily.

"I generally figure to get a side shot on the skull between the eye and ear. I look the bear in the eye, and after a while he turns his head and looks away, and that gives me my chance.

"The next day I thought I'd see what I could do to get the cubs, so I took my boy with me and went back to where the old bear lay. When we got near to the carcass we saw two cubs going up a big spruce tree, snake fashion, circling round and round the tree as they went up. I brought my rifle up and took a quick shot and put a ball right through the head of one of the cubs, and that was the end of him.

"Then I thought of catching the other one. I asked the boy if he thought he could climb the next tree to the big one, for that had no limbs. He said he believed he could skin it, and started for the tree.

"'Hold on,' I said; 'I want to rig you out.'

"I went and cut a crotched pole 10ft. long, and fastened the crotch to his belt so he could climb with hands and feet, and told him to go ahead and skin up the tree.

"He got up 30ft. or so, carrying the pole with him and then he was on an even height with the cub in the other tree, and only about 10ft. off. I told him to take the pole and put the crotch on the bear and shove it off the limb it was sitting on.

"The boy gave the bear a punch and knocked him off the limb, but he hung on underneath. He punched again and the cub came back on top. 'Now,' I says, 'you give him a good big punch and knock him off anyway.'

"The boy gave him a good punch and knocked him off. The cub made himself round like a bat-ball coming through the air, and he struck on his rump right at my

feet. I grabbed him by the nape of the neck and back and he turned like a flash and began scratching like a bag full of cats.

"I sang out to the boy to hurry up and come down or I'd have no flesh left on my hands, and when he got down I had him tie the forward feet with a piece of string and help me get the little devil under control.

"All this time the cub was making the most unearthly noise, and I thought to myself if there were any old bears around I should have company. I kept the cub till he was six months old and then sold him. When I got him he weighed about 5lbs., and when I sold him he weighed 50.

"I had put the old she bear in for bait, and about a week after I got the cubs I went back to the trap and caught another old one, and a little after that I got my fourth grown bear in the trap where I had knocked the bear over with a club.

"Bear meat makes as good a bait as anything. The secret in catching bears is to select the right spot for setting the trap. One man may set a trap in one place and never catch anything, and another man may go fifty or a hundred rods to one side and get a bear right off the first thing.

"Some bears are mighty smart. I tried three years for one, and had the blacksmith make me a special heavy trap. He was a monstrous big bear, and you could follow him through the woods by his track just as easy as you could an axe. I put out a dead horse weighing 1,000lbs. for him and he hung around till he ate him all up, and it didn't take a great while either. I covered the horse with brush and hid the trap in different places, but he'd paw the brush away till he'd located the trap before he'd take a bite of the horse. I've known bears to walk round and round a trap till they'd worn a regular ring in the ground. At last I took bee's honey and smoked herrings and that was too much of a temptation for him to go by, and I got the old fellow.

"As a rule bears, when they get in a trap, fight themselves and get het up so they choke themselves. If one gets in a stream or pond, where he can keep cool, he'll live for quite a spell."

John Cushman's camps are at Katahdin Lake, under the shadow of Maine's highest mountain. There is good fishing and hunting, particularly for caribou, in his section, and it is also a great place for bears. In the last three springs Cushman has trapped thirty-five bears, and he may be said to make a business of catching bears.

A year ago last spring Cushman killed three full grown bears in one day, and carried no weapon but a .38cal. Smith & Wesson double-action revolver with 5in. barrel. His day's work netted him $15 in bounties and $44 for the skins, or $59 in all. The fact that he nearly lost his life in a hand-to-hand conflict with one of the bears is a minor feature of the story.

"I had forty steel traps worth about $8 or $10 apiece set around back of Katahdin Lake," says Cushman. "I made all but about four or five of the traps myself. It's no great job to make a bear trap. I do most anything from making moccasins to snowshoes and canoes. Well, as I was saying, I was off there looking over my traps thirty-five miles from home, and alone, at the time, with nobody nearer than L. B. Rogers' hunter camp on the East Branch, thirteen miles away. I came to a trap that was missing and followed up the bear for about ten minutes, and walked right up to within 6ft. of the bear before I saw him. He'd got hung up by winding the chain around a tree, and lay flat on his back in among some brush and stuff looking up at me as well as he could. He couldn't see very good, for the sun was right in his eyes, and he was hung up so he couldn't move.

"I shot him and skinned him and took the hide right along. It took me from half to three-quarters of an hour to skin him. I don't make much business trying to hurry when I'm skinning a bear, for fear of cutting the skin.

"I hadn't gone quarter of a mile from that place when I found where another bear had gone off with a trap. I followed him about a mile, and then the first thing I knew I heard a rattling of the chain and saw the bear coming toward me on the run. I let him get within a rod and fired and killed him stone dead with a bullet in the brain.

"I took the bear's jacket off and then I walked back to the canoe with the two hides, and paddled up the lake a piece to where I had some more traps set. I looked over several traps before I found one that had done the business. This bear led me quite a chase. I followed the trail three hours and ten minutes before I came up to him. I had my watch in my hand a good deal of the time, for I wanted to allow time to get back to the lake before dark, when the walking would be bad. The bear was traveling toward the south end of Katahdin, and walked in the bed of every brook he came across, and did his best to hide his track.

"As last I heard him making the devil of a roaring off in the woods. I left the trail and struck across toward him, following the sound. When I came up he was fast in some treetops where four or five large spruces had been rooted up by the wind and the tops thrown together. The minute he saw me the bear threw himself on his back and put his feet against a log and tried to yank out of the trap. I thought if he got out he might make it too warm, so I ran in and took a shot at his head, trying to cripple him. The bullet struck directly under the ear and brought up against the knuckle of the neck bone. It was not heavy enough, as it happened, to do the bear any serious injury, but it knocked him senseless. I kind of took it for granted he was dead, and jumped up on one of the trees and walked along it down to where the bear was to see if he had good fur—I've killed shedder bears as early as the 10th of May, and only got $2 for the skin.

"The bear never stirred, and I started to get the chains off the clog, and quick as a flash he had me. My insteps had been right against his back, but quicker than I could think he turned over and was standing on his feet facing me. His mouth was within 6in. of my face, and his breath didn't smell good. He was in the act of nailing me with his claws, and I had to shove him off mighty quick without choosing where to put my hand, either, anywhere so as to get him away in the shortest order, so I shoved my left hand, as it happened, square into his mouth.

"If I'd had my revolver in the case there'd never been no chance for me at all, but I'd never put it up, and it was still in my right hand. With the same motion that I shoved the bear off I raised the pistol and put the muzzle on to the bear's head so close that it burned the hair off, and gave him four shots. Of course, I jerked my left hand back mighty quick out of the bear's mouth, but I wasn't quite quick enough to prevent him getting his teeth into the middle finger. If he'd held me for one instant he'd stove me right to pieces, but I knew I had to get that hand out, and so it came.

"The bear got those four shots in him from my double-action pistol before he ever touched the ground, and when he did he was dead for keeps.

"He'd ripped up my finger pretty well, and there was a piece of the cord half an inch long sticking out. I cut the cord off with my knife and took and laid a chunk of flesh right in and bound up my hand. Then I skinned the bear and set the trap again, and took the hide and went back to my canoe and paddled over to camp. After that I took the three hides and went through thirteen miles to Rogers' camp, and spent the night there. Charley Hunt, of Staceyville, and John McNally, of Sherman, were there, and I got John to wash the hand and do it up again. It was swollen very bad and pained me so that I couldn't sleep. The next day I started at 6 in the morning and got home that afternoon, carrying my three bearskins. I was laid up a month with that hand and couldn't feed myself or touch anything. The finger won't work right yet, and I never expect it will. I got two quarts of bears' teeth and toe nails since then, though, and I feel satisfied."

Messrs. Wing and Cushman both are willing to take sportsmen with them on their trapping expeditions. May is the best month for bears. J. B. Burnham.

Arkansas and the South.

Little Rock, Ark., Aug. 13.—At this season of the year there is little to shoot but wood ducks and doves, but of these there are quite a number. The best summer duck shooting, I am informed, is at Beaver Dam Lake, which is in Mississippi, forty-three miles from Memphis, on the Yazoo Valley Railroad, where some Memphis sportsmen control a preserve. This club opens the season July 4, and on the 20th Dr. R. W. Mitchell and Tom O'Sullivan were there and bagged seventy-seven ducks, of which Dr. Mitchell killed fifty, the limit. Mr. O'Sullivan, who is quite an old man, had the misfortune to break his glasses, or he would also have got the limit, he tells me. Several days later Nash. Buckingham and Carl Neptune bagged sixty. This club has been in existence sixteen years, and before the rule limiting the bag to fifty ducks a day was adopted it frequently occurred that 100 ducks a day were shot to the single gun.

During the entire period of the club existence there has never been a change of officers; those who were chosen when the club was organized have been re-elected each ensuing year. This reflects great credit on those thus honored. They are: Dr. R. W. Mitchell, President; W. A. Wheatley, Secretary and Treasurer, and J. A. Austin, Chairman of Executive Committee. One other person who has been a fixture for nearly this length of time is the club's cook and caretaker, Andrew Jackson Bounds, who has been with the club fourteen years. The club does not own the lake where its preserve is located, but leases it, and has only recently renewed this for another term of years.

The Wapanocka Club members also enjoy good wood duck shooting on their famous preserve, which is situated in eastern Arkansas, and which contains 6,000 acres of land and water and requires fourteen miles of fence to inclose. A party consisting of J. P. Ederington, A. C. Treadwell, John Overton, Jr.; Robert Galloway, Dr. J. S. Minor and others were over on opening day, which is Aug. 1 with this club. But though there were plenty of ducks, the party averaged only about ten ducks per man. The water in the lake is very low, and the extreme heat had killed a great many fish, which were scattered about on the water and along the bank, and these produced such an offensive odor that it precluded all possibilty of remaining on the lake any length of time.

The membership of this club is limited to forty, and the stock is valued at $1,000, but nevertheless there are no vacancies, and at present there are four or five applications on file. This club employs a keeper, who is also a deputy sheriff, to patrol its land, for in addition to its fine duck shooting there are also deer, turkey and squirrels on its preserve.

At both these clubs the daily bag of ducks is limited to fifty, and there is also a clause prohibiting the members from offering any of their game for sale, under penalty of expulsion.

The Hatchie Coon Club and Oak Donick are both situated in Arkansas, and are located on the bank of the St. Francis River. The membership of these organizations is also composed mostly of Memphis sportsmen, and recently they have been merged into one. The principal attraction this club has to offer consists of the fine bass fishing to be had in the St. Francis River, which has been the best for the past twenty years. The club limits the number of bass to be taken in a single day to fifty, and it frequently occurs that these are taken in a few hours by the more skillful members, while even the novice has no difficulty in taking the limit. Perch and channel cats are not limited, and these are equally plentiful. The club house is quite a structure, and the club keeps a capable and competent man in charge to look after the wants of the members, and as the accommodations are first-class in every respect the members' wives and families frequently accompany them.

The membership of this club is limited to 100, and the stock is in great demand at $175 per share. This preserve embraces about 800 acres fronting on the St. Francis River.

While in Memphis the other day I was informed that the dove shooting in that vicinity was not as good as usual, but notwithstanding some very fair bags were being made. I was also told that last year a party of Memphis shooters went to Senatobia, Miss., and slaughtered 1,200 doves in a single day.

Here in this part of Arkansas the dove shooting has been very good, and bags of from twenty-five to forty are regular occurrences. But the weather has been very hot the past two weeks, and there is plenty of hard work connected with this kind of shooting.

Paul R. Litzke.

Antiquity of Hunting.

Probably the forefathers of all mankind were hunters. This presumption is one of the most reasonable things we can imagine, whatever may be the true theory of the origin of man. This must be admitted by all people who admit anything, regardless of those who never do.

In the matter of hunting, moreover, man does not greatly differ from all other creatures of the animal world, nor, it may also be said, from the creatures of the vegetable or even of the mineral kingdoms. It is one of the most apparent facts that everything endowed with life is eternally in quest of some other creature or thing. I shall entertain this belief until some hunter digs up a microbe, a mote, or any other kind of a thing that is absolutely inert. To do this he will, perhaps, have to dig up something that does not exist.

This belief of mine, however true, does not seem to make much difference anyhow or anywhere, somehow. There are so many kinds of hunters and so much diversity in the hunting that it neither evens up, levels nor squares anything in particular. The mineral particles that are eternally in quest of some other particles, the roots, fibers and juices that are forever reaching out for what they seek, the microbe, the mite, the pollywog, the catfish, the whale, the leviathan, the mugwump, the monkey and man are all engaged chiefly in the same pursuit—hunting something else.

Nevertheless, this business of hunting, that is carried on so extensively and so continuously, has a great deal to do with the goings on in this world; so much, indeed, that I hope someone agrees with me in my opinion that hunting is not given the distinguished importance to which it is peculiarly entitled.

Without meddling with the millions of other creatures addicted to hunting, it is enough, in the space likely to be allowed this essay, to consider man in what may be the first position. Man is so unmistakably a natural born hunter that I am of the opinion he ought to be measured by some sort of a Nimrod—that is to say, some measure expressly designed to ascertain his real dimensions in comparative respect to other hunting creatures.

With proper deference to things ancient and sayings proverbial, isn't it about time a new set of saws was fixed up for generations coming on hereafter? As an instance, if there is nothing new under the sun, there ought to be an organized and earnest effort to fix some old thing over so that it will seem at least as good as new. If posterity could request something of us, especially something American, the demand would doubtless be for a few new, or at least thoroughly renovated, aphorisms. All the old gambols have been shown; and some of them have exposed themselves.

As another instance—an instance of anything you please—a man is *not* known by the company he keeps, scarcely. Very pious people have sometimes been thrust among sinners, in jails and other evil places. Again, some very religious and not well-known men keep all sorts of company in houses they rent, in business they do, and while they are hunting. And there are gun clubs and associations of sportsmen who differ.

The saying has perhaps done more harm than is thought for. How much better it would be to establish a fact, instead of a trite lingo that doesn't either rhyme or stay where you put it. If we could fix that phrase over and say a man is known by the hunting he does, there is no doubt posterity would like the flavor of it. Such a combination of words and wisdom in small compass ought to be in some Poor Richard's almanack in the year 2000, which comes hereafter quite a while.

There are other instances. Instead of saying How do you do? How are you? and How is Smith or Brown getting along?—instead of asking these questions a thousand times we might be less tiresome and monotonous by saying What are you hunting to-day? Did you find it yesterday? or What is Smith hunting for this time? Replies to such questions would doubtless signify something.

Men are forever hunting, and women are usually quietly or otherwise in quest of something. This fact is established beyond legitimate refutation, for it may be traced throughout history, Scripture and mythology; while the incredulous and skeptics may either assure themselves of it by daily observation, or, as they have been known to do in other cases, avoid the proofs to maintain their stubborn opinions and characters.

Digging in my garden recently (where I dig chiefly in hope of digging up something, about the only way I raise anything) I dug up evidence that goes to establish my theories of things. I think I am the first civilian that ever dug up the ground or anything else where my garden is, and I have unearthed more gophers, bugs, snails, spiders, scorpions, tarantulas and other gewgaws than I have had any use for; most of them were evidently hunting, even in the earth, for other things.

The evidence alluded to consists of some several arrow and spear heads, chipped from obsidian, together with a stone mortar and two pestles for the same. These relics of the noble red man (and woman as well) were found under about a foot of earth by the stump of a large black oak, on the bank of a small stream. There is no way of learning how long these primitive implements were buried, but they are apparently as good as they ever were.

The relics of people long since gone to an everlasting oblivion, so far as concerns those who survive them, offered an excellent opportunity for reflection and conjecture. Having always found it more to my liking to ruminate than dig, I abandoned, for a time, at least, that purely physical exercise in order to defer to intellectual impulse. Base is the slave who digs or delves and likes to do it. The world, in my opinion, is overburdened with sweating laborers. They have been perverted from their original and natural instincts as hunters and gentlemen. This region is full of wild-eyed, unkempt and underfed lunatics digging for gold. They are yet hunters, but they would be lucid for intervals at least if they were digging worms for bait, and they would be improving the surface of the earth, even if bait fishing were prohibited, or they couldn't catch a sunfish.

The red aborigines had the loftier instincts. In fashioning with infinite patience his arrowheads of black flint, in shaping his primitive bows and arrows, and in hunting for the things that supplied his real needs, I say he was

the true hunter on the right trail. In time he might have attained to better things than his vanquishers, for none of them knows the history of his development nor the era of his Adam.

The aboriginal tribes of the Pacific Coast, for whom our linguists have provided no fitter designation than Digger Indians, no syllable of which is in any degree significant or suitable, were perhaps the least worthy of all the North American tribes. But if there were no vestiges of them remaining but the obsidian arrowheads, stone mortars and woven baskets, yet found everywhere in California, those alone are mute but indisputable proofs of some of their traits. Man has been distinguished as a tool-using animal, long ago by some learned professor, and he might well have observed that to have been the secret of his sway over all other creatures in the world. In our remembrance the most potent implement has been and is now the gun. Give even a Digger Indian guns and gunners enough and he could rearrange civilization.

When Bodega Bay, where the fancied Golden Gate lets ocean commerce into San Francisco, was first discovered by a pirate, he found people there capable of the noblest kind of hospitality. The result has been as has been the result throughout history; no civilized power has ever been great enough to be humane or even honest in its contact with weaker barbarians. The weaker need not be very barbarous, either. It all depends upon which is the mightiest hunter.

A red savage standing waist deep in the ice-cold mountain stream for hours, patiently waiting for a salmon to come within reach of his spear; another tracking with noiseless steps and anxious eye the deer that he must slay with his barbed stick or starve; the old mother grinding dried berries and acorns in the stone mortar, hour by hour, to furnish sustenance for her children and braves, are never again to be familiar scenes in the territory occupied by the United States of America. The land is occupied by a mightier host, an entirely different people; and yet there are hunters and fishers in plenty, greatly superior in many ways, but lacking in a kind of nobility for which civilization has, at most, no monopoly.

If the problem, "What is the chief end of man?" has been sufficiently answered, we ought to inquire something as to the chief end of civilization. If it is wealth and luxury we ought to remember the fate of the first republic—*Senatus populusque Romanus;* and if it is to propagate the greatest number of a given race, we might consider the accomplishments of the Chinese; if it is to be expansion or imperialism, we ought to be more clearly assured as to just what to hunt for.

After examination, it appeareth that this essay about hunters savors too much of an indefinite kind of expansion, but I cannot let go of the subject without the addition that, in my opinioin, the Czar of all the Russias (if not of all the Russians) is one of our very mightiest hunters. I hope he will drive center on Mars eventually and effectually prevent pot-shooting the dove. It is a pity the Peace Conference was not called by an American.

In concluding this epistle, while I retain the belief that we are all hunters fundamentally. I have derived from a compilation by one Noah Webster information that I am at times, moreover, a potwalloper. Hermits have no wholesome way of dodging that affliction. They are fortunate if they are skillful enough at hunting to get things to potwallop. And so this ceaseth.

RANSACKER.

SHASTA MOUNTAINS, Cal., July.

CHICAGO AND THE WEST.

Movements of Western Sportsmen.

CHICAGO, Ill., Aug. 17.—Mr. H. O. Wilbur, of Philadelphia, writes me as below regarding Western small game country:

"As usual I come to you for information regarding shooting. A friend and myself expect to go to Jackson's Hole for elk shooting the last of this month, and after remaining a month desire to find some small game shooting which we may conveniently take in on our return trip. Can you recommend some place or places where we should be likely to find some of this kind of shooting not far from the Union Pacific or Chicago Northwestern railway, east of Pocatello, Idaho? Believing you have the best facilities for knowing these places, and are to-day the best posted man I know of, have taken the liberty of writing you this letter. I hope to see you in Chicago as we pass through, but would like to get this information before starting if possible, that I may make arrangements accordingly."

I have advised Mr. Wilbur to stop as he goes east about the central part of Nebraska, where he should find good quail shooting, and perhaps a few chickens, though the latter are being killed now in good numbers ahead of the season, and may be scarcer yet by the time the big game season ends. For a better chicken country a party would better go further to the northwest, in the sand hills of the Loup region, for instance, but I have about given up advising anybody on chickens, for the shooting is pretty much all done before the legal season begins over the greater part of the Western country. The quail is a better factor now in Western sport than the chicken—a hundred to one. Mr. Wilbur will find abundance of quail in Nebraska.

Hon. Jas. H. Eckels, ex-Comptroller of the Currency for the United States, and now president of the Commercial National Bank of Chicago, called at my office this week for directions in regard to a Western shooting trip which contemplates both large and small game. Mr. Eckels will be one of quite a large party who will go in at Sisseton, S. D.—Old Fort Sisseton, built in 1864 and abandoned some years since—after prairie chickens. The party will be under guidance of Minneapolis gentlemen and will be made up as below: Messrs. Jas. H. Eckels, Geo. M. Eckels and John Crerar, of Chicago; W. F. Harrity, of Philadelphia; Judge E. Koon, of the Minneapolis bench; W. Thayer, cashier of the National Bank of Commerce, Minneapolis; W. Jeffry, cashier of the First National Bank, of Minneapolis; C. F. Folds, also of Minneapolis. They will have plenty of money along to pay all the bills, and if they run short they can telegraph and get more from home. They go to a country naturally very good for chickens, and if the wardens can hold down the law breaking element which is this year worse than ever in its open defiance of the chicken date, they will have some sport with the chickens.

At the close of the chicken trip Mr. Eckels, with his friends, Dr. John B. Murphy, the distinguished surgeon of this city, and Mr. Edward W. Paige, of New York city, will go on out West still further, and have a big game hunt. It was regarding this part of the trip that Mr. Eckels wished advice, not knowing whether to go over the Great Northern or the Northern Pacific Railroad. I gave him the names of guides on the Blackfoot reservation for the Two Medicine and also the St. Mary's country, also the addresses of Billy Hofer, for the Park region and below, and of E. Van Dyke, at Red Lodge, for the country lying east of the Yellowstone Park. Mr. Eckels will consult with his friends before deciding which of these trips to make. He very wisely thinks it might not be imperative to turn around and come right back out of the mountains if they got into a good game country, and says that, while his time ought to be two weeks, it is capable of stretching. A man never so much needs an elastic calendar as when he is in the Rocky Mountains. It is a hard place to get away from, as many a man has more than once discovered. Mr. Paige is an old moose hunter in the East, but, as I understand it, has never made a visit to the Rockies, so he has the best part of his life before him at this writing. I feel very sure this party will have a good trip, whichever locality they decide upon. They will round up at Fargo, N. D., after the chicken shoot at Sisseton, and go west in September for an indefinite stay.

Mr. James Hunt Cook, Secretary of the Cotton Exchange, Vicksburg, Miss., comes to me this week with letters from Mr. Horace Kephart, of St. Louis, and with the intent of looking around in the biggest and dirtiest city on earth, which is Chicago. Mr. Kephart is the best posted man on rifles in America, and Mr. Cook comes from the State where men have very large hearts. After a while Chicago is going to annex both Mississippi and St. Louis, and it might do worse—indeed has done worse.

Mr. J. H. Harrow, of Greenville, Miss., passed a few hours in this city this week, on his way to State Line, Wis., where he will get experience with the muscallunge and bass.

Hon. Willis Vandeventer, Assistant Attorney-General of the United States, arrived in Chicago this week from Washington, on his way to Wyoming, where he is going fishing for a while.

Mr. Geo. F. Murphy, of Sodaville, Nev., is in Chicago this week, purchasing material enough to suppress an Indian uprising if need be.

Mr. L. Boyce, of this city, left this week for Lac du Flambeau, Wis., for a session with 'lunge and bass.

Mr. C. H. Ferry, of Chicago, is another gentleman to try the Flambeau Chain. He departed for that region early this week.

Mr. Geo. Murrell, secretary of the Chicago Fly-Casting Club, this week tried the Fox River near Algonquin for bass. He did not find the bass coming to the fly, so went to the bait rod. He took one very fine bass, a 4lb. fish, very fit and good, and also got five little fellows around a pound in weight.

Mr. Perce, of the Fly-Casting Club, is absent in Indiana at Hudson Lake. He has sent up some nice bass to friends and apparently has had sport.

Mr. B. W. Goodsell, alias "Pa" Goodsell, also of the Fly-Casting Club, is out in the pine woods after trout, though it is late in the trout season. None the less he seems to have located them, for he has sent down 125 nice trout this week to friends. The locality is shrouded in secrecy just at this writing.

Mr. R. Mansfield, of San Francisco, the undisputed master of long-distance fly-casting in America, is expected to be present at the meeting of the Chicago Fly-Casting Club this coming Saturday. This is looked upon as something of an event by the local experts, and the occasion is apt to be a red-letter one to the best of the ability of the Chicago men.

Mr. H. G. McCartney, of this city, left early this week for Kabekona Camp, Minn., of which camp he is proprietor. He purposes a stay of some days. Mr. McCartney is one of the general committee on arrangements for the Congressional trip which will be undertaken this coming month by the Minnesota National Park and Forestry Association, and his advice will be valuable to that body, as he is thoroughly acquainted with the region to be visited by the distinguished guests of the organization. I understand that several railroad men are now up in that country looking it over carefully with a view to completing their own plans for handling the big party.

Theatrical Department.

Last night I went out to see the play "Arizona," being attracted by the name, as well as by the fact that Mr. Bruning, a very good friend of mine, is in the cast, and Mr. Bruning is also a FOREST AND STREAM sort of man. Mr. Augustus Thomas chose a good field for a play when he got into the Spanish Southwest. I understand that he paid the country a visit before he wrote his play, which is more than some writers on Western topics ever did, albeit it is a very useful custom. We do not look for the accuracy on the stage that we expect in literature, but Mr. Thomas disappointed anybody who went there to carp by presenting a play the greater part of whose setting is accurate. One can fairly feel the sand in his teeth again as he looks at the sets of the piece, and the ranchman is a ranchman for a fact. The cowpunchers wear their belts long and low, and their chaps are fair to middling anyhow, even if they do wear their kerchiefs more like sailors than cowpunchers. I understand that most of this excellent costuming is due to the supervision of Mr. Frederic Remington. The soldiers are some of them real soldiers, fresh from Tampa, and on the whole one gets a very pretty and satisfying sense of the sunshine and sand of the real Southwest. As for the play, it shows the master hand of one who knows his business. Of course, there must always be remembered the point of view of the stage. The real Arizona would not do from the standpoint of the playwright. The heroines in silk, the bloodthirsty Greaser in such very tight trousers, the champagne with ice, and that sort of thing, one hardly finds in actual life in the cactus country, but he may love it on the stage and pass a pleasant evening watching it.

But that is not what I wanted to write about. It was something which carried me back still more strongly to that land of mañana which I knew in one of the yesterdays of my own life. As I sat watching the play, hoping in spite of myself for the ultimate foiling of the villain—though I knew personally that off the stage the villain is a most companionable and delightful sort of man—I was a bit surprised to hear the neighbor on my left, to whom I had not been introduced, break the silence which followed a bit of the applause.

"Well," said he, in a rather discontented fashion, "it may be that they have cracked ice with their champagne down in Arizony now, but they didn't never use to when I was there. Not in a hundred!"

As the speaker apparently addressed this remark to me, I responded that when I was in that end of the country they didn't very often have either ice or the champagne—especially ice.

"I've saw the time when I'd of give a dollar a pound fer it," said my new friend. "You see, I'm a cow man myself, an' that's why I come in yer to-night. I've been all over that country—Texas, New Mexico, Arizony and them places. I'm ranchin' it now down in southern Oklahomy—got about 1,100 acres down in there, an' a nice bunch o' stock. Cows is lookin' up now—prime steers brung $6.25 on the market here at the yards yesterday. Yes, well, as I wus sayin', I never did see no ice down on no ranches when I was in them parts. Not noways where the roofs was made out of mesquite poles yet. I don't know what you call it, but seems like to me the feller that runs this thing has shore slipped his cinch a leetle bit on this yer ice business. An' no more did I ever see a s'argent speak to a lady in a officer's house, not in my time, though it may be they do that way now."

I tried to explain to my friend that this play was so much better than any other play ever written on a Western subject that we really had no kick coming, but he was hard to content about that cracked ice and the green crême de menthe in the glasses of the ranchman's table, which he declared was ag'in natur', so to speak. From one thing to another we got to speaking of the old days in the Southwest, and I discovered that my companion knew some of my old friends down in that country—for instance, Pat Garrett, the sheriff who killed Billy the Kid down in New Mexico, and others of that country which was once my stamping ground. I am afraid the play was not the thing for the rest of the evening, for we slipped in a word now and then about the old days, all this spiced with the vivid movement of the spectacle before us. It was a queer experience to me, this episode of the varied life of the city, and took one back in an odd, compelling sort of way. I do not know Mr. Thomas, who wrote "Arizona," but I want to thank him for a very enjoyable evening, and to assure him that he had two very good lookers and listeners that night. We both agreed to forgive him that ice. As to the name of my temporary friend, I did not ask it, but I know he was the real article. He would know how to dig wood in Arizona and where to find water when there wasn't any water visible.

Where the Shoe Pinches.

CHICAGO, Ill., Aug. 18.—There came into the office of the FOREST AND STREAM to-day a delegation of deputy wardens, Messrs. Geo. Kleinman, H. Edenboro and Mr. Ratto, and they had a subscription paper. The said paper signified that the peace and dignity of the State of Illinois was threatened by a proposed raid of lawbreakers from Iowa, members for the most part of sportsmen's clubs of Burlington, Iowa, who own lands in the State of Illinois, who use these lands for shooting preserves, and who rebel at the new Illinois game law which exacts a license from non-resident shooters. It was further set forth that the State of Illinois had no money with which to meet this proposed raid, and that the signature of myself to the extent of about $5 worth would be very much appreciated. I signed, naturally, being very unwilling that the proud State of Illinois should be injured as to her peace and dignity. The fund so raised is to be devoted to sending these deputies down into the threatened territory, where they will meet the invaders and arrest several of them very pleasantly, if they can secure enough funds to pay the necessary bills to take them there at the time of the raid.

This is the first attack on the license law for this State, and it would appear that the law is not going to prove altogether popular. The trouble with all game laws is that they pinch now and then. The shoe gets on to our own foot once in a while, whereas, of course, it ought always to be on the other fellow's foot. I confess I do not like to loosen from $5, even for the peace and dignity of Illinois, when there is a hard winter coming on, and I could use the $5 to pay a quarter's rent. That is where the shoe pinches me chiefly at this moment. As to the gentlemen from Burlington, they were all very fully represented at the midwinter convention of the Illinois State Sportsmen's Association, which passed a set of resolutions embodying its views as to game laws, some of which were offered and adopted in more or less altered form, in the much discussed and somewhat mutilated game bill which ultimately became our present game law. As I remember it, we were all very happy down there, everybody was a perfectly jolly gentleman, and the goose was hanging high. Nobody was bothered at that time by any possibility of a pinching shoe. We resolved, to the best of our ability, that we would like to have such and such kind of a game law. Then we left the rest to a beneficent Providence, and a finance committee, which latter after a year of hard word collected about enough to pay its clerk hire—I know, because I ran the finance committee work myself. At that time there were no shoes to trouble anyone. Now we have a game law, and it has this license clause to it, and the men who thought it might be a good thing to have a license clause—for the other fellow—in order to raise a fund for the game warden to enforce the law, you know, are now nursing a much pinched foot. As for the fund to be raised for the wardens and the enforcement of the law, we have not yet got around to that. The law hasn't had time to work very much yet. Meantime we are getting funds from the sporting press and the sporting goods trade. This is the actual situation in regard to the Illinois game law just at present.

Of course, there is no use beating around the bush about this, and the man is in a pitiable position who tries to straddle the fence in this question. There is but one position to take in regard to this law, or any other game law,

or any other law of any sort whatsoever which has been regularly passed by the duly constituted Legislature of a State. The law is the law, and it goes. It is no use hollering because it pinches now and then. It is the law. Every one of us helped make it, and part of our joint action as citizens, whether we voted for or against a law, is represented in that law after it is passed and signed. We may not like it, but if so it is our privilege to vote next time for men who will kill it. It is not our privilege to break the law or countenance breaking it. We ought as gentlemen to take our medicine, and if we don't like it we know what to do next time. But if we break the game law, whether or not it pinches us personally, we are lawbreakers just as much as a burglar is a lawbreaker. Under no other view is the law entitled to any respect, and when we cease to respect the law we are worse than criminals—we are anarchists, putting forth actions and advocating principles subversive of all law. In game law matters the individual has for a long time thought that he was the State. It is about time that the State should get big enough to show to the individual of this sort that he is not the State, but only a section of the same. I am very much pleased to observe that the State of Illinois is asserting its dignity in this way, by passing around the hat, and I have no doubt that if the list of sporting newspapers and sporting goods houses holds out we shall eventually wrest from the proposed invaders the unwilling confession that though the shoe may be a leetle tight, it is not so tight but that it can be worn.

Of course, there is the old, old cry of "unconstitutional." This new game law is "unconstitutional." Of course it is, and the Burlington men are going to prove it. Any law is unconstitutional which is not made for and applied to the other fellow exclusively. I am sure the framers of this law must feel uneasy in their sleep as they reflect how very unconstitutional this law is, since it inflicts a penalty for its infraction and lays down certain rules which interfere with individual liberty and the right to bear arms. If you don't like a law, holler about it, and break it, and say it's unconstitutional.

Now suppose this law is proved to be unconstitutional—and for the sake of the argument I do not care whether it is so proved or not. It will take some years of time and some thousands of money to prove this one way or the other. Meantime, the shooters of a certain class—and by this I do not mean to classify as of that class these shooters of Burlington—will have gained everything they wanted. While the lawyers are year by year driving a coach and four through the game law, the shooters will be driving the same equipment through the game. The markets will be gobbling away under the claim that the whole game law is "unconstitutional." This very thing—and we are going to have this fight on here in Illinois—is just what the more conservative minds pointed out in regard to the proposed change in our game law at the last session. We had a fairly good law, not a perfect one by any means, but a fairly good law, and it had been taken up and passed upon by the Supreme Court in its more vital points, and we knew what we could expect under it at least, poor as it was in many regards. Now under our new law, radical as it is, we don't know what we've got. Come around in a few years and we may be able to tell you what we have got in the law, and what we have not got in the fields and covers.

The new law may be theoretically a good thing. I presume maybe it is. But it is a pinchy sort of thing. It pinches the newspaper classes, wealthy though they be and able to stand it. It pinches the downtrodden shooter who always did shoot thus and so and who always wants to. It pinches the warden who can't collect licenses if the law is proved unconstitutional. Lastly, but a very important feature to be sure, it pinches the game bird, and it will pinch him off the earth. The people of lower Illinois don't want any game law. They don't mean it when they say they do. They don't want to abolish spring shooting. They don't want a license law. They don't want any game law except one made for the other fellow. Now it may be I am a trifle sad over being separated from that $5 by George Kleinman—I was saving it up and was going to have another $5 after a while and take a trip to the seashore—but none the less I am very much disposed to believe there is a large element of fact in the foregoing.

Confiscating Guns.

I was talking with the deputy wardens above mentioned as soliciting funds, all of them good fellows and known to myself as hard workers, and the conversation turned upon another odd feature of our game law matters. Under the régime of the Hon. Chas. Blow, former game warden for Illinois, it was customary for deputies to seize the guns of persons whom they arrested, and sometimes to keep these guns if the parties never appeared for trial. It was very common to arrest a man, take his gun as security, and have him show up in town for trial the next day. A lot of Chicago men were arrested at Fox Lake one time, and as they wanted to get home they were all thus bailed out by the deputy, without ever having been brought before any court. In fact, it has long been the custom in this Western region for the officers to be court, jury, judge and the whole thing. Of course there is not the first color of law in all this. I am not now speaking of the many cases in this State under earlier wardens, where cases were compromised out of court for cash paid to the warden, the prisoner never being arraigned at all.

I was mentioning these things to my friends, the deputies, the other day when they came, and they frankly admitted that they sometimes took a man's gun as security that he would appear in court. "You see," said Mr. Ratto, "we make our money out of the fines, and we want to make as good a haul as we can. Suppose I had to take one or two men away over to town to put them in jail or get them bailed out. I miss, perhaps, half a dozen others whom I might get if I just arranged to have these fellows all come over themselves for trial, instead of my taking them over personally, one or two at the time."

There is something of an argument in that, of course, but really all deputies ought to know that they take a good-sized risk in any such action as the above. The deputy is an officer or servant of the court. He can not try a cause. It is his duty to take his prisoner to the court and file the complaint, the same as a policeman does. He has no right to bail out a prisoner, or to accept either money or property from a prisoner as security.

George Kleinman said: "Yes, I know that; a lawyer told me that. I have never taken a bit of money from a prisoner, though I have often taken a gun as security. I always turned this gun in to the court, and never kept it." Of course, George Kleinman is not the sort of deputy who accumulates property out of his work, but none the less he takes some chance actually every time he thus demands security from a prisoner before he has been brought before the court. Mr. Ratto told me that once he had taken a watch from a man as security. The man turned up the next day and paid his fine and got the watch. All of these men would be above dishonest action, and they do this sort of thing because it is the most practical thing to do in the way of securing convictions. This is quite a distinction from the procedure under the Minnesota law, by which the deputies used to seize a man's gun and dog as the unlawful tools of his trade. Confiscation of such tools can no doubt be made under the law, but this confiscation must be by action of court, and not by action of warden or deputy. I only say these things because I believe that the game laws are gradually coming to stricter enforcement and a closer inspection year by year, and I should not like any one of my friends, of whom I have a good many among the deputies, get into trouble over an action which might be very practical but yet very irregular. Out in the old Southwestern country where I lived we never cared very much for the law, but we were dead scared of the sheriff. If the sheriff thought we ought to hang a man, we did so, and sometimes when he didn't think so. The officer was the law itself to our eyes. A horse-thief cared not for principles, but he cared a plenty for sheriffs. Nowadays we are getting pretty high toned in some things in this Western country, and if I were a deputy warden I don't believe I would take any chances about confiscating a man's gun in advance. It is safer to take him carefully over the marsh and deposit him carefully in jail over night if he can't get bail. If a prisoner sleeps in jail he has time to think it over. If he goes home to the bosom of his family, his wife talks to him and persuades him he is an injured being. He gets a good breakfast and comes into court sassy. He thinks the game law isn't so awful, and resolves to be more careful next time. Don't separate the sooner from his gun. Separate him from the loved ones at home. His wife will then pass sentence because he let the dinner get cold.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

How to Improve Black Bass Fishing.

A BRIEF history of what has been done to improve the black bass fishing in Lake George, and the present condition of the fishing in the lakes, as compared to what it was in the past, may be of interest at this time, when there are so many complaints of the black bass fishing falling off in other waters.

Lake George is a natural black bass water, a rare thing in this State, and this can be said only of such waters as have connection with the Great Lakes through the St. Lawrence. Black bass came into Lake George, probably, through the St. Lawrence and Richelieu rivers and Lake Champlain. In 1844 John J. Brown, author of "The American Anglers' Guide," describes the excellent fishing in the lake, and mentions that the largest black bass that he caught weighed 5lbs. 9oz. As that was before I was born, I depend upon statements from the "oldest inhabitants" as to the fishing at that period, before and after, until I began to go there as a boy early in the sixties.

One of my earliest recollections of Lake George as a fishing water was of a visit I made one spring with Mr. Edward McDonald, and finding men "burring" bass from their beds in what is now Kattskill Bay, and of Mr. McDonald chasing them in his boat and their escape. To "burr bass" was to place triangle hooks on the bass beds, and as the fish took the hooks in their mouths to remove them the butchers yanked the bass into their boats. This kind of slaughter was kept up for years; in fact but a few years have elapsed since the practice was stamped out and the people who indulged in this style of fish-murder came to realize that they were utterly destroying the black bass fishing in the lake.

As the fishing became poor a special law was passed to open the black bass season later than in other waters in the State, and rigorous means were adopted to stop illegal fishing. The special season did not cover the spawning period of the bass, as the lake is spring fed and very cold, and another amendment, and later still another, was passed, so that for half a dozen years or more the season has opened in Lake George on Aug. 1. It was much easier to pass laws to protect the bass than it was to enforce the laws after they were passed, but the Lake George Association was composed of men who employed a special fish and game protector, and convictions became common, when arrests were made for fishing out of season and the people found that fishermen would not visit the lake when there were no fish to be had; and gradually there came about a sentiment in the community that the laws were just and must be enforced, and the game protector had the support of those who had before been indifferent in the matter. This year I went through the lake on several occasions, and everywhere I was told that more bass had been seen on the spawning beds along the shores than in many years before, and there was a fine prospect for good fishing when the season opened.

Just here I must tell a story of what happened at one of the hotels in July. A young woman walked down on the dock of the hotel apparently waiting for some one. There were a fish rod, line, hook, etc., on the dock where some fisherman had left them and a can of earth worms nearby invited the young woman to bait the hook and cast it into the water. In a moment she gave a tremendous yank and landed a black bass on the dock. A few moments later a rowboat came to the dock and she got into it, taking the bass with her and leaving the rod where she found it. All this was seen by some dining room girls from the dining room windows.

An hour or so after the departure of the young woman with her bass, an old gentleman walked down on the dock from the hotel, quietly smoking a pipe. He looked over the edge of the dock into the water, and the pipe came out of his mouth, so that he could fairly pant: "Who stole that bass from its bed?" Then he gave utterance to remarks that the editor would blue pencil should I write them down, and finally became calm enough to offer a reward of $25 for information that would lead to the arrest and conviction of the person or persons guilty of snatching a breeding black bass from its spawning bed. He meant it, but the girls who saw the act could not identify the captor of the bass, who was probably an occupant of one of the many cottages along the shore, and who, when the hue and cry was out, was careful not to reveal her identity.

It seems that the old gentleman had been watching the bass from the dock since it first made its bed and had repeatedly warned the boys who fished from the dock that the fish must not be disturbed under penalty of the law, but the young woman, while waiting for her boat and escort, passed the time by dropping a baited hook exactly on the bed of the watchful bass, and that act led to its destruction, while the young woman was, in all probability, utterly ignorant that she was violating a fish law and leaving behind her in the water a lot of unhatched black bass eggs without the protection that nature intended they should have.

On Aug. 7 I was at Lake George, and there had been five fishing days since the season opened. On the opening day Mr. C. Burgess Warren and a party of friends caught twenty-five black bass weighing 57lbs., two of the fish weighing 5lbs. each. On the 2d half a day's fishing nine bass, one of them weighing 5lbs. and one 4¾lbs. On Aug. 3 fourteen bass, one of 4lbs 2oz. and one of 4lbs. Aug. 4 twenty-seven bass, one of 6lbs. 1oz., one of 5¾lbs., one of 4½lbs., one of 5¼lbs. During this time Mrs. T. F. Torrey, of New York, caught a bass of 6lbs. 14oz.

The morning of the 7th I was sitting on the veranda of the Sagamore waiting for the steamer to take me to Hague, having declined an invitation to fish that day, when I saw a gentleman land a big bass on the hotel dock. The fisherman was Mr. George Halsey, of East Orange, N. J., and the fish when brought up to the hotel weighed 6lbs. Next he caught one of 5½lbs., then three of 4¾, 4¾, 4½lbs., or a total of 25½lbs. for the five fish. To be strictly correct and speak from the record, Mrs. Halsey caught one of the bass, but my memorandum does not say which one, although I believe it was one of the 4¾lb. fish. A Mr. Bixby was attracted to the dock and caught a bass of 4lbs. Several fishing parties had started early in the morning, and when I returned to the Sagamore in the evening I saw their fish. Judge J. O. Dykeman, of White Plains, N. Y., and Mr. Francis Irwin brought in eleven bass of the following weights: 6, 5½, 4½, 4, 4, 3½, 5½, 4¾, 4, 4½ and 4lbs. each. Mrs. Torrey caught about a dozen bass, the largest weighing 5¼, 4½, 4¾ and 3½lbs. Mr. Warren had as his guests Adjutant-General Avery D. Andrews, Rev. Dr. Van DeWater and Commodore John Boulton Simpson, and they had two bass of 6lbs., each one of 5½ and one of 4lbs. At the Hundred Island House Capt. Harris, of the steamer Horican, on which I went to Hague, told me there was a bass on the dock which was said to weigh 6lbs. Returning in the afternoon we passed a boat at anchor, and the fishermen held two bass which must have weighed over 5lbs. each.

But the bass caught from the Sagamore dock or by fishermen from the hotel, nearly all of which I saw, numbered twenty-five, and weighed 119¼lbs., and if that is not good black bass fishing I do not know where it can be found. The bass caught from the dock were caught on crayfish, a bait that is not native to the lake, but planted in the tributary streams by the State twenty-two years ago, and they are now abundant.

To restore the black bass fishing in any lake where it was once good requires only that the bass be protected during the breeding season and that they be taken only by fair angling.

As soon as a lake is fished out, practically, by fishing on the spawning beds and before the parent bass has left its young, although it may be done without violating any statute law, and by illegal methods, the State is appealed to for fish to restock it. All the black bass the State can furnish will not do as much to restore the fishing as a law, well enforced, to protect such bass as are left in the lake during the spawning and brooding period.

I have already cited Glen Lake as an example of black bass stocking. It had thirteen little black bass planted in its waters, and they furnished tons of bass during the following twenty-five years with no other addition except as it came from the natural increase, and certainly no lake has been so persistently fished in a lawful manner, for in no instance has anyone been known to take a bass from its bed in the lake. When Glen Lake was originally stocked it swarmed with pike (pickerel), and the bass increased and the pike decreased, until very lately a gentleman came to me to say he feared the bass were almost gone from the lake, and the pike were increasing, and he wanted the State to plant more bass and have a law passed that would make the open season the same as in Lake George, viz., from Aug. 1 to Dec. 15. The future of black bass rests largely with the people and the lawmakers, for the State cannot supply fish to restore the fishing, and it is not necessary even if it could.

Black Bass and Yellow Perch.

Section 141 of the fisheries, game and forest law of New York provides that: "Pickerel, bullheads, catfish, eels, perch and sunfish may be fished for through the ice with hooks and line or tip-ups" (in certain named waters), "and in any other waters of the State not inhabited by trout, lake trout, salmon trout, black or Oswego bass, or landlocked salmon or mascalonge."

This has always appeared to me to be an unwise law, for perch are at their best for the table in winter, when they can be caught through the ice, and they afford sport, food and an income in some localities at a season when all are desirable by one or another. Perch are a prolific

fish, and though they furnish food for other species of fish, and often, in some waters, suffer from an epidemic of some sort that destroys them by thousands, their numbers never seem to diminish materially. Perch prey upon the young of other fishes, and no doubt they contribute largely to the decrease of black bass, lake trout and bullheads, for they have often been found with the fry of all these fishes in their stomachs. Lake George was specially exempted from the provisions of the ice-fishing law. It has both black bass and lake trout, and perch were found to be feeding on the fry of both of these fishes, and Sec. 133 of the fisheries law was amended to permit fishing for perch at any time by "angling." The serious objection to a law which permits perch fishing through the ice in waters containing trout is that the fishermen will catch trout—catch them deliberately by fishing for them where there are no perch, under the pretense of perch fishing—but this objection will not apply to waters which contain black bass and do not contain lake trout, for perch are not found as a rule in any waters containing brook trout. If this law should be amended to permit perch fishing through the ice in all waters that do not contain trout or landlocked salmon, it would work benfit to black bass. Yellow perch yield as high as 90,000 eggs per fish, and being a spring spawner the eggs hatch quickly, and if it were not for the occasional epidemics which visit the species they would overrun the waters in spite of the numbers devoured by other fishes. In black bass waters there is scarcely any danger of perch fishermen through the ice taking black bass, and the perch so taken are a benefit all around—to the men who catch them and to the other fish in the water.

Big Trout in Canada.

Dr. Wm. H. Drummond, of Montreal, who writes the charming habitant poems, in a letter to my daughter says: "Tell your father that on Aug. 3 (warm day, but slightly overcast) I took on a fly (casting) at Lac Au Foin, two and one-half hours' trip from Laurentian Club headquarters, two dozen of the fish always termed by him in his FOREST AND STREAM 'Angling Notes' 'speckled beauties' (perhaps you would better tell him through the telephone, for he may describe a parabolic curve that you will not wish to see) weighing from 1½ to 3lbs. each. Eight were over 2¼lbs., and I wish your father could have been there to see them, and I know he will agree that for Aug. 3 the sport was exceptionally good. I also inclose another item of interest for him. The fish mentioned were all speckled trout caught on a sunken fly, trolling."

The item refers to a certificate Dr. Drummond inclosed which reads: "Caught in Lac a l'Eau Claire, May 24, 1899, twenty-two speckled trout, weight 104lbs.; one trout 8½lbs, girth 12½in., length 28in.; one trout 7lbs., girth 15in., length 24in.; one trout 6lbs., girth 13in., length 23in."

This is certified to by two members of the St. James Club, Montreal, and the Doctor adds: "This lake is in the Laurentian country and is the property of George Washington Stephens, Esq., of Montreal."

A year or two ago, when in Montreal, Dr. Drummond told me, if I am not mistaken, of a trout from the same lake that weighed over 8lbs., and I went with him to see the fish at a taxidermist's, where it was being mounted. In the writer's list of big trout quoted above, the girth of the 8½lb. fish is not given clearly, as one figure is made over another; but the figure seems finally to be 2, making the girth as I have given it—12½in. This is 2½in. less than the girth of the 7lb. fish, but the 7lb. fish is 4in. shorter than the 8½lb. fish, so that the larger fish could not have been in the best condition, for had it been it might easily have weighed 10lbs. or more. This score is superior to one made a year ago last September in Triton Creek waters by Mr. Wm. F. Rathbone, of Albany, and the writer, when we killed twenty-five trout casting the fly that weighed 101½lbs. On that occasion the largest fish., caught by Mr Rathbone, weighed 7lbs., but it was not measured as to length or girth, as we were simply fishing for sport and food for our men and ourselves and had no idea we were making any record until we figured up the weights of the fish, which we had put down daily for eight days.

The "Saturday" Salmon Fly.

I am indebted to Mr. Charles Stewart Davison, of New York city, for a specimen of the "Saturday" salmon fly, who writes:

"You ask for a fuller description. It may amuse you to inspect a 'Saturday' salmon fly tied in the old-fashioned Scotch manner, and in accordance with what I cannot but deem the jocose intentions of the writer of the article. As you justly observe, any amount of looking through English and Scotch fly-tiers' lists and hasty turning over of indexes of books on salmon fishing produces no reference whatever to any such insect. But, nevertheless, to see what such an article would look like, I asked Conroy about ten days ago, having read the article in the Sun, to have a fly tied as per description and sent him the clipping from the article which you copy. The result I inclose. I see no reason why such a fly should not take salmon, as it embraces all the elements of half a dozen salmon flies (including what is probably of most value in any salmon fly—a topping). I agree with the writer's statement that modification of the genuine Saturday are still to-day the most valuable of a large collection.'"

The fly that Mr. Davison sends me looks more like a Scotch Ira trout fly than it does like a standard salmon fly, but, as he observes, it would probably kill salmon. I once gave the late Col. F. S. Pinckney a black bass fly as unlike a salmon fly as one could imagine and still be a fly, and yet he rose and hooked a salmon on the bass fly in a Canadian salmon river. I am indebted to Mr. Davison for his courtesy in permitting me to examine the famous Saturday in all its glory.

A. N. CHENEY.

Black Bass for Stocking.

WE shall be obliged on behalf of inquirers for reference to sources from which young black bass for stocking purposes may be had.

Fishing Up and Down the Potomac.

A Washington Fishing Lodge.

HE who was at the World's Fair in Chicago, or who reads Walton and Cotton, will remember the quaint little sentry box of Cotton's, of which he wrote: "I have built a little fishing house * * * dedicated to anglers, over the door of which you will see the two first letters of my Father Walton's name and mine twisted in cypher."

One can sympathize with the sentiment which treasures a splinter from its woodwork, while deploring the vandalism that could deface it even in its decay. But the subject does not appeal to all alike. Some men there be "cannot abide a gaping pig," and there are individuals—sour visaged sure—who are such turkey cocks they would prance on being confronted with a cardinal virtue, without other color of reason than that its name suggested red-handed vice.

Hear what such a one said of Walton in 1822 in Colburn's Magazine (v. 4, p. 491): "The book is much more talked of than read, and it is read more than it deserves. * * * Angling as a mere amusement is not to be justified. I will, for the sake of human nature, suppose that no one will ever attempt to justify it. I even question if anyone ever seriously set his wits to seek an excuse for it." And this man was pretending to review Walton, whose whole life was an excuse for it. No wonder he said the book was more talked about than read.

The very next year, in the London Magazine (v. 7, p. 634), another reviewer, and an automobile to a wheelbarrow—he was the jollier fellow—said of the same book: "We can only say, that those who love a delightful book, delightfully got up, ought to have Major's edition of 'Izaak Walton.' At the same time we must say that the purse will not close with the purchase of this completest edition of the 'Compleat Angler'; for we will defy the reader after perusing it and dwelling on the illustrations to avoid buying a rod, a reel, a line, a plumb, a dozen hooks, gymp, guts and a gentle box. * * * We will defy him to sleep quietly in his bed on a likely morning when the wind is south and the May-fly is expected to unfurl his cowslip-colored wings over the waters."

THE LODGE AT FOUR-MILE RUN.

The latter was without doubt a welcome guest at many a fishing lodge in those days, and it was always the brighter for his coming. In these modern days the club houses and fishing lodges are more elaborate affairs than then, and it is one of these pictured above.

A dozen years ago four men of Washington, whose frequent meetings behind the scenes and fishing trips together across the Potomac had developed hearty friendships and a love for the locality they frequented, built a cottage on the banks of the pool at Four-Mile Run, just inside the arches.

They were Morgie Sherwood, George Denham, John Williams and Walter Williamson.

Later the two latter dropped out and their places were taken by Walter Allen and James Galway. Then Allen and Sherwood built another cottage adjoining, and Denham and Galway kept the original.

This is now among the show places of Washington, and here they have entertained many of their actor friends, for their playhouse is always open when the others in the city are closed.

Here may sometimes be seen a grave-looking gentleman fishing as if his life depended on it, and one would not suspect his life's mission was "funny business" and that he can set an audience in a roar much easier than he can catch a fish. Who would believe the lady teaching a jolly party how they dress inch-long minnows in her own sunny Spain, and that all vote is beyond compare, is resting her little feet that have danced around the world, and their owner into their hearts of millions? Even a staid English review called her the greatest of living dancers, who, as "great writers write and great painters paint, dances because she must." Or that a jovial fellow the life of the party, guying and being guyed, is a man who when at work has his visage creaming and mantling "like a standing pool"? For his forte is the heavy villain and he is guilty of more mimic crimes than a pirate king, now wasting all his arts of deception in vainly trying to circumvent a little white perch. Sometimes it is a painter, who leaves as a souvenir of his holiday a valued picture of a leaping bass upon the wall.

Not the least interesting of the attractions at the fishing house are the hosts. Denham, who comes of a theatrical family, has trod the boards for all of a busy life. With the Worrells, Wallaces and Chapman Sisters; eleven years with John Ford in Baltimore and Washington; with the Hess and the McCaull opera companies; and since 1885, and now, with the Joe Jefferson Company.

Galway, though not so long, has skipped no years since in '68 he entered on an eleven years' engagement with the Baltimore Stock Company; and since with Jefferson, Maggie Mitchell, Evans and Hoey, and Herne, with whom he created the character of Joel Gates in "Shore Acres," and now with Brady's "Down East."

Here, summer after summer, between seasons, they spend their days literally on the water—indeed, their nights too, since the cottage is built over it; never so happy anywhere else, for the tides bring the fish to their door and they are prouder of a big bass now than in getting a hand on opening night.

The dining room, which looks out over the pool, is a gem. Sherwood, who was property man at Albaugh's, and now at the National, is an artistic decorator, and this was his handiwork, in which he took much pride. From the wainscot the walls are of papier-maché in heavy relief, and colors in imitation of the marsh beyond, showing the tall sedges, with great cranes stalking about, while the frieze is of lions' heads with chains festooned between. Two or three cranes from the same marsh stand about as if they had just stepped from the wall, and in a rack are creeping paddles and other implements of the water chase ready for instant use.

A bust of the veteran Forrest is the presiding genius of the place. From top to bottom the other rooms are filled with souvenirs and curios. Here hangs a sword used by poor McCullough in "The Gladiator," in his first star engagement in Washington; there Joe Jefferson's white silk hat, which has seen seasons on Bob Acres. Paintings, too, by Jefferson, hang on the walls, and by Charlie Armour, and others, and sketches by a score of artist friends.

A sombrero from Mexico, a buckskin suit with a bloody history, bows and arrows and pottery from the Western Indians; piles of packing cases of wardrobes and properties; pistols and swords, antique and modern, are scattered everywhere, and fastened against the wall the drill guns of the Olympia Quartette, whose coherence for a quarter-century gives warrant of their excellence. Antediluvian programmes, and prints of old-time footlight favorites; relics of the chase, some captured, some purchased, including half a dozen pairs of horns of the practically extinct bison. (These were once found on the banks of the Potomac, and an old French account tells of trips by Canadian traders to this very region for buffalo skins. Since then they have been swept across a continent, and a few miserable survivors at the Zoo brought back to keep the type from perishing.) Whichever way one turns is something to catch the eye and arrest the attention, and should it rain and you needs must stay indoors there is a well-selected library of histrionics, including specimens old and rare, of the workshop where they build and rig their boats and repair the tackle which daily use impairs.

A pleasant hour is to sit upon the western porch as evening closes in, with sometimes gorgeous sunsets across the distant hills and, mark! a flock of summer ducks are passing over to the head of the marsh to dabble in the shallows and flying low as if they knew that opening day was still a week away. Up go imaginary repeaters and Bang! Bang! and not a duck would escape if——

The bats are circling in the dusk and skim the glossy pool for their invisible prey, and as the darkness grows, the fireflies set their signal lamps till all the valley is aglow with countless points of phosphorescent flashes that rival those everlasting twinklers far above, and on the banks the glowworms' steadier blaze marks the water line around the pool with a rim of yellow light like gilding to the basin's lip.

And there is music in the air too, to glad an angler's heart, for beneath the nearby arches the perch and rock are feeding on the minnows as they hug the walls in fear, and the chug of the big ones sounds plainly in the evening's silence, as if some urchin were dropping bricks from the parapet, and directly the boys can stand it no longer, and out come the rods for a half-hour's try for a striped bass for breakfast; and it is well our pleasure lies most in the trying, for there is not always bass for breakfast, but nobody seems to mind.

It is little wonder that they love the place, or that that friend counts himself as lucky who finds himself their guest. Every day a little fishing while summer lasts; every day, though within sight of the monument, away from the noise and bustle of the city, and with long nights of quiet, it is such a retreat as Walton himself would have loved. Sky and water and little else, and who needs more for rest?

HENRY TALBOTT.

Pacific Salmon Take the Fly.

San Francisco, Aug. 10.—*Editor Forest and Stream:* I see by the Forest and Stream of July 29 that Mr. A. N. Cheney discourses on the question of whether the salmon of the Pacific Coast will or will not take the fly and gives judgment that they will not. I call for a rehearing of the case and beg to submit my testimony on the question. I have given my version of the subject in old issues of the Forest and Stream, which I presume Mr. Cheney never saw, and for his enlightenment will again give my experience on this mooted point.

For many years in succession I have been in the habit of going up the coast in the month of October to the Navarro River for salmon, as about that time we get our first rains, and thereafter the fish enter the river preparatory to running up the stream as soon as the succeeding rains have caused a freshet; and during the period of a month or so, while awaiting it, the salmon enter the tide water at the river's mouth in great numbers. On my first visit, by invitation of a gentleman who owned a sawmill located about a mile from the mouth of the river, as we drove along the road on the opposite bank of the stream to cross a bridge near its mouth, I noticed that fish were jumping and making swirls at a great rate. I said to my friend, "Harry, what are those fish?" "Salmon." "By George! we will go for them!" "Oh," said he, you can't catch them. They won't bite. No one ever caught one of them with a hook. The seine is the only way to get those fellows." "We will see about that," was my reply.

I had no tackle with me but an 8oz. fly rod and a fine silk line with single gut ordinary flies. Nevertheless, after lunch we adjourned to the sawmill, and rigging up my tackle I pushed off in a skiff to the middle of the river—about a hundred yards wide. As I did so Harry sung out, "I pledge myself to eat raw all the fish you will catch with that flimsy tackle, or any other, if it is salmon you are after." "Salmon are just what I am after," I told him.

As it was noontime the mill hands were off duty eating their lunch and were chuckling and having lots of fun at the idea of that city fellow catching a salmon with that minnow rig.

My flies were the ordinary brown hackle. Rigging one of those on the line, I shoved off in the boat and made a cast or two with no result. At that moment a fish made a swirl near the boat and I landed my fly right on the spot. "Whiz!" went the reel, and the little rod made a courtesy and a half circle that tested its merits in a way that it had never experienced in its long history of the thousands of big trout it had handled. The way that salmon jumped was a caution, and an acrobatic exhibition. I saw that I had business to attend to if I wanted to hold the fish and save my tackle. He felt like a whale. My reel was small and contained just sufficient line to reach either bank of the stream, and the way the fish scooted across the river, backward and forward, was a trial, bringing up on either bank, which was perpendicular and rocky, and must have damaged his nose. I felt sure if he would keep that up and not run up or down the stream to exhaust my line, I had him. He must have crossed and recrossed at least twenty times, but finally showed signs of weakening, and I began to tighten on him. It took nearly an hour to get him alongside the boat. Then, reaching down, I got my finger in his gills and lifted him into the boat and pulled ashore with the hook still in his upper lip. My friend Harry all this time was sitting on a log smoking a cigar and watching the performance. As I landed and laid my fish on the wharf, I said, "Here is your dinner. Come, sail in. You are to eat him raw, you know." He looked at the fish, the hook and the line with wonderment, at last saying, "Well I'll be dogged! If my own father had told me he had caught this big salmon with this tackle and I had not seen it with my own eyes, I would have told him he was telling a fish story." "And probably got a licking," I added. It was not a very big fish for a salmon, but it weighed 12½lbs. and was quite as heavy as I wanted to handle with an 8oz. rod.

I caught six more the next day after strengthening the gut by doubling, and of course lost several, but the catch averaged about 8lbs. I could have caught dozens with appropriate tackle, but it required so much longer time with such light rig that it used up most of the day.

The next season I went prepared and was able to handle them in much less time. I caught thirty-five on that trip, all with the fly. The third year I could not raise one with the fly, and fell back on the feathered spoon, which they took greedily. Since then I have had varied success. Some seasons they would take the fly and others they would not, and it was beyond me to divine why they would take the fly one season and not another. I have not visited the Navarro the last three seasons and cannot therefore say how they feel now about taking the fly; but fishermen generally make no attempts with the fly, it is so much less trouble to troll with a feathered spoon and substantial rig. Of course, the scientific fisherman repudiates such matter-of-fact fishing, but it has its excitements, for a 15lb. salmon on your hook makes himself manifest to a remarkable degree with his leaps and runs. He is a very gamy fish under restraint of any kind.

To see a school of salmon playing, jumping and coming to the top of the water, one would notice that their action was precisely that of trout when going for insects at the surface; but I am convinced that insects were not their object, as there were no insects on top of the water. It seems to be matter of play and amusement solely.

I have dissected many, and never found an insect in their crops, and seldom anything; in fact, to find any kind of food is exceptional. I am going to make my usual trip to the Navarro this fall, and shall give the question of fly-fishing close attention. Judging from the avidity with which they take the feathered spoon, seemingly attracted by its brightness, it has occurred to me that a bit of tin foil wound around the body would have a similar effect.

Summing up the evidence, pro and con, I am willing to admit that as a general rule the Pacific Coast cannot be relied on for much sport with the fly, and that instances of their being so caught are rather exceptional. They are evidently of a different character from the salmon of the Canada waters. They can be taken quite numerously at the head waters of the Sacramento River with salmon roe bait, fishing in the pools and rapid water. I have heard of several instances of their being taken in Humboldt Bay with the fly, but not commonly. I have not fished in those waters, my experience being confined to the Navarro River, as I have described; but thousands are caught all along the coast below, especially in the Bay of Santa Cruz, with the feathered spoon.

I give my experience with a view to set at rest Mr. Cheney's doubts as to whether salmon have really been caught with the fly on this coast, although I do not pretend to assert that it is the rule, but rather the exception.

I will give the results of my next trip to the Navarro, as I will give my mind to the question of how the fish feel about it this coming season. Podgers.

Grants Pass, Ore., Aug. 10.—*Editor Forest and Stream:* Mr. Kipling is mistaken in saying of the Pacific salmon and the fly that "those brutes won't rise to it," as I have caught a Rogue River salmon on the fly, and I send the photo of my catch on that trip by this mail. The first week in October, 1897, fishing near Bybee Bridge on Rogue River (twenty-five miles above Grants Pass), I caught a fine lot of salmon trout, and one male salmon weighing between 3 and 4lbs. These fish were all caught with the fly in one afternoon and one morning.

Last year my brother, fishing three miles below Grants Pass, caught a 12lb. salmon on the fly, the struggle lasting upward of an hour. The Rev. Robt. McLean, now of Portland, has caught several salmon on the fly, and I know of others. As a rule the salmon will take only the spoon, which is shown on the photo of the four salmon. The salmon of Rogue River are identical with the Chinook of the Columbia River, and are now "running" to the spawning beds. They are accompanied by the salmon trout, which feed on the salmon spawn during the spawning season, and will take the fly from July 1 to Nov. 1.

Theo. P. Cramer.

Canadian Angling Notes.

Quebec, Aug. 12.—The latter part of the salmon fishing season was better this year than the first. In the St. Anne des Monts River there was a fine run of fish, and in the Grand River of Gaspé the fish were unusually large, Mr. L. Z. Joncas getting one of 46lbs. The sport on the Ristigouche remained poor all the season.

Trout fishing has been very good of late for the midsummer months, though, strange to say, the far-famed Montmorenci River was well fished by two efficient anglers—Col. Wilson and Col. G. R. White—last week without yielding them anything better than 1lb. fish. The fishing on the lakes in the Lake St. John country, on the contrary, has been quite good. Some splendid catches of 4 and 5lb. speckled trout have been brought to town from a lake in the territory of the Tourilli Club. These all rose to the fly. Equally fine fish have been lately taken out of Lake Edward, but these latter were caught on trolls. Portages and camps have been made throughout the territory west and southwest of Lake Edward, and as there is understood to be a practically unlimited supply of fly-fishing to be had there in the proper season, an unprecedentedly large number of campers are expected here next month. The plague of flies, which has been particularly severe during July and the first ten days of August, has now largely subsided.

Gov. Roosevelt has been invited to fish next month in the St. Maurice district, and Mayor Carter Harrison and party, from Chicago, are expected at the Tourilli Club.

At the Triton Club several large parties are expected up in September, both for hunting and fishing, the indications for a good caribou season being very favorable.

The Vermont Fish and Game League will meet in Quebec on the 28th and 29th inst. and from 150 to 200 sportsmen from the Green Mountain State are expected here at that time. All the arrangements for their reception have been carefully made in advance by Mr. Titcomb, the president. The annual dinner will be given at the Chateau Frontenac. The privileges of several fish and game clubs in the district will be extended the visitors and many of them are expected to accept the invitations that will be open to them to fish for ouananiche and trout. Some of the regulations of the Fish and Game Department will probably be suspended in favor of the visitors. Gov. Smith, who will accompany the party in his private car, will probably continue on in it to Lake St. John.

Among other well-known anglers now at Lake St. John after ouananiche are Lieut.-Col. Haggard, D. S. O., of England, and Mr. Sam Ehrich, of Ehrich Bros. and Wall street, New York, who has a large party with him. Col. Haggard has brought me from New Foundland a number of ouananiche skins, showing the fish found there to be identical with those of Lake St. John.

The fishing in the Grande Décharge continues wonderfully good, and the ouananiche are exceedingly plentiful. A remarkable incident in connection with the angling for this fish is that a couple of American fishermen went out on Tuesday last to fish for them in Lake St. John, immediately in front of the village of Roberval, and caught over twenty of them. In fact, they seem to be abundant everywhere this year in their chosen waters. The ease with which they are taken in the Discharge has doubtless prevented many parties from ascending the feeders of the lake this summer, although they, too, would certainly yield good sport at this season.

E. T. D. Chambers.

Bass and Sucker at Once.

Carbondale, Pa., Aug. 16.—*Editor Forest and Stream:* While out fishing on the East Branch of the Delaware River I caught a good sized bass and a silver sucker at the same time. Old-time fishermen said that they had never seen or heard of anything like it, and of course my word was doubted. Now the most remarkable thing is that the man who doubted me went fishing with me the next morning, and in the same pool I caught a larger bass and a good sized sucker at the same time. So my companion, who was a New York sportsman, claims that I did something that has never been equaled. This fish story can be attested to by the New Yorker and Drs. Meaker and Jenkins, of this city. Jas. Rutherford.

Indiana's Obnoxious Fish Law.

Williamsburg, Ind.—*Editor Forest and Stream:* The last Legislature enacted a law permitting seining from July 1. The result, as might have been foreseen, was the extermination of all but the smaller game fish in the creeks throughout the State in less than a month after the seining law opened. The seines started at daylight or before on opening day and swept the creeks day after day, until there was nothing left to seine for. The fruits of fifteen years of protection and restocking were wiped out in two weeks. Before the seining there were a thousand miles of creeks that were reasonably good bass fishing; now there are hardly a thousand bass. A thousand people who found occasional recreation and rest from the worries of life now find they might as well fish in the bath tub as in the creeks. The seiners, of course, claim that they have as good a right to fish in their way as the anglers have to their way, but no man or set of men have a right to exterminate any of the good things that are nature's gifts to the people. Below we give the expressed opinions of a few of the fishermen in widely scattered parts of the State. We have a whole lot more just like them, and could get a thousand. O. H. Hampton.

Brookville, Aug. 7.—It is the worst law that was ever enacted in our State, and it is ruining the game fishing.
I. A. Pepper, President Battle Point Fishing Club.

Bloomfield, Aug. 7.—We fishermen think that the new law kills all the good there is in the May and June closed season, and it gives the rod fishermen little to hope for.
J. E. S.

Tipton, Aug. 6.—We think that the new seining law is depopulating the streams. They are being thoroughly seined with all kinds of seines. It is an outrage, and radical steps should be taken to change the law. This feature of the statute is a great blunder.
Ike Booth.

Marion, Aug. 7.—All of the anglers of this section are thoroughly disgusted at the ignorance of our Legislature and the seeming incompetency of our Fish Commissioner. In a short time we will need no fish law, for a very obvious reason—no fish.
Frank H. Rigdon, Sec'y Marion Gun Club.

Wabash, Aug. 7.—I am going seining this afternoon, but do not have much hope of catching anything, as the river has been emptied. Bad luck to the fish law, for it is a great failure. W. E. Bent.

Liberty, Aug. 7.—The local rod and line fishermen think the present law an outrage and a fraud.
George W. Pigman.

Newcastle, Aug. 7.—The local fishermen say the new seining law is an outrage and should be knocked out. I have spoken to several and they all object to it and say that it is no good. J. B. Landwer.

Washington, Aug. 7.—I tell you there is but one sentiment on the seining question, and that is that the law is a monumental blunder. F. I. Sepit.

Muncie, Aug. 7.—Local rod and line fishermen of this vicinity are utterly opposed to the fishing law enacted by the last Legislature. Line fishing is believed to be a thing of the past. H. R. Williams.

Logansport, Aug. 7.—About ten out of fifty think the law is all right. They are men who never fish with rod and line, only with seines. Our true fishermen think the law the worst we ever had and say they ought to tie a can to Sweeney and get a good man in his place. I have not heard of one case where carp have been caught with seines. John Hilderbrandt.

Brownstown, Aug. 7.—Seining should be stopped.
F. M. Miller.

Lawrenceburg, Aug. 7.—We all fish in God's country (Kentucky) where they have no laws.
A Fisherman.

Elkhart, Aug. 7.—The fishermen here seem willing to give the new fish law a trial. A. B. Witt.

Vernon, Aug. 7.—The rod and line fishermen are in favor of the new seining law. Nearly all of them here indorse it. Louis Eitel.

Kendalville, Aug. 7.—Our fishermen don't think at all about a law that will in any way countenance seining or netting—we just swear. All true sportsmen here favor a closed season from December to July 1. Don't want fishing of any kind during that time. H. A. Moyer.

Noblesville, Aug. 7.—They say it's no good.
Reube Ireble.

Ft. Wayne, Aug. 7.—Our fishermen don't care to catch fish by the wholesale with a seine. We would like to with rod and line in May and June. C. H. Miller.

Jeffersonville, Aug. 7.—We do not like the new seining law. We think that seining and dynamiting should be strictly prohibited. As far as we can see seining should not be allowed under any circumstances.
Chas. E. Poindexter.

Where Napoleon Might Have Fished.

The St. Helena anchorage literally swarms with fish, and the evening following our bonito fishing I caught over a hundred mackerel and a fish resembling him, called the kingfish, on a hand line. There is little else to attract the sportsman to St. Helena. A few pheasants, partridges and rabbits I am told are to be found, but the walking is terrible and sport to be obtained hardly worth the trouble.—Asian.

Orthographical Ode.

RESPECTFULLY INSCRIBED TO A. N. CHENEY.

I'm the grand, magnificent "Maz-Ke-Nozh,"
The destroyer of the deep;
And they quake with fear when I appear,
In my lithe and lordly leap,
As I sweep the deep
With my tail, in a vertical leap.

I swim, a gigantic "Mascalonge";
I'm bigger than a whale;
No shark, in his spring, has such a swing
To his heterocercal tail;
I'm bail; nor a whale
Has got such a twist to his tail.

I jump a monstrous "Muskellunge,"
To strike you dumb with awe;
For I jingle tunes with the Skinner spoons
Which decorate my jaw,
As I gnaw, Haw-haw,
On the spoons in my tiger jaw.

I dive, the Frenchman's "Masque-Allonge,"
I would gladly scalp the same
Old dunderhead, ere he was dead;
For mine is an Injun name;
'Tis a shame, I claim,
To be libeled with such a name.

I die a "Musky," alias "Lunge";
Know ye my magic spell?
It will paralyze the angler wise;
My name he cannot quell;
Nor tell, quite well,
Just what is my magic "spell."

ZERO.

CHICAGO.

Surgeon-General Wyman's Pole.

"SURGEON-GENERAL WYMAN knows how to fight fevers and stamp out epidemics as well as anybody," said a Treasury veteran the other day, "but there's a thing or two he has yet to learn about sporting, unless he's better posted in the lexicon of the thing than he was two or three years ago. I remember being in the office of William E. Curtis, Assistant Secretary of the Treasury under Carlisle, one day, when the Doctor called. After transacting some business, he dropped the official air and said, evidently with not a little pride:

"'This morning I received notice of my election to membership of the Woodmont Rod and Gun Club. You fish, don't you, Curtis?'

"'Oh, I cast a fly occasionally,' answered Curtis, lolling back in his chair, 'but I didn't know you went in for that sort of thing.'

"'Only in a dilettante way,' said the Doctor modestly. 'On the strength of my election, I have just bought a new pole.'

"'A new what?'

"'A new pole. I'd like to show it to you and see whether you think I gave too much for it. It is all finished in silver, and has two ends.'

"'Of course it has—the butt end and the other extremity.'

"'No, no; I mean two—two ends—two or those sticks the string hangs from, don't you know.'

"'Ends—sticks—strings—yes, I know. But'—here Curtis drew a face as solemn as Job's—'you've made a mistake, Wyman, in the title of that concern which admitted you to membership. It can't be a rod and gun club; it must be a pole and shooting-iron society.'

"I never knew whether Wyman saw the joke, but it evidently troubled him for a while."

Massachusetts Codfishing.

BOSTON, Aug. 19.—The annual outing and fishing excursion of the Icemen's Fishing Club, of Charlestown, came off on Tuesday. The tug Elsie was chartered for the trip to the fishing grounds off Minot's Light. The party started early, and reached the grounds in very good season. Immediately fishing began, and the fun was lively, and especially competition for the prizes—$7 for the largest codfish, or fish of any kind, and the same money for the smallest. This competition for the smallest created a good deal of merriment. Mr. Robert M. Donahoe won the first prize and Mr. F. L. Shaw the second. An excellent catch was made, the fishing lasting for several hours.

Codfishing trips are many, to different points along the coast, and generally with very satisfactory results. The vessels furnish bait and tackle, the captors retaining all the fish they care for, the remainder going to the craft. Bluefishing is not generally satisfactory, only small catches being reported by the parties who fish for sport.

SPECIAL.

The Salmon Clause in Indentures.

IT is rather a pleasant task than otherwise to dispel illusions long current, and let in the light to the dark chambers of mystery. An idea is prevalent that salmon was once so common in our great rivers that clauses were inserted in the indentures of apprentices to the effect that it should not be served as food more than twice, or, at the most, thrice, a week. Few statements have obtained a wider circulation than this. I have myself heard the assertion that such clauses existed in indentures, made, not once, but a score of times. Here is not a case, moreover, of vague and often repeated affirmation. Men with every claim to be regarded as authorities have advanced the statement again and again. The pages of Notes and Queries have been filled with what is called evidence. In books such as Ormerod's "History of Cheshire," Brooke's "Art of Angling," Pulman's "Book of the Axe," Kerr's "Agriculture of Berwick," and innumerable others, the existence of this clause in the indenture is mentioned as a thing well known and generally conceded. The theory, indeed, extended into other countries. In Scotland it was said to be compulsory for a farmer to bind himself not to give his laborers salmon more than thrice a week. A writer in the Standard, Feb. 27, 1883, declared that Northwestern Irishmen, still living, could testify to the truth of "the servants at Ballyshannon, County Donegal, having, less than fifty years ago, bargained that they should not have salmon for dinner more than three times weekly." Even so far as the Continent the same idea has spread, the stipulation that salmon should not be supplied more than once a week being, it is said, known in Dordrecht, and other places in Holland, and not unknown in Connecticut, in the United States.

No Indenture with a Salmon Clause to be Found.

The question was first dealt with in a thorough fashion by Dr. T. N. Brushfield, in a paper read before the Chester Archæological Society, and printed in its journal. From this I derive many highly interesting particulars. The most curious thing concerning the matter is that no proof of the existence of such an indenture can be found. Scores of people assert that they have seen it, and many have been sanguine as to their ability to lay their hands immediately upon it. In no case whatever has it been forthcoming. Rewards were offered for the production of an indenture concerning the clause, a sovereign by the editor of the Worcester Herald, and £5 by Mr. Ffennell, an inspector of salmon fisheries. The latter stood open for more than a year, but no one appeared to claim it.—Sylvanus Urban in the Gentleman's Magazine (London).

CHICAGO AND THE WEST.

Plans of the Minnesota Forestry Association.

Committee work diligently progresses in the Minnesota National Park and Forestry Association, but the date for the start of the big Congressional excursion is as yet undetermined. It is thought that the invitations to Congress will be formally signed by a special committee, and it is hoped that this committee may be composed of Governor Roosevelt, of New York; President Cyrus Northrup, of Minnesota State University, and Mayor Carter H. Harrison, of Chicago. It is a very nice question, that about the dates for the trip. Admiral Dewey has signified his intention of arriving at New York the last week of September, and about every American will want to arrive there about the same time, to see the man who licked a whole fleet before breakfast. If the Minnesota trip be delayed beyond the first week in October, the weather might not be so good. No doubt these difficulties will be satisfactorily adjusted.

It is a serious problem to handle so large a party on what is to be practically a sporting trip, a problem which will be appreciated by anyone who has taken in charge even a small party in the woods. The railroad men are working on this now, and have representatives on the ground. One of the members of the committee drafted the following schedule, which at this writing is informal, but which will perhaps be adopted at least in part. It contemplates dividing the party into four divisions, and of alternating these divisions at the principal parts of interest. One will need a map and a little acquaintance to fully understand the schedule, which with the accompanying programme for the trip is given below:

Starting point for entire party, St. Paul. Leaving time, evening, so as to arrive in Park Rapids early in the morning. Breakfast in dining car for the entire party. Those leaving train at the earliest point to be first in the dining car. Party No. 1 to be left at Park Rapids for a drive to and from Lake Itasca. Wagons to be in readiness on arrival of train at Park Rapids. Tents, provisions and everything necessary to be in shape at the lake. Party to remain over night at Lake Itasca, sleeping in tents and returning next day to Park Rapids (or going down the river to Bemidji). Leave party No. 2 at Dorset for Sand Lake. Wagons to be ready to leave on arrival of train. Tents, provisions, etc., as above. Also boats and guides, giving this party two days' fishing and one night in camp. Leave party No. 3 at Walker, to be taken care of in hotel and given steamboat excursions on Leech Lake. Leave party No. 4 at Pine River. Wagons ready to drive to Woman Lake.

The Biggest Bass.

So far as I am able to learn at this writing, the biggest bass taken in the West this season is that caught on the morning of Aug. 17, this week, at Fox Lake, Wis., by Charlie Adams, a cripple of that village. Mr. D. J. Hotchkiss, of Fox Lake, advises me that this bass weighed 7lbs. when fresh, and weighed 6lbs. 14oz. eight hours after being caught, kept out of the water. It measured 21in. in length and 16in. around. The fish was taken on frog bait, and a light rod with reel. Mr. Hotchkiss says there are plenty more up there, and indeed I have heard of more big bass from that water this season than from any other hereabouts. If anyone has caught a bigger bass than 7lbs., let him come forth. This was a bigmouth.

Dr. and Mrs. W. H. Meeker, of Appleton, Wis., from Aug. 11 to 13 took eighteen mascalonge in the Manitowish Lakes. All uninjured fish were returned to the water. The largest fish weighed 18lbs. Good three days' sport for people who up to that time had never caught a mascalonge.

The Ryan and Conkey party, of Appleton, will leave for Big Lake, on the Manitowish waters, Sept. 23 and pitch tents on their old camping ground.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Large Striped Bass.

MR. HENRY A. PETERS, of Brooklyn, caught last Saturday off Milton Point, Long Island Sound, a striped bass weighing 33lbs. The fish has been mounted and will be on exhibition at the store of Messrs. William Mills & Son, 21 Park Place, this city.

FRED MATHER'S "Trouting on the Bigosh," Dr. Morris' "Autocrat of the Eddy," and his salmon leaping photos; Jay Beebe's "Amateur Fisherman," "Dobsons for Bass Bait," Nessmuk on "Blackflies and Mosquitoes"—these are the things of particular interest to anglers in the current issue of the *Woodcraft Magazine*.

New Jersey Coast Fishing.

ASBURY PARK, N. J., Aug. 19.—The prevailing easterly winds of the past few days have sent the bass to their surf haunts with a rush. More have been taken at the various points during the past week than during the entire season previous. Each day produces some from our piers, and to-day fifteen fine fish have been taken in the vicinity of Shark River Inlet. While the size is not of the largest, still the average is fair; 4 to 12lbs. is the run, and the fish fine in condition. A few weakfish also are being taken and any quantity of plaice. Kingfish appear to have given us the go-by temporarily, but will undoubtedly be in evidence as soon as the sea boils down. Barnegat Bay is not up to the standard as set earlier in the season. Fishing there has been of the best until the present week, and I was booked for the 20th and 21st, but a message from our captain informs me not to go until further notice. All the tidal streams are now fairly alive with lafayettes, porgies and snappers. The latter, of course, are very small as yet, but as they grow very rapidly sport with them in the near future is assured. The heavy surf of the past few days has made the landing of fish from the ponds an impossibility, and as a consequence fish are high in price and very scarce, local dealer losing heavily in supplying the hotels at contract price.

LEONARD HULIT.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 4-7.—Toronto, Can.—Toronto Industrial Exhibition Association's eleventh annual show.
Sept. 12-15.—Milwaukee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.
Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Aug. 31.—Emmettsburg, Ia.—The Iowa Field Trial Association's second annual field trials. M. Bruce, Sec'y.
Sept. 4.—La Salle, Man.—Western Canada Kennel Club's annual amateur field trials. A Code, Sec'y.
Sept. 6.—Morris, Man.—Manitoba Field Trial Club's thirteenth annual trials. William C. Lee, Sec'y.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ———, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Manitoba Field Trials Club.

WINNIPEG, Man., Aug. 11.—*Editor Forest and Stream:* Subjoined you will find a list of the entries for the All-Age Stake of this club, consisting of thirty-five setters and fifteen pointers, and which number we consider makes a splendid showing:

SETTERS.

Pin Money—Charlottesville Field Trials Kennels' blue belton setter bitch (Count Gladstone IV.—Daisy Croft).
Christina—Charlottesville Field Trials Kennels' black white and tan setter bitch (Blue Ridge Mark—Lou R.).
Sam T.—Del Monte Kennels' black, white and tan setter dog (Luke Roy—Betty B.).
Minnie's Girl—Del Monte Kennels' orange and white setter bitch (Antonio—Minnie T.).
Gilt Edge—Del Monte Kennels' orange and white setter dog (Count Gladstone IV.—Lillian Russel).
Glad's Girl—Del Monte Kennels' orange and white setter bitch (Count Gladstone IV.—Lillian Russel).
Hurstbourne Zip—D. E. Rose's (Agt.) black, white and tan setter dog (Tony Boy—Dimple).
Pearl R.—D. E. Rose's (Agt.) black, white and tan setter bitch (Sam Gross— ———).
Lena B.—D. E. Roe's (Agt.) black, white and tan setter bitch (Tony Boy—Nellie C).
Lady's Count Gladstone—D. E. Rose's (Agt.) black, white and tan setter dog (Count Gladstone IV.—Dan's Lady).
Peconic—Avent & Duryea's black, white and tan setter dog (Count Gladstone IV.—Hester Pryme).
Topsey's Ranger—Avent & Duryea's black, white and tan setter dog (Roderigo—Topsey Avent).
Prime Minister—Avent and Duryea's black, white and tan setter dog (Count Gladstone IV.—Hester Pryme).
Roysterer—Avent & Duryea's black, white and tan setter dog (Count Gladstone IV.—Hester Pryme).
Lady Rachal—Avent & Duryea's black, white and tan setter bitch (Count Gladstone IV.—Hester Pryme).
Jef—Avent & Duryea's black, white and tan setter dog (Orlando—Dolly Wilson).
Tol Wilson—Avent & Duryea's white and tan setter dog (Hobson's Bob—Estell).
Joe—Avent & Duryea's black, white and tan setter dog.
D. Antonio—G. O. Smith's black, white and tan setter dog (Dash Antonio—Imagination).
Misfortune—W. Gould Brokaw's black and white setter bitch (——— —Queen).
Bonnie Lit—John Wootton's black and white setter bitch (Orlando—Lady Lit).

Manitou Spot—John Wootton's black, white and tan setter dog (Val Lit—Cam Sing).

Rosa Bondhu—John Wootton's black, white and tan setter bitch (Dick Bondhu II.—Maud A. Rose).

Sport—W. S. Cottingham's black and white setter dog (Dan—Jess).

Ella Wheller—A. C. Reid's black and white setter bitch (Ponto—Scwab).

Burlington Route—Dr. J. S. Brown's black, white and tan setter dog (Count Featherstone—Topsey F.).

Jubilee Flo—Thos. Johnson's black setter bitch (Little Billie—Belle W.).

Nellie—Thos. Johnson's black, white and tan setter bitch (Ponto—Bess).

Duke's Rush—Winnipeg Kennels' brown and white setter dog (Duke of Manitoba—Cam Sing).

Maid of the Morn—W. F. Ellis' blue belton setter bitch Val Lit—Cam Sing).

Silver Lace—W. F. Ellis' black and white setter bitch (Val Lit—Cam Sing).

Exasperator—W. F. Ellis' black, white and tan setter dog (Duke of Manitoba—Dora M.)

Blackie—Harry Holman's black and tan setter dog.

Fairview Bell—W. Gould Brokaw's liver and white setter bitch (Edgemark—Bell).

Fly—W. Gould Brokaw's black and white setter bitch (White B.—Queen).

POINTERS.

Nana—Charlottesville Field Trials Kennels' liver and white pointer bitch (Ch. Rip Rap—Toxie).

Ranee—Charlottesville Field Trials Kennels' black and white pointer bitch (Ch. Rip Rap—Toxie).

Lad of Jingo—D. E. Rose's (Agt.) liver and white pointer dog (Jingo—Dot's Pearl).

Alex. C.—D. E. Rose's (Agt.) liver and white pointer dog (Glenleight—Saddle Bags).

Fairview Tom—W. Gould Brokaw's liver and white pointer dog (Sir Walter—Van's Pride).

Bang III.—Hamber & Code's black and white pointer dog (Rector—Dinah).

Mac Hamber—Hamber & Code's black and white pointer dog (Croxteth Ned—Miami).

Manitoba Belle—Hamber & Code's black and white pointer bitch (Croxteth Ned—Miami).

Ned B.—Dr. J. S. Brown's black and white pointer dog (Rap—Lady Grace).

Jubilee Prince—Thos. Johnson's black and white ticked pointer dog (Rector—Dinah).

Jubilee Princess—Thos. Johnson's black and white ticked pointer bitch (Rector—Dinah)

Jubilee Diana III.—Thos. Johnson's liver and white pointer bitch (Rector Dinah).

Prince Ightfield—Paul A. Gale's liver and white pointer dog (King—Frankie).

Sport—Jos. Lemon's black and white pointer dog (Buster—Bell).

WM. C. LEE, Sec'y-Treas.

Points and Flushes.

Entries to the All-Age Stake of the Continental Field Trial Club close on Oct. 15. Mr. Theo. Sturges, 141 East Eighteenth street, New York, is the Secretary.

The premium list of the second annual dog show of the Texas Kennel Club can be obtained of Mr. Geo. W. Clayton, Supt., P. O. Box 914, Chicago. His address after Sept. 1 will be Dallas, Texas, care of Texas State Fair Association. The dates are Oct. 9 to 13. Entries close Sept. 25.

Canoeing.

The war canoe races of the A. C. A. meet came very close to the highest record in aquatics, there having been 105 contestants in the crews of the seven big canoes. We believe that some years ago in a race at Detroit ten ten-oared barge crews started, and there may be other similar records in rowing, but in canoeing such a fleet is unique. The finest sight of the day, surpassing even the races, was the closing in of the seven crews after the finish, when all tossed paddles and cheered Com. Thorne, to whose efforts, aided by Vice-Com. Howell, the success of this new event was due.

American Canoe Association.

Twentieth Annual Meet.

HAY ISLAND—ST. LAWRENCE RIVER.

Aug. 4-18.

WITH an exceptionally good camp ground and the best possible weather, the meet of 1899 promises to be remembered as a most pleasant and successful one. The general location of the camp, close to the great routes of summer travel, has made it easily accessible from the vicinity of New York and from Boston as well, though but few New England men are present. For the great body of fresh water canoeists between Buffalo and Montreal the location is specially advantageous, and they have availed themselves of it in large numbers. The war canoe races have helped greatly to swell the camp register far beyond the usual figure, but even with the seven crews of fifteen men each deducted, the register shows a great increase over the past half dozen years, the total figure for the two weeks being 340.

The weather has been as nearly perfect as is ever found, even among the Thousand Islands—clear, dry, with a bright, sunny sky all day and starlight at night. For once the old tradition of a meet at full moon has been abandoned, the new moon being still on its way to the first quarter. Throughout the day the temperature has been high, but tempered by a mild breeze, and in the evening it has not been chilly enough to call for a coat or wrap, while the ground is dry, with no dew.

The layout of the camp ground, one of the chief factors contributing to a sociable and united camp, has never been surpassed; the two divisions—main and ladies' camps—are entirely distinct, each accessible without passing through the other, and both close to the central part, the wharf, mess tent and headquarters.

The camp is made up distinctively of campers, people who come with a full knowledge of both the pleasures and discomforts of open air life, and who are prepared to make the most of the former and the least of the latter. The hotel and tourist elements are entirely lacking, and on the one hand there are no troublesome visitors and on the other there is nothing save the mild attractions of Gananoque to take men from camp.

The dress question, so often discussed, seems at present to have settled itself very satisfactorily; there is nothing dudish in the dress of the men, and fortunately there is nothing of the fashion of the 1896 meet, when sleeveless jerseys were the vogue all over the camp and men even came to the public mess tent with bare arms and shoulders burned to running sores. This year the popular dress is the strictly yachting costume of blue serge coat, white duck trousers and yachting cap; good enough in its way, but far less suitable for a canoe camp than the picturesque and negligee club uniforms such as the Mohicans wore a dozen years ago. The most discordant detail of this costume is the modern ten-story stiff collar, which is worn by many. Those who care more for convenience and comfort than for the camp fashion content themselves with a jersey in place of coat and collar, or even the plain sailor's working suit, of rough canvas blouse and overalls. The dress of the ladies is of the every-day, sensible sort—short waists and short skirts, fit for the canoe or for a tramp over the rocky hills and shores, and in no way over-elaborate.

The camp amusements are of a wild sort that hardly need to be catalogued; there is nothing special to do, but all hands are pleasantly occupied from early morning until "taps," or even later. The bathing is excellent, in clear, clean water of any depth; there are numbers of open canoes on the different beaches for those who wish to paddle about among the many beautiful islands of the vicinity; there are several small yachts at anchor off the camp and under way every day, and there is good fishing close by. With no outside attractions and few set entertainments in camp, the time still passes quickly and pleasantly.

On Aug. 10 there was a dance in the mess tent, and on Saturday night Mr. Wright, of the camp site committee, had the tent arranged and gave a very interesting exhibition of lantern slides, many of the pictures being taken by him in a trip around the world, a number of A. C. A. pictures being also shown. On Sunday evening service was held in front of headquarters, in the open air, by the Rev. F. R. Sexson, of Gananoque, assisted by the Rev. G. L. Starr, of Kingston.

The so-called "Visitors' Day," Monday, Aug. 14, passed off very pleasantly. The presence of the war canoes brought many strangers to camp from Brockville, Kingston, Gananoque and other nearby places, but the crowd was very well behaved and orderly, and the arrangements were such as to confine all strangers to the central space, keeping them from overrunning either camp.

The attendance is made up largely from members who have joined within the past ten years, or even less, but there are many who are well known to each other through frequent attendance at the more recent meets. The highest number on the membership roll is now about 3,500, and the registry book shows but a dozen names whose numbers are lower than 1,000, as follows: W. P. Stephens, R. J. Wilkin, L. W. Seavey, J. N. MacKendrick, W. G. MacKendrick, Paul Butler, Ford Jones, W. R. Huntington, C. F. Wolters, Wm. M. Carpenter, H. M. Carpenter and G. W. Ruggles. The new Western Division is represented by six members—H. C. Morse, F. B. Huntington, W. C. Jupp, W. M. Clarke, E. B. Nellis and Wm. Campbell.

There are two unpleasant features of the camp which are too prominent to be passed over—the mess and the dispute between the regatta committee and the sailing men. The mess, managed by a caterer from Kingston, is bad enough to recall unpleasant memories of that at Jessup's Neck in 1890. The food is of poor quality, very badly cooked, and the service is of the same sort, the waiters, though polite and attentive, being inexperienced and too few in numbers. The charge is the regular one of $1 per day for breakfast, dinner and supper, not an exorbitant one, but it has been repeatedly proven that with honest intention and reasonably good management a caterer can satisfy the campers and at the same time make a profit, even in the States, where the cost of food and labor is higher than in Canada. That the average A. C. A. member is not difficult to satisfy in the matter of food is shown by the comparatively mild complaints in the present case.

The trouble with the regatta committee has created a good deal of feeling on both sides, and has been unpleasant to even the majority of disinterested members. There are two sides to the dispute, which has grown apidly from an insignificant beginning.

With all its advantages there is one serious drawback to Hay Island, in that the natural racing course, to the south, is a very poor one, both for sailing and paddling, the winds being broken and fluky and the courses obstructed by shoals from each shore. The contestants in the war canoe races all complained of the serious drag due to a depth of only 4 to 5ft. over portions of the course, especially inshore, and the sailing canoes are in frequent danger of grounding.

The race programme for the meet, published in the FOREST AND STREAM of April 8 is different in several important respects from all previous programmes. The long-established custom of beginning the important races on the second Monday of the camp has been departed from for the first time, some of the best races being set for the first instead of the second week. Another change is the fixing of the dates of the races some months in advance, making no allowance for weather. The sailing races, too, have been reduced in number, while the paddling races have been increased. This is in part but a natural recognition of the decline of canoe sailing, so apparent at all recent meets, and the coincident revival of the interest in paddling. A part of the trouble is due to the fact that no member of the committee had had any experience with races at a meet. The early publication of the programme gave ample opportunity for criticism and suggestion on the part of the racing men, but apparently no one took any interest in the races prior to coming to camp. The programme is as follows:

Sailing and Paddling Races—Decked Canoes.

Event No. 1.—Record Combined.—Paddling and sailing, half mile alternately, three miles; time limit, one and one-half hours; start to be made under paddle. Aug. 10, A. M.

Event No. 2.—Record Sailing.—Four and one-half miles; time limit, two hours; same rig and seat to be used n events Nos. 1 and 2. Aug. 10, P. M.

Event No. 3.—Record Paddling.—One-half mile straightaway. Same canoe as events Nos. 1 and 2. Aug. 11, A. M.

Event No. 4.—Novice Sailing.—Three miles; time limit, two and one-half hours. Open only to members who have never contested in any but their own club sailing races. Aug. 11, P. M.

Event No. 5.—Trophy Sailing.—Nine miles; time limit, three and one-half hours. See Rule 5 of Racing Regulations. Aug. 12, A. M.

Event No. 6.—Dolphin Sailing Trophy.—Seven and one-half miles; time limit, three hours. Canoe winning first place in trophy race will not compete in this event. Aug. 12, A. M.

Event No. 7.—Sailing, Live Man Overboard.—Decked sailing canoes, one-half mile. At the discharge of gun the passenger will go overboard, the canoe will pass around the quarter-mile buoy, pick up the man, and then sail to home buoy.

A. C. A. War Canoe Championship Races.

Event No. 8.—War Canoes.—A. C. A. championship, one mile straightaway. Aug. 14, 10 A. M.

Sailing Races—Open Canoes.

Event No. 9.—Open Canoe Sailing.—One and one-half miles; time limit, one and one-half hours. Open or partially decked canoes allowed.

Event No. 10.—Combined Sailing and Paddling.—One-half mile alternately, one and one-half miles; time limit, one and one-half hours. Start under sail. Single blades. Open or partially decked canoes allowed.

Note.—In events 9 and 10 the sail area is limited to 40 sq. ft. No rudder, or seat projecting beyond gunwales allowed. One pair detachable leeboards may be used. The paddle can only be used for steering except in event No. 10 on the paddling leg. The same canoe, sail and leeboards will be used in both events. Canoes may have the usual bow and stern decks of about 32in., and side decks of about 2in. wide with combing about 1½in. high. Canvas covers or other substitutes for decks will be measured as decks.

Division Sailing Races.

Event No. 11.—Atlantic Division cup.
Event No. 12.—Central Division cup.
Event No. 13.—Western Division cup.
Event No. 14.—Northern Division open canoe sailing for Orillia cup.

Note.—Division sailing cup races will be sailed on Aug. 15, weather permitting, provided they have not been sailed at division meets, and will be sailed under the rules provided by each division, which will be posted on the bulletin board day of race and called in the order published. Division regatta committees will run their own sailing races. (See Chap. 9.)

Division Paddling Races.

Event No. 15.—Western Division.—Gardner cup, paddling.

Event No. 16.—Northern Division.—War canoes; open to A. C. A. members only. Aug. 14, 3 P. M.

Paddling Races.

Event No. 17.—Trophy Paddling.—One mile straightaway; paddles optional. Aug. 15.

Event No. 18.—Paddling.—Double blades, open canoes, one-half mile with turn.

Event No. 19.—Tandem Paddling.—Single blades, open canoes, one-half mile with turn.

Event No. 20.—Relay Race.—Open paddling canoes, single blades; one and one-half miles, over sailing course; three men from each club or division. Starters paddle to and around first buoy, pass an article to second man, who paddles to and around second buoy, passing to third man, who paddles to the finish.

Event No. 21.—Paddling.—Single blades, one-half mile, with turn.

Event No. 22.—Novice Paddling.—Single blades, open canoes, one-half mile with turn. Open only to members who have never contested in any but their own club paddling races

Event No. 23.—Four Men Paddling.—Single blades, open canoes one-half mile, with turn.

Event No. 24.—Tandem Overboard.—Single blades, open canoes, one-fourth mile. At the discharge of the gun both men will jump overboard, clear of their canoes, regain their seats in same and paddle to home buoy.

Event No. 25.—Tilting Tournament.—Sparring poles will be provided by the regatta committee. Each sparrer will stand immediately aft the forward thwart. Both contestants must be on their feet giving and taking.

Event No. 26.—Upset Paddling.—Single blades, open canoes.

Event No. 27.—Hurry-scurry.—Single blades, open canoes. Run, jump, swim and paddle.

Event No. 28.—Ladies' Paddling.—Double blades, open canoes, one-fourth mile.

Event No. 29.—Ladies' Tandem Paddling.—Single blades, open canoes, one-fourth mile.

Event No. 30.—Swimming.—One hundred yards.

Notes.

First, second and third prizes will be awarded in all events except Nos. 25, 28, 29 and 30, in which two prizes will be awarded. Two starters to win first, three starters to win second, and four starters to win third.

Flag prizes will be awarded sailors and paddlers.

A banner emblematic of the "A. C. A. Canoe Championship," together with a suitable "follow" prize, donated by Com. Thorn, will be awarded the winning crew in the

war canoe event. Flags for second and third places will be awarded also.

Events Nos. 1, 2, 3, 4, 5, 6, 11, 12, 13 and 14 will be called on the date shown in programme, weather permitting. The time for starting same will be posted on bulletin board by 8 A. M., date of race. Postponed events will be run off first opportunity.

Events Nos. 8, 16 and 17 will be run on date shown in programme, wind, sea or rain notwithstanding.

The committee reserves the right to call remainder of the programme at any time during the meet, when in their judgment the conditions are most opportune, notice of which will be posted on the bulletin board at 8 A. M., date of race.

Entries must be filed with the clerk of the course one hour previous to calling of any race.

All events will be called promptly at hours designated on bulletin board. Events postponed for lack of starters will not be called the second time. Stragglers will be ruled off the course.

Com., F. S. Thorn, Buffalo, N. Y.; Sec'y-Treas., Chas. P. Forbush, Buffalo, N. Y.; Regatta Committee, F. B. Huntington, Milwaukee, Wis.; John W. Ely, and Al. T. Brown, Rochester, N. Y., chairman.

The first events were called as early as Aug. 10, the Thursday of the first week, and though they were the three record races, once the most important of all, they brought out but three starters and were very dull and uninteresting. Event No. 4, the novice sailing, was called on Aug. 11, with but three starters. Event No. 7, the man-overboard race, was called on the same afternoon and was interesting to the spectators, Mr. Moore winning.

The trophy race, called early on Aug. 12, resulted in the dispute recounted last week, only two men starting. The open canoe sailing race, on the same day, had only three starters, Mr. Archbald winning easily.

The war canoe races, Events 8 and 16, were by far the most interesting of the meet, the field of seven canoes, each with a crew of fifteen, being a novelty. The Brockville Rowing Club had a new racing war canoe, designed and built by Mr. Gilbert, builder of Mab, a very light craft, well cut away at the ends, and with a turtleback deck forward, this, with the straight sheer and full lines of the bow, giving her the appearance of a torpedo boat. Her crew used short, broad-bladed paddles and a short, quick stroke. The other canoes were of the conventional war canoe type, with high sides, good sheer at the ends and nearly straight keel. The clubs represented were the Bohemian, of Brockville; Brockville Rowing Club, Britannia, of Ottawa; Ottawa C. C., Toronto C. C., Kingston Y. C. and the Dorval Juniors, a crew of young boys from the vicinity of the Royal St. Lawrence Y. C., at Dorval. During the past winter and spring Com. Thorn and Vice-Com. Howell have worked hard to secure entries for this event, and out of eight promised up to the beginning of the meet, seven were present. The course for the principal race was one mile straightaway, finishing off the little point at headquarters. Monday was a perfect day, with a moderate breeze that made the steering a little difficult, but with no other drawback. A number of visitors, mostly friends of the crews, were in camp to witness the races. Prior to the start of the first race the regatta committee decided that steering fins were not allowed on the canoes, and the Brockville Rowing Club was compelled to remove one from its canoe. The boat was wild and crossed the course, fouling several others, the steersman having no control over it. The Bohemian crew won after a hot race, with Britannia second and Dorval Juniors third. The Britannia crew protested the Ottawa for fouling.

The second race, in the afternoon, was over a course of one-half mile, with turn, the same crews competing. The Dorval crew took the lead at the start, getting away with a spurt, but the Bohemians again won.

The protest was taken up by the regatta committee after the second race, the captains of the opposing crews being present. The double victory of the Bohemians made it plain that they had won first place on their merits, as the other crews freely confessed. The Ottawa crew admitted the foul and was disqualified. The whole discussion in the meeting was marked by special good feeling on the part of all concerned. The sight of the seven crews under full speed was one well worth seeing, and that when the seven canoes came in to the point in a group, tossing paddles and cheering for the winner and for Com. Thorn, was equally fine.

On the same day a special sailing race was called for a handsome banner donated by the Mayor and several citizens of Gananoque. Although the race was not started until 12:45, after being posted for 12 o'clock, nearly all the members of the Sailors' Union were late, some being at their dock with sails not yet stepped when the second signal was given. Mr. Archbald and Mr. May crossed with the gun. The course was sailed with buoys to starboard and with a N.W. wind the second leg was a run and the other two reaches, there being no windward work. Mr. Archbald won as he pleased, taking the lead on the second leg and soon being far ahead of the second man.

On Tuesday the Dolphin trophy race was called, but the Sailors' Union refused to start on the plea that this race could only be called after the trophy race, and that there had been no trophy race. After the race had been abandoned, the same men went out and sailed a scrub race for a private prize.

The paddling trophy race was the principal event of Tuesday, there being seven starters, all in open canoes, with double blades. Mr. J. Smith, of Montreal, won after a close finish, with Mr. W. T. Landers, of Ottawa, in second place. The afternoon was devoted to the tournament, which was very amusing to the spectators, the swimming race and similar events.

On Wednesday the Dolphin trophy was sailed for under the management of Mr. D. S. Goodsell, of the Division regatta committee.

As has always been the case, the end of the racing marked the breaking up of the camp, and many left as early as Wednesday evening, instead of the usual break-up on Friday morning, the general exodus taking place on Thursday morning, though Com. Thorn and a small party remained until Sunday.

On Tuesday evening the Toronto C. C. gave a very pleasant camp-fire, the ladies being present and refreshments being served. On Wednesday evening the ladies held a camp-fire at Squaw Point, the feature of the entertainment being a series of open-air tableaux arranged on the spur of the moment by Mr. Seavey. The subject was "The American Woman," a series of single figures shown separately—the Indian girl, the Puritan, the golf girl, Canada, Columbia and similar subjects. Each was posed in the darkness under the trees and illuminated by colored fire, the effect being excellent.

Owing to the early breaking up of the camp there was no general camp-fire for the announcement of the new officers and the presentation of prizes.

The meeting of the executive committee for the election of officers was held on Aug. 16 in the Commodore's tent, the following members and proxies being present:

Com. F. S. Thorn, Sec'y-Treas. C. P. Forbush and Librarian W. P. Stephens.

Atlantic Division.—Vice-Com. H. C. Allen, Rear-Com. N. S. Hyatt, per R. J. Wilkin, proxy; Purser A. H. Wood, per M. D. Wilt; W. C. Lawrence, per H. H. Smythe; Thos Hale, Jr., per H. L. Quick.

Central Division.—Vice-Com. H. C. Morse, Purser Walter M. Clark.

Eastern Division.—Rear-Com. J. B. Waterbury.

Northern Division.—Vice-Com. Geo. A. Howell, Rear-Com. A. G. Bowie, per J. N. MacKendrick; Purser G. Walter Begg, per J. W. Sparrow; W. J. English.

Western Division.—F. B. Huntington, W. C. Jupp.

The minutes of the annual meeting were read and accepted. It was suggested that a formal report of the formation of the new Western Division should be presented to the executive committee, in order to appear as a permanent record on the minutes, and Vice-Com. Morse promised to prepare and submit to the secretary-treasurer such a report, the motion being made by Mr. MacKendrick that such a report be spread on the minutes. Carried.

The special committee appointed at the annual meeting to consider the question of the official organs of the Association reported that it had done nothing at all in the matter. A long discussion of the question of an official organ resulted in no action being taken at the present time.

Mr. MacKendrick brought up the question of the time for the principal races, asking why they were not held, as usual, in the second week. The general discussion brought out strong opinions in favor of races in the first three days of the second week and not on fixed dates except in the case of the war canoe races. Mr. MacKendrick urged that it was less desirable that the arrangements should be such as to permit men to come to the meet for a few hours for one race only than to induce all racing men to spend at least three days in camp, thus knowing and being known to the other members of the Association. After some discussion a motion was made to take up the regular business of the meeting—the election of the commodore and the secretary-treasurer for 1900. Vice-Com. Morse, of the Central Division, but now a member of the new Western Division, announced that the Central Division, after holding the meet this year in the turn of the Eastern Division, which had declined it, had decided to resign its own legal claim to the meet of 1900, further presenting the request of the Western Division that the meet of 1901 be given to it. Vice-Com. Howell stated that the Northern Division last year confidently expected that the meet of next year would come to it, and had worked through the winter to build up the Northern Division in order to hold a successful general meet at Muskoka Lake. A long discussion followed as to the desirablity of the two divisions, the general feeling being in favor of the Northern Division for 1900 and the Western Division in 1901, a motion by Vice-Com. Allen, to the effect that the meet of 1900 should be held in the Northern Division, being carried.

In view of such a choice, the Northern Division had for several days canvassed the question of a commodore, Vice-Com. Howell having positively declined the nomination. Mr. H. R. Tilley was also suggested, but declined, and at a meeting on Wednesday morning Mr. W. G. MacKendrick was selected as the choicie of the division. Mr. Howell presented Mr. MacKendrick's name to the executive committee for the nomination, seconded by Messrs. Wilkin and Stephens, and he was unanimously elected. As Mr. MacKendrick had left camp the previous evening, he could not be consulted as to his choice for a secretary-treasurer to assist him, so the nominations for this office were deferred.

Mr. J. N. MacKendrick moved that it be recorded as the sense of the meeting that the meet of 1901 be held in the Western Division. Some objections were made to this as being binding on future officers, but it was urged by some as a necessary assurance to the new Western Division that it would not be compelled to wait until its regular turn, in 1903, for its first meet. After discussion the motion was carried by a rising vote, all but Messrs. Wilkin, English and Waterbury voting for it.

Mr. Quick moved that a special committee of five be appointed to revise the racing rules, but after discussion it was withdrawn as unnecessary.

Mr. Smythe then asked for information as to the present status of the dispute between the regatta committee and the Sailors' Union, on which the following letter was read by the secretary-treasurer:

HAY ISLAND, Aug. 14.—Mr. C. P. Forbush, Sec'y-Treas. A. C. A.: Dear Sir: We are in receipt of your communication of the 13th inst. advising us of the action of the executive committee at their meeting held on Sunday morning last. Our position in the controversy is as follows: We contend that the present by-laws and racing regulations do not require us to sail the trial race except there be entries in excess of fifteen.

We contend that the postponement of the trophy race, which had been scheduled for four months to be sailed on Aug. 12, would have been manifestly unjust to several of those interested.

We contend that the meeting of your honorable body was illegal by reason of its having been held on Sunday, and unconstitutional because of the failure of several participants to file properly executed proxies.

We submit that this committee, not having been created by your honorable body, are not amenable to it, and therefore cannot be vested with authority to declare void a race which in our deliberate judgment has conformed to existing rules and has been fairly sailed and won.

We contend that the protest taken is unconstitutional and not in accordance with Rule IX., Sailing Regulations.

We have not as yet called upon the executive committee for their construction of the racing rules, and until we do so, or an appeal is taken in the prescribed manner, we would respectfully ask that this committee be allowed to perform its duties according to its own best judgment and not be hampered by dictation from above.

Through a misunderstanding this committee omitted to acknowledge in writing your previous communication. For this omission we offer an apology. Very respectfully,

AL. T. BROWN,
E. A. BURNS,
E. B. HUNTINGTON,
Regatta Committee.

Mr. Quick made the objection that if the meeting were illegal, as claimed by the regatta committee, all the business transacted at it was illegal. An acrimonious and pointless dispute ensued, which was ended by a motion to adjourn, made by Vice-Com. Allen, and carried.

Two division meetings were held in camp, the Eastern and Atlantic divisions having already elected officers at their division meets. The Central Division elected the following officers:

Vice-Com., John S. Wright, Rochester, N. Y.; Rear-Com., Jesse J. Armstrong, Rome, N. Y.; Purser, C. F. Wolters, Rochester, N. Y.; Executive Committee, W. R. Huntington, F. G. Mather and C. P. Forbush.

Northern Division.—Vice-Com., J. McD. Mowat, Kingston; Rear-Com., Edgar C. Woolsey, Ottawa; Purser, J. E. Cunningham, Kingston; Executive Committee, Allison G. Bowie, F. Bickerdike and D. J. Howell.

As usual, each division elected one man in excess of the legal number.

The election of Mr. MacKendrick was a surprise to all parties. From the old Grindstone days he, with his father and two brothers, has been well known to all attendants at the meet, the quartette being prominent in the paddling races. Mr. H. F. MacKendrick won the paddling trophy in 1890 at Jessup's Neck. Mr. W. G. MacKendrick was both a sailor and paddler, being the best man in the combined race and the winner of first place on the record in 1889 and second place in 1890. Of late years business has kept him from the meets, and his presence this year was purely accidental. Coming only for a day, he stayed nearly a week, taking an active part as starter in work of the regatta committee, and reviving his old interest is the A. C. A. With a thorough knowledge of the usages and customs of the Association, and of all branches of racing, he is fully qualified for the office, and he is certain to have the support of the Northern Division, as well as of his many old friends in the Association.

27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

The Seawanhaka International Challenge Cup.

Editor Forest and Stream:

The editorial article of Aug. 12, concerning the outcome of the late Seawanhaka cup races, discusses the important question of propriety in the conduct of yacht races by amateurs. Will you allow a few words in advocacy of a different view of this matter?

There is, or ought to be, a marked difference in the spirit governing contests in sports between professionals and those between amateurs. The article mentioned seems to ignore this difference. Undoubtedly strict and rigid rules are necessary for the practical management of yacht racing which may not be evaded by judges, referees or other judicial officers. But there can also be no doubt of the right of any contestant to waive any rule in his favor. The point is made that the skipper of the winning yacht was acting in a representative capacity and had no authority to abandon the race on account of an accident to the competing yacht. This is specious; but it is not all there is to be said on this point. The Royal St. Lawrence and the Seawanhaka yacht clubs had the right to waive the rule; and in matters of emergency arising during the races had to act, if at all, through their representatives present. Some one must be presumed to represent the clubs. If the race committee be deemed a judicial body only, then in the absence of other executive representatives the skippers of the yachts must act in that capacity, and have the right to do in emergencies what their club or executive committee could do if present.

It is not to be presumed that the St. Lawrence or the Seawanhaka Club wishes to win or retain the international trophy except by a race upon the merits of the competing yachts. In these international races these clubs may be deemed to be in large measure the reprsentatives of the Canadian and the American people.

Th view "that it would be a very pretty piece of sentiment but very bad sport * * * had he [the skipper of Glencairn] given up" is inconsistent with the high standards in amateur sport. The difference between sport on a high plane and business is practically this matter of sentiment.

It would be less embarrassing to discuss the present case had the Yankee yacht won the cup on a sail-over. Criticism from losers is not always in good taste nor always free from prejudice; but the keeping of the methods of professionalism out of amateur sport is of so much consequence that a loser may be permitted to speak in moderation. In amateur contests there should be the largest possible latitude and liberality, consistent with orderly management, in construing rules and in considering the authority of representatives to act for their principals, in the interest and in the spirit of sportsmanlike ideals, rather than the strict construction of the letter that is appropriate in business matters.

If memory is not at fault, Sir Richard Sutton refused to take a race in the America Cup series of 1885 by sailing over the course alone. It is doubtful whether Lieut. Henn would have done so. Is there any question that both of these gentlemen better represented the yacht clubs in whose names they challenged, and the English amateur sportsmen and people generally, than did the owner of Valkyrie? SEXTANT.

The spirit of our correspondent's letter is thoroughly in accord with the principles of fair sport, even among professionals, which the FOREST AND STREAM has always advocated, and we can quite understand his position. The case in point, however, is one which can only be discussed by those perfectly familiar with all the circumstances of the Montreal races of 1897-8-9; and the exact relations of the two clubs. Those who have tried to judge of the disputes of each year on the sole evidence of the reports in the New York daily papers have blundered from first to last.

The high standard of sport for its own sake, as set forth by Sextant, is unfortunately seldom found; but it did mark the first match between the Seawanhaka Corinthian Y. C. and the Royal St. Lawrence Y. C. at Oyster Bay in 1896, when Glencairn I. won the cup from El Heiric. The amiable relations continued all through the following winter, when all details for the return match on Lake St. Louis were satisfactorily arranged by mutual agreement, and it was confidently expected by all concerned that the races would pass off with the same good feeling on both sides.

The first break came on the evening preceding the first race between Momo and Glencairn II., and was caused by the attempt of the Seawanhaka race committee to introduce a new condition, not incorporated in the rules and contrary to the established precedent of the two previous years, allowing more than one man to sign the agreement as helmsman. It was perfectly well known at the time that this was due to the fact that the two heavy men selected by Mr. Crane for his crew were too heavy to handle the headsails, and Mr. Crane desired to give up the helm to one of them at times while he worked forward. After a session of four hours by the two committees, the demand of the Seawanhaka committee was rejected by the other on the grounds that it was not called for by the rules, and as distinctly contrary to established precedent in the two previous races, in which the owners personally had signed the agreements and each steered his own boat.

This decision was accepted with very bad grace by the Seawanhaka committee, and it was in retaliation that a few days later, after Momo had proved to be lacking in power, Mr. Crane gave up his place to a stranger, Mr. Dresser, one of the race committee, a very much heavier man. This change was made as deliberately and discourteously as possible, no notice being given of a change of crew and no request for the sanction of such a change being made. The matter was perfectly understood by both parties at the time. Mr. Dresser did not replace Mr. Crane because he was a better sailor or more familiar with the boat—quite the reverse; but solely because he amounted to some 60lbs. more of unmeasured ballast to windward. The right to make such a change of crew was not given by the rules and was at least an open question, while by all rules of courtesy and fair sport some notice of the change should have been given to the other party. The hostile and discourteous spirit in which the change was made was fully apparent to all who attended the races.

The original quarrel was aggravated by the new dispute over the construction of Dominion last year and the offensive orders sent to Mr. Crane by the race committee in the famous Dresser-Kerr telegram, which he faithfully obeyed.

For the past two years there has been hardly a pretense of sentiment between the two clubs, and it has been simply a matter of the exact, literal and rigid interpretation and application of the racing rules and special cup conditions. In the course of the continued disputes in connection with these races, the FOREST AND STREAM has taken the same position as Sextant in favor of sport on the highest possible plane, free from trivial technicalities, and in so doing it has encountered only hostile criticism from those most closely interested in bringing the cup back to Oyster Bay.

Without wishing to assume too much, it appears to us that Sextant has failed to distinguish between what should be and what really is in current yachting usage. It is a question whether, in important international matches, if not in all racing, the race committee or other executive body should not be endowed with more ample powers, enabling it to deal at discretion with special emergencies; but there is, we believe, no question that, as we stated in the article which aroused Sextant's criticism, such committee is not now authorized to go outside the letter of the rule, and in this case, after the course was virtually agreed to by Mr. Post, the preparatory gun fired, the committee was powerless, the race had to stand and only the action of the club could annul it.

As concerns the helmsmen of the respective yachts, the matter is perfectly plain; they have no discretion in departing from the rules. It has been our contention for the past three years that one man in each yacht should sign the agreement as owner, owner's representative or master, regardless of who may steer the yacht, being responsible for the observance of the rules and fully recognized as in command. This arrangement has not been carried out, as it would be contrary to the contention that any number of men may sign as helmsmen, the original cause of the dispute. If we understand the most recent agreement between the two clubs, no one man is officially recognized as captain of the yacht.

So far from being a specious one, the point we made that the skipper has no option but to follow the rules is the actual fact; and as a matter of practice, it must be plain that a man who is charged with the steering and management of a yacht in an important race is in no position to judge of the actions or accidents of a distant competitor and to withdraw and thus throw away what is fairly a race for his side. The question may be one on which it is necessary to hear evidence and to spend hours in deliberation, and yet according to Sextant's idea it should be decided in a moment by a skipper who is busy at the tiller. In the first race between Momo and Glencairn I., when the latter broke her tiller before the start and fouled the stakeboat, Mr. Crane did not withdraw Momo, but continued and took the race on a sail-over, as he was fully justified in doing. Had he and the Seawanhaka race committee, present at the time, offered after the finish to call the race off because of an accident to the other boat during the preparatory interval, it would have been

most chivalrous, but by no means necessary by all yachting usage; a man should expect to stand fairly by his own accidents, hard as they sometimes are.

The case of Sir Richard Sutton is quite different from the present one. While the relations of a skipper or owner to his club are nominally the same in the America Cup matches as in other international yachting contests, they are really very different. In the America Cup contests the challenge originates with an individual yachtsman, who builds a yacht and practically conducts all negotiations in person. The club which he represents merely indorses him, and its part in the negotiations is largely nominal. Sir Richard Sutton, Lieut. Henn and Lord Dunraven have each acted as principals in the final negotiations at New York and in the management of their yachts in the races; their clubs appearing only in the formal challenge at the start. Each enjoyed absolute liberty of action, unhampered by instructions from his club. When Puritan fouled Genesta the actual circumstances were that the latter was disabled, lying helpless with her bowsprit alongside when the committee tug came up. There was every opportunity to discuss the case at leisure with a full knowledge of every incident; and after so doing Sir Richard Sutton declined to avail himself of his unquestioned right to rig a jury bowsprit and to attempt to sail the course in the time limit.

Another case that bears on the question is that of Valkyrie III. after the foul with Defender. Lord Dunraven might have withdrawn when he saw that Defender was disabled and have made a new start after she had repaired the damage; but he was under no obligation to do so. In the Seawanhaka cup, Canada cup and similar matches a challenge originates with a club, which selects a representative by means of trial races. The skipper of the representative yacht, defender or challenger, has no option but to sail the race under the rules, leaving to the club representative or the race committee to deal with all general questions. As a matter of fact, the position of Mr. Crane and Mr. Duggan in the Seawanhaka races is very different from that of Lord Dunraven and Sir Richard Sutton in racing for the America Cup.

Our account of the final race between Constance and Glencairn III. was based on the first reports received, and some important details were omitted. The course over which the race was finally sailed was full one and one-half miles in length, with the windward mark boat anchored in 11ft. of water; the starting line was necessarily nearer than usual to the shore, but with deep water about the line. This was the fourth course laid out to meet the protests of the challengers, who had declined to race over a proposed course of one mile to windward sailed six times over. From the early morning it was a Glencairn day, her superiority in very light weather being recognized by all parties. After 3 P. M. the race could only be started by consent of both competitors, and the many delays, discussions and changes had brought the time almost to this hour. When Constance took the ground, apparently on a rock or small shoal, in otherwise deep water, she was close inshore, and a long distance from the line; and she came off as soon as her board was raised and over a minute before the starting gun. She sustained no injury and might have crossed the line with a small handicap, but she withdrew and sailed up to the committee boat to make a protest.

Not having heard the evidence, we are not in a position to pass a fair judgment on this protest as to the nature of the course, though from all that we can learn we are of the opinion that it should have been made before the preparatory signal or not at all. The other question, as to whether the club as a body should have offered to call the race off as a matter of pure sport and to resail it, is a matter of sentiment and personal opinion and not of racing rules; as already stated, this is not usually done.

On the technical facts of the case, as concerned in the actions of the race committee and the skipper of the defending yacht, we see no reason to revise our original opinion. The whole matter points to the necessity for especial care in the final arrangements for the great international races of the year, though we doubt whether it is now possible to endow a committee with special and unusual powers to stop a race on account of an accident, and it certainly is not possible to so instruct the skippers of the competing yachts.

The following report has appeared in some of the New York papers. We give it for what it is worth:

BAY SHORE, L. I., Aug. 16.—Not discouraged by his recent failure to win the Seawanhaka's cup from the present Canadian holders, Mr. Regis H. Post has decided to issue another challenge. He will have constructed a larger yacht than Constance, which came so near winning the coveted trophy. Mr. Crane will design the new challenger, which is to have less freeboard than Constance, the desire being to obtain a speedy boat in light airs.

The new challenger will fly, in addition to Mr. Post's private signal, the burgee of the Penataquit Corinthian Y. C., of which organization Mr. Post is a member, and in whose fleet the new craft will be enrolled. She will be ready early in the spring for the trial races, and will be equipped with every modern yachting appliance, including three sets of sails.

Canarsie Y. C.

CANARSIE—JAMAICA BAY.

Saturday, Aug. 19.

THE Canarsie Y. C. sailed a Corinthian race on Aug. 19. A light wind blew from the S.E. at the start of the race, which died down soon after and then blew strongly at the finish. The times were:

Cabin Cats.

	Start.	Finish.	Elapsed.

Shamrock's Arrival.

SIR THOMAS LIPTON'S Shamrock, the representative of the Royal Ulster Y. C., of Ireland, in the races for the America Cup, to be held here in October, dropped anchor off Tompkinsville, Staten Island, at 10:30 A. M. on Friday, Aug. 18. Shamrock made the trip from the Clyde in fourteen days, nineteen hours and fifty-four minutes. She was towed about a third of the way by her consort, the steamer Erin. As Shamrock came up the bay she was quickly recognized, and received a warm reception from the craft in the harbor. She was painted a light green, and flew the private signal of her owner, a green shamrock on a yellow field, and the ensign of the British Naval Reserve. The tug James A. Lawrence, chartered by David Barrie, Sir Thomas Lipton's agent in America, was not on hand to meet Shamrock, but the tug Robert Hadden towed her to her anchorage.

Shamrock's daily runs were as follows: Aug. 4, 203; Aug. 5, 263; Aug. 6, 282; Aug. 7, 223; Aug. 8, 193; Aug. 9, 190; Aug. 10, 243; Aug. 11, 263; Aug. 12, 231; Aug. 13, 260; Aug. 14, 291; Aug. 15, 258; Aug. 16, 210; Aug. 17, 265; Aug. 18, 210.

The log of Erin is as follows:

"Left Fairlie, Scotland, 5:47 Aug. 3. Passed out the Browhead Light, which was the last British land seen.

"Sunday, Aug. 5.—Unsettled weather in the morning; light winds up to 11 A. M.; then heavy weather, with severe thunderstorm, accompanied by blinding flashes of lightning.

"Aug. 8.—Heavy weather continues. Lost sight of Shamrock for an hour. Very heavy wind. Last seen of Shamrock she was standing well ahead of us. After a circuitous route picked up Shamrock across our bows.

Aug. 9.—245 miles from Carvo, Azores, at 4 P. M. overhauled Shamrock. She had been sailing with her flying jib. Shamrock signals to us, 'Will you call Fayal?' Answered, 'No.' 5 P. M. Shamrock has all sails set. 9 P. M., weather is very pleasant. Sea is smooth. Shamrock sailing well.

"Aug. 10, 9:35 A. M.—Sighted Carvo. We then had gone 1,559 miles. We exchanged no signals with land. Passed about seven miles out. Shamrock signaled: 'Will you come aboard and dine?' We declined the invitation. Erin had her sails set and was making eleven and a half knots.

"Aug. 11 and 12.—Weather very calm. Towed Shamrock.

"Aug. 13 and 14.—Calm weather continued, but Shamrock made her own sail.

"Aug. 15.—Shamrock forged ahead of us. Six hundred and ninety-one miles from the Hook. Shamrock is going with all sails set, making about ten knots an hour, and about ten miles ahead of Erin on starboard bow.

"Aug. 16.—Clear weather, with a long, heavy swell.

"Aug. 17.—Met several steamers and exchanged signals. Steamer America stood out of her course a considerable distance and signaled, 'We hope you will succeed.' Erin answered back 'Thanks.' Shamrock overhauled Erin about 9 o'clock. Passed Fuerst Bismarck 5:45 P. M. Erin hoisted her flareup. Bismarck did not understand the new signal. Both yachts under sail.

"Aug. 18. 4:13 A. M.—Thick fog. Pilot picked up at 7 o'clock. Reached Sandy Hook at 8:25 A. M."

Shamrock was taken to Erie Basin on Aug. 21 to be docked.

Racing at Newport.

THE 30-footers sailed a race on Aug. 16 for the Narada cup, offered by Henry Walters, owner of Narada. There was a light wind from the south when the race was started at 3:40. The boats sailed over the Dyer's Island course, and the times were:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 42 40	2 02 40
Hera, Ralph N. Ellis	5 42 54	2 02 54
Wawa, Reginald Brooks	5 43 32	2 03 32
Veda, C. Vanderbilt, Jr.	5 44 19	2 04 19
Dorothy, H. P. Whitney	5 44 38	2 04 38
Esperanza, H. O. Havemeyer, Jr.	5 45 01	2 05 01
Pollywog, A. H. Paget	5 45 17	2 05 17
Vaquero III., H. B. Duryea	5 46 10	2 06 10
Raccoon, John R. Drexel	5 47 17	2 07 17
Asahi, Lloyd Warren	Withdrew.	

On Aug. 17 a race was sailed over the triangular course from Brenton's Cove to Bishop's Buoy. The wind was from the south, and the start was made at 3:27. The times were:

	Finish.	Elapsed.
Wawa, Reginald Brooks	4 46 29	1 19 29
Vaquero III., H. B. Duryea	4 46 41	1 19 41
Carolina, Pembroke Jones	4 46 54	1 19 54
Esperanza, H. O. Havemeyer, Jr.	4 47 18	1 20 54
Hera, Ralph N. Ellis	4 47 34	1 20 34
Dorothy, H. P. Whitney	4 48 21	1 21 21
Pollywog, A. H. Paget	4 49 29	1 22 29
Asahi, Lloyd Warren	4 50 32	1 23 32

On Aug. 18 a sweepstake was sailed over the triangular course in a light wind, the times being:

Start, 3:10.

	Finish.	Elapsed.
Wawa	4 51 32	1 41 32
Pollywog	4 53 02	1 43 02
Carolina	4 53 24	1 43 24
Vaquero III.	4 53 41	1 43 41
Hera	4 54 00	1 44 00

Cohasset Y. C.

COHASSET, MASS.

Saturday, Aug. 19.

THE Cohasset Y. C. sailed a race on Aug. 19 in a light wind. Swallow fouled Jap at the start and was disqualified. The times were:

Knockabouts.

	Finish.
Delta, R. B. Williams	4 32 36
Barracouta, A. C. Burrage	4 33 37
Remora, Crocker & Tower	4 35 10
Kid, H. Bigelow	4 35 28
Heralda, A. Bigelow, Jr.	4 37 06

Half-Raters.

Jap, B. C. Tower	3 47 49
Bee, F. W. Clarke	3 48 16
Swallow, J. Richardson	Disqualified.

Beverly Y. C.

BEVERLY—BUZZARD'S BAY.

Saturday, Aug. 19.

THE Beverly Y. C. sailed its last Corinthian regatta of the season on Aug. 19, the times being:

21ft. Class—Course, 16 Miles.

	Elapsed.
May Queen, D. L. Whittemore	2 51 40
Blazing Star, C. M. Baker	3 01 52
Ulula, W. H. Winship	Not timed.

Second Class Sloops—Course, 15 Miles.

Thordis, T. B. Wales	2 34 05
Islander, George H. Richards	2 38 26

21ft. Knockabouts—Course, 12 Miles.

Quakeress, W. F. Harrison	2 27 56
Cyrilla, R. W. Emmons, 2d	2 30 31
Amanita II., J. Crane, Jr.	2 33 06
Edith, R. S. Dow	2 25 06
Amanita I., J. Crane, Jr.	2 35 11
Kalama, David Rice	2 35 56
Kittywake, S. D. Warren	Withdrew.

Fourth Class Cats.

Sally, W. S. Burgess	1 45 07
Elsa, C. S. Sargent	1 51 58
Daisy, Howard Stockton	1 53 04
Heiress, G. G. Amory	1 53 50
Hope, J. H. Ellis	1 54 18
Fin, L. M. Stockton	1 56 33
Howard, H. O. Miller	1 58 24

15-Footers—Restricted.

Uarda, J. Parkinson, Jr.	1 51 58
Next, C. H. Jones	1 53 38
Peacock, R. Winsor	1 55 20
Vim, F. W. Sargent, Jr.	1 56 45
Teazer, N. F. Emmons	1 57 52

Jubilee Y. C.

BEVERLY, MASS.

Saturday, Aug. 19.

THE Jubilee Y. C. sailed its first open race on Aug. 19 in a good S.W. wind, the times being:

Class B—30ft.

	Elapsed.
Meemer, R. C. Nickerson	1 31 40
Ashumet, W. F. Bache	1 32 09
Emma C., P. A. Coupal	1 43 17

Class D—25ft.

Hermes, A. W. Chesterton	1 41 04
Little Peter, H. Moebs	1 41 43
Black Cloud, T. O. Gilliott	2 01 03
Elf, Chas. Prescott	2 06 04

The Yacht Races at Shelburne, N. S.

THE following is the result of the races held on Shelburne Harbor on Aug. 7, 8, and 9 for the handsome cup offered by the citizens of Shelburne for the club twice winning it. As last year the yachts from Halifax and Yarmouth competed, the cup thus becomes the property of the Royal Nova Scotia Yacht Squadron, of Halifax.

Another cup will be provided by the Shelburne Regatta Committee next year, and the races will become an annual event. The following is the summary:

First Day.

	Elapsed.	Corrected.
Dione	5 15 16	5 08 55
Viking	5 09 40	. .. ..
Alba	5 19 30	5 16 30
Sabot	5 20 00	5 18 16
Savitar	5 35 08	5 31 18

Second Day.

Iris	4 59 43	4 53 00

Burgess Y. C.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, Aug. 19.

THE Burgess Y. C. sailed a special race for 16-footers and gunning boats on Aug. 19, the times being:

16ft. Class.

	Elapsed.
Cyclone, F. G. Macomber	1 12 35
Ugly Duckling, C. F. Lyman	1 13 45
Polly, E. Wadsforth	1 16 23

Gunning Boats.

Ha Ha, A. F. Whitmore	1 21 31
Woodcock, F. J. Dupair	1 22 33

The Lake Yacht Racing Association Meet.

TORONTO AND HAMILTON—LAKE ONTARIO.

Aug. 14-19.

THE annual meet of the Lake Yacht Racing Association was held last week as per programme recently published, with four days' racing at Toronto, followed by a cruising race to Hamilton and a race at that place, the fleet sailing back to Toronto on Sunday in time for the international match of this week. It was expected that the occasion of the meet, filling the week between the trial and final races for the Canada cup, would bring the entire Lake Ontario fleet to Toronto, with yachts from the other lakes, and that the racing would be exceptionally spirited. Such, however, has not been the case. The racing has been confined mainly to the Toronto and Hamilton yachts, and it has on the whole been slow and uninteresting as compared with some previous years. The weather has been clear and pleasant for the entire week, with very little wind on the hot days at the end.

The following yachts took part in the racing. Clorita is one of the two one-design schooners designed by Mr. A. Cary Smith last year; she has just been purchased by Geo. H. Gooderham from P. T. Dodge, of New York, being brought to the lake by canal.

First Class.

Clarita, schooner, Geo. H. Gooderham.....Toronto
Breda, cutter, A. G. Peuchen.....Toronto
Merry Thought, cutter, Æmilius Jarvis.....Toronto

45ft. Class.

Canada, cutter, Browne, Cox and Gooderham.....Toronto

Vedette, cutter, Reed & Gray.....Toronto
Vivia, cutter, N. Macrae.....Toronto
Vera, cutter, —— .....Belleville

35ft. Class.

Minota, sloop, R. C. Y. C. Syndicate.....Belleville
Myrtle, cutter, Burnside Syndicate.....Hamilton
Hamilton, cutter, Fearnside Syndicate .....Hamilton
Weir, cutter, H. Weir.....Hamilton

30ft. Class.

Verona, sloop, Pembroke & Sprogge.....Rochester
Kestrel, sloop, —— .....Kingston
Chetta, J. C. Dryer.....Rochester
Wona, cutter, Eby Bros.....Toronto
Sylvia, cutter, T. Lyon.....Toronto
Brenda, Rev. C. E. Whitcombe.....Hamilton
Mirage, —— ..... ——
Happy Thought, —— ..... ——

25ft. Class.

Pedro, sloop, Miller & Perry.....Rochester
Bat, lugger, C. E. Archbald.....Toronto
Lady Adeline, —— .....Toronto

Knockabouts.

Enid, Owain Martin.....Toronto
Veritas, J. G. Averill.....Toronto
Petrel, W. McGill.....Toronto
Winona, —— ..... ——

On Monday there was a fresh easterly wind with a roll of sea up the lake. Only the Hamilton boats were entered in the 30ft. class, the Weir boat having a new mast stepped 11in. further aft than the one lost in the trial races. She won easily from Hamilton, while Myrtle withdrew. On Tuesday the wind was still east, but lighter, with less sea, and a very good race was sailed. On Wednesday there was very little wind. Minota beat two of the Hamilton boats badly. On Thursday there was no wind at 11 o'clock, and just enough at noon to warrant a start. There was no more on Friday, when the yachts started off the town club house and worked out the Eastern Gap for the cruising race to Hamilton, each yacht towing a dinghy for the full course of thirty miles. They picked up the breeze outside, however, and made a race.

The Toronto races were as usual under the management of the Association officer, Mr. W. Q. Phillips.

The official times were:

Monday, Aug. 14.

Triangular course, 4 miles to a side. Wind E., fresh.

45ft. Class—Two Rounds—Start, 11:00.

Inland Lake Regatta.

OSHKOSH—LAKE WINNEBAGO.

Aug. 14-19.

THE Inland Lake Yachting Association's regatta, held on Lake Winnebago, Aug. 14 to Aug. 19, was most successful. The East as well as the West was represented in the races, and among the entries was Cavite, of the White Bear Y. C., which club has challenged the Royal St. Lawrence Y. C. for the Seawanhaka cup.

The race on Aug. 14 was for the Felker cup, a local trophy. Ten 20-footers competed in this race. The start was made at 2:30 in a light N.E. wind, the boats sailing over a 12-knot course. The finish was so close that it took the judges till late at night to decide upon the winner. Aderyn was placed first, Argo second, Algonquin third and Cavite fourth. The difference in time between the winner and the fourth boat was 37 seconds.

On Aug. 15 the first of a series of three races for 20 and 17ft. boats for the possession of the club trophies was sailed over the regular course. At 2:30 there was no wind, and the start was made a half-hour later, when the wind blew fresh from the east. Flying Fox was disabled. The times were:

20ft. Class.

	Finish
Aderyn	5 24 02
Argo	5 23 17
Lassie	5 25 09
Iota	5 26 36
Cavite	5 29 14
Algonquin	5 31 23
Cherokee	5 31 25
Momo	5 40 31
Patricia	5 44 47
Rajah	5 50 02

17ft. Class.

Nightingale	5 16 34
Xenia	5 21 18
Flying Fox	Withdrew.

The third day's racing was as exciting as that of the previous days. It was a good racing day; the sky was clear and the wind blew from the S.E. Argo won her second victory, and requires only one more race to her credit to win the championship. The course was twelve miles, and the times were:

20ft. Class—Start, 2:30.

	Finish
Argo	4 29 12
Cherokee	4 29 29
Iota	4 29 56
Cavite	4 30 36
Aderyn	4 31 08
Lassie	4 35 45
Patricia	4 42 43
Algonquin	4 43 40

In the 17ft. class Flying Fox won by 42 seconds over Nightingale. Xenia was third, 5 minutes behind the winner.

Argo won her third and final victory in the 20ft. class on Aug. 17, and thus clearly demonstrated her superiority over the other boats of her class who have sailed against her. The fourth day was the best of the week for racing, a strong, wholesail wind blowing from the south. Argo is an Oshkosh boat, and her victory was very popular. The times were:

20ft. Class—Start, 2:30.

	Finish.
Argo	4 31 22
Aderyn	4 34 45
Cherokee	4 36 22
Cavite	4 38 43
Iota	4 38 42
Harpoon	Disabled.

17ft. Class—Start, 2:35.

Nightingale	4 32 49
Flying Fox	4 34 17
Xenia	4 37 53

On Aug. 18 the race for the cup offered by the Oshkosh Y. C. was sailed by the 20-footers, while the 17-footers finished their series for the Inland Lake championship. Argo again asserted her supremacy over the other boats of her class and scored her fourth consecutive victory. Nightingale won her third race in the 17ft. class and wins the Inland Lake cup. The times were:

20ft. Class.

	Start.	Finish.	Elapsed.
Argo	2 30 57	5 30 59	3 00 02
Algonquin	2 30 10	5 35 19	3 05 09
Cherokee	2 30 36	5 38 14	3 07 38
Aderyn	2 30 28	5 39 36	3 09 08
Iota	2 31 16	5 45 56	3 14 40
Harpoon	2 31 07	5 51 47	3 20 40
Lassie	Withdrew.		

17ft. Class.

Nightingale	2 36 02	5 14 56	2 38 54
Flying Fox	2 35 29	5 17 34	2 42 05

New York Y. C.

NEWPORT, R. I.

Tuesday, Aug. 15.

THE wind-up races of the New York Y. C.'s cruise were sailed on Aug. 15 off Newport. The wind was moderate from the east at the start, but fell to a light air toward the finish of the races. The course was a triangular one of twenty-one miles. Columbia again scored over Defender, sailing the course in 8 minutes 52 seconds better than her rival. In the race for the Commodore's cup, open to the 30ft. class, Carolina won in a pretty race. Light winds and smooth seas have been the rule during the cruise, and Columbia has proved herself a remarkable boat under these conditions. The times were:

Sloops—Class G—Over 70ft.

	Start.	Finish.	Elapsed.	Corrected.
Columbia	11 35 25	2 29 00	3 53 35	. .. ..

Wednesday, Aug. 16.

The races for the owl and gamecock colors were rowed on Aug. 16. Only two boats were entered in the race for two-oared dinghies for the owl colors. The crew of Crusader's dinghy beat Syce's crew by 8 minutes 23 seconds. The four-oared gigs of Ituna and Fleur de Lys rowed for the gamecock colors. Ituna's crew won, an accident to the Fleur de Lys' crew forcing them to withdraw. Iroquois' two horse power launch beat Wachusetts' launch by 11 seconds over a two-mile course. Two launches from Corsair also raced. The four horse power launch beat the one of six horse power by 36 seconds on time allowance.

Hempstead Harbor Y. C.

HEMPSTEAD—HEMPSTEAD HARBOR.

Saturday, Aug. 5.

THE annual regatta of the Hempstead Harbor Y. C. was sailed on Aug. 5. An hour after the start a squall was seen approaching and the regatta committee decided to end the race on the first round. Nike, Meadow Hen and Snipe capsized. Skimmaug and Ox collided. The times were:

Penataquit Corinthian Y. C.

BAY SHORE—GREAT SOUTH BAY.

Saturday, Aug. 19.

THE Penataquit Corinthian Y. C. sailed the second of a series of races for half-raters on Aug. 19. The course was twice over a triangle of eight miles, and the wind was light from the east, later dropping to a calm. There were but two entries. The times were:

	Start.	Finish.	Elapsed
Surprise, J. Low	3 05 00	5 42 30	2 37 30
Giggle, R. H. Post	3 05 00	5 46 30	2 41 30

Chippewa Y. Cs. Challenge Declined.

THE Chippewa Y. C. of Ogdensburg, N. Y., challenged the Royal St. Lawrence Y. C. for a race with Glencairn over an eleven-mile course for $300 a side. Mr. Duggan, owner of Glencairn, has replied that it will be impossible for him to accept the challenge.

Rhode Island Y. C.

PROVIDENCE, R. I.

Saturday, Aug. 19.

THE Rhode Island Y. C. sailed the third of a series of six races for sloops of the one-design class on Aug. 19. The times were:

Start, 3:35.	Finish.	Elapsed.
Rascal	5 34 58	1 59 58
A 12	5 37 26	2 02 26
Kitten	5 45 40	2 10 40
The Kid	5 48 00	2 13 00
Scoot	5 48 16	2 13 16
Earl	5 49 55	2 14 55
Sprint	6 11 25	2 36 25
Ruth	6 13 20	2 38 20

Duxbury Y. C.

DUXBURY—DUXBURY BAY.

Saturday, Aug. 19.

THE Duxbury Y. C. sailed a handicap race on Aug. 19 in a light S.W. wind, the times being.

	Elapsed.	Corrected.
Rooster, Watson L. Baker	1 28 06	1 28 06
Bobolink, Goodspeed Brothers	1 31 40	1 28 40
Nancy Hanks, P. W. Maglathlin	1 33 30	1 30 30
Lobster, C. C. Clapp	1 34 15	1 34 15
Halcyon, H. C. Winsor	1 36 40	1 35 40
H. F. P. Norwood	1 49 48	1 34 48
Fedora, Cassius Hunt	1 49 30	1 35 30
Random, G. P. Cushman	1 48 10	1 32 10
Scamper, E. H. Reed & Brothers	1 42 08	1 40 08
Fanny D., E. H. Watson	1 47 40	1 44 40
Geisha, W. T. Whitman	Withdrew.	

Wood's Holl Y. C.

WOOD'S HOLL, MASS.

Saturday, Aug. 19.

THE Wood's Holl Y. C. sailed a regatta on Aug. 19 in a light S.W. wind and a dense fog. The boats were all fourth-class cats, no other entries being received. Mary E. and Scup were obliged to withdraw, owing to the heavy fog, which made it difficult to find the outer buoy and the finish mark. The times were:

	Elapsed.	Corrected.
Frolic, R. O. Veeder	2 01 13	1 59 11
Darling, R. N. Veeder	2 02 43	2 02 05
Maud S., Robert Veeder	2 02 15	2 02 15
Mary E., A. F. Crowell	Withdrew.	
Scup, J. S. Howe	Withdrew.	

Trapshooting.

Fixtures.

Aug. 22.—Worcester, Mass.—All-day target shoot of the Worcester Sportsmen's Club; $40 added. A. W. Walls, Sec'y.

Aug. 23.—Canton, Ill.—Annual tournament of the Canton Gun Club. J. C. Thompson, Jr., Sec'y.

Aug. 23.—Atlantic City, N. J.—Elliott-Crosby contest for E. C. cup, emblematic of target championship.

Aug. 23.—Elkwood Park, Long Branch, N. J.—West End handicap, 20 birds, $20, birds included; 12 noon.

Aug. 23-24.—Leavenworth, Kans.—Two days' tournament at targets.

Aug. 23-25.—Spirit Lake, Ia.—C. W. Budd and Fred Gilbert tournament; $300 added.

Aug. 25-26.—Chicago, Ill.—Tournament of the Eureka Gun Club; $100 added. Dr. C. W. Carson, 3872 Cottage Grove avenue, Sec'y.

Aug. 26.—Elkwood Park.—Grand national handicap, 50 birds, $50; 10 o'clock.

Aug. 30.—Elkwood Park.—Dewey handicap, 15 birds, $15; 1 o'clock.

Aug. 30-31.—Auburn Me.—State tournament on the grounds of the Auburn Gun Club. L. A. Barker, Sec'y.

Aug. 30.—Pottstown, Pa.—All-day shoot and clambake of the Schuler Shooting Club.

Sept. 2.—Elkwood Park.—Country Club handicap, 20 birds, $20; 11:30 o'clock.

Sept. 4.—Brockton, Mass.—Semi-annual silver cup handicap. A. A. Barrett, Sec'y.

Sept. 4.—Meriden, Conn.—Labor Day tournament and sheepbake of the Parker Gun Club. C. L. Howard, Sec'y.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 4.—Brooklyn, L. I.—Fulton Gun Club's Labor Day shoot.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 6.—Lyndhurst, N. J.—John Wright's live-bird shoot.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 15.—Hackensack River Bridge, Paterson Plank Road, Heflick's Hotel.—Shoot of the Hackensack River Gun Club. John L. Chartrand, Sec'y.

Sept. 19-20.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.

Sept. 19-22.—Detroit, Mich.—John Parker's eighth international tournament; live birds and targets; $500 cash added.

Sept. 23.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Sept. 23.—Hartford, Conn.—All-day shoot of the Colt Gun Club. L. H. Bradley, Secy.

Sept. 26-27.—Squaw Creek Park, between Niles and Girard, Trumbull County, O.—Tournament of the Rummell-Gaston Gun Club. Dr. James E. Gaston, Sec'y, Mineral Ridge, O.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Oct. 2.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

It has been suggested that the doings of a club do not become news till they are published, but it is possible that age may render news too good for the mind as age may render cheese too good for the palate of many. This is submitted as a matter for consideration of club secretaries who send us scores of club shoots two weeks or a month after the shoots have taken place, and also why we may consider that they may need more age to ripen thoroughly before publication. It gives us pleasure to publish news, but a tournament held during the reign of the Ramessids, beginning about 1460 B.C., would hardly be considered news at the present day.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Dr. James E. Gaston, of Mineral Ridge, O., under date of Aug. 14, writes us as follows: "By a considerable outlay we have been able to secure Squaw Creek Park as the place for our tournament instead of Midway. This park is on the line of the Mahoning Valley Electric Railway, between Niles and Girard, Trumbull county, O. It is one of the most picturesque and popular parks in the State. On days of our tournament, Sept. 26 and 27, special cars, aside from regular cars every half hour, will leave both Youngstown and Warren, making very fast time to the park. We will put in our programme, already made up, a special shoot for one hammerless ejector gun, value $105; another for one L. C. Smith hammerless ejector, value $105; one take-down Winchester repeater, also one merchandise shoot, first prize 500 smokeless powder shells, second one Bristol steel fishing rod, third order to Gun Barrel Treatment Co. for holder to have barrels treated, fourth one mahogany fancy cigar box. The park has the finest location for shooting in the State. From present indications we will have the largest attendance of any shoot in the country, as well as more entries."

Sept. 4, Labor Day, is fixed upon as a day for a warm time for the shooters of Cleveland and those from elsewhere who attend the nineteenth annual tournament of the Cleveland Gun Club Company. Shooting commences at 9 o'clock standard time. Targets, 2 cents in all money events. Averages will be taken only from events 3, 4, 5, 6, 7 and 8. In order to compette for general average prizes shooters must compete through these events. In cash events, 15 targets, moneys will be divided 40, 30, 20 and 10 per cent. Merchandise prizes are to be divided or to be shot off, accordingly as the winners may agree upon. Average prizes awarded to high guns. There is a long list of valuable merchandise prizes. Send for a programme. It contains the list. Shooters are invited to bring their friends. To reach the shooting park, take Willson avenue crosstown line to Kershaw street. For programme and all other pertinent information, address Mr. F. H. Wallace, financial secretary, City Hall, Cleveland.

The Hastings Gun Club, Hastings, Neb., has issued its programme for its tournament on Sept. 19-21, $500 added. There are nine events each day, 15 and 20 targets alternately, $1.50 and $2 entrance respectively, $15 added to 15-target events, $20 to 20-target events; excepting on the last day a 25-target event is added, $2.50 entrance, $25 added. Shooting begins at 9 o'clock. Ship shells in care of Mr. W. S. Duer, Hastings, and they will be delivered free on the grounds. All purses divided 40, 30, 20 and 10 per cent., excepting Nos. 4 and 6 each day, and No. 10 on the last day, when 30, 25, 20, 15 and 10 per cent. will govern. This tournament is for amateurs only. Targets, 2 cents.

Mr. L. H. Schortemeier, of New York, has been doing some excellent work with the shotgun of late, his scores at the Interstate at Portland being the most recent. There he broke 163 out of 175 the first day, and the same number on the second day, Leroy beating him by 2 targets for the two days. Both averaged between 93 and 94 per cent. Schorty has now two high amateur averages to his credit, made at the recent Interstate tournaments at Providence and Portland.

There will be a warm time at Atlantic City, N. J., on Wednesday and Thursday of this week, Mr. J. A. R. Elliott and Mr. W. R. Crosby contesting for the E C cup on Wednesday. Mr. Charles A. Young contests with Mr. Elliott on Thursday for the cast iron medal. All are acknowledged first-class performers, and if the contestants are in good form the matches will be very closely contested.

Mr. A. A. Barrett, secretary of the Brockton Gun Club, writes us that the next shoot of the Brockton Gun Club will be held on Aug. 26, and that Sept. 4 is fixed for the first shoot for the semi-annual event—prize, a silver cup; May 30, 1900, for the second. This cup must be won three times by any club member in order to hold it permanently. This event is a handicap.

Mr. W. F. Parker, well known to all good trapshooters, met with a painful accident recently. While riding his wheel he got tangled with a truck in some way, as is a very easy matter in crowded streets, and injured his knee somewhat; but it is hard to down a good man, and we learn with pleasure that Mr. Parker will resume his old stride at the traps in a few days.

Messrs. Sexton and Koohler's midsummer tournament, fixed to be held on Wednesday and Thursday of this week, at Leavenworth, Kan., has ten events each day, and each event is at 20 targets, $2 entrance, $10 added. The Rose system, five moneys, governs the division of the moneys.

The shooting at the Brooklyn Gun Club's grounds on Saturday last was something above the ordinary. Mr. Bernard Amend in particular distinguished himself, as the scores in another column will show. John Wright's course of training teaches either the young idea or the old idea how to shoot.

Capt. A. D. du Bray, representing Parker Brothers, well known as one of the most gentlemanly and skillful of trapshooters, contemplates taking a trip to the Pacific coast in the near future. The sportsmen of that region have a pleasure in store.

Under date of Aug. 13, Mr. Jas. W. Sexton, Leavenworth, Kan., writes us as follows: "We will give a two days' shoot here on Aug. 23 and 24; ten events, 20 targets, $10 added to each event both days."

Sept. 2 and the Climax club grounds, Plainfield, N. J., were fixed upon for the next contest of the Central New Jersey Trapshooters' League. The Brunswick Gun Club won the last contest; score 107.

The Phoenix Gun Club team defeated the West Chester Gun Club team, of West Chester, Pa., on the grounds of the latter club by a score of 239 to 236, 25 targets per man, thirteen-men teams.

The report of the Arkansas State shoot by Mr. Paul R. Litzke has a scope and vividness well worthy of a perusal from beginning to end. It covers a great amount of detail.

The Colt Gun Club, Hartford, Conn., has fixed upon Sept. 23 for its all-day shoot. L. H. Bradley is the secretary.

The Schuler Shooting Club, Pottstown, Pa., will hold an all-day tournament and clambake on Aug. 30.

BERNARD WATERS.

The Brooklyn Gun Club's Tooth Tournament.

ON Wednesday of last week the Brooklyn Gun Club most happily inaugurated its first annual tooth tournament, an invitation event, duly considered and happily devised, which, though run on lines which have been in vogue from time immemorial, was a success. It was entirely free from jealousy or heartburnings, and the victors received the applause of the members present with a feeling that their rejoicings were sincere and that well-earned success was appreciated at its true worth.

There were eighteen members present, all in neat and natty costume, and each one feeling in his usual good form. There were no excuses made, and none necessary to make, as was befitting the occasion. And yet the event was something far out of the ordinary, and notwithstanding its rarity of purpose had in it much that was worthy of the commendation and consideration of other people who shoot and who have a proper sense of appreciation.

It was this way. For some weeks there seemed to be underhanded proceedings on the part of the members of the Brooklyn Gun Club, which in a way seemed to be directed secretly against their esteemed manager; for when two or more of them were talking toegther at the club shoots or at other times when John Wright was near, they watched him furtively and seemed to be talking of matters which would not excite his suspicion, if it is possible that that amiable man could suspect any one. And all these doings of secrecy and subterfuge seemed to be for the purpose of cloaking their designs, and designs they had, for the boys had determined to give John Wright a shaking up such as he had not had in many years. Till the lightning struck, they wished to keep all knowledge of the impending danger from him.

They had determined to give good John Wright a dinner, the like of which, from the point of good will and good fellowship, and perhaps a good dinner, never had its like before.

So it came about, after much sub rosa effort, that John would attend a tournament wherein he would be free from the cares of pulling traps and hustling squads and keeping scores and racing here and there to fix this thing and please that some one, and generally wear himself out in his efforts to give every one a good time, and wherein he would have some attention paid to himself. So it was fixed upon that the tournament would take place at the Atlantic Hotel, Sheepshead Bay, L. I., and that Monsieur D. Olagner, the proprietor, would provide everything required by the specifications of the programme. This he did in a manner which proved him to be a crackerjack in his profession, for his doings were those of an artist, doing all that is specified in the programme and quite a bit more besides. As to the programme itself it was conducted without a protest or a kick, so that the division as to system must have been a success. A copy of it follows:

First Annual Tooth Tournament of the Brooklyn Gun Club, Wednesday, Aug. 16. Programme:

First event: Olives, radishes and anchovies—Practice.

Second event: Soup—bisque of lobster—Unknown angles.

Third event: Fish—sea bass—equitable system—Potatoes and cucumbers added to the pot.

Fourth event: Clams—pairs, thrown from magautrap.

Fifth event: Chicken—live birds a la Van Sise; lettuce and tomatoes added.

Sixth event: Green corn—one man up, expert rules.

Seventh event: Ice cream—high-guns; spoons added.

Eighth event: Watermelon—walking match.

Consolation race: Coffee—known angles, handicap; sugar added. Ten toothpicks will be divided among the ten high teeth.

John S. Wright, as a matter of course, had the seat of honor, and by his side sat Mr. Edward Banks, who presided over the dinner with great tact and bonhomie; and also there were "Uncle Jake" Pentz, Capt. J. A. H. Dressel, Dr. Jas. M. Creamer, Dr. A. A. Webber, Dr. W. L. Gardiner, B. Amend, J. P. Milliken, W. D. Vandenhore, C. von Lengerke, Harold B. Money, T. P. McGlinn, Thos. P. Baron, C. W. Floyd, J. J. Hallowell, W. H. Sanders, G. S. K. Remsen, Geo. B. Paterson, the secretary of the club, and B. Waters.

Regrets were sent by Mr. J. S. S. Remsen, W. R. Hobart and Capt. A. W. Money. As the regrets of each were expressed to the club there were murmurs of regrets in turn, but when it came to the regrets of Capt. Money there was a demonstration which would have done the soul of the veteran war horse good could he have heard it. A resolution was made amid much applause that the company present deeply regretted the absence of Capt. Money; the resolution was put in writing, and the temporary clerk was ordered to send the same to Capt. Money.

At the coffee stage the prizes for high averages were awarded, first going to a sterling performer, ex-Coroner Joseph M. Creamer, with an average of 98, while J. P. Milliken was close up with the excellent average of 96. Waters was third, with Baron, each scoring .945, while C. W. Floyd had to be content with 91, he having lost several points by re-entry on corn and chicken. Messrs. Dressel, Paterson and Webber were in the crackerjack class, each scoring .901, their merit being in the order mentioned, while B. Amend was not in his usual good form and scored only .888, he having missed several clams. J. J. Hallowell was handicapped on account of being a professional, and if he had not been a royal good fellow he probably would not have received anything; as it was, he was awarded .86, his score being injured by a fudge on chicken. Mr. Banks delivered the prizes to each of the proud winners, and with great felicity bestowed kind words of praise to each, recounting their points of excellence, all of which was received most happily. The toothpick awarded to Dr. Creamer was a most majestic affair in form and size, similar to a stove-lifter, with a red, white and blue ribbon tied in a bowknot across the handle. The others were but a trifle less in size, each ornately decorated with ribbon, and each a testimonial of good performance.

But there was a pause while Mr. Banks explained that there was a booby prize, which was to be given to the man they all were friendly to and had their esteem and affection, etc., and then a beautiful, fine clock was set in front of John Wright, and he was told that the prize was his. John had many things to say, but somehow he couldn't say them, though he expressed his thanks and appreciation of the doings of his good friends. And then speeches were made, or rather talks were made in manner happy and friendly, and when the dinner ended it was well toward the time when evening ended also. And with the end of this first annual was rounded out on broader lines the good fellowship which obtains in the following of the Brooklyn Gun Club.

Auburn Gun Club.

AUBURN, Me., Aug. 19.—To-day was a perfect day for trapshooting. It was rather warm, but this seemed to make no difference to the twenty-nine shooters who faced the traps and made the best scores of the season as yet. Adams and C. S. Randall, of Portland; Hunnewell, Ashley, Burgess and Noble, of Auburn, broke 25 straight. C. S. Randall dropped but 2 out of 105, and Hunnewell but 1 out of 75. In the 25-bird match for the gold badge thirteen men were tied, Hunnewell winning it in the shoot-off.

Adams, Coleman, Arthur, Taylor, C. S. Randall and Gray, from the Portland Gun Club, were welcome visitors at the club grounds, and shot through all the events, making good scores.

Events:	1	2	3	4	5	6	7

Watt	11001011010010101101—11

Lost or Dead.

A SHOOTER at the score calls out to the trap-puller, "Are you ready?" and receiving the response, "Ready," he calls "Pull," simultaneously with which or a moment after, but before the trap is sprung, he discharges one barrel. What should be the referee's decision? Ans. If he does not fire his remaining barrel at the bird, or if he fires and the bird is not gathered within bounds, it is a lost bird. If he fires and the bird is gathered within bounds it is a dead bird.

Get Your Money's Worth.

Game Laws in Brief and Woodcraft Magazine, is the biggest 25 cents' worth—the best value—I have ever seen. It is so valuable that a New York deer hunter appropriated mine on sight.

J. B. BURNHAM,

ADIRONDACKS.

WESTERN TRAPS.

A New Chicago Medal Series.

CHICAGO, Ill., Aug. 15.—The matter referred to in earlier issues of the FOREST AND STREAM, of a new medal series for the Chicago live-bird shooters, has taken very definite and desirable form under the management of Mr. W. B. Leffingwell, who inaugurated the successful series which occupied the last year in our shooting calendar here. Mr. Leffingwell does not do this work in this latter instance as the representative of any house, but as the chosen representative of the Chicago shooters. He states the position and the proposition in the following communication:

An Open Letter to Chicago Sportsmen.

The Montgomery Ward & Co. medal shoots, which have recently terminated, gave such universal satisfaction and created so much pleasure to Chicago shooters, that I have been asked to inaugurate another series of shoots, which I have undertaken to do. I wish to say, however, that these shoots will be conducted by Mr. John Watson, at his park, and that all cash and other prizes will be given by popular subscription, and nothing whatever will be given by dealers, although I wish to publicly thank them for their willingness to do so. The plan for the shoot is for each sportsman resident of Cook county, Ill., to subscribe $5 for a diamond badge; this plan is so acceptable that I have already received subscriptions sufficient to warrant me in telling the sportsmen of Chicago that they will have a diamond trophy valued at $200 to contest for. Mr. John Watson has very generously offered another trophy, to be given to the one making the highest average in the series of shoots and valued at $60. All contests will be at 15 live pigeons, the shooters handicapped by Mr. Watson. At the time of each contest those contesting are to pay $1 entrance fee. This sum, with donations, will be divided among the contestants as follows:

Ties on 15.—First high gun, the diamond medal, to be held until next regular shoot, also 40 per cent. of entrance money. Second high gun, $5 cash, donated each shoot by Mr. E. S. Rice.

Ties on 14.—First high gun, 30 per cent. of entrance money. Second high gun, 100 hand-loaded shells, donated by a contestant.

Ties on 13.—High gun, 20 per cent. of entrance money. Second high gun, 100 hand-loaded shells, donated by a contestant.

High gun on 12 will get 10 per cent. of entrance money.

The one making the greatest number of consecutive kills in any shoot, beginning with the first bird shot at, to hold the John Watson high-average medal until next shoot. The one winning the diamond medal the greatest number of times in twelve shoots to retain it permanently. The same with the high-average medal.

The first contest will take place Friday, Sept. 15, at 1:30 P. M., and the contest will be held thereafter on the first and third Fridays of each month. These shoots will not be conducted by any club, but by the sportsmen generally of Chicago, and any resident of Cook county, Ill., can participate by paying $5. Should there be any surplus after paying for the diamond trophy, such surplus will be disposed of afterward as the subscribers may agree.

Should any of you who read this, whose residence is in Cook county, Ill., wish to participate in these popular shoots, you will please send your name and address to me and pay $5 when requested so to do.—W. B. Leffingwell, 115 Michigan avenue, Chicago.

To-day, Aug. 15.—Mr. Leffingwell had twenty-five signatures to his list, and was receiving support so readily that he said he had no doubt whatever that at least forty men would come in for the medal fund at $5 a head, which would allow the building of a very pretty emblem. This series will be popular among the Chicago boys without doubt, for there will be enough at stake at each shoot to make it quite worth while, even for those who reach only second or third places. There will be in all fully $500 put to be contested for, and it is sure that the popularity of this idea will continue till the end of the series, which will fall in the early spring, in such time as not to conflict with the spring campaign of the Illinois Association or other big tournaments which will be due when the winter closes. We are shy a little shooting excitement here just now, and this coming winter will be all the livelier by reason of the every-other-week meetings of this live-bird series.

The Big Chicago Park.

Progress is making in the matter of the big Chicago shooting park, of which extended mention has from time to time been made in earlier issues of FOREST AND STREAM. Subscriptions continue to come in, and it is the expressed belief that these will aggregate a sum sufficient to warrant the establishment of the enetrprise. There is a rumor to effect that John Watson will offer the grounds at a nominal lease; he to keep up the expenses of the park after it shall be established. It is stated that the grounds will be obtained of a railroad company, on leasehold, and that the buildings and improvements need not run over $10,000. It is necessary to raise the money before making known the proposed location, for obvious reasons.

Fox Lake Shoot.

On Tuesday, Aug. 22, there will be held a target shoot at Fox Lake, Wis., under management of R. E. Hoover and D. J. Hotchkiss, which should prove a very pleasant little event to take in. There are fifteen events scheduled, and the usual details of management, loaded shells, lunch, etc. Targets at 1½ cents, included in entrance. Grounds at Elmwood Park.

Eureka Shoot.

Chicago, Ill., Aug. 19.—All arrangements for the first annual target tournament of Eureka Gun Club, of Chicago, are progressing most favorably, and there is no reason to doubt that the shoot will be a success in every particular. This pleasant affair comes off next Friday and Saturday.

Large Sale of Guns.

Very often we hear of large sales of guns by salesmen representing the big gun firms of the country, these usually consisting of heavy orders sold to some big firm of retailers or jobbers. Who has made the largest sale of guns to individuals, I wonder, in the last few years? I question very much if we have yet seen beaten the record this week made by our friend Mr. Hirth, of this city. This week Mr. Hirth sold four foreign-made guns, to special order, to customers over his own counter. The price of each gun was $1,000, and two of the guns were intended as presents, which latter fact makes suppression of names desirable. This is the biggest counter sale which ever came to my notice in the gun line, and indeed, I think the entire sale, $4,000, was made in one day, to say nothing of other little things. You can't stop the old color-bearer. Perhaps I do not need repeat that Mr. Hirth was color-bearer for a noted regiment in the Civil War.

Audubon.

This week Oswald von Lengerke won the badge of the Audubon Gun Club, with the score of 25 straight, which is a hard one to beat in this neck of woods.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

Chicago, Ill., Aug. 19.—This was a perfect day to shoot, except for the heat, it being about 100 in the shade. In the trophy shoot Ed Steck won Class A. There were no Class B or C shooters. In Class D Mrs. Carson won. In the team race on 20 birds, Cunnyngham's side won—83 to 80.

Trophy event, 25 targets:

F P Stannard	1111011001110111111111111—21

* Ten pairs.

Garfield Gun Club.

Chicago, Aug. 19.—Herewith are scores as made on our grounds to-day. Notwithstanding the extreme heat making it an exceedingly unpleasant day for shooting, twenty shooters faced the traps for the trophy events.

Dr. Shaw won the Class A trophy after shooting off a tie with E. S. Graham; score, 22.

B trophy was won by A. Hellman on a score of 21. C by J. Fanning on a score of 20.

The shooting throughout the day was very fair, considering the sultry atmosphere and extreme heat.

B. AMEND.

Brooklyn Gun Club.

Aug. 19.—In the contest for the gun, a handicap at 25 targets, Lane, Paterson, Smith and Amend scored the limit, 10 points. Amend was shooting in excellent form, breaking 75 in the 50-target event and the 25-target event, in which he shot. Banks was high man in the total of all events.

Gun contest, 50 targets:

Arkansas State Shoot.

LITTLE ROCK, Ark., Aug. 18.—In many respects this was the most successful tournament ever given by this Association, for not only did the entries exceed those of previous shoots, but for general satisfaction and good fellowship it was also above standard. The principals seemed to be immensely pleased with the arrangements and the programme, and there were no protests or complaints from any of the participants, while many were the compliments showered upon the management on the smooth and satisfactory running of the shoot. Much of the above results are due to the energy and enterprise of W. R. Duley, president of the Association, and J. K. Thibault, its hustling vice-president; also Mayor Woodson, who is president of the Capital Gun Club, under whose auspices the tournament was held, as well as W. D. Matthews, who is vice-president of the organization. Mr. Matthews is a newspaper man, and very kindly acted as press representative for one of the local papers; thereby the shoot was well written up in our daily paper, all of which will materially further its interest. The above quartette also constituted the tournament committee, so that in this respect, too, there was nothing lacking, for all of these are capable, competent business men and ably qualified for the positions intrusted to them. While to these four belongs the lion share of the honor for achieving so satisfactory results, there are also a number of others who were active in the interest of the club and the shoot, among whom must be mentioned John M. Pemberton, John T. Fletcher and G. N. Peay.

The tournament was held on the club grounds in North Little Rock, which has so long been used for this purpose. Some time ago it was thought that the club would certainly be compelled to relinquish these grounds, but when a committee began to look about for a new location it was impossible to find anything suitable that was accessible, and it was finally decided to retain the present ones. This could only be done by changing the direction of the shooting and throwing the targets out toward the river, so that now the shooter faces southeast in place of directly east, as heretofore, which does very well, though not as desirable as before.

The club has erected a large shooting stand, so that irrespective of the weather the shooting could have continued just the same; but in regard to this the club has nothing to complain of, as the conditions could not have been more favorable at this season of the year.

The grounds are not the most accessible, and on this occasion the shooters experienced some difficulty in reaching them on the first day. The club had made arrangements with a reliable livery firm to carry the shooters to and from the grounds each day for the nominal sum of 25 cents, but unfortunately the party with whom these arrangements had been made was taken ill and it appears that no one else was aware of it; so that on the first day there was some difficulty in getting to the grounds, which, however, was at once overcome.

Bluerock targets and expert traps were employed at this shoot, and as is usually the case gave the utmost satisfaction. The screen over the traps is very low, not being over 18in. high, which enables the shooter to see the target almost immediately after it is released, and this found much favor with the shooters. The corps of assistants, from the referee to the trappers, was a most efficient one, and many were the compliments paid those who acted in this capacity.

The refereeing of Gibson Thibault and the scoring of Len Johnson was as near perfection as possible, and it is questionable if either of these erred a single time during the entire shoot. Thibault's decisions were always prompt and decisive, while he always adhered strictly to the rules.

Visiting Sportsmen.

There were present during the shoot A. H. Frank, W. H. Thompson and Mr. Loeb, Memphis; J. T. Welch, Robeline, La.; J. L. Daniels, Mer Rouge, La.; Chris. Gottlieb, Kansas City, Mo.; Frank Hodges, Olathe, Kan.; Chas. McL. Clarke (Chase), Dr. J. W. Smith, J. Henry Conrades, Jr., Jule Selzer, E. A. Peck and Herbert Taylor, St. Louis, Mo., the latter representing the Du Pont Powder Co.; C. W. Budd, Des Moines, Ia., representing the Hazard Powder Co., U. M. C. Co. and Parker Gun; W. A. Leach, Joe P. Matthews, F. B. Baptist, J. O'Keiff, R. G. Hunt and I. D. Oglesby, Fort Smith; E. A. Howell, J. T. Lloyd, J. B. Speers, E. C. Arnold and J. A. Coles, Pine Bluff; Jeff Davis, Russellville; W. Bowman, Jonesboro; Mr. Frauenthal, Atkins, Cramer and Haines, Stuttgart; Drs. A. U. Williams and S. P. Collings, Hot Springs.

Association Transactions.

There was nothing of great importance transacted. The protest of the Pine Bluff Gun Club over the Sumpter-Matthews match for the individual championship medal was withdrawn when it was shown that Mr. Mattheys had no intention of violating the rules and conditions governing them, and claimed that he was under the impression that he had complied with all of them when he sent his forfeit to the treasurer of the Association, not having any knowledge of the clause requiring publication of his challenge in order to make the same binding.

In order to avoid any like confusion in this matter the conditions were amended to read as follows: "Holder when accepting challenge must return the medal to the treasurer of the Association, and the latter will hold the same in trust until the pending contest shall be decided, when he shall turn the same over to the winner." On motion a legislative committee was appointed, which consists of J. A. Woodson, J. T. Lloyd and Dr. A. U. Williams. This committee was instructed to renew its efforts to accomplish something in behalf of the Association's measure. The selection of a place for holding the next annual meeting was next taken up, and as Fort Smith was anxious to secure this it was granted unanimously. The election of officers resulted in the following selection: W. A. Leach, Fort Smith, President; John M. Pemberton, Little Rock, Vice-President; Paul R. Litzke, Little Rock, Secretary; John B. Speers, Pine Bluff, Treasurer. It was also voted to change the conditions of the team championship from a four-men to a three-men race, and that hereafter this medal be subject to a challenge under the same conditions as the individual medal.

General Averages.

There being two classes of shooters present at this tournament the club had decided to give average money for both. For the professional class $25 had be set aside to be divided: $15 to first and $10 to second high gun. There were only two entries in this class—Budd and Taylor—so that there was practically no competition, so to speak, as it was almost a foregone conclusion that Budd would beat out Taylor, which entitled him to first and the latter to second. This eventually proved to be the case. In the amateur class it was different, and there was quite a scramble to be among the seven high guns, so as to get a part of the $50 reserved for them. A. H. Frank took the lead on the first day and succeeded in maintaining it throughout, though on the last day his honors were somewhat in jeopardy, as Gottlieb cut down his lead 4 birds; but nevertheless he landed on top and got $10 for consistent work. Second average went to Coles, which paid him $9, Gottlieb getting third, $8. J. T. Welch by his great shooting on the last day took fourth, $7; Joe Matthews getting fifth, $6, while Chase and Pemberton, who are tied for sixth and seventh, got $5. The order in which the others finished is also shown, and as there are eighteen names in the table this also exceeds last year's record. The table of averages follows:

Budd	153	153	156	480	462	.962
Frank	148	146	133	480	432	.900
Coles	146	145	138	480	429	.894

First Day, Tuesday, Aug. 15.

Many of the principals displayed marked ability, and the shooting of some of the Simon-pure class is worthy of honorable mention. True, none of this class succeeded in equaling the great total of Charley Budd, one of the two trade representatives present, for he dropped but 7 targets in the programme events, and his stride was entirely too fast for the amateurs present. The competition for the premiership in the amateur class was close and spirited throughout, and finally went to Frank, who practically won out in the last event, as in this he beat Gottlieb 2 birds, which was just what his total exceeded that of Gottlied. Frank has an

average of .925, and is second to Budd, who of course leads the bunch with the great percentage of .956. Coles and Gottlieb are tied for third place with .913, while Thibault and Welch are also tied for fifth place. Budd made four straights during the day, and his best run was 51. Frank also made four straights, but all of these occurred in 15-bird events. Gottlieb has three straights to his credit, and he and Frank broke their first 34 targets straight. There was not a single event without a straight, though in the eighth event there were none that counted until the very last man went to the score, and he, Weigel, shattered his 20 targets in great fashion, and with it the hope of the eight men who hoped to get a piece of the purse on their score of 15.

The weather was bright and clear, with very little wind and not too warm, so that the conditions were favorable to good scores.

The programme consisted of eight 15-target events and two 20s, while there was also a 25-target handicap, but this remained unfinished. Budd and Taylor shot for targets only, being trade representatives.

Rose system prevailed; ratio 7, 5, 4, 3, when four moneys; when five moneys 7, 5, 4, 3, 2.

Second Day, Wednesday, Aug. 16.

The result of to-day's shooting is in many respects similar to that of yesterday, as the aggregate shows Budd again first, with the same average as the day before, while Frank, too, has maintained the lead in his class, though he is 2 breaks short of yesterday. Coles is again contending for third position, though on this occasion it is with Williams, one of the new arrivals, who was not present yesterday. Hodges, too shows marked improvement, and has fifth place all to himself, after which come Chase, Matthews and Gottlieb, the latter having let down somewhat in his shooting. Fletcher, who yesterday was very near the bottom, showed the most improvement, as to-day he is well to the front and leads all the home contingent.

The open programme was identical with that of the day previous, but the State team championship was also decided. The general conditions, if anything, were even more favorable than yesterday, as it was partially cloudy, though the light was good, and it was even cooler than the day previous. In this respect the shooters have nothing to complain of.

The score sheet shows that forty-two participated in to-day's events, which is the largest entry recorded since '95, on which occasion the shoot was practically wide open, and we had all of the wolves with us, who had been to Knoxville the week previous.

Team Championship.

This event was also on the schedule, and was therefore disposed of in the order. At the meeting last night the conditions governing this were changed from a four-men to a three-men team shoot, while henceforth this medal will be subject to a challenge, the same as the individual emblem, and as the Association will redeem the medal each year, paying the holder $10, it is possible that there will be some additional contests for it. The Pine Bluff shooters were the chief advocates of the above change, and they should at once set a good example by challenging the holders. The contest itself brought out some surprising results, for the winner, Fort Smith Club, was not looked upon as a factor to any extent in the race, for this team contained but one particular strong shooter. However, they put up a very uniform score, and landed the medal on the creditable score of 66 out of 75, Leach having the honor of leading the team. Little Rock's team, composed of the country contingent, is second with 63, Pemberton being high man on it, while Pine Bluff and Little Rock's city element are a tie with a total of 62. Heretofore each club could enter but one team in this race, but in the future they may send all they can muster. The conditions of this event are 25 targets per man, entrance price of targets.

Last year the Little Rock team won the medal on the very insignificant total of 77 out of 100, while the year previous it was won by the Pine Bluff Club with a score of 84. This is Fort Smith's second win, they having captured it at Hot Springs in 1892.

Third Day, Thursday, Aug. 17.

Charley Budd was ill—quite ill—so ill in fact that he was unable to leave on the evening train, as he intended to do; but notwithstanding that he had a high fever he shot better than on any of the previous days, for he had chalked up a 113 straight before the first miss was recorded against him, which did not occur until the eighth event, and he managed to finish the programme with but 4 losses, which gives him the fine percentage of .977. This excels anything heretofore accomplished at the traps in this city. Welch came forward with a rush to-day and practically ran away from his class, as his nearest competitors—Gottlieb and Williams—are 7 breaks behind. To him goes the distinction of making the best percentage on any day during the shoot among those who are permitted to shoot for money. Not only does this apply to the present tournament, but also to all of the previous ones given by this Association. The best previous records in this respect were made by Dr. Forsythe, a year ago, and duplicated by Frank on the first day of the present shoot, their percentage on these occasions being .925. Col. Woodson showed up particularly strong to-day, and has no less than three straight scores to his credit, having finished with a run of nearly 50 straight. Pemberton, too, was largely in evidence, and is tied with the Mayor for fifth place. The weather was again propitious and pleasant to a marked degree.

The individual championship and the handicap medal were among the events disposed of to-day. The latter was won by Gibson Thibault, the young man who acted so efficiently in the capacity of referee during the tournament. Budd, Taylor, Hodges, Fletcher, Woodson, Loeb and G. Thibault tied on the total with their allowances, with the exception of Budd, who was scratch, and who withdrew from the contest. In the shoot-off G. Thibault and Fletcher again tied, and the next trial between these two resulted the same, as each of them scored 23 without their allowance. Fletcher now agreed to let the boy shoot at 19 to his 17, and the latter easily won out by scoring all but 1, while Fletcher dropped 4.

Individual Championship.

Seventeen shooters qualified for this race, which was the greatest ever shot for this or any similar trophy since the organization of the State Association. Collectively and individually, the scores rank higher than heretofore, and the contest was keen and close until the very finish. The Pine Bluff delegation was permitted to shoot up their score, so as to enable them to take an early train for home, and of this contingent Ed Howell finished with 46, which was the best score ever made in a contest for this trophy, and it was generally conceded that this would ultimately win for him, and as he is exceedingly popular he was the recipient of much congratulation; but his hope was eventually to be shattered, for later, when the contest was taken up, Joe Matthews also put up a score equal to that of Howell's. However, neither of these was to become the possessor of any jewelry, for there was a doctor who had a few things up his sleeve, and when it came his turn to try conclusions with the saucers he negotiated them so successfully that all but 3 of them were put in the game sack, and his score exceeded that of Howell and Matthews by a single break, which was just sufficient to win; all of which is very pleasing to record, as the Doctor has been with the Association since its inception, being one of the few charter members yet remaining in the fold and has ever contributed his mite toward its advancement and success.

The first open contest for this medal took place at Pine Bluff in 1897, where it was won by H. Conner, of Little Rock, who turned it over to Geo. Clements, of Pine Bluff, after being defeated by him in an individual contest by a score of 44 to 43. John Sumpter next got possession of it, as he won it from Clements; they both tied on the very inferior score of 39, but in the shoot-off Sumpter broke 24 out of 25 to Clements' 20. In the open contest of 1898 Sumpter again won it, scoring 42, but shortly after he had to surrender it to Joe Matthews, when the latter defeated him by a score of 44 to 43. Matthews retained possession of it nearly twelve months, as no one seemed to care to go after it. The conditions are 50 singles, unknown angles:

Stray Items.

A. H. Frank, that popular Memphis shooter who won high average in the amateur class with an even 90 per cent., shot a Parker gun, Leader shells and Schultze powder. No one envies Abe's success, and all hope to see him again next year.

Weigel, winner of the local club medal, was in evidence at this shoot also; he scored a 20 straight in the first event he took part in, and this cannot be looked upon as a fluke, for he was the last man up, and was aware that no one had accomplished this.

Herbert Taylor, of Du Pont Powder Co., sprung quite a surprise on the crowd by putting up an enormous cake for competition. In this cake Charley Budd had put a new nickel, and the winner was compelled to cut it on the grounds, while the one who was fortunate enough to draw the piece containing the coin would be presented with 50 shells by Budd. Welch won the cake and Daniels got the piece containing the nickel, so that the cake and the shells were won by Louisiana's representatives.

Attorney-General Jeff Davis participated during the first two days, and while he made no pretentions of being a trap shot would doubtless soon develop into one, as on several occasions he landed well toward the top. Jeff added much life to the shoot by his good-natured bantering. There are few better quail shots, and his string of dogs are among the best in the State.

Mayor Woodson was prevented by municipal business from shooting through, although such was his intention. The last day he was largely in the division, as he made no less than three straights. This stride would doubtless have landed him among the seven high guns. In addition to this, he had the bad luck to break his gun on the first day.

Dr. A. U. Williams, winner of the individual championship, shot a Smith gun, Smokeless shells and Du Pont powder. This has been the Doctor's favorite combination for a long time.

Pemberton was the only one of the local shooters to get among the seven high guns. Singularly this was distributed in as many different sections, Memphis, Pine Bluff, Kansas City, Robeline, Fort Smith, St. Louis and Little Rock getting a piece of it.

Frank Hodges' poor showing on the first day was due to the fact that he arrived here without a gun; but on the second day his pump came to hand, and thereafter he also became a factor in the shoot. Frank contemplates holding a shoot at Olathe next month, with about $300 added.

Leach showed up in such improved form that he surprised all his friends. It was on preliminary day that he did his best shooting, for on this day he ran straight in three successive events.

J. T. Welch, the Robeline shooter, has made much progress in the art of shooting since he last visited us, and on this occasion was right to the front. The writer well remembers Mr. Welch's first efforts at the trap, which occurred at the Monroe shoot in 1897.

Chris Gottlieb created the same favorable impression here as everywhere. It is not at all surprising that he should have achieved so much success in politics. A person of his disposition and affable manners cannot help being a winner wherever he goes. Chris's shooting was not quite up to the customary high standard, but nevertheless he is very close to the top. He is scheduled to return next November and go on a camp hunt.

Chase expressed himself highly elated over his trip to Arkansas and promises to be with us again next year. To land among the average winners is not so bad in the field that was here.

Ed Howell shot a great race for the championship. He ran his first 24 birds straight, and when he finished with 46 everyone hoped he would win. There are none more clever and few who possess so many friends. Ed has steadily improved in his shooting.

The Fort Smith delegation promise to make the next tournament one of the most attractive ever given in the South, and it is their intention to materially increase the added money at this shoot. They realize that this is what will draw the crowd. This shoot will take place some time during July.

PAUL R. LITZKE.

IN NEW JERSEY.

Hackensack River Gun Club.

Hoboken, N. J., Aug. 19.—The H. R. G. C. held the second of its series of monthly live-bird shoots yesterday. Harms was the only man to kill straight, he killing all his birds with the first barrel.

Great credit is due Mr. Heflich for the fine lot of birds furnished, there being only two sitters out of 160 birds trapped.

The match at 50 targets was won by Wm. Hexamer with a score of 41 to Heflich's 34.

W. L. Ferguson and Fred Durr shot a match at 20 targets each, which was won by Ferguson.

A meeting was held after the shoot, and the following officers were elected: Wm. Hexamer, President; John Chartrand, Recording Secretary; H. W. Kramer, Financial Secretary; L. F. Kleber, Treasurer; H. M. Heflich, Captain.

An excellent supper was furnished by mein host Heflich after the meeting, and a very enjoyable time was had.

Our next shoot takes place on Sept. 15, when it is expected that Heflich will shoot Hexamer another match at 50 targets.

Five birds, $2.50, one money:

Jas Tracy .....00112—3 H M Heflich.....*022*—2
O Demarest .....22012—4 H Harms .....20111—4

Ten birds, handicap:

JOHN L. CHARTRAND, Sec'y.

Central N. J. Trapshooters' League.

Aug. 19.—The meeting to-day on the grounds of the Brunswick Gun Club brought out five teams of the Central New Jersey Trapshooters' League. A few sweeps were also shot. The scores in the team contest were as follows:

Brunswick Gun Club—Capt. Bunk 23, Randall 19, Arthur 22, Nicholas 22, Oakley 21; total 107.

Reservoir—L. Belloff 13, Morgan 18, Bissett 24, McDowell 19, J. Belloff 21; total 95.

Columbia—Disbrow 20, Little Jim 19, H. Bloodgood 13, Green 14, Ivins 15; total 81.

Dunellen—Hoey 18, Osborn 17, Gates 17, Fletcher 22, Lindsey 18; total 82.

Climax—Keller 20, Vandeveer 19, Joy 17, Waters 24, Elkins 12; total 92.

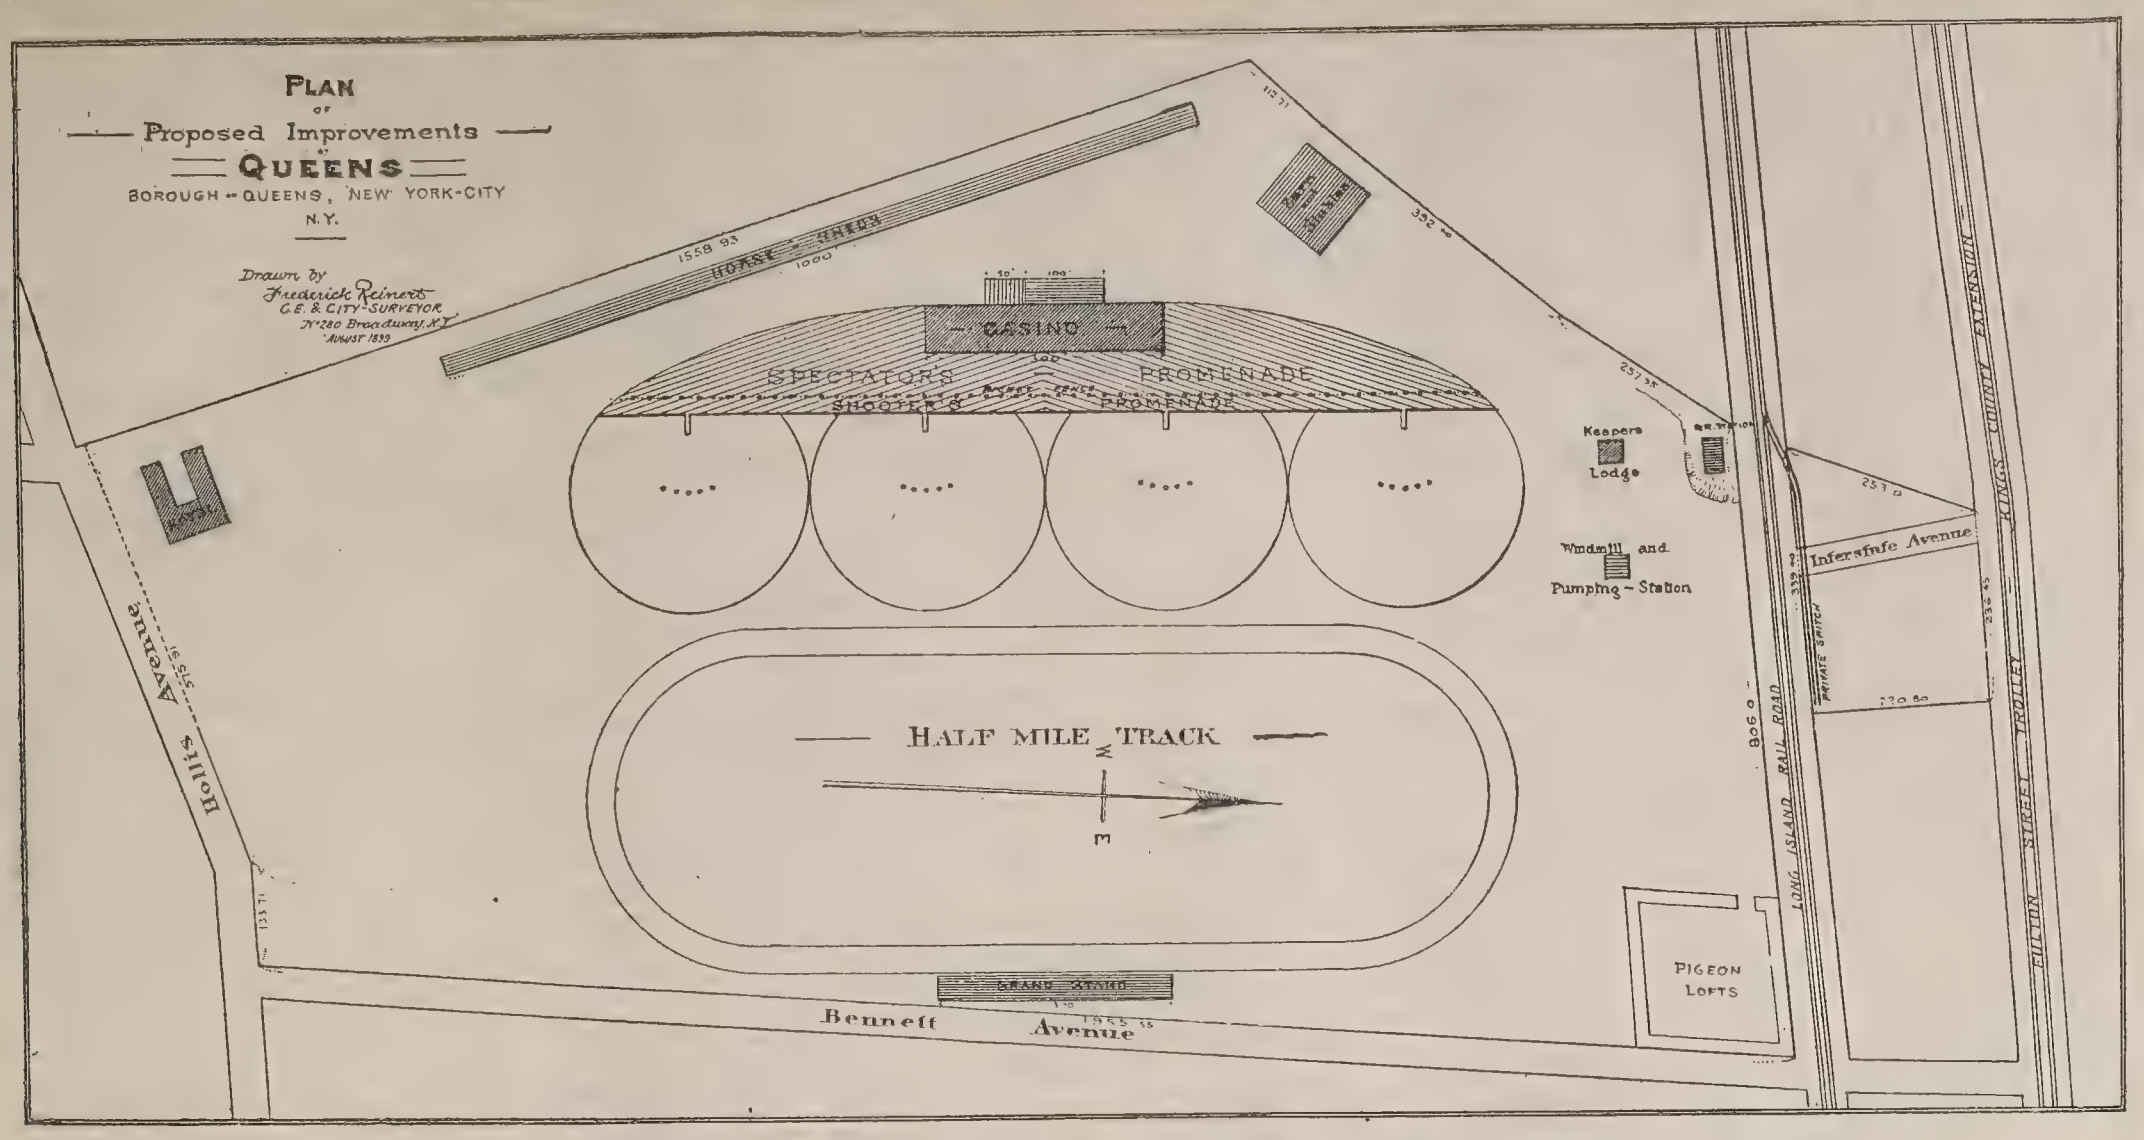
Hudson Gun Club.

Aug. 21.—The house-warming shoot of the Hudson Gun Club was an unqualified success. The members and their friends turned out in great force and shot with a persistency which resulted in about 7,000 targets being thrown. This shoot was to introduce the improvements and new club house to public notice, as well as to hold a good shoot after so many weeks of hard work, for the new house, two stories, with ample room for the club members, was the work of their own hands. Two sets of target traps have been installed, and thus ample shooting can be provided to members and their friends. A delicious clam chowder was served free, with sandwiches, lemonade, ginger ale, etc., and everyone to a man enjoyed himself thoroughly. The weather was sweltering hot, but no one seemed to mind it particularly. A race at 50 targets between Harold Money and Dudley excited much interest from its closeness, 47 to 46 in favor of the latter, who was shooting a great gait.

By an oversight the scores of those who shot for tagets only were not obtained. The following are the scores of those who shot in the sweeps:

A team race, five men, 25 targets, resulted as follows:

Brooklyn Gun Club—Capt. Money 20, Dudley 24, Waters 20, H. Money 20, Dr. Webber 20; total 104.



Hudson No. 1—Van Dyne 15, Von Lengerke 14, Schields 19, Banta 19, O'Brien 15; total 82.

Hudson No. 2—Bock 17, Nagle 16, Raryan 18, Altz 17, Heritage 8; total 76.

Oceanic Gun Club—Bender 12, Schneider 21, Martin 20, Diffley 20, Coleman 16; total 80.

East Side Gun Club—Piercy 20, Fischer 12, Hassinger 23, Jones 21, Schorty 20; total 96.

GROUND PLAN OF INTERSTATE PARK.—Scale 100 yards to an inch.

The Interstate Park Association.

We have received the following interesting communication from the management of the Interstate Park:

The business features of the Interstate Park Association's enterprise, in respect to the establishing of a model and modern shooting park, are set forth at length in the business columns of this journal. There are, however, many news features of special interest to shooters which may very properly be published in the news columns.

For a clearer understanding of many of the details, a plan of the park, showing the surveyor's outlines, is presented herewith. It will greatly add to a ready perception of the general scope of the enterprise and of the completeness of the particulars which go to make a perfect whole. This will be referred to more in detail hereinafter.

In the selection of a suitable tract of land for such a mammoth undertaking, there were certain prime considerations which were necessarily always to be kept in mind, viz., first-class transportation facilities and good hotel accommodations, as well as a healthful and desirable neighborhood. The grounds meeting the general requirements, then the particular requirements came next in consideration, such as their adequate size, satisfactory topographical character, general surroundings, etc., while the marketable and increasing value of the land were also particulars not to be ignored.

It was a comparatively easy matter to find tracts of land that had one or two of these requirements, but it was the diligent work of weeks to find one possessing all of them. No one who has not sought to purchase land in and about the city of New York has any idea of the labor involved. It is a city whose population numbers millions, and the outlying country for many miles in every direction is filled with smaller cities, towns, hamlets, cross roads, etc., so that a piece of land might be perfectly acceptable in itself, and yet be unavailable on account of its surroundings.

However, the result of the search in this instance was an entire success. The ground now owned by the Interstate Park Association is all that could be desired for the purposes intended; and also for home purposes in the future, when shooting interests must give way to the public need.

As to the requisites concerning transportation facilities, on referring to the plan it will be observed that the Long Island Railroad runs through the northern end of the tract, while an electric street car line bounds it on the extreme north. Both roads afford an easy means of transportation to New York or Brooklyn, the trains on the Long Island Railroad running to the Bridge or Long Island City in less that 40 minutes, and at half-hour intervals all through the day. The electric cars run on a headway of only a few minutes' interval. Thus one of the most essential considerations—that is to say, accessibility—is satisfactorily met.

As regards transportation facilities over the Long Island Railroad, the management of the Interstate Park Association has received assurances from the chief executive department of the road that a depot and a switch will be located at Interstate Park, where marked on the plan, and this at the earliest moment they are needed. They have also been assured that all regular trains, as well as fast express trains when necessary, will stop at the Interstate Park depot. This of itself signifies the important estimate which this great railroad corporation attaches to the enterprise.

The land itself is situated in one of the most healthful upland sections of Long Island, a section fertile and flourishing, pleasingly picturesque, and with evidences of material prosperity on every hand. It is still an agricultural section, and yet it is practically not out of the shadow of the great city. Thereabouts city and country blend at present, but as years pass it will be less of country till it is country no more. It is foreordinated for future homes.

The Interstate Park grounds are level, free from trees or other obstructions to shooting. They need no grading to serve the purpose required. If it were a section of smooth, level Iowa prairie transferred to Long Island it would not have any better natural qualities for a perfect shooting park than it now possesses.

The railroad advantages already mentioned solved largely the matter of hotel accommodations, as visitors can stay in New York if they wish to do so, and yet be within easy reach of Interstate Park.

But the management contemplates providing the park with every requisite, and to that end a large hotel will be built, which as to its appointments of cuisine, rooms, etc., will be first class in every respect. From the main building two long wings will extend in a U-shape, as shown in the plan, and there will be accommodations for 200 guests. A large billiard room, bowling alleys, shuffle boards, etc., will afford means of wholesome exercise and recreation, also serving to make the hours pleasant instead of irksome when the shooters await their turns at the score in great events, such as the Grand American Handicap and other tournaments. The hotel will be open the year around, thus when any event takes place at Interstate Park accommodations will always be ready.

The plans for the casino and traps need very little explanation. The casino will be large enough to meet all demands on its space, and will be fitted with hundreds of lockers. Several new features, all in a line with making things pleasanter for the shooters, are to be introduced. The plans for the buildings are now being prepared by the architect, and when completed, which will be in the near future, they will be published for the information of the public.

That they will be handsome buildings goes without saying, and that they will be planned with care is also certain, for the project is in the hands of men who know well what shooters require and what they should have.

A reference to the plan will show four sets of live-bird traps placed not in the clover-leaf form, but on a common base line. This insures an equality in the matter of wind and light on all four sets of traps. In addition to that advantage, a spectator or contestant standing on the steps of the casino or on its roof garden can see the whole length of the four sets of traps, thus, in the case of a shooter in whom one is interested, his doings can be watched from one place without the necessity of any game of tag, such as has to be played where the "clover-leaf" system is installed.

In each of the live-bird grounds a set of target traps will be placed, the same being located between the live-bird traps and the shooter's score. They will be placed in such a position that the covering of the trap pit will be level with the ground when the live-bird traps are in use. It will of course be readily seen that four sets of traps are not the limit of the capacity of Interstate Park, but for the present at any rate no change from the plan now made public will be adopted.

The half-mile track is a concession to popular demand. Such a track is needed in that portion of Long Island in which Interstate Park is located. The soil being a light sandy loam, it is assured that the track will be as fast as any half-mile track in the country.

The horse sheds and stables, as shown in the plan, will be large and ample, and all other requisites have been carefully thought out and provided for. The shooting interest, however, will be first considered and completed. Driveways and roads will be laid out in the park wherever they are necessary. The buildings themselves will all be graceful in design and substantially built; in short, there will be no detail omitted which will in any way contribute to make Interstate Park the best equipped sportsmen's park in the world.

The scale of the plan is 100yds. to 1in.

The Duluth Tournament.

The Central Gun Club, of Duluth, Minn., brought off its seventh annual tournament on Aug. 9 and 10, and while the attendance was not quite as large as was expected the shoot was an unqualified success in every way. Everything, including the magautrap, ran smoothly and without the least hitch or jar. Every man knew his average within five minutes from the time the last gun was fired and had his winnings and average money paid to him within twenty minutes from the time the last squad stepped back from the score.

The Duluth boys had cooked up a great mess of weather and served up everything from a Scotch fog to a cloudburst, with a 30-mile northeaster, during which the last event was shot in darkness so great that the targets could hardly be seen. But the West Superior squad set the example by going out in the downpour, and the rest followed suit.

Many of the old standbys who have not missed a Duluth shoot for six years failed to show up. Mr. and Mrs. Johnston, of Minneapolis, were missing, as were Robbins, of Fargo; Lawrence, Holt and Novotny, of St. Paul, and Murry and his genial crowd from Stillwater. But there were quite a number of new faces—jolly good faces and good shots, too, all of them.

The tournament was open to all, but the only professionals who came were Hirschy, who never fails us, and old Tramp Irwin, whom we were glad to have come and contribute their money to help the poor amateurs, like Morrison and Trent, along; our only regret is that there were not more of them. As it was, there were so many in the money in every event that nobody carried away very much. The first day, when the equitable system was in use, the best shots quit only three or four dollars ahead of the game. The second day, with the division of money 35, 25, 20 and 20 per cent. and a strong gale of wind blowing, it was possible by shooting a 90 per cent. clip to win enough to pay for shells and a few cigars on the side—but not very good cigars or many of 'em.

In looking over the scores following it should be borne in mind that on the second day the wind was blowing a gale most of the time, and the magautrap was tossing the birds from 60 to 75yds. It will thus be seen that the Northwest can boast of a pretty hot crowd of amateur shooters.

Nearly all the boys seem to be very modest, and shoot under assumed names, but I believe they ought to be unmasked; so here goes: Kabo is E. M. Fish, of Eau Claire; Yank is Dan R. Scammon, of the same place; Hart is Judge S. H. Moer, of Duluth, just getting fairly acquainted with a new Smith gun; Dixie is Finn, of West Superior; Ban is Bancroft, of Stillwater; Wads is Louis Larsen, of Crookston; Noisy is A. W. Loud, of Duluth; Bennett is A. B. Thomas, of Duluth; Doc is Dr. H. W. Spratley, of Virginia, and Wojeck is Dr. D. H. Day, of Duluth, and Duchess is his wife. There are a few others, whose real names I do not know, but they have used their shooting names so much that I doubt if they can remember the names their parents gave them.

Next year we hope to give a shoot that will eclipse anything we have ever given, and we feel sure that we will have every man who attended this year and all his friends.

Wednesday.

I. Kanthittem.

Soo Gun Club.

Sioux City, Ia., Aug. 18.—In the eleventh of the summer series of shoots of the Soo Gun Club yesterday afternoon, Hunter carried off the honors with 28 to his credit. The wind blew almost a gale straight in from the magautrap, and the way the bluerocks jumped and climbed up in the air would make a jacksnipe hide his head for shame. Scores:

Thirty targets, handicap added:

Meyer, 1	011111001101111101110111110001—21—1—22
Hunter	011111101111111111111111111111111—28—0—28
Boyer, 3	110101100100011101101000110011—16—3—19
Milchrist, 7	010111001000010010010010001010—11—7—18
Leich	111101111111111111111101111110—27—0—27
Kortright	110011111111111011101111110101—24—0—24
Duncan	111111111111101011111101111111—27—0—27
Gray, 1	111011111001111111111101101111—25—1—26
Chapman, 1	110110101110110111101110110111—22—1—23
Langers	110001101111000001110111111001—18—0—18

A number of the boys shot up back scores, with the following results, each member shooting at 30 targets:

Event No. 1.—Back scores—Milchrist (14) 30, Boyer (9) 29, Duncan 28, Leach 27, Langers (7) 29, Gray 23.

Event No. 2.—Milchrist (3) 20, Boyer (5) 18, Leach 26.

Event No. 3.—Milchrist (8) 23, Leach 28.

Event No. 4.—Leach 24.

Wanecha.

Haverhill Gun Club.

LYNN, Mass., Aug. 12.—In writing of the shoot of the Haverhill Gun Club on Aug. 8, it would be quite proper to say that there was "a small, but very select, company present."

While the number of shooters was a disappointment, the shoot itself was a very enjoyable affair. What wind there was blew from score to traps, and kept the targets rather low in flight, which, taken in connection with the speedy gait given them and the mixed background, made the shooting difficult, and the scores made under the existing conditions speak volumes for the talent present.

Many of the club members who regularly attend the holiday and Saturday afternoon practice shoots are so situated that attending a shoot any other day than the ones mentioned is out of the question, which accounts for the small number of such being present, although many of them turned up after lunch.

In the mind of the writer, who, by the way, was one of the committe on arrangements, the making of one event of the 100-target event is open to criticism. Should a like situation again present itself, he would be in favor of making each of the 25 targets a distinct event, with such money added to each as the club might elect, in which case those who are not capable of holding a 90 per cent. pace through the long event would have a chance to drop into the money by making one good rally in one or more of the 25-bird events. The winners of the event in question were: Leroy, first, 91; Dickey, second, 91, and the writer scratched in third with 88.

On the completion of the programme the out-of-town shooters left for Portland to take part in the Interstate, while the club members shot until late in the day.

Later in the season we hope to hold another shoot with more present.

On account of the late arrival of Capt. and Harold Money, the 100-bird race was put over for the last event. They admitted arriving in Boston on time, but were very late in reaching Haverhill. They ate breakfast in Boston, and being unacquainted with the Boston menu, probably ordered beans, and tried to chew each individual one; hence their late arrival.

Jack Fanning turned up all right, but there being nothing more than a box of cigars in sight for high average (he being in the habit of walking off with silver mugs, diamonds, etc.), he showed no disposition to exert himself, and as a result did not shoot his usual clip.

Any one examining the score will readilly see that Leroy is shooting at a gait that will make a "rocky road" for any expert to travel who beats him. He does it in a seemingly easy manner, and never "strains his gun" with long-distance shooting.

Harold Money inveigled the Captain into shooting a 25-target race for price of targets, and beat the Governor out by 1 bird.

While Admiral Courtney did not make a straight at the traps, he did not miss once at lunch, or, if so, it was not scored against him.

Our secretary being absent, Ned Tozier acted as cashier, giving general satisfaction, and Capt. Miller looked after the running of the shoot in his usual finished manner.

C. F. LAMBERT.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., Aug. 17.—The Thursday afternoon shoot of Minneapolis Gun Club was well attended considering the rainy day. The shooting as a whole was good. S. B. Loye & Sons offered as a prizein the Schlitz badge event a $5 light laprobe, which was won by Hays with a 2-bird handicap, defeating Mrs. Johnston and Ramaley. Holtzerman's Chicago store donated a beautiful imported German stein in the Paegel badge shoot, which was won by Ramaley in a hot fight with McKaipen, who also had a straight score, and Gerber with 23, he having a 4-bird allowance. Ramaley broke 35 birds straight to win out. The following are the summaries in the regular events:

Val Blatz diamond badge, 15 singles, unknown angles: Johnston 12, Biffton 14, Neeley 10, French 13, McKaipen 12, Mrs. Johnston 12, Gilfillan 7, Black 8, Hays 9, Morrison 9, Trapton 8, Willis 7, Parsons 9, Heller 10, Mrs. Shattuck 10, Ramaley 12, Parker 12, Jones 13, Shattuck 13.

Biffton won badge.

Schlitz diamond badge, 25 singles, unknown angles: Johnston 18, Biffton 20, Neeley 18, French 18, McKaipen 21, Mrs. Johnston 22, Gilfillan 17, Black 19, Hays 22, Morrison 16, Trapton 10, J. Cooper 12, Shattuck 20, Ramaley 22, Parker 20, Noerenberg 16, Gerber 16, Davis 3, Mrs. Shattuck 21, Jones 17, Hoffman 20, Moore 13, Chamberlin 17, Stone 13, Barber 8, Daniels 13, Mrs. Melich 15, Steck 13, E. Cooper 14.

Hays broke 1 out of his handicap of 2 and won badge and laprobe.

Paegel challenge badge, 25 singles, unknown angles: Johnston 19, Biffton 22, Neeley 21, French 21, McKaipen 25, Mrs. Johnston 20, Gilfillan 21, Black 16, Hays 20, Morrison 18, Trapton 15, Steck 16, E. Cooper 14, Shattuck 21, Ramaley 25, Parker 23, Noerenberg 16, Gerber 23, Stone 12, Mrs. Shattuck 21, Jones 15, Hoffman 15, Moore 9, Chamberlin 14, Davis 9, Daniels 16, Barber 8.

Handicaps: Gerber 2 out of 4, McKaipen 5 out of 6, Ramaley 10 straight, Gerber 6 out of 7.

Ramaley won badge and stein.

Club badges, 10 singles, known angles; 5 pairs:

Mrs Shattuck	1111111101	10 11 10 11 11—17
Jones	1001111111	10 11 11 10 11—16
Neeley	1111110111	11 00 11 11 11—17
French	1111101010	10 10 10 10 10—12
McKaipen	1111111111	00 01 10 10 11—15
Mrs Johnston	1111111111	10 10 00 10 10—14
Steck	0011111010	10 10 11 10 00—10
Shattuck	1110111110	10 11 10 11 10—15
Ramaley	1111111111	11 00 10 10 00—14
Cooper	0001110010	01 11 10 11 10—11
Johnston	1111011010	11 10 10 10 10—14

Mrs. Shattuck won senior badge, Neeley won the amateur badge and Steck won the junior badge.

Rochester Gun Club.

ROCHESTER, N. Y., Aug. 16.—Beginning next Wednesday the Rochester Rod and Gun Club intends to have a prize shoot every two weeks, and will have four prizes, valued from $2 to $4 each.

Members will be handicapped from their shooting during the past six months; the committee in charge will do everything possible to place all on an equal basis, so that the crackajacks cannot win all the prizes.

Following are the scores of the last shoot:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	15	10	10	10	10	15	10
Weller	9	9	9	12	6	9	7	8	11	10
Borst	9	10	5	10	8	6	9	..	..	..
McCord	9	9	8	..	9	..	..	..	13	..

Rogers	11	01	11	10	01																

Arkansas and the South.

St. Louis Doings—Busch Medal.

ST. LOUIS, Aug. 12.—P. M. Kling met defeat at the hands of H. C. Greisedick, the holder of the Busch challenge medal, in a contest for this trophy at Du Pont Park. Kling is the third aspirant who has thus been dealt with by Greisedick in a contest of this nature, but in order to bring this about the holder had to extend himself and dispose of his 25 birds without a skip, for Kling was in the best of form and killed straight up to the 19th bird. This loss, however, proved fatal to his chances, and if he is still ambitious to gain possession of the medal he must renew his efforts. Greisedick now has four wins to his credit, and if he meets with success in two more contests he will retire the trophy.

The birds in this race, I am informed, should have been a very good lot.

Greisedick	2221121222121111222212112—25
P M Kling	2222211121112221120112222—24

A Fall Tournament.

Manager J. A. Corray writes me that it is his intention to hold a four days' shoot at Du Pont Park, St. Louis, during the early part of October, and will be prepared to announce his date within the next week. He expects to add from $300 to $500, and will devote from one to two days to live birds. This tournament will probably precede the Belle Meade shoot.

Kaw Town Cullings.

Kansas City, Aug. 9.—The tie of the Gottlieb-Sweet, Allen-Beach match was shot off to-day and resulted in a win for the former by a score of 48 to 45. It was intended to defer a settlement of this tie until the weather got cooler, but as Jim Sweet is compelled by business reasons to leave Kansas City for a while the matter was disposed of to-day and brought about the above result. Gottlieb and Sweet duplicated their previous score, as did Allen, but Beach was unable to do this, and thereby lost the match for his side. Allen went through without a skip, while Gottlieb lost one dead out of bounds.

This was also the regular day for the Washington Park Club, and their club contest preceded the race. In this Allen also killed straight, as did Planck and Gottlieb, but as the latter is not a member of the club his score did not count. Allen disposed of Planck in the shoot-off by killing 6 birds straight. This evidently was Allen's day, as he killed all the birds he shot at, having a run of 46 to his credit. This performance was the feature of the day.

The scores of Sweet and Gottlieb were as follows:

Sweet	2211121021112211121222222—24
Gottlieb	2222121211212212*2111112—24—48

Allen and Beach shot as follows:

Allen	1111212111122122211211212—25
Beach	1001212222220211021122022—20—45

The scores made at the Washington Park Gun Club's shoot were as follows:

N Beach	112122210202112—13	F M Planck	2112121121111122—15
W Bruns	2210112211202111—13	Gottlieb	1221122111221211—15
Foxhall	2211100222222122—13	W De Shong	1121111*2112122—14
W A Laidlaw	1211010112221121—13	N Jarrett	2121212212021122—14
W L Moore	2211222212**202—12	A F Rickmers	11222*1*1221111—13
C E Wright	02*222121*21221—12	Fairman	2212212*22102022—12
W S Allen	1221111111121122—15	D Elliott	11101111202111*—12

Shoot-off:

Allen	111111	Planck	112220

LITTLE ROCK, Ark., Aug. 18.

PAUL R. LITZKE.

Trap Around Reading.

READING, Pa., Aug. 14.—The thirteenth weekly shoot of the Mt. Penn Gun Club, of this city, for a fine Parker gun was held to-day on the Mt. Penn Club grounds, near the city limits. The scores for the gun follow: Twenty-five targets, handicap of added targets:

	Broke.	Hdcp.	Total.		Broke.	Hdcp.	Total.
Yeager	20	5	25	Gilbert	19	2	21
Ball	17	6	23	Coleman	20	0	20
Laird	19	0	19	Hunsberger	18	7	25
Rhoads	20	1	24	Dietrich	20	0	20

Yeager leads in the percentage thus far with 89, with Ball second with 85 1-3 per cent. Seven more shoots will be required to decide the ownership of the gun.

West Chester, Pa., Aug. 17.—The Phœnix Gun Club journeyed over to this city to-day and defeated the West Chester Gun Club's team on their home grounds by the close score of 239 to 236, the magautrap being used. Several sweeps followed the team shoot, in which some close scores were made.

Team shoot, West Chester vs. Phœnixville, 25 targets per man:

West Chester Team.—Lumis 19, Peters 21, Gill 22, Lamb 22, Hoar 12, Henry 18, Harrison 15, Howard 19, P. Brinton 15, Ford 18, C. Brinton 20, Torpey 21, Ferguson 14; total 236.

Phœnixville Team.—Buckwalter 21, Erb 15, Johnson 23, Miller 21, Harris 12, Hodge 21, Williams 19, Phelert 22, Halman 21, Earley 11, Ennis 18, Ulman 17, Dotterer 18; total 239.

Sweepstake scores follow:

Events:	1	2	Events:	1	2
Targets:	10	10	Targets:	10	10
Peters	6	10	Miller	8	10
Harrison	9	9	Karns	..	10
Gill	8	7	Hoar	..	7

Johnson	9	8	Earley	6	5
Halman	8	7	Ford	8	10
Phelert	7	9	Ferguson	..	6
Jackson	7	6	Henry	6	6
Harris	3	..	Howard	9	6
Buck	8	10			

Pottstown, Pa., Aug. 16.—At a meeting of the Shuler Shooting Club, held this evening at the Shuler House, it was decided to hold an all-day target tournament Wednesday, Aug. 30, and instructed the secretary to send out invitations to all shooters in this section of Pennsylvania to attend. Also to have a clambake in connection with the shoot. All shooters who want to have a good time, put the date and place in your hat and get around. All are welcome.

DUSTER.

The London Tournament.

LONDON, O., Aug. 16.—In the live-bird event, 10 birds, $5 entrance, three moneys, Heikes and Rhoades killed straight, while a number tied on 9. The scores:

Phillis	2112202222— 9	Heikes	2222222222—10
Rhoades	2221221222—10	Guy	11110 10 1— 9
C O Smith	10111120— 8	Jerry	1110112220— 8
Darby	1111110121— 9	Hunsicker	0211200210— 6
Young	2222022222— 9	Patrick	1110111212— 9
Mackie	2220221222— 9	Fisher	2200112022— 7
Shaul	2220112222— 9	Wasson	2101111011— 8

Auburn Gun Club.

AUBURN, Me., Aug. 12.—Twenty-four shooters attended the weekly shoot of the Auburn Gun Club, Saturday, Aug. 12. Messrs. B. Norton and Roberts, of the Winchester Co., were visitors of the club and enjoyed the shoot very much. A match was shot for the challenge cup, in which Hunnewell and Ashley defeated Cobb and L. Norton, 50 to 48. Bickford won the gold badge after a hot race. The club is busily preparing for the State shoot, to be held Aug. 30-31.

Mr. L. A. Barker, secretary of the Auburn Gun Club, writes us concerning his club's forthcoming tournament as follows: "The annual State tournament of Maine gun clubs will be held on the grounds of the Auburn Gun Club, Auburn, Me., Wednesday and Thursday, Aug. 30 and 31. There will be one 20-bird event, with a $60 guaranteed purse each day; also $50 high-gun money, open to the world. All other events for Maine shooters only. Manufacturers' agents and experts invited to attend and shoot for high-gun money and open events. Ship shells and guns care of Auburn Gun Club."

Rifle Range and Gallery.

Fixtures.

Sept. 1-2.—Jersey City, N. J.—Twenty-fifth annual shooting festival of the Zettler Rifle Club at Armbruster's Shooting Park. G. A. Nowak, Sec'y.

Sept. 4.—Sea Girt, N. J.—Meeting of the New Jersey State Rifle Association. De Lancy G. Walker, Sec'y.

Sept. 4-5.—Denver, Colo.—Fourth annual tournament of the Colorado Rifle Association.

Nerve Racking at Shell Mound.

SAN FRANCISCO, Aug. 14.—*Editor Forest and Stream:* Yesterday was a nerve racking day at Shell Mound Range on account of a very high and fitful wind. Every few shots necessitated a readjustment of the sights. The attendance of marksmen was good. Scores:

The quarterly bullseye shoot of the Norddeutscher Club was won by D. Salfield with a score of 228. The others made the following scores: J. Gefken 368, J. Lankenou 390, H. Burfeind 501, H. Stelling 640, F. Koch 832, F. P. Schuster 845, O. Lemcke 989, G. Alperse 1,033, William Gottschalk 1,175.

The monthly medal shoot of the Independent Rifles resulted as follows: H. Kuhlke 38, Sergt. George Mitchell 41, C. Iverson 11, R. Bither 35, Lieut. John Staude 36, C. Andrews 37, P. Schonig 35, Corp. W. Tinken 4, F. H. Laun 30, H. Marzolf 35, H. Felix 28, F. Wild 15, D. Steffins 17, H. Gaetijen, Jr., 22.

In the monthly medal shoot of the San Francisco Schuetzen Verein the following scores were made: Champion class, D. B. Faktor, 434; first class, not won; second class, H. Lilkendey, 378; third class, Ed Goetze, 384; fourth class, William Goetze, 360; best first shot, L. Bendel, 24; best last shot, J. Kefken, 24.

The scores in the monthly medal shoot of the Germania Schuetzen Club were: First champion class, Dr. L. O. Rogers, 436 rings; second champion class, not filled; first class, E. H. Goetze, 413; second class, D. Salfield, 405; third class, H. Lilkendey, 401; best first shot, D. B. Faktor, 24; best last shot, J. B. Bridges, 21. In the competition for cash prices D. B. Faktor made 72 rings, E. H. Goetze 70, F. P. Schuster 70, D. McLaughlin 70, Dr. L. O. Rodgers 67. The Bushnell medal scores were as follows: F. P. Schuster 218, Dr. L. O. Rodgers 214, D. B. Faktor 207.

The Golden Gate Rifle and Pistol Club held a rifle and pistol shoot. In the rifle shoot the scores were: Dr. L. O. Rodgers 217, J. F. Bridges 197—191, D. B. Faktor 203, J. E. Gorman 188, J. Kollman 187, E. N. Moor 214—180, E. Weanne 194, F. W. Belknap 189—185, D. W. McLaughlin 218, C. M. Henderson 191—162, O. A. Bremer 188, F. E. Mason 223—216. The pistol scores follow: D. W. McLaughlin 86, E. F. Moor 53, J. E. Gorman 91—92, J. F. Bridges 72—73, E. Waenne 49, J. Kullmann 63, Dr. L. O. Rodgers 88, F. E. Mason 83.

An average of 93 in ten scores was made with a pistol by J. E. Gorman, of the Golden Gate Rifle and Pistol Club, in practice. His ten consecutive scores were as follows: 96, 90, 95, 92, 91, 92, 94, 95, 93, 91.

ROBEL.

Cincinnati Rifle Association.

AT the annual election of officers of this Association, the following members were elected to serve for the ensuing term: President, Syl. F. Trounstine; Vice-President, Jacob Strickmeier; Secretary, Edgar D. Payne; Treasurer, H. H. Uckotter; Captain, Mat. Gindele; Lieutenant, Charles Nestler.

All communications should be addressed to E. D. Payne, Lick Run road, Price Hill, Cincinnati, O.

PUBLISHERS' DEPARTMENT.

Gettysburg, Luray, Washington.

PERSONALLY CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

OVER the battlefield of Gettysburg, through the picturesque Blue Mountains via Hagerstown and Antietam and down the beautiful and historic Shenandoah Valley to the unique Caverns of Luray; thence across the rolling hills of northern Virginia to Washington, is the route of this tour—a section of the country intensely interesting from both a historic and a scenic standpoint.

The tour will leave New York 7:55 A. M., and Philadelphia 12:20 P. M., Saturday, Sept. 16, in charge of one of the company's tourist agents, and will cover a period of five days. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the trip throughout. Round-trip tickets, covering transportation, carriage drives and hotel accommodations, will be sold at the extremely low rate of $25 from New York, $24 from Trenton, $22 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents, Tourist Agent, 1196 Broadway, New York; 789 Broad street, Newark, N. J., or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

"The sale of game should be forbidden at all seasons."
—FOREST AND STREAM, Feb. 3, 1894.

Concerning wolvs, it is ordered that if any one shall kill a wolfe hee shall have twenty schillings for his paines, all soe if any Indian shall kill a wolfe and bring the head to the constable: The Indian soe doing shall have for his reward Twenty gilders provided it can bee dicerned that it killd within ten miles of the towne.—Middletown, N. J., Towne Book, 1668.

"THE CHALLENGE."

HERE in the high mountains the September morning is very cold as the sun rises clear over the sharp peaks. Heavy frost hangs on grass and weed stalks, and there is a skim of ice on the rocks, which at midday will be wet with a thin trickle of water. The beautiful autumn flowers which bloom on these heights are frozen and shriveled now, yet as the sun rises higher and the heat grows stronger they will again appear fresh and fair.

Along the sides of the mountains far and near white clouds and tufts of mist are rising, blotting out in their slow motion bits of the landscape which lie in their track, and then revealing them as they pass higher. In the ravines which seam the sharper peaks and on the summits of the more rounded mountains lie streaks and fields of snow left over from the last winter, which will soon be buried beneath other snows of the advancing autumn. Down in the deeper ravines and stream valleys are the black masses of evergreen trees, brightened here and there by patches of paler aspens, and as they climb higher on the hillsides, yielding little by little to the alders, until finally the conifers run up in lessening points toward the bare rocks, and at last disappear.

It is very still here. There is no song of bird; not even the whistle of the mountain marmot, nor the piping cry of the little chief hare is heard. Only from a distant ravine comes the shrill sweet whistle of a great bull elk, as he utters his bold challenge to all rivals far and near.

You can see him plainly as he walks out from the timber and slowly climbs the hill, followed by the group of watchful cows; and he is a splendid picture. Short-bodied, strong-limbed, round and sleek-coated, he is a marvel of strength, if not of grace. His yellow body is in sharp contrast with the dark brown head and mane, and the hugely branching antlers, wide-spreading and reaching far back over his shoulders, seem almost too much for him to carry; so that as he marches along with ponderous tread each step seems to shake the earth. At intervals he throws back his head and utters his wild call, and before its first notes reach the ear you can see the white steam of his breath as it pours forth into the frosty air. His cows feed near to him as he steps along, or if one straggles too far he moves slowly toward her, and shaking his mighty horns warns her to return. If you fire a shot at one of that band, speedily the old bull will show himself the herder and protector of his family. Rushing about from point to point, he will gather up cows and calves into a close bunch, and will drive them off over the hills, threatening the laggards with his mighty horns, using those horns, too, with cruel effect if the cows do not hurry.

No chivalry this on the part of the old bull. Yet in such a case he always travels in the rear, for these cows are his and he does not propose to have them taken from him. He drives them forward at top speed, not because he wishes to protect them from death, but because at this season of the year he does not intend to be robbed of wives and children.

Very musical is the challenge of the bull elk; sweet, clear and plaintive when heard from afar, echoing along the hillside and across the ravines and tossed back from point to point of the hills in notes that grow ever fainter, but not less pleasing. Perhaps in all the mountains there is no sound that appeals so strongly to the imagination of him who hears it. Nor is there in the mountains any other voice of nature that brings up to the mind of the old hunter so many memories of hunts gone by, of mountains traversed, of hunting companions loved, but living no longer; dead by hostile bullet, by winter's cold; overborne in the deep waters, or conquered by lingering illness.

Listen then to the whistle of the elk. If you are young it will fire your blood to strive for the great trophy; if you are old it will thrill you with memories of a past which shall seem to you brighter and better than anything the later years can yield.

NON-RESIDENT LAWS ARE CONSTITUTIONAL.

ILLINOIS has a law which forbids a non-resident to take game without having first obtained a license, the fee exacted for which is $10. No exception is made in favor of non-residents who may be owners or lessees of shooting territory in the State. The sportsmen of Burlington, Iowa, who have been accustomed to shoot in Illinois, resent the application of the non-resident law to themselves, and in mass meeting assembled have denounced the discrimination as unconstitutional, and proclaimed their determination to make a test case and carry the question up to the Supreme Court of the United States. Mr. J. F. Breitenstein, of Burlington, has issued an appeal to sportsmen to contribute the funds necessary for the purpose. If the Burlington shooters shall succeed in taking up a collection and making the Supreme Court case, they will supply an interesting subject for the attention of the shooting world, and will no doubt add to popular information as to the basic principles of game protection and game legislation. But aside from the application of these principles to the precise point involved in a non-resident statute, it is not probable that the game would be worth the candle. For the principles which control here have already been enunciated in unmistakable language by the Supreme Court, and are perfectly familiar to all well informed persons who have given attention to the subject. In the light of the Supreme Court decisions handed down in the cases of Macready vs. Commonwealth of Virginia, and Geer vs. State of Connecticut, no question may reasonably be entertained of the constitutionality of a law which places restrictions upon non-resident shooters.

The foundation of all game legislation is in the principle that the State—by which term is meant "the people of the State in their united sovereignty"—owns the game. As owner of the game the State may prescribe when, how and by whom its game may be taken.

In the case first cited, Macready, an oyster planter, was debarred from planting oysters in Virginia waters by a statute which restricted to citizens the privilege of oyster fishing. Mr. Macready contended that the statute was unconstitutional because a violation of the section of the Constitution which declares that "The citizens of each State shall be entitled to all privileges and immunities of citizens of the several States"; and defeated in the lower courts, he carried the case to Washington, where this point of constitutionality was decided against him. In the opinion, written by Mr. Chief Justice Waite, it was said:

"The principle has long been settled in this court that each State owns the beds of all tide waters within its jurisdiction unless they have been granted away. In like manner the States own the tide waters themselves and the fish in them, so far as they are capable of ownership while running. For this purpose the State represents its people, and the ownership is that of the people in their united sovereignty. The title thus held is subject to the paramount right of navigation, the regulation of which, in respect to foreign and interstate commerce, has been granted to the United States. There has been, however, no such grant of power over the fisheries. These remain under the exclusive control of the State, which has consequently the right in its discretion to appropriate its tide waters and their beds to be used by its people as a common for taking and cultivating fish, so far as it may be done without obstructing navigation. Such an appropriation is in effect nothing more than a regulation of the use by the people of their common property. The right which the people of the State thus acquire comes not from their citizenship alone, but from their citizenship and property combined. It is in fact a property right and not a mere privilege or immunity of citizenship."

Again it was said: "Virginia, owning land under water adapted to the propagation and improvement of oysters, has seen fit to grant the exclusive use of it for that purpose to the citizens of the State. In this way the people of Virginia may be enabled to produce what the people of the other States cannot; but that is because they own property which the others do not."

"The second section of the fourth article of the Constitution, which declares that 'The citizens of each State shall be entitled to all privileges and immunities of citizens of the several States' does not vest the citizens of one State with an interest in the common property of the citizens of another State." Hence it follows that the Virginia law, "by which only such persons as are not citizens of that State are prohibited from planting oysters in the soil covered by her tide waters is neither a regulation of commerce nor a violation of any privilege or immunity of interstate citizenship."

Fish and game are both *feræ naturæ*, and so of the same class in respect to the law; if the Virginia statute forbidding non-residents to prosecute the fishing industry in its tide waters is constitutional, the Virginia statute also which forbids non-residents to shoot wildfowl on its waters is constitutional. If this Virginia non-resident game law is constitutional, the Illinois game law is constitutional. And for all three we have this United States Supreme Court decision in Macready vs. Virginia.

A second and more recent decision is that of Geer vs. State of Connecticut, which was decided in the October term of 1895. The full text was published in these columns at the time, and may also be found in the April number of the *Game Laws in Brief and Woodcraft Magazine*. Mr. Geer was a game dealer who had a notion that the Connecticut law forbidding him to export partridges which he had bought and thus made his own "property" was unconstitutional because a violation of the interstate commerce clause. To this view the Court did not assent; it found against Mr. Geer. Here, too, the points at issue were determined only after a searching examination of fundamental principles, and an enunciation anew of the basic principle that the people of the State own the game, and as owners of it have exclusive control of and right of enjoyment in it. For the benefit of the Burlington sportsmen and others it may be worth while to quote these passages from the text of the opinion as written by Mr. Justice White:

"While the fundamental principles upon which the common property in game rests have undergone no change, the development of free institutions has led to the recognition of the fact that the power or control lodged in the State, resulting from the common ownership, is to be exercised, like all other powers of government, as a trust for the benefit of the people, and not as a prerogative for the advantage of the Government, as distinct from the people, or for the benefit of private individuals, as distinguished from the public good. Therefore for the purposes of exercising this power the State, as held by this court in Martin against Waddell, 16 Peters, 410, represents its people, and the ownership is that of the people in their united sovereignty. The common ownership is thus stated in a well-considered opinion of the Supreme Court of California:

"'The wild game within a State belongs to the people in their collective sovereign capacity. It is not the subject of private ownership, except in so far as the people may elect to make it so, and they may, if they see fit, absolutely prohibit the taking of it or traffic and commerce in it if it is deemed necessary for the protection or preservation of the public good.'—Ex parte Maier, 103 California, 476.

"The same view has been expressed by the Supreme Court of Minnesota, as follows: 'We take it to be the correct doctrine in this country that the ownership of wild animals, so far as they are capable of ownership, is in the State, not as a proprietor, but in its sovereign capacity as the representative, and for the benefit of all its people in common.'—State against Rodman, 58 Minn., 393."

In conclusion, if the State of Illinois owns the game of Illinois, the State may constitutionally restrict the taking of its game to its own citizens, or if it elects to extend the privilege to citizens of other States, it may prescribe the conditions under which it will license them to enjoy that privilege. While a test case proposed by the Burlington sportsmen would be regarded with interest, it could hardly add anything new to our present understanding of the principles of State ownership which underlie game protective legislation.

SNAP SHOTS.

We suspect that the tall Yankee stroke in the story of a "Pull to Windward" was none other than Tarpon himself, who relates the incident out of a life rich in stirring episode. By the way, commenting on a history of the Buccaneers, which we sent him the other day, our correspondent asks for reference to a copy of a book entitled "Tales of the Ocean"—an old book, he says, "which did more to send me to sea than anything else. I want to find a copy; I have a curiosity to see if it will read as it did fifty years ago." It would be a pleasure to supply the Tales, but the book is not necessary to satisfy Tarpon's curiosity—no book is the same fifty years after.

M. Albert Menier, the chocolate manufacturer, who died the other day at his home in France, was a sportsman known in two hemispheres. His enterprise of converting the Island of Anticosti into a game preserve was an undertaking which received much attention in this country. Now that M. Menier has passed away, we may look for Anticosti's reversion to a wild state.

The Sportsman Tourist.

A Pull to Windward.

ALMOST forty years ago I was one of the crew of the bark Vision, of New Bedford. She was a neat, tidy craft, of some 300 tons, with a mixed crew of Americans, Portuguese and Kanakas, like the majority of whaleships at that time. Capt. Camp, who commanded the Vision, was a young man, but his energy and integrity had won him a good position at a very early date. Mrs. Camp, who accompanied her husband, was a lady, educated and refined. She seemed strangely out of place on a whaleship. She was beloved and respected by all, and in her quiet, unobtrusive way exerted a marked influence on our motley crowd.

We had cruised about the Pacific for some two years, getting perhaps our share of sperm oil, visiting a few ports on the west coast of South America for letters, and occasionally calling at some island for wood and water.

As soon as the anchor was down the waistboat would be called away to carry Mrs. Camp and the captain ashore, It became so much a fact that Mrs. Camp invariably spoke of the waistboat's crew as "her boys"; and there was always a generous rivalry to see who would carry her ashore through the surf. It generally fell to the stroke oarsman, perhaps because he had the longest legs. Then if any one found a curious shell or a rare flower it was treasured for her.

Of a consumptive tendency, it was thought a sea voyage would do her good; but after the first year we all could see that she slowly but surely failed. The daily walk on deck became shorter and slower, the thin hands grew thinner still, the hectic flush and the wan, weary smile told more plainly than words that the end was near.

About this time we fell in with the bark Congo, Capt. Everett. Capt. Everett and Capt. Camp were old shipmates, and Mrs. Everett, who was with her husband, was an old schoolmate of Mrs. Camp. Of course this made the situation pleasant in the extreme, and Mrs. Camp seemed to have acquired a new lease of life. But it was the excitement of meeting with old friends that gave her momentary strength, and very soon she was seen to be failing more rapidly than ever.

Under the circumstances it was deemed advisable to go into some still bay and try if the quiet of an anchorage would be any help to the invalid. Accordingly both craft joined their forces for a season's hump-backing, the Vision with both ladies and one boat's crew to lie at anchor, while the Congo, with a majority of the men, was to attend to the whaling.

But perhaps it would be as well to explain what is meant by the term "hump-backing." There is a whale of the bone species called hump-back. The oil is inferior, while the bone is so short as to be commercially worthless. Yet they are so easy to capture at the breeding season that many ships are in the habit of "hump-backing" every season or so, to pick up liberty money.

During the breeding season the whales are almost as tame as domestic cattle. The cows are the ones sought after, for, contrary to the sperm whale, the cows are much the largest and yield the most oil, besides being easier to capture.

Our preparations being all completed, we came to anchor in a large bay to the southward of Guayaquil.

After our arrival at anchorage Mrs. Camp seemed to gain strength. She would sit on deck most of the time, and made many little excursions ashore, where she seemed to take much interest in the profusion of birds and flowers, for which that portion of the coast is famed.

We had been in the bay some two weeks with fair success in whaling, when Mrs. Camp seemed to lose her strength again, and grew more listless than ever. Capt. Camp did not seem to realize how near the end was, but the crew (Mrs. Camp's boys) were quick to note the change. They spoke with hushed voices, and came and went with noiseless steps. Mrs. Everett was almost continually with her friend; and everything that love and kindness could prompt was done—but all in vain.

One Saturday Mrs. Everett had gone on board of the Congo to see about her husband's clothing, the Congo at that time being about five to six miles north of the Vision, and both vessels about five miles off shore. The wind, usually southwest and very uniform, had backed to south, and was blowing half a gale. The sea soon got up. Sunday morning was the first really bad weather we had seen in the bay, and all day Sunday the gale grew worse. Mrs. Camp was failing rapidly. She wanted Mrs. Everett, but the wind and sea were so bad she would not listen to sending for her. "The wind will go down with the sun, Fred," she said to her husband, "and then my boys will go and get Abbie."

But the wind did not go down; on the contrary, it blew harder, and at 8 o'clock it was blowing too hard for anything but a whaleboat to face. At 8:30 she roused somewhat from her stupor. "Fred, won't you please ask my boys to bring Abbie to me?"

The waistboat's crew were ready, and not only ready, but anxious to do anything in their power for the little woman who was dying there—dying so bravely, almost alone, and still so much of a lady as to prefer a request when it might have been a command.

The boat, which had been riding at the end of a long painter, was hauled alongside. Watching their chance as the boat rose and fell on the sea, sometimes up to the rail, sometimes on a level with the keel, they tumbled in. "Let go! out oars!" and away they go to leeward like a scared wolf.

Now, just a word as to that boat's crew of six men. Frank, the harpooner, was a Western Island Portuguese, short and slight, but nervous and hard as iron. Dick, the bow oarsman, a wiry little Vermonter. Big John, midship oar, a Portuguese from Western Islands, of immense strength, and with the endurance of a machine. John Twine, tub oarsman, was a South Sea Islander, and as good a man as ever stepped in a boat. The stroke oar was pulled by a long-armed, down East Yankee, who had such control over the rest of the crew that they were ready to lift the boat out of the water at his word. The officer in charge, Mr. W., was a typical Nantucket whaleman, and a man who was very economical of words, leaving it to his stroke to do the talking. It does not take a whaleboat long to make five miles to leeward in such a gale as was blowing that night, and they were soon alongside the Congo. Mrs. Everett was expecting a call, and was all ready; but how could they get her into the boat without breaking bones or staving the boat?

The long stroke oarsman of the waistboat solved the problem. Standing up in the stern sheets he shouts: "Jump and I'll catch you!" Mrs. Everett was a sailor's wife. She stands on the rail supported by her husband. As the boat rises almost to her feet she makes a flying jump and the stroke has her fast. "Let go! out oars!" And now the boys find they have something to fight. Says stroke: "Boys, nothing but grit and muscle will win to-night; you've got 'em. Give way!" Oh, that long, weary pull. Many times it seemed they were being blown to leeward; but with set teeth and bent backs they fought on. The long, steady whaleman's stroke, the dogged, indomitable grit, began to count. Yet it seemed an age, when the second mate opens his mouth: "I see a light, boys; pull hard." They were pulling hard. They were pulling for love, and they knew that the little woman who was sitting wrapped up in oilskins in the stern sheetls must be got to the side of her dying friend. The stroke says through his teeth: "Boys, you've got it to do; lift 'er hard."

And when they had got Mrs. Everett on the Vision's deck and their boat veered astern they clustered around the break of the poop, anxious to know if she still lived. The steward came on deck. "What is it, steward? Is she alive? Did she know Mrs. Everett?"

"Yes, she is alive, but sinking fast. She just said, 'Oh, Abbie! God bless my boys!'"

And the boys, uncouth, unkempt, tatterdemalions as they were, were crying like children.

TARPON.

ANDREW DOWNS.
In his seventy-ninth year.

A Midsummer Journey.—I.

AFTER an outing of a month's duration I find myself once more in my den, and before the letter mail is disposed of I cannot resist the temptation to use the paper knife on the stack of FOREST AND STREAMS that has awaited my arrival. In the issue of Aug. 12 I find a kindly comment from our Nestor, Von W., and a query as to the Rocky Mountain columbine. It is of the same genus (*Aquilegia*) as the New England flower (*A. canadensis*), but is larger, longer-spurred and varies in color from deep purple to a snowy white. Botanically it is *A. caerulea*. It flourishes at an altitude of about 8,000ft. on shaded hillsides. In the southern part of Utah and in Arizona and New Mexico it gives place to the golden columbine (*A. chrysantha*). Perhaps it is because our flora is so different from that of the East that I am especially partial to the columbine. We have no rhododendron, laurel, azalea, jack-in-the-pulpit, showy orchis, wake-robin, fringed gentian—scarcely any of our boyhood friends, and the columbine, aside from its rare beauty, always carries a sweet, homelike suggestion with it.

There seems to be a kinship between the old-time contributors to FOREST AND STREAM that the years make stronger ere "ever the silver chord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel be broken at the cistern." One by one we find it easier to stroll down the hill than to climb a mountain; to sit by the fire and dream of the past than to struggle with old Boreas and follow the trail on a blacktailed buck. And yet we never grow old. Dame Nature is wondrous kind to those of us who learned to love her in the long ago. Somehow she smooths our pathways toward the setting sun.

I am sorry that El Comancho has got that boy of his back to civilization. The "kid" will surely want to go wandering again. He has the fever, and is not chained to business, so he will give his faithful biographer the slip and become a knight-errant on his own account.

"Despoiling Berkshire Trout Waters" is a melancholy title. The headwaters of the Housatonic used to afford the best of sport, the little brooks of South Adams and South Williamstown that sprang from the foot of Greylock being literally alive with fish. The same was true of most of the streams east of the mountains between Pownal and Rutland. In the old days there were two stage lines from Rutland to Woodstock, one by what then seemed a wild and tortuous road, taking in the magnificent scenery of Killington and Pico. The other route was easier. It went through Tyson Furnace, by Plymouth ponds to Bridgewater. The brooks back of Killington were famous for their trout, and good sport could be had at the little lakes near Tyson, but I suppose that these streams are now in the same condition as those of Berkshire county. All this is hardly a suitable introduction to a midsummer trip in Utah and Colorado, but life is made up largely of changes and contrasts, and these New England notes have sent me "wool gathering."

Of all the camping parties that I have ever traveled with this was apparently the most incongruous as to makeup, and yet from the beginning to the end of the trip there was not the slightest friction of any kind, though we numbered the unlucky thirteen. Business was combined with pleasure, for the four men were interested, two heavily and two slightly, in the copper, gold and gilsonite propositions of eastern Utah and western Colorado. King, Sr., capitalist; King, Jr., just returned from Germany with his bride; Prof. Brimfull, with his daughter and three sons; King, Sr.'s two little girls; two schoolmarms and Shoshone answered the rool call when we left Provo in two heavy wagons, one surrey and accompanied by extra saddle horses. I wished to do considerable work in ornithology, and so, not having time to load, picked up all the 12-gauge shells that I could pro-

cure from local dealers. I do not shoot smokeless, as I am not able to afford just the gun I want for nitro powders, and in my outfit I had black powder from almost every reliable maker in the land. It gave me just the opportunity I had long wanted to test for cleanliness, range and penetration the merits of such powders as the Du Pont, Laflin & Rand, Hazard, the Winchester, U. M. C. and Peters shells, and I have now some fixed ideas upon the subject.

Had the party been smaller our start would have been earlier. As it was, noon found us just outside the city limits. The first entry in my journal noted the appearance of a yellow-breasted chat in an apple orchard. This bird has recently come among us, but I believe it to be permanently established in the basin region. The long-tailed chat is indigenous. Our fifteen-mile ride through Provo Cañon was marred by the fact that railroad graders were at work along the entire distance. This made game scarce, and ruined the fishing. The deserted camps, where horses had been fed, were in possession of rats and doves that were not alarmed by our presence. At the upper end of the cañon we ran upon a brood of half-grown ruffed grouse. Two of these, with a score of doves, made us a good supper. Our first camp was made early owing to rain. It was near the village of Charleston, twenty-two miles from Provo and 5,625ft. above sea level.

The second morning broke clear and cool. For six miles we drove through one of the most beautiful valleys of the intermountain region, and then we bade adieu to civilization. It was ten days before we again saw a house. Daniel's Cañon was the route chosen by which to ascend the Wasatch divide. The distance to the summit was twenty miles, and the aneroid showed the elevation of the point of crossing, which was reached at 6 o'clock, to be 8,350ft. The cañon had a wide mouth, and we drove for hours through groves of box-elders and maples. Oak brush was left by noon. At our dinner camp we caught a few trout, and would have caught more had not the ladies been disgusted with the sight of a dead sheep in the stream and insisted upon pushing on to the reservation. Letting the rest of the party have their own way, I chose rod instead of gun, took a saddle horse, and said I would join the crowd at dark, promising fish for supper if I could be excused from my share of work in setting up the tents. For five or six miles luck was against me; then I struck a little creek, as clear as crystal and so narrow that I could leap it anywhere. There were roses by its banks, pines and aspens shaded it, warblers and thrushes made their nests within the music of its voice. It took many trials to find just the fly that was necessary for business, but when I put on a gray-hackle the riddle was solved. The gray-hackle proved a mascot throughout the entire trip. The bed of the stream was white sand; there were no large boulders, so the fish had every advantage excepting in deep overhung pools. Nevertheless I filled the pockets of my hunting coat, and at dusk a friendly Ute piloted me to the camp, which was six miles on the reservation. Poison ivy has long been a terror to me, and I have been sightless and sore for weeks from its baneful effects. On this particular afternoon I got into a bed of the stuff and immediately commenced to bathe face and hands with a weak solution of carbolic acid. The treatment was continued for three days. There was the usual appearance of pustules without any irritation, and a slight desquamation was the worst result.

The third day was one of rest for the horses. Prof. Brimfull had stopped in Charleston on business, and we were to await him. One of his sons slept with me, and at the first flush of dawn I nudged the boy:

"Wells, let's go fishing."

"You bet."

The leaders had been soaked the night before, and I proffered Wells the choice of my fly-book, but he preferred to use the angle-worms which he had brought from Provo. Just here I want to make a digression. Do not think me conceited. The rest of the crowd were just as good if not better fishers than I, but I clung exclusively to flies, while sometimes they used worms, sometimes grasshoppers and occasionally flies tipped with bait. The scores tell more than words. I did, however, bring them all to use small hooks instead of the 2s and 0s that they started with. An old trout is suspicious of a large lure, but a 10, 12, or 14 hook daintily poised and floated down steam will fetch him every time. I was somewhat dubious as to our success. Last year I tried Strawberry headwaters without result. Dynamite and lime had done their deadly work. This year I realized that if the Indian police caught us we would be marched summarily to Fort Duchesne, permits notwithstanding.

The exhilaration of morning at this altitude is beyond description. Frost on the grass, with little icedrops sparkling in sympathy with the golden clouds above; songs from pines that fringe snowbanks; tinkle of horse bells; pale smoke from deadened camp-fires—an unpainted idyl. The wet sedge sprinkled our shoulders as we stole among the willows and struck the stream. A splash here, a splash there, showed that mosquitoes and moths were attractive, and we vied with nature in furnishing food for the hungry gourmets of the upland. When sunlight fairly broke upon us, I quit—Shoshone 16, Wells 12; enough for breakfast. We went back, lighted the fire and made coffee for the ladies. It is a very foolish thing for a man in camp to expect that the women folk will get up when he does. Long experience teaches me that to keep the sky serene a cup of tea or coffee, with a slice of toast, should be taken to the bedside, the camp-fire should be blazing and there should be warm water at hand ere the feminine portion of the outfit is summoned to greet the day. (Don't say that an old man cannot learn gallantry.)

After breakfast the Kings were unusually restive. Senior finally borrowed my gun, and Junior fixed up his tackle. The result was chickens for dinner and a dissertation on the fickleness of trout. During the day we were visited by a couple of sheepherders. They warned us against the Utes, and when we asked about the sheep on the reservation they informed us that the Indians let summer pasturage at 5 cents per head for sheep and $1 for cattle. Toward sundown Junior and I wandered to the creek. Senior bet on his son, but I won by a small count. Our fishing was stopped by a shower, which is a daily occurrence here, and after we were all asleep the Professor rode up, drenched and happy, and laid plans for the morrow.

When morning came I was aching with rheumatism, but a ramble on the mountain side after chickens limbered me up. I secured several rare birds that will be named in my list later on. It was with regret that I learned on my return that the tents were to be pulled down. Senior had a favorite camp ground that he had located some fifteen years before, and with it as a base line wished to make certain explorations. Our drive down Strawberry was long to be remembered. The occasional showers that dampened our bedding could not cool our ardor. Chickens galore, doves and rabbits came to bag, and in every little stream that we crossed trout were disporting themselves. Badgers and coyotes were much in evidence, and once on a sagebrush flat, *mirabile dictu*, the horses stepped into the nest of a gray duck and smashed eight of the dozen eggs that were almost ready for hatching. The mother bird did not desert her home, but was as solicitous over the remaining four as she had been of the original setting. She was attending to duty when we left the country.

"King's Kamp" proved a haven of rest to us. Far from track of Indian or white man, we were in the forest primeval. Our four tents were pitched beneath the aspens, on a grassy flat, bordered by columbines and protected by two brooks that gushed from the mountain side, finding birth in the largest springs that I have ever seen. Chickens furnished us with food, while deer were sighted every day. To the credit of our party, be it said that not one of these beautiful creatures was molested. For three days the Kings and Prof. B. rode the ridge on private business, while I studied birds and read "David Harum," "The Choir Invisible" and such like literature. We were somewhat suspicious of our red brothers, but were not annoyed by them. The trouble is with the Colorado Utes, who were moved to this reservation, and not liking the change are stirring up disaffection as far as they are able to do so.

The next move took us over grassy plains to the great cañon of Strawberry, where we spent a ne'er-to-be-forgotten afternoon. The chicken shooting en route excelled anything that I have ever seen. Brimfull, with his .22 rifle, did splendid execution. He learned to use a rifle in the Indian raids of thirty years ago, and took all his birds upon the wing. We dared not use our shotguns on account of their loud report.

When camp was pitched and we had enjoyed dinner I took to the stream, here about 20yds. wide. It was no longer a placid brook, but an angry torrent, foaming and roaring between naked rock walls that towered hundreds of feet above us. The fish were good size (from ½lb. to 3lbs.) and as fierce as their habitat. My first strike and the clicking reel brought the rest of the party to the river. Our scores may seem too large for justification, but it was supposed that this was the last fishing we would have, and preparations were made for salting down sufficient for a four days' trip. I do not know, but I instinctively feel that this afternoon was high-water fishing mark for me. The dial turned back twenty years as I stood, waist-deep, in the boiling waters, scarcely able to keep my footing, and struggled with the trout that had never before made a fight for life and liberty. When the shades of evening curtained us I changed hackle for white-miller and fished on. Only night brought me to my senses. I had twenty-five trout to my credit. The other four, who used bait, had twenty, all told.

After breakfast, one week from Provo, Mrs. King, Jr., with one of the boys for driver, and the two little girls, started homeward, while the rest of us drove toward the main chain of the Uintas—the land of the rising sun.

SHOSHONE.

Pioneer Days.—XIV.

BY ROWLAND E. ROBINSON.

Josiah Becomes a Family Man.

OBJECTS were becoming dimly defined in the light of dawn, when the girl was awakened by Josiah's voice, sounding strange and unfamiliar as her surroundings looked, until with a sharp pang she realized that yesterday's events were not a frightful dream.

"I want tu talk tu you a minute afore the children wakes up," he said, speaking low; and she arose and sat down near the freshly kindled fire. "I gin your father my word an' him a-dyin' 'at I'd ta' keer on ye faithful," he began abruptly, looking straight into her sad dark eyes; "an' I'm a-goin' tu, fur as I can. It hain't alone from keepin' your body from bein' hurt, but your good name, an' a gal can't go traipsin' 'raound the country wi' a man' 'at hain't nothin' tu her by blood nor no-ways wi'-aout that bein' hurt; so I've got tu marry you, the fust square or minister we light on."

"Oh, I can't! I—I don't want tu," she gasped, all in a tremble, and pale and red by turns.

"I do' want tu nuther," he said in blunt honesty. "I never thought tu come to 't, but I got tu, an' so we got tu make the best on' t. Naow we'll eat what we've got an' be off."

The children were aroused and fed, and the party set forth by such routes as were likely to be clear of the enemy, but did not always prove so. More than once they discovered, just in time to avoid being discovered themselves, a squad of British or German soldiers in quest of prisoners or booty, or driving a small herd of cattle that the fleeing settlers had been obliged to leave behind.

Once, as they were hurrying along a dark and obscure forest path, the soft patter of rapid footsteps was heard behind them. Josiah pushed the children into a thicket, drew Ruby to one side and made her crouch behind a huge log, and sheltered himself behind a tree, where he peered cautiously down the path.

"Injins!—six on 'em—trackin' us!" he whispered back to her. Then quickly filling his horn charger, and handing it to her with a bullet and patch, said: "Hold these 'ere till I want 'em."

He resumed his scarcely interrupted watch of the approaching enemy, now coming rapidly up the path, with eager glances divided between the tracks of the fugitives and a search forward for the fugitives themselves. He covered the breast of the leader with a careful aim, and pulled trigger at the grst moment that the next Indian came directly in the line of fire. The foremost fell headlong at the report, the second staggered and sank to the ground, while his gun searched blindly for an aim at the unseen foe, and those who followed vanished in the cover of the woods quicker than the thin smoke of the rifle dissolved in the air.

In the same instant Josiah turned and took the charger from Ruby's ready hand, emptied it in the muzzle of the rifle, then took patch and ball, and rammed them down, primed the pan, cocked the piece, and was closely scanning the cover for another target.

What he first discovered was the entry of a new actor, a strong, tall man on horseback, but evidently not a belligerent, for he was dressed in the plain garb of a Quaker, not so noticeable in those days for its cut as for its drab color and the broad-brimmed, uncocked hat. Furthermore, he carried no arms of any sort, but only the spiked jacobstaff, then in use by land surveyors, and which he bore upon his shoulder, while the compass was strapped in a case behind his saddle. Nevertheless the Indians seemed to consider him legitimate prey, for the hindmost of them, aimed his gun at him, changing front in doing so and exposing himself to the fire of Josiah, but trusting to his three remaining comrades to guard his rear. Fortunately for the man of peace, the priming of the Indian's gun flashed in the pan, and he, assured that horseman was unarmed dropped the firelock and rushed upon him with uplifted tomahawk.

"Ta' keer my staff don't come down on thy head an' hurt thee—it's mortal heavy!" the surveyor said in a calm, cautionary tone, as his bridle rein was violently seized, and even as he spoke the ironshod oaken staff fell with stunning forse on the naked head of his assailant, who dropped in limp collapse almost under the hoofs of the horse.

The surveyor slipped nimbly from the saddle, and turning the inert body face downward quickly tied the hands behind his back with a cord that he drew from his pocket. Then he drew the knife from its sheath and cast it and the tomahawk for into the undergrowth, and then picking up the gun made it useless with a few sturdy strokes upon the trunk of the nearest tree.

"Thee might be tempted to do a mischief with thy carnal weapons," he remarked; and then, noticing that the Indian was beginning to show signs of returning consciousness, he turned the Indian to a more comfortable posture, in spite of which the latter kicked and struggled violently to loosen his bonds. "Thee's brought this all on thyself, friend," said the Quaker, in a tone of mild reproof, "and thee'd ought to be ashamed of thyself for tacklin' one that never done harm to thee or thine. Now thee'd better try to get into the quiet whilst thee waits for thy folks to come to thee."

With this admonition he left him, and taking up his jacobstaff, led his horse along the path. Suddenly he came upon the bodies of the Indians who had been brought down by Josiah's bullets—one stark dead, the other at the last gasp—and stood still wondering at the ghastly sight. The other Indians were seized with a panic at the unexpected issue of the attack on the unarmed Quaker, following so quickly the fall of their comrades, and skulked away with all speed.

Josiah suspected this when no further attack was made on the surveyor, and when he displayed the lure of his empty hat crown very temptingly without drawing their fire was assured of it, and stepped forth from cover to congratulate his old acquaintance, Benjamin Ferris, who upon seeing him, but not yet recognizing him, asked, pointing to the dead Indians:

"Is this some of thy work?"

"Yes, an' a good job tew," Josiah answered, with some pride. "Both tu one shot."

"It's bloody work," said the surveyor, shaking his head. "I can't bear to look at it. Let's go away from here."

"It was that or my scalp, an' a young woman's an' four children."

"Maybe so, but thee'd better done as I done," the Quaker said, still shaking his head solemnly.

"You done well, Mr. Ferris, but if that divil's gun hedn't missed you never'd run another line."

"What! does thee know me? Why, I do believe thee's the young man that bought one of Nicholas' rights of land from somebody that didn't own it. Yes, and Hill's thy name. Well, I've just been up that way to do a little surveying, but everything is so unsettled, and there's nobody there but now and then a Tory; so I'm gettin' back to Oblong as fast as I can. But who did thee say is with thee?"

Josiah told him the sad story of the Torreys.

"Poor things! Poor things!" Benjamin sighed, with pitying eyes upon the orphans, and casting about for some way of helping them. "I'll tell thee what, Josiah, I'll take the young woman behind me—she's in the most danger—and the youngest gal afore me—she's the least able to go afoot—and get 'em inside our lines as quick as I can. I reckon our folks hold Manchester, and if they do I know a good woman there that'll take 'em in. Wheeler is her name, and she lives in the north end of the village, and thee can't miss her."

Josiah was loath to give up any part of his charge to another's care; but it seemed the wiser way; and so, sadly parting, Ruby and her little sister rode away with the good surveyor.

Josiah smashed the guns of the dead Indians, upon whose ghastly faces the children gazed with fascinated horror, each eager to see, and yet be furthest from them.

"See! See!" cried one, and Josiah's eyes followed the pointing finger just in time to see the Quaker's late adversary sneaking into the forest maze, stooping low with bound hands behind his back. The ranger's rifle instantaneously sought an aim, but failed to find it on the vanishing figure.

"Wal, go it, an' good reddance tu ye; but if I'd hed the handlin' on ye you'd be as harmless as your mates here."

He forthwith got his little troop on the march, and now encouraging the youngest by an hour's ride astride his shoulders, and giving the others a helping hand, he got beyond the advance of the enemy without further adventure, and at nightfall of the next day came to Manchester.

He had no trouble in finding the house to which Benjamin Ferris had directed him, where he also found that good man still tarrying with Ruby and her little sister. The one neat room was presided over by a brisk little brunette matron, whose dark eyes and ruddy cheeks looked familiar to Josiah.

"Oh-h-h!" she cried, after a long, intent look at the new-come guest. "It ees M'sieu Josi. An't you rem'ber Matilde—Pierre some tam? Dat is me, an' Mah Deek he was go wid de harmy. Ah 'ope 'ee come back to me an' hee's boy. See la petit Deek?" and she showed with pride a miniature counterpart of Dick Wheeler. "An' you, M'sieu Josi, was dat yo' famile?"

"No, but they're goin' tu be," said he. "Father an' mother both dead an' left 'em on my hands. I want tu leave 'em wi' you till I can captur' a pa'son or a square."

It's very proper you two should be married," said Benjamin. "And it's a pity you wa'n't members among Friends, an' so not be pestered with magistrates or hirelin' priests, but marry yourselves in the presence of your Heavenly Father, which seems most solemn, sensible, an' fittin' way."

But as this was not feasible, Josiah went out in quest of some one competent to perform the office, and found a clergyman, whom he brought forthwith to Matilde's house, when the ceremony was duly performed. Friend Ferris was greatly grieved that the strict discipline of his society would not permit him to be present at the marriage, and that he was obliged to stand out of doors during the ceremony; but he would peep in at the window.

So after this brief and unique courtship, Josiah Hill became, against his will, a married man; yet he never regretted it. When, many years later, he sat by her death bed in their Danvis home, he took her wrinkled hand in his own, and with unwonted tenderness he said:

"I hated the idee o' bein' merried, Ruby; but if I'd hunted the wide world over, I couldn't ha' faound a better womern 'an I got, for there hain't one in it faithfuller ner truer 'n what you've be'n."

And she answered, with love lighting her dimmed eyes: "You've allus be'n a good man tu me, father."

Natural History.

Andrew Downs, F. R. S., Zoologist.

BY CHARLES HALLOCK.

THE fairly good portrait of Andrew Downs which is presented with the accompanying sketch was made when he was in his seventy-ninth year, at which advanced age he was engaged in the construction of a museum annex for accumulated stuffed specimens and a new aviary for small living birds. Nevertheless, he was already feeling the weight and disabilities of added years, for he writes, Dec. 9, 1889, quite pathetically: "I don't suppose I can hold on much longer. I am not as young as I once was. This is a world of great beauty, and of very great distress. Life is too short to accomplish much in, and I will say with the poet,

"'If so soon we are done for,
I wonder what we were begun for?'"

Three years after this he passed away, on Aug. 26, 1892, lacking but one month of eighty-two years. He seemed to have overtaxed himself in installing a natural history exhibit for a provincial exposition the year before. He said then it would be his "last show." He was quite ill afterwards and unable to endure prolonged exertion, but was able to "be about" until within two days of his death. Like most scientists, he was a confessed agnostic. He writes: "I know nothing about any hereafter. My religion is that of humanity. The woods and lakes are my church." He was a native of New Jersey, but his relations were royalists, and he moved to Halifax, N. S., when he was fourteen years old, and he always claimed that the British Government was the best in the world.

Ornithology was his eclectic study. At the same time he was probably in his day the most intelligent curator and breeder of large American fauna known to history, for his charge included not only all varieties of the antlered tribe and bears, but many fur-bearing animals and rodents. He cultivated rare breeds of dogs, such as Scotch deerhounds, black Russian poodles, Pomeranians and Skye terriers. He tried the propagation of black foxes, but failed in the attempt to cross foxes with terriers. He exchanged with all the principal zoos of Europe and was collector at home or abroad with Chas. Waterton, the South American explorer; John J. Audubon, George A. Boardman, Spencer F. Baird, H. G. Torre, a Church of England clergyman who was tutor to Lord Faulkner's son; Thomas Blackiston, a Royal Engineer of the Crimean War; Col. Chearnley and Arthur Wm. Crichton, who was credited with the largest private natural history collection in England, especially of eggs. Sir William Thompson, naturalist of the famous Challenger expedition, said that he never saw Downs' work surpassed. From first to last his grounds, comprising 100 acres, have received many distinguished visitors. The Prince of Wales, one of the Bonapartes, Lady Faulkner, Sir Richard Grant and King Victor Emanuel's daughter were among his earliest patrons. For forty-five years Downs was widely known to men of science all over the world. He was a fellow or corresponding member of many natural history societies in Europe and America. There is hardly a museum in either hemisphere that does not contain specimens obtained from him. He has sent upward of one hundred moose heads and scores of entire specimens across the Atlantic. Many of these went to reigning sovereigns, of whom King Victor Emanuel showed himself foremost in zoological zeal. At one time the latter had in his Garden of Acclimatization, at Pisa, Italy, no less than twenty-five live specimens of moose and caribou, furnished by Downs. In 1864 he made a European tour, receiving multiplied courtesies from the nobility and the scientific associations, as well as the distinguished compliment from the Queen of England of a free passage across the Atlantic on one of Her Majesty's war vessels, on which occasion he carried with him fifty living specimens, two cases of stuffed birds and a stuffed moose which he presented to the London zoo, receiving some seventy specimens in exchange. And yet his modesty was always such that his name is hardly known outside of scientific circles, while his credentials lie folded away in a napkin. The light of the eminent naturalist's reputation has never shone upon that part of the benighted world which lies in shadow. Certes, there is one glory of the sun and another of the stars.

time, though he bridged that interval by educating the Downs started about a third of a century ahead of his time, though he bridged that inerval by educating the public up to his standard. He was contemporary with Audubon, but he worked in a different groove. While Audubon killed and stuffed and painted, he preserved and propagated. The one perpetuated the vraisemblance, the other the natural life. His abilities were duly recognized by the Central Park Commissioners, and in 1867 Andrew H. Green and Salem H. Wales were earnest in their wish to have him made superintendent of the animal collection, as the following letter attests in part:

Office of the Board of Commissioners of the Central Park, Bank of Commerce Building, 31 Nassau Street.—New York, Oct. 9, 1867.—My Dear Sir: Will you have the kindness to let me know whether you have written to Mr. Downs respecting the zoological matter, and what the prospect is of his coming this way? and much oblige yours very truly,

AND. H. GREEN.

To Chas. Hallock, Esq.

Prof. Baird warmly indorsed Downs for the position, declaring that no one was more competent. But a hitch occurred along the line of negotiation, and the proposal went off. Downs was so confident of the appointment that he actually broke up at Halifax and moved his family to New York, expecting to be installed forthwith. This movement, it appears, was premature, or "too previous," as it were, and the bottom fell out. Mr. W. A. Conklin got the appointment. Downs was obviously short on official etiquette.

Downs founded his zoological garden at Halifax in 1847. It was not until 1863 that the animal collection in Central Park, New York, was opened to the public. The Philadelphia Garden opened its gates in 1874, although the society was incorporated in 1850. The Cincinnati Zoo opened in 1875; the St. Louis Zoo in 1877, and the Lincoln Park Garden, in Chicago, in 1881. Woodward's Aquarium, in San Francisco, was opened, I think, in 1876, though this was not technically a zoological garden, and a small affair was started in Detroit in the latter part of the summer of 1883, but it failed to pay and was abandoned in August, 1884. For several years a sort of menagerie annex to the Smithsonian Institution was maintained at Washington, D. C., which formed the nucleus for the magnificent zoo established in 1890 at Rock Creek, now constituting by long odds the finest site in the world, having nearly four times the area of the largest garden, and comprising advantages of natural environment such as exist nowhere else within corporate limits. The final culmination in this direction, we all know, is the inimitable Bronx Park, in New York, established in 1896, of which Wm. T. Hornaday is managing director and presiding genius. Hornaday was formerly in charge of the Smithsonian animal collection, and as practical taxidermist there mounted the principal groups in the National Museum.

My acquaintance with Downs was intimate thirty years ago, and it is a great pleasure to me now, at this late day, when the kind old naturalist has passed into Cimmerian darkness, as it were, to turn the searching calcium upon his lethean seclusion and call upon the enlightened world to recognize and honor his works. To this end I wrote recently to Director Hornaday that I had a framed group of sketches of suggestive parts of Downs' premises, taken in 1864, which I begged him to hang up in one of his spacious bird or animal houses at Bronx Park. All I expected was just a bit of wall space 30x30in., and photos, you know don't eat. And this is the reply he made, literatim:

"Since Downs' establishment has never attained any historical importance, and very few Americans have ever heard of it, I hardly think it worth while for us to accept the pictures and try to exhibit them."

Did the astute director imagine that I wished to use these photos as an advertising card for a Nova Scotia syndicate? Downs' methods of caring for his moose, beaver, seals, hawks, caribou, pheasants, ducks and what not were unique and on common sense lines. Most of these were not caged closely, but were placed in environment as nearly as possible to natural habitat, and the illustrations which I offered will instruct more, as object lessons, than a column of written description, which I could give you on request. I am sorry that Downs is too obscure to engage that attention at Bronx Park which I would bespeak for him; but men of eminence have different ideas. A good deal depends upon the structure of the eye and the standard of estimation. To a man up in a balloon the whole earth looks flat.

Poison Oak or Ivy.

CARTHAGE, O.—*Editor Forest and Stream:* In Henry Talbott's article in a recent number of "our paper," allusion is made of a case of poisoning by that frequenter of good camp sites, and I am moved to give to the readers of FOREST AND STREAM a simple and efficacious remedy which is almost always to be found in any vicinity where poison oak abounds.

An old and esteemed friend, as well as genial hunting and fishing comrade, who is now in the seventies, is still, and has been since graduating in early life, a practicing physician of note, following the profession of his father, told me years ago that his father learned from an old Indian that a plant commonly known as the "ragged milk weed," cut fresh during camping time, or cut when in the milk and dried, was an infallible and quick remedy. It is cut up in small pieces and steeped in a little water and the decoction used to bathe the affected parts. A few applications effect a cure, and the itching is at once relieved.

Being myself an "immune," I never had occasion to use it except upon others. On two occasions camping friends were poisoned, and I at once instituted a hunt for the serrated leafed antidote (whose botanical name I do not know), and having found it, I prepared it in a discarded fruit can, and as soon as cool enough had the parties use it, and the result was simply astonishing. By this mail I send you a stalk of the herb, cut in full milk, and before the top had branched into several outshoots for blossoming. Perhaps you can give its botanical name.

E. S. WHITAKER.

[We are unable to identify the plant from the specimen sent. Will our correspondent kindly send us a carefully pressed leaf, and if possible the flower.]

MR. ERNEST SETON THOMPSON recommends the brook balsam, jewel weed, or spotted touch-me-not (*Impatiens fulva* of botanists). The flowers are orange spotted with reddish brown. Its seed vessels explode when touched, hence its name. It is abundant along brook sides in the summer, and its succulent stems and leaves, when crushed and applied as a poultice to the poisoned spots, allay and finally cure the malady.

Wolf Puppies at Rest.

THE beautiful photograph of the litter of wolf puppies at rest we owe to the kindness of Mr. Arthur Erwin Brown, superintendent of the Philadelphia Zoological Society. The animals are young gray wolves, bred in that society's gardens April 2, 1899, and the picture was taken by assistant superintendent R. D. Carson on May 27, the pups being then fifty-five days old. When the general difficulties of taking such a picture are considered, and also the inherent restlessness which abides in young wolves, the picture result which we publish will appear a triumph of photographic art. The wolves are resting at the mouth of their den in the gardens, but for all that the picture shows they might be sleeping on the walls of some rocky cañon of the far-distant mountains of the West.

WOLF PUPPIES IN THE PHILADELPHIA ZOO.

The Song of the Wood Thrush.

Editor Forest and Stream:

Some time ago there appeared in FOREST AND STREAM an article that made the claim that birds and other animals do not educate their young. I have mislaid the paper, but if my memory is correct the writer claimed that young animals finding themselves endowed with certain powers exercise such powers without parental assistance.

To contradict this claim I desire to call to the attention of all FOREST AND STREAM readers the wood thrush's singing school, established solely for the purpose of teaching young thrushes how to sing. I hope every one who has the opportunity will go into the wods and ascertain if my version is the true one.

Find a family of wood thrushes and carefully note what takes place. The old male thrush will sing the sweet song in loud, clear, flute-like notes once, and then stop to listen while the young birds try to imitate the song. Some will utter one note, some two. Some will utter a hoarse note, others a sharp note. After a while they seem to forget their lesson and drop out one by one. When all are silent the old thrush tunes up again, and the young thrushes repeat their efforts, and so it goes on for hours.

The young birds do not acquire the full song the first year; so the lessons are repeated the following spring.

I take many visitors into the woods to enjoy the first thrushes' singing school, and all are convinced that the song of the wood thrush is a matter of education pure and simple.

Try it, friends, and report results in FOREST AND STREAM. HERMIT.

How Underbrush Occurs in Forests.

IT is remarkable to relate that the tangled woods of Maine were once so free from underbrush that Mr. Lincoln, the lord proprietor and patentee of Nos. 1 and 2, says that he could ride in 1786 and for fifteen years afterward through them on horseback all over this region, which is included in Washington county. But after that year the hackmatack trees first, then the hemlock, and next the spruces, were attacked by an insect which cut down the trees. In a few years the ground was strewn with the fallen trunks, and the woods became impassable." Moose were astonishingly numerous then, but the Indians nearly exterminated them through jealousy of the intruding white settlers. One single family, it is stated, killed over 400 in one winter. Their hides and tallow only were utilized. Nevertheless moose are as abundant to-day as they were then. Probably no species of animal propagates more abundantly than moose do when amply protected. CHARLES HALLOCK.

DENNYSVILLE, Me.

Mother Love of the Whale.

IN connection with the reference, in his story on another page, to the pursuit of the cow whales, Tarpon says: The mother love of the parent is taken advantage of by the whalemen. She will never leave her young while it is alive, and will not even make a violent movement for fear of hurting her calf. The harpooner will try to fasten to the calf without killing it; this once accomplished, the cow can be dealt with at leisure.

Game Bag and Gun.

On the Pickerel Hills.

I PUT in my twelfth season last fall deer hunting in northern Ontario and my fourth among the rocky ridges through which the Pickerel River runs and which the old settlers in that part of the Parry Sound District call the Pickerel Hills.

The open season for deer in Ontario lasts only fifteen days, from Nov. 1 to 15, both days inclusive, and as I wanted a longer outing, being run down by confinement in my office, I arranged to go up ahead of the other members of my party for some ruffed grouse shooting and to board at the house of Carl Lorenze, a German settler who lives six miles from our camping ground and is our nearest neighbor. We have stored the bulk of our camping outfit with him from season to season, and his sons have done our teaming.

I left home on a Grand Trunk Railway train at 9 A. M. on Oct. 17, reached Burk's Falls at 6 P. M., put up at a hotel over night, boarded a steamer at 7 next morning for a forty-mile trip down the Magnetawan River and across Lakes Cecebe and Ahmic to Ahmic Harbor. There I disembarked and found Bob Lorenze, one of the settler's sons, waiting for me with a lumber wagon, in which, after dinner at a hotel, we journeyed seventeen miles to his home, which we reached about 6:30 P. M. We did the last two or three miles through a heavy rain and pitchy darkness, the horses apparently finding their way by instinct. Those who have traveled the rocky roads of Muskoka and Parry Sound can imagine what a relief it was to see the lights in the Lorenze clearing and hear "the watch dog's honest bark." We received a hearty welcome from the old couple, and the horses having been unhitched and stabled and quarters found for my pointer bitch, Spot, in a cow house, we sat down to tea in the settler's dwelling, a comfortable log building, kept very tidy by Frau Lorenze. I turned in early, sleeping German fashion between two feather ticks, and I slept like a top.

The weather was fine next morning, and I set out with Spot for the birds. I found them fairly plentiful, and though nearly always alone throughout the day, I enjoyed myself greatly up to the time when the other members of my party arrived, Spot's good work adding to my enjoyment. My largest bag for one day was twelve birds. I reached that figure twice, and my total was fifty-seven, which were hung up in a cool building to remain until I was ready to go home.

In the evenings the old man entertained me with reminiscences of his career in the German army. He served in the rebellion of 1848, the Austro-Prussian war of 1866 and the Franco-German of 1870. In the last, as he was with the Landsturm, he did not smell powder, but in "saxty-sax" he did so with a vengeance, as he fought at Sadowa and Konnigratz. Though a particularly intelligent old man, and though eleven years in Canada, his English, on account of his home in the bush being so isolated, was very broken, and he and I conversed under difficulties, except when Bob was present to interpret for us. The old lady's English was equally defective, but her housekeeping was all right. She, her husband and son spared no pains to make my stay with them agreeable, and they succeeded. I felt thoroughly at home, and considered myself fortunate in being their guest. On Saturday, Oct. 29, the other five members of my party landed at Ahmic Harbor, where Charley Lorenze, the old couple's eldest son, who is married and lives near his parents, met them with a team, and they joined me late in the evening. They were Ed Saunders, John Pirie, George Gastle, Fred Wales and my son Kenneth. The two first named had hunted with me during a good many seasons. Kenneth had been with us twice, and Wales once. Gastle was a new member, but an experienced hunter. The boys brought with them four beagles and an old foxhound no faster than a beagle.

On Monday morning we were at our old quarters, a deserted lumber camp about a mile from the river, but finding the buildings all burnt down, we pitched our tent. This was large enough to accommodate us, but we decided to go in for something more commodious and comfortable, and build ourselves a permanent log camp.

There was a salt lick at the old lumber camp, formed by the emptying of brine from salt meat into a slough, and there were similar licks at two other old camps, one two and the other four miles away, on the cadge road which connected the three. All were great resorts for deer earlier in the season, and the Lorenze brothers informed us were visited from time to time every summer in quest of deer by Italian settlers who lived ten miles away on the other side of the river, and who, apparently, had burnt down the buildings, perhaps accidentally, or just as likely to prevent us from occupying them. The Italians seldom or never left the roads and camps on their summer hunting trips, according to the boys, and the latter advised us to build our camp in the thick bush where the Dagoes would not be likely to see it. We soon found a suitable site, about half a mile from the old camp and close by a log road running from it to the river. There were plenty of spruce and hemlock trees to conceal it and timber to build it, including cedar for the roof.

The four foundation logs inclosed a space of 12 by 14ft., and the walls completed we put on a roof of cedar troughs. Cedar logs, averaging about a foot in diameter or perhaps a little less, were split into halves, scooped out to form troughs, one lot laid scooped side up and another scooped side down, the crack between each pair of the former being covered by one of the latter. The roof, when completed, was solid, durable and watertight. All chinks in it and in the walls were filled with swamp moss, jammed in as tightly as possible. Three double bunks were put up against one wall, a dining table made of boards carried from the old camp, a cupboard out of packing boxes, and our sheet iron stove was moved from the tent and put up.

The result was a big improvement on our tent. One objection to a tent in the deer hunt season is the difficulty about hanging up wet clothes to dry, which one needs to do nearly every night. There was plenty of room on our shanty walls for clothes, cooking utensils and anything else that we wanted to hang up.

Though our building operations encroached on the two first days of the hunting season, we stuck to them until everything was satisfactory, for we knew that there were plenty of deer, were confident of killing our allowance, and we looked forward to having comfortable quarters and less camp work during future seasons.

We began to hunt on Thursday, Nov. 3, when we let loose a couple of beagles, but we had no luck, getting no chances except at fawns, which are always exempt in our party. Friday morning was a repetition of Thursday, and in the evening I struck out alone for a still-hunt, which I greatly prefer to hounding. I made for a large beaver meadow about two miles from our camp and close to the cadge road, and on reaching it began to circle around it. The conditions were favorable. There was no snow, but recent rains had moistened the fallen leaves, and I was able to move pretty noiselessly.

Just as the light began to fail I climbed a high ridge overlooking a narrow neck of shallow water and beaver grass which opened into the main meadow some distance beyond. I followed the top of the ridge some distance toward the meadow, stopping every few yards and watching. My experience in still-hunting has been that I have got most of my best chances when standing, and that the great majority of the deer that I have sighted when moving have showed me nothing but their flags.

In this case, while I was standing, a huge buck appeared, walking across the neck about 100yds. away. I aimed behind his shoulder and fired. Though I was pretty certain that I had held straight, he did not make the plunge that I expected if I hit him. Neither did he stand as he might have done if I had missed him, but he moved off, straight away and not very fast. I fired a second shot and he stopped. I felt pretty sure that he would not go much further, but to make sure of him and spoil as little meat as possible, I fired at the back of his neck and he dropped without a kick, falling on his belly with his flag still erect. On going up to him I found that my first ball had struck where I aimed, my second had broken one of his hind legs at the gambrel and my third had gone into the back of his big bull neck, but though my rifle was a .45-90 Winchester, had not gone through. He weighed 221lbs. dressed, and he had a grand head, for though his antlers had only eight points they were particularly large, heavy and symmetrical. I found it impossible to hang him up unaided, but after removing his inwards I raised his hindquarters as high as I could with the aid of a bent sapling, and as I intended to go back to him with help that same evening, I blazed my way out to the road and made for camp. It was very dark when I got there and tea was just ready, but after the meal Pirie, Wales, Kenneth and I went back with a lantern, found and managed to follow the blaze, hung up the buck and were in camp again by 10 o'clock.

Next day, Saturday, it rained hard, and we all went still-hunting. The luck was with me again. I was standing on the edge of a swamp, looking into it, when a spike horn buck walked into view about 40yds. away, and I dropped him with a ball through his shoulders.

On Monday morning we put out a couple of dogs, and Gastle shot a doe ahead of them. After the run was over, Saunders went for a still-hunt near where I had shot the spike horn buck. As he was crossing the swamp he stopped for a look and saw a very large buck about 80yds. away, walking straight toward him, and settled him with one shot, the ball striking at the base of the neck and ranging back. This buck was, as nearly as possible, a mate for mine, being only a few pounds lighter and having an eight-point head and very heavy antlers, but unfortunately the symmetry of the latter had been spoiled by the breaking off of one point, probably in a fight.

On Tuesday morning we had a hunt with a pair of beagles in the neighborhood of Saunders' buck, having arranged to wind up by carrying it out to the cadge road. Gastle increased our contract by killing another buck, weighing about 150lbs., which was scared into his vicinity by the dogs as they were running a fawn, which was allowed to escape. Gastle's first shot broke the buck's back close behind the shoulders and paralyzed the hindquarters, but another shot through the head was necessary to put the animal out of pain. The remainder of the day was spent in carrying the deer out on handbarrows of poles and ropes and hanging them up along the road ready for collection by the Lorenze boys with their lumber wagon. We never bring any deer into our Pickerel River camp unless they are killed close to it. They are quite safe anywhere as long as the ravens keep away from them, and if there appears to be any danger of them, they are easily kept away by making small flags with pocket handkerchiefs and placing them above the deer. This has never failed with us, no matter how numerous the ravens have been, and there are always plenty of them in the Parry Sound and Muskoka bush.

Saunders scored again next morning, when he made what he called the biggest fluke on record. He was standing at one end of the beaver meadow which I have mentioned, when a doe crossed the opposite end about 350 to 400yds. away. She was not going fast, and five shots which Ed fired at her did not appear to hurry her. He had just refilled his magazine, when he saw a buck following the doe's track and going at a good speed. Ed fired three shots at him, holding well above and ahead of him, and was astonished to see him drop after going about 40 or 50yds. The ball had passed through behind the shoulders. This buck weighed 160lbs. dressed.

Next day we crossed the river for a still-hunt around the edges of a burnt area covering several square miles, but the frost of the night had been too hard, the walking was noisy, and though we saw no less than twenty-two deer among us, in nearly every case we merely saw their flags, and we got none of them. Kenneth fired at a doe which was running about 150yds. away on the burnt rocks and wounded her, but though she bled a good deal and he and I followed her for an hour or two, we never sighted her.

On Thursday Wales shot a buck about the same size as Gastle's, and in very much the same way, and two more does were bagged by the end of the week.

On Monday the conditions were not favorable, and we had no luck.

Tuesday was our last day of the season, and we were three deer short of our limit of two each. We crossed the river, bringing a brace of beagles with us. Kenneth, who had not killed a deer so far and was somewhat discouraged, struck luck at last. He followed the edge of the burnt area, and as the dogs had gone in another direction took to still-hunting. He climbed to the top of a high burnt ridge and lay down on a flat rock, from which he could see a long way up a gully through which a small creek ran, and in which the trees had escaped the fire. He had not been there long when he saw a large deer feeding about 200yds. away in the edge of the green bush. He could not, on account of the distance, see whether it had horns or not, but as the deer's side was toward him and he had practically a dead rest, the chance was a good one, and he aimed just above the shoulder and fired. The deer staggered off and went about 50yds. before it fell, the boy firing six more shots as it went. Gastle and I heard the shooting, followed by shouting, and concluding that a large deer had been killed and that help was wanted, we made for the spot. Sure enough, Kenneth had a fine buck, the third largest of the hunt, weighing 185lbs. dressed, and having a fine eight-point head. Kenneth's first shot had gone through the base of the neck, another through a foreleg, a little above the knee, and a third had grazed the brisket. The other four had missed.

Having hung up the buck, we separated, managing to meet again at 3 P. M., and carry him out. Shortly afterward John Perie, who had also been in hard luck, jumped a fair sized buck with a six-point head and fired at him as he was runnig straight away about 50yds. off. The ball struck at the root of the deer's tail and ran some distance up his spine, and there was no need for a second shot. Saunders was within hail and helped to hang up the carcass.

Nothing more happened until Gastle, Kenneth and I met as arranged at 3 P. M., to bring out Kenneth's buck, Pirie and Saunders having undertaken to look after the other one. We took the deer down and had dragged it about 200yds. along the low ground by the creek, when we heard the dogs coming, dropped the rope and separated, but had not time to get far apart when a very large doe, followed by two fawns, ran along the top of a rock not more than 20yds. from Kenneth, who fired twice, his first ball going through behind the shoulders and his second entering the head from the back of the neck, dropping the doe in her tracks. We had her hung up within a short time, and found that we had our hands full, for it was some distance to the road and still further to the river. However, we rigged up a handbarrow and Pirie and Wales coming to our assistance after about an hour or so, we had the buck across the river before dark. Wales and Kenneth carried out the doe early next morning. The Lorenze boys, who had come a few days before with their lumber wagon and had taken a load of our deer to Ahmic Harbor, turned up again in the forenoon. A couple of the members of our party helped them to collect the balance of our deer, while the rest packed up our camping outfit, which was loaded on the wagon after dinner. We reached Lorenze clearing before dark, put up there for the night, left before daylight next morning for Ahmic Harbor, got there before dinner time, took the boat a little later, arrived at Burk's Falls in due time, boarded a G. T. R. train, traveled all night and reached home next morning.

W. P.

Potomac Reed Birds and Sora.

WASHINGTON, D. C.—Congress at its last session passed an amendment to the game laws which, among other things, provided that the season open in the District of Columbia for these birds on Aug. 20 instead of Sept. 1 as heretofore, and that shooting should be legal only on Tuesdays, Thursdays and Saturdays during the open season.

As the 20th fell on Sunday, Tuesday, the 22d, was opening day, and the Eastern Branch Marsh had its usual complement of hunters, some who never miss a first day and some who had never been before. It is almost useless for a tyro to attempt to use a gunning skiff on these marshes at the beginning of the season. It takes a professional to judge the tide, to know the likely places and to pole a boat through the tangle of wild oats, cattail and sedge the first time. The oats stand high above the gunner's head in many places, and until they are broken down by winds and tides, by birds and boats, it is no joke to get the boat through.

There were not many birds as yet, though for two weeks before they could be heard passing over every night. The small return for the hard work and expense has led to some grumbling among the unthinking against the new law, as opening the season too early, but the complaint is groundless, and the chances are it will not be changed without further trial. Heretofore the opening was considered too late, as poachers were supposed to play havoc before the law-abiding citizen had any chance. This was not true last year, thanks to the precautions of Chief of Police Sylvester, the warden of the Game and Fish Protective Association of the District; but if the birds do not arrive till after Aug. 20 legitimate sportsmen will be sure to have equal opportunity with the poachers, and it will not be more destructive to the game if the game is not here.

But the responsibility for no shooting this year on opening day rests elsewhere than with the law, and that is with St. Swithin. It rained on his day, July 15, which is supposed to bring forty days and nights of deluge. It has not been quite so bad as promised, but it has been an unusual season of showers for this locality, and without the August drouth. The consequence is the wild oats on which the birds feed is still very green, and they can get no good of it, and they will not come in any great numbers till they can. Another season, with the oats ripened early the birds will be here all right on the first day. There are practically no birds yet on the Virginia marshes, but a week's sunshine and one cold night will bring them in plenty.

The law is all right, and the alternate days will be good for both birds and hunters.

HENRY TALBOTT.

Partridge and Woodcock.

SMITHVILLE FLATS, N. Y.—Partridge and woodcock are more numerous this year than they have been for a dozen years. A man acquainted with the country can put up from fifty to one hundred birds in a day's hunt.

G. P. FINNIGAN.

CHICAGO AND THE WEST.

The Chicken Season.

CHICAGO, Ill., Aug. 26.—The chicken season comes on as the fishing season draws to a close. Of the two sports, shooting and angling, I presume the latter will have the longer life in the Western country. Our better fishing waters seem to hold their own much better than the shooting covers, which once had a reputation. Nowadays if you ask a shooter where he is going after chickens, his face will wear one of two expressions. He will either look blank or he will look cunning! Probably he does not know where he can be sure of getting some sport on chickens, but if he does he is apt to prefer to tell you about it after he has come back. I do not think there is in the West to-day any extended stretch of country which can be truthfully called a safe and practical chicken region. To-day the sport comes in patches, here and there, as there happens to be a few coveys which have been overlooked, a few farms which have been protected, or a region which has been shot down so close as to be abandoned, and which has hence had time to recover itself. Of course there will be some large bags of chickens made in the Dakotas and in Minnesota. I should consider that the crop in those States this year, from all reports I can obtain, is fully as good as it was last year. I am told that northwestern Iowa is good this fall. From Nebraska and Kansas I have not heard sufficiently to form an opinion. Illinois will as usual furnish some sport here and there, in localities which have been carefully protected. Lower Wisconsin, more especially that part of the State where the hardwood begins to touch the pine belt, and where the farms are crowding into the marshes and woods, is for this year, as it has been for several years, very well worth watching. I have a quiet tip that Babcock, Wis., on the Milwaukee & St. Paul road, can this year show a few birds, and I know of one or two parties who are going in there on the first of September. I am asked to join a party there, and may get out for a day's shooting on opening day at this point. From Babcock on west across the State there are some birds scattered here and there, but it is risky business to name any definite points, for one does not like to send inquirers into a country which has been devasted by sooners. There is something peculiar about the prairie chicken. A man will wait until the opening of the duck season, and he would lose caste even among fellow criminals if he shot quail before the law was out, but over a great part of the chicken country the offense of early illegal shooting is winked at and condoned. It is difficult to explain this fact, but it is true, and owing to its truth it is a very risky matter to attempt in these days to name any locality which is sure of offering good sport on prairie chickens. To be sure, one can go to such points as Fargo, N. D.; Pembina, N. D.; Hallock, Minn., and depend on getting directions there for fairly decent chicken shooting. He could do as well by going to Ruthven, Ia.; Algona, Ia.; Emmetsburg, Ia., or other points in the natural chicken country. For those asking for territory where they can be reasonably sure of sport on this game bird, the best advice, and really about only the practical advice, is to go out to some point, in the best chicken region, and there get local advice for the hunt. The time is coming very rapidly when the twenty-five birds a day limit will not be necessary in any State law, for it will rarely be the case that one will kill so many birds as that in any one day. Yet he can have sport in killing a dozen birds, if he hunts in September in a cornfield country. The prairie chicken is becoming educated, and is a warier bird to-day than he was twenty years ago.

Col. C. E. Felton, of this city, leaves next week for a chicken shooting trip near Springfield, S. D., and I am sure I hope he will have good success. Col. Felton is one of our best known Chicago sportsmen. He is sixty-eight years of age, and gets younger every year. "I am sorry to see the FOREST AND STREAM take up this idea of shooting licenses," said he to-day. "The license idea is all wrong. You sporting newspapers have killed off all the game in the country, and now you want to fix it so we have to pay a big license to get even a little shooting at what game there is left." "Are you going to pay your license out in Dakota?" I asked Col. Felton, and he replied, "Of course I am, and I am going to respect the twenty-five birds a day limit. If you see any communication coming in about some one killing 125 birds a day you will know that I wrote it, but only in my character as a sporting writer. I am president of the local branch of the Ananias Club."

A Few Sooners.

Chas. Van Drew, residing near Sterling, Ill., was this week fined $15 by Justice Weaver, of that city. Mr. Van Drew was seen to discharge his gun toward some prairie chickens, and was fined for trying to kill them. I would hate awfully to be fined for shooting chickens if I couldn't hit them, and this same view seems to have been taken by the justice, who remitted the fine. Mr. Van Drew should practice a little before going after game.

At New Ulm, Minn. (which in Minnesota is pronounced "Ny Ullum"), Mr. Gust. Brandt, son of the publisher of the Fortschritt, was arrested last Monday by Warden Geiger, who found five prairie chickens on his person. Justice Hennigsen fined Brandt $53, and did not remit the fine. A great deal of previous shooting has been going on for some time in that part of the country, but this is the first arrest up to this time, proof being difficult to secure.

Quail.

As the prairie chicken disappears the quail may fairly be said to increase, in spite of all the enemies it has to encounter. In Minnesota the quail is abundant this fall as far north as St. Paul. It is more generally abundant in Iowa than it was in the time of my boyhood. In Wisconsin it is doing very well, and in Michigan it is marching steadily northward in great numbers. Illinois never had a better quail crop than she has this fall, and I think the same is practically true of Indiana, where the conditions are nearly identical.

Woodcock.

One of the best woodcock grounds in the West is along the Mississippi River bottoms, above La Crosse, more especially in the low grounds near Trempeleau. There is good woodcock country also down the river from La Crosse. If any sportsman will write to Asher Spicer at La Crosse, the latter will take him out, and I think will give him a little shooting on woodcock, as he is thoroughly posted in that country.

The Kankakee River in Indiana is of course a good woodcock country, but we do not hear of very many bags of woodcock made there nowadays. The fact that we do not hear of them has nothing to do with the fact that they are made. The early woodcock and the early wood duck are still considered legitimate sources of revenue for quite a class of population, resident and non-resident, who hunt in Indiana.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

The Sultan of Johore and His Tiger.

WHEN a young Sultan goes a-tigering in the jungle and gets the striped pig-thief, he deserves to see his picture in print. We copy it from the London Illustrated Sporting and Dramatic News, which says of him: The young Sultan of Johore is distinguishing himself as a shikari. A well-built and manly young fellow, His Highness frequently goes on big game expeditions on foot, and depending almost entirely on his own skill with the rifle.

THE SULTAN OF JOHORE AND HIS TIGER.

Our illustration shows the Sultan standing behind his latest kill, a magnificent full-grown tiger. The beast had been after a Chinaman's pigs at a place about a couple of miles from the palace at Johore (the south of the mainland of the Malay Peninsula, and only fifteen miles from Singapore). The Sultan went after him and turned him out of some jungle about 30yds. off, his first shot breaking the spine and his second piercing the skull. The Malays are naturally very proud of their plucky young sovereign.

Canadian Game Export.

BY Customs Department Memorandum No. 1063 B, dated Aug. 16, 1899, deer killed by sportsmen may be exported under the following conditions, the term deer comprising deer, caribou and moose:

The deer may be exported only at the customs ports of Halifax, Yarmouth, Macadam Junction, Quebec, Montreal, Ottawa, Kingston, Niagara Falls, Fort Erie, Windsor, Sault Ste. Marie, Port Arthur and such other ports as shall from time to time by the Minister of Customs be designated for the export of deer.

The exportation of deer in the carcass or parts thereof (except as to cured deer heads and hides of deer) shall be permitted only during or within fifteen days after the open season.

No person shall in one pear export more than the whole or parts of two deer, nor shall exportation of such deer be made by the same person on more than two occasions during one calendar year. A non-resident exporter must show his license to the collector of customs.

Nova Scotia Moose.

I AM sending you a short article about Nova Scotia as a hunting ground, because I know FOREST AND STREAM has the largest number of readers among the sportsmen. My particular object is to bring to the notice of sportsmen the fact that we have the best hunting grounds for moose in North America. I have been in the woods for ten or twelve years every fall. With your kind permission I shall give our American (we are all Americans) United States sporting men some idea of how they may reach the greatest moose grounds on this continent.

Sportsmen can leave New York or Boston and be on the hunting grounds in two or three days—we shall say three days at the outside.

There are different routes: The all rail, the Plant steamship line, the Yarmouth steamship line, all of which leave Boston directly for Nova Scotia.

In purchasing tickets, I should advise buying a return ticket on either of these routes for New Glasgow, which will be the same price as if purchased to Eureka Junction, Nova Scotia.

Arriving at Eureka Junction on the Intercolonial Railway, the sportsman will change cars and take the train going over the Nova Scotia Steel Company's road to Sunny Brae, where, after a beautiful drive through ten miles of fascinating scenery, he will arrive at the West River, St. Mary's. Here the sportsman can make his headquarters at the Pictou House, kept by the ever-obliging Mr. Angus McDonald. Arriving at St. Mary's the guide will have to be looked up, for I should advise all sportsmen to secure a guide before he leaves home.

The West River of St. Mary's is beautifully situated, with high hills on either side. Here, in the woods over the mountains, on the flatlands, which are dotted with beautiful large lakes, is the home of the moose. These animals have a vast extent of territory, but it will not be unlikely that with a good guide the hunter will not be many days in fetching down the king of the forest. The season opens in Nova Scotia Oct. 1. The time will quickly arrive. The prospects were never better than this fall. I am told that moose have frequently been seen dashing across the path of prospectors during the past few weeks.

There are several good callers, but probably the man who was most successful in bringing up a moose in the past years is Mr. David Smith, of Smithfield, West River, St. Mary's, Guysboro county, Nova Scotia. He is a man who has been trusted in every particular, and if Dave cannot get a moose no other need try.

I feel confident that if sporting men in the New England States would give the hunting grounds of Nova Scotia a fair trial they would not go home disappointed.

K. M. S.

Vermont Law Enforcement.

NORTH FERRISBURGH, Vt., Aug. 18.—*Editor Forest and Stream:* Last Wednesday night the Burlington Free Press reports: "Wednesday night Deputy State Warden Ramsey (better known in Ripton and Rutland as the 'Tramp Warden,' from the fact that some of the officers of those places some time ago came near arresting him for a tramp while he was working up cases there), arrived at Vergennes from Little Otter Creek with two distinguished prisoners—Dr. Henry Furman, of Malone, N. Y., a former Vermonter, who is also an expert on insanity cases, and who figured in the Mildred Brewster case, and Rev. Andrew U. Ogilvie, of Elkhart, Ind., formerly chaplain of the State prison at Windsor, whom he caught in the early evening engaged in breaking the game laws of the State by shooting ducks out of season, and in whose possession he found one duck as the result of their united skill. They were brought before Justice Moulton and pleaded guilty, and were fined $10 apiece and costs, amounting to $28.17.

"It is a shame that such men are so unprincipled as to break the laws of the State. The sentiment of every law-abiding citizen that such conduct, especially by one of the cloth, who of all men should carefully avoid conduct so much at variance with his profession, is severely denounced. The humorous side of this disreputable affair came out when the doctor and the reverend gentleman bought back the duck, which was 'only a little one,' paying for it 25 cents."

This is the first arrest made for illegal shooting on the Little Otter which has come to my notice, and Warden Ramsey is to be congratulated on convicting these sooners.

If a little more such work was done here that class of campers who camp along the shores of Lake Champlain and decorate the shade trees in front of their camps with the pelts of minks and other fur-bearing animals killed in July and August and sneak in on the flocks of young ducks, just a little sooner than is legal, would soon conclude to respect our State laws or stay at home.

Messrs. Furman and Ogilvie have no doubt come to the conclusion that Vermont ducks are a little high, but the better class of shooters here feel they have paid little enough for their game, and got a free advertisement in our leading local dailies thrown in.

FERRIS.

West Virginia.

WARDENSVILLE, W. Va., Aug. 23.—The hunting season is coming on. We have plenty deer, turkeys, pheasants and quail. Black bass and trout in season. Capon River is a beautiful stream.

T. B. W.

The Choristers.

[From the Philadelphia North American.]

THERE'S a little band of singers
Every evening comes and lingers
'Neath the window of my cottage in the trees;
And with dark they raise their voices,
While the gathering night rejoices,
And the leaves join in the chorus with the breeze.

Then the twinkling stars come out
To enjoy the merry rout,
And the squirrels range themselves upon a log;
And the fireflies furnish light,
That they read their notes aright—
The katydid, the cricket and the frog.

All the night I hear them singing;
Through my head their tunes are ringing—
Strains of music straight from Mother Nature's heart;
Now the katydid and cricket,
From the deep of yonder thicket;
Then the croaking frog off yonder drones his part.

By and by the moon appears,
As the midnight hour nears,
And her smiles dispel the low'ring mist and fog;
Then the mirth is at its height,
And they glorify the night—
The katydid, the cricket and the frog.

DON'T SHOOT

until you SEE your deer—and see that it is a deer and not a man.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in Forest and Stream.

In the New Dominion.

The years 1897 and 1898 were wet years, and the people grumbled because there was not enough fair weather to cure their hay; but it takes such a year as this to bring them to their senses, and long for the rains they despised. The poor fish are faring badly. The West Fork of Greenbrier River stinks with the dead brook trout, and on the smaller streams are signs of where harpies have drained the pools and taken the trout by wholsale. This season bids fair to undo the good work of the wet years in stocking the streams.

Pocahontas county will soon be open to the world, for a thousand laborers are at work building a railroad along the banks of the once sequestered Greenbrier River, and we fear the worst. The railroad hands have always dynamite at hand, and are desperate characters. They commit the unpardonable sin of dynamiting the fish. The work has just commenced, but the dull boom of dynamite has already been heard after dark, when we know that it it not used for any legitimate purpose. The new road follows the bank of the river for ninety-eight miles, and is to be built within a year. We hope that enough bass will creep in the safe places in the rocks and escape to restock the stream. This railroad development is sudden and unexpected, and very welcome in every way except hunting and fishing, as we are all glad down to the bottom of our souls that we are going to have a railroad. As much as we delight in hunting and fishing, we who have to work for a living must hold that "sport is of our life a thing apart, and not our whole existence," to paraphrase a familiar quotation.

A part of the development of the Greenbrier Valley which set the fishermen to objecting was the establishing an unusually large pulp mill about forty miles from the mouth of the river. The fishermen and a small town which took its drinking water from the Greenbrier protested vigorously, and threatened to apply for an injunction, that vague, formless, paralyzing influence of courts; and behold! the company pulled up the stakes it had set for thirty-seven acres of buildings and crossed the divide into Virginia, to pollute the headwaters of the noble James, and those few devoted fishermen and waterworkers were the cause—or at least the pretext—for moving, and they have been the subject of as much abuse and vituperation as ever was heaped on the heads of a few offending mortals. And now, when the would-be fisherman fishes all day in the Greenbrier without getting a nibble—and their name is legion—he thinks about that protest, and his soul boils within him, and he says, "And it was for this that Virginia instead of West Virginia secured the biggest pulp mill in the world," and goes home and writes to the papers about it.

I think myself the objectors are a little frightened at the effect of their protesting, and having tried to raise the devil are scared at the apparition. I think, too, that they showed a vein of selfishness that should be foreign to the makeup of the sportsman. I know there are plenty of men who will say that every man has a right as an individual to block the development of a section by insisting on one of his minor inalienable rights, and is justified in asserting it; but in this particular case I belong to the majority, who have been bewailing the loss of the greatest industry that ever was offered to this State, and we were willing to sacrifice one of the choicest of streams for it.

The trees are being sheared away 100ft. from the edge of the water, letting more sunshine fall on the river. The railroad will run where there has never been even a public county road, and every pool in the Greenbrier will be easy to reach. Along the east bank of the river for the entire distance of ninety-eight miles are well-known deer stands, each bearing a name familiar to all the people of the locality, and it is safe to say that from the car windows these stands can be seen at intervals of half a mile or less, each of which has been the scene of stirring hunting events.

The country is to be developed, but we will pay the price for the busy times promised in the loss of our forests. They can be cut but once in our time, and much of the land will be nothing but a barren waste of brush, instead of a wide reach of stately trees.

Catching a basket of fish has been a very uncertain thing this year, and it is all but impossible to induce them to rise to a fly. Near the mouth of the river, however, two bass of 3½lbs. each were caught at one cast. At Alderson a man was fishing from the county bridge with a stiff bait rod. He hooked a fish weighing 4lbs. 9oz., and lifted it out of the water and deposited it on the floor of the bridge by the power of his elbow.

The boom company on this river have a very vexatious dam, and they have afforded very poor facilities for bass to pass over it. In speaking of it, a lawyer said it looked like mill dam people expected the fish to get out on the bank and get around their dams. This dam was drained the other day, and after the water had subsided a catfish weighing 20lbs. was discovered stranded on a riffle, and was killed with a pike-pole by a lumberman. The whole neighborhood had catfish steak for supper.

An eel was speared in the river this year. There are very few to be found west of the crest of the Alleghany Mountains, but all that have ever been taken are large. There are about as many eels in the Greenbrier as there are in land-locked waters, and in its tributaries none.

The condition of this country in this season of drought is very much like that described in the "Jungle Book." The small streams of the woods are entirely dry, and in what are ordinarily mountain torrents the fisherman can fish all day dryshod. The water is so clear, however, that the fish are easily alarmed, and they hide under the rocks. If a man crawls over rocks with a snake-like motion when he sees a trout lying in the foot of a pool and gets a fly over it with an awkward side swipe he has a chance to catch it, but ordinary fishing brings very poor results.

Since the waters have dwindled so I have had one trip into the heart of the wilderness. We packed our freight to the usual place, and arrived in the afternoon. Then we discovered that some one had found the cave where we had hid our cooking utensils for many years and carried away everything. We were in a desperate situation. It was twelve miles over the roughest bridle path ever trod by horses to the first house. But it happened that we had two loaves of bread—the first time we ever went there with a supply of bread, it being our custom to bake bread as soon as we had made our camp. We had bread and butter, and we were like the princess who said she saw no occasion for anybody starving; she would eat bread and butter before she starved! But we did not come out to fast. We sent Joe, the black cook, back for a baker, pot, frying-pan and other necessary articles, and scattered off for trout, after demolishing a camp we found, which probably belonged to the thieves.

We came back with a hundred or so good trout, and no way to cook them except to give them a smoky broil at the fire. We were about to make a dry supper on bread and butter, when we thought of our big new coffee-pot. We filled it full of big trout, standing them on their heads, and pouring in water brought to a boil let them cook a few minutes. We made a sauce with butter, flour, lemon juice and the soup off the fish, and had the best dish of boiled trout it has ever been my lot to share. That bountiful supply of the most toothsome dish turned famine into a feast. The next day we were in shape to cook everything which came our way.

I kept account of the number of fish I brought into camp during the week we spent there, and it amounted to 195. There were eight in the party, and as some did not care to fish, it kept those who did fish working to bring in enough to form this, the principal item of diet.

A trout over a foot long in West Virginia is a rarity, but out of that number I caught three which exceeded that length, two of 13in. each and one of 14in.

All of these were unusually large trout for this section, as one is likely to take a thousand without getting one over a foot long. Of that number I took my entire catch except one with fly, but that one was one of the big ones. It was taken from a baited pool just as the rain dashed down on the water.

The largest one was got in a big, clear pool, where the bed of the stream widened behind me so that I could cast at least 50ft. of line. He boiled up like a bass and gave me a fine tussle in landing him.

The third trout was by far the finest fish, and his taking gave me an hour of the keenest of sport. I found a deep pool, surrounded by rocks, one of which was as large as a small cottage. I had caught a big trout there going up, and another one rose, but did not take the fly. Coming back I crawled to the top of the largest boulder and cast over the pool, and a big trout rose to the fly, but before he could reach it a tremendous fellow interposed himself between the trout and the fly, and neither took it. It seemed as if the big trout had compelled the smaller trout to abandon a manifest intention of taking the bait. Of coure I lusted after that trout, which looked bigger that he really was. I dropped back and smoked a pipe, and made a cast from another quarter, and the same thing occurred. I only made the one cast and retired. This time I ate my lunch, consisting of a biscuit and piece of bacon, and had another pipe, and then cast from the lower end of the pool. The two trout rose again in the same way, the big one dashing in in time to save his companion. I was prepared then to maintain that the big trout's object was to keep the smaller trout from taking the fly, and if I had quit then I might possibly have asked the Forest and Stream readers to believe that there was a missionary trout in the North Fork of Cranberry which warned its brethren away from the snare of the fisherman. When I tried the pool the fourth time I got no rise until a fingerling dashed at it and got hooked. Then I stepped to the side of the pool, and found that the trout had been rising from under a sunken tree in about 6ft. of water. With about 10ft. of line I let my cast of flies sink to the bottom and jiggered them to the top. I had no well-defined hope of this sort of juggling succeeding, but as I brought the flies up the third or fourth time, I saw a flash of crimson, and I had him. He was a strong fish and fought a good fight, but he was landed. Even in the strand where I was gloating over him he died hard.

While on that trip a medical gentleman and myself went to walk in the woods and lost ourselves beautifully, and walked seven hours before we got back to camp. I am not ashamed of having lost my way, and the best woodsman will be the last to ridicule any one for having done so. They know that such a thing is possible with any one. On that wonderful tramp we saw bear sign. A large rotten log was literally torn to pieces and scattered around. This must have been the work of a big bear searching for grubs.

Andrew Price.

Marlinton, W. Va.

Arrow Wood for Rods.

Judge S. H. Greene, of Portland, Ore., sends us this note from the Oregonian: "It has long been known that the wood of the brush or shrub called by the Indians "arrow wood," and which is common in this State, is very suitable for making fishing rods, and many a fisherman who has been so unfortunate as to break a joint of his rod has had it replaced by a joint of arrow wood, which made a good substitute. A man at Oregon City has been making some very fine light rods of this wood, one of which is now owned by Judge Greene, of this city, an ardent sportsman, by whom it is highly prized. A test was lately made of the strength of an arrow wood rod as compared with lancewood and split bamboo. It was found that lancewood broke under a strain of 11lbs., split bamboo under 18lbs., and arrow wood under 27lbs. It may be that arrow wood is the coming wood for fishing rods and will supplant lancewood, greenheart, bamboo, Bethabara and the various other woods which have, from time to time, been used in the manufacture of fishing rods. It is not to be found in large pieces, but plenty can be found of a length and size suitable for making fishing rods."

ANGLING NOTES.

Pacific Salmon and Artificial Fly.

In a previous note upon the subject of the Pacific salmon taking the artificial fly when cast in the same manner that it is successfully presented to the Atlantic salmon, I admitted that my former belief that the Pacific salmon would, or might be made to, take the fly under such conditions, could well be shaken if Mr. Henry P. Wells had made the effort and failed. I know Mr. Wells to be such a careful, painstaking man in everything pertaining to experiments in angling, and an experienced salmon fisherman, who fished with his head as well as with his fly, that it did not seem to me to be the proper thing to set up a belief against his practice, but he writes me fully about his experience with the Pacific salmon, and it appears from his letter, which follows, that his experiments with the fly were not conclusive:

New York, Aug. 16.—My Dear Mr. Cheney: Business pressure compels me at times to fall behindhand in reading up my copies of the Forest and Stream. This being an afternoon of unexpected leisure, I began to work up my arrears and found three articles which particularly interested me. The first was by you in the paper of June 17 in reference to Mr. Kipling's experiences in salmon fishing near Portland, Ore.; the next, an article by Mr. Beadleston, in the paper of July 22, in which he briefly describes his and my efforts in that direction on Mr. Kipling's ground; and third and last, an article of yours in the paper of July 29.

Your article last mentioned concludes with these words:

"For the same reason, I have believed that when salmon are fresh run and on the rise they are not particular as to the name of the fly if it is properly presented, and that Pacific salmon would prove no exception. I say I have believed, for Mr. Wells' trial may well cause me not to be too cock sure when belief is confronted by practice."

Do no abandon your old belief, but be firm in the faith until something happens to shake it which is entitled to much more weight than my brief essay.

As you are aware, angling in an unfamiliar country where nothing in the nature of a guide is obtainable, and sight-seeing do not fellowship together. Mr. Beadleston and I were obliged to leave Portland in the morning, drive out to Clackamas Creek, do our fishing and get back to Portland the same evening. How far this point was from our hotel in Portland I cannot now remember, but I know we lost our way and that the ride was a protracted business with dust as in the wreck of a flour mill.

However, we got there at last, and found a fine-looking river, perhaps as much as 60yds. wide, as I recollect it. An island divided this river into two equal branches. Immediately below the island, and where the branches of the river again united on its way to the sea, a rack was run across the river from bank to bank, completely barring the stream. This rack was composed of slats a couple of inches thick and perhaps 2 or 3in. apart. The lower ends were embedded in the bottom of the stream, the upper ends projecting several feet above the water and inclining down stream. Along the up-stream side of this rack ran a foot bridge about 2ft. wide.

Below this rack lay the Chinook salmon in plain sight. Mr. Beadleston very modestly estimated their average weight at 30lbs. My recollection is that we saw none not much heavier. Judging from their length, as compared with the Atlantic salmon, and allowing for their greater depth, I remember that I thought two of those we saw fully equaled, if they did not exceed, 60lbs. in weight. Some thirty fish were plainly visible.

They were in fearful condition, battered to a degree that one would have thought would be fatal by jumping against the rack in their efforts to get up stream. I remember one, the skin on the left side of the head of which was almost completely stripped off and hanging down from the lower jaw like a loose piece of cloth. All of them, as I recollect it, without exception were more or less so bruised.

Now the only way to reach these salmon, owing to the nature of the banks, was from this foot bridge, and the only shelter from sight was a post about 9 or 10in. in diameter.

It is true, as Mr. Beadleston says, we tried all the more popular salmon flies with considerable persistence. We tried and rested the water, and tried and rested the water again and again. Tackle, rod, line, leader and flies were all right, if one may judge by their former efficiency on Canadian salmon rivers, and they were handled in the way which experience has shown to be the most killing in those waters. Every cast made passed over and within easy fishing distance of one or more fish. Once I thought one salmon moved slightly as if he had contemplated taking the fly and then had changed his mind, but that was all.

I need not say to one of your experience that, under these conditions, this experiment has no bearing whatever on the question whether the Chinook salmon will take the fly or not. Located immediately below an obstruction which they had endeavored in vain to surmount, and battered and bruised in their efforts so to do, I think you will agree with me that no Atlantic salmon would have acted differently.

As to the fishing above the rack, the water there held a number of steelhead salmon, but as far as we could tell, no Chinook salmon. These steelhead salmon took the fly very readily, but they were no meat for a 15ft. split bamboo salmon rod. I find from my notes made at the time, that Mr. Beadleston and I, turn and turn about (for we had but the one rod), took ten of these steelhead salmon, gaffing the first two until we found out what they were like, and then tailing the rest, removing the hook and setting them at liberty below the rack. Most of them were taken on a No. 4 Pennel silver-doctor fly. The largest fish was 36in. long, but weighed only 11lbs. Indeed, to borrow one of our old friend John Danforth's quaint expressions, they were all quite "lathy." The date was Aug. 4, 1899.

It was at this point above the rack that I judge, from reading Mr. Kipling's article, that he must have taken his fish.

Notwithstanding our experiment, if such it may be called, I am still firm in the belief that under reasonably favorable conditions the Chinook salmon, if it takes the spoon, as it undoubtedly does, will also take the fly. It is

possible that flies much larger than are customary on Canadian rivers may be essential to success. I have seen times on Canadian rivers when I could get nothing with a fly smaller than a 3.0, and again when I could get nothing with a fly larger than a No. 8.

I carried my salmon rod all the way to Alaska in my hand on purpose to try the Chinook salmon with the fly, but the hereinbefore described opportunity was the only one we had. Salmon were abundant in many places we visited, but in all the rivers we saw, except the Clackamas, the water was hopelessly turbid with mud brought down by the melting snows upon the adjacent mountains.

When we first arrived at Clackamas we were warned by the custodian not to fish below the rack. But whether because he had never seen a salmon rod handled before and was interested therein, or because he was pleased that after killing two fish we treated the rest with tenderness and restored them uninjured to the water, or because he was interested in the question whether the Chinook salmon would take the fly, or because he saw we were fly-fishermen, pure and simple, and thought it would amuse us and do his fish no harm, I do not know. But at all events, after we had taken our tenth steelhead and had had enough and were preparing to take down our rod, the custodian told us we might try below the rack. I mention this in justice to him that he may not be thought to have been remiss in his duty, and in justice to ourselves that we may not be suspected of poaching.

Though I have never seen a Chinook salmon taken with a spoon, I have heard of it so often and from so many different sources, that I no more doubt it has been frequently done than I doubt the existence of Africa, which also I have never seen.

Assuming this to be the fact, then to my mind it is almost irrational to suppose that a fly would be boycotted if of the same size and general appearance, and if it were presented under the same conditions. Of course trolling with a spoon, if mere taking of fish be alone considered, is far more killing than fishing with the fly in the manner customary in salmon fishing; which method I understand alone to be implied when the question whether the Chinook salmon will take the fly is debated.

The troller can cover far more water in a given time and can fish at any depth he chooses, while the fly-fisherman covers his water much more slowly and must display his fly within 1ft. or so of the surface. Not only does this give the spoon the advantage in almost any water, but also in the range of water, since the fly-fisherman must select a place where the water is comparatively shallow and where the path of the fish is restricted.

That the Chinook salmon, since it takes the spoon, will also take some type of fly I have no doubt. The thing to discover is what type of fly. The facts, as far as I know them, seem to indicate that some departure from the flies used on the Atlantic seaboard is at least worth trying.

No day's or even week's trial, except by great good luck, can solve this problem. Aside from the kind and size of fly and the manner of its presentation, remains the question where ought one to fish—in fresh, brackish or salt water? Experience has taught us where to fish for the Atlantic salmon, but it by no means follows with certainty that the Chinook salmon is of the same mind and taste.

That the fish with which we are familiar and which only enter fresh water to spawn, become very lazy and difficult to move after they have been in fresh water some time, we all know. This would seem to suggest a trial in brackish or salt water—in other words, to try the fish either just before or when they first begin to run.

I am very much inclined to think that past lack of success is very likely in great part due to too small a fly, and that it was used over stale fish. An examination of the most successful spoon, and a study of where and how it has been most successfully used, could hardly fail to be profitable. Until a fly of approximately the same size and general effect has been tried with some persistency in as nearly the same manner as possible, it seems to me we are in no position to conclude that the Chinook salmon will not take the fly. A day's failure by an Atlantic salmon fisherman with his Atlantic flies in fresh water, possibly over stale fish, seems to me very slim ground for the conclusion that the Chinook salmon will not take the fly; and as far as I know, this is about all the present basis there is for that conclusion.

I might add as the merest suggestion, that from the limited amount of information I was able to acquire I thought if I could find a place in brackish, or better still, salt water, where it was not too deep and where the fish bunched, I should try a nice, beautiful silver-doctor about 3in. long with the inspiration of hope.

Your friend,

HENRY P. WELLS.

It is a pleasure to read Mr. Wells' letter and present it to the readers of FOREST AND STREAM, for I can now return to my old belief that if the Pacific salmon will take a spoon they will as certainly take a fly, particularly as evidence is coming in from time to time that the salmon of the West have taken the fly. Another friend writes me from California, dating his letter San Jose: "Noting what you say in FOREST AND STREAM of July 29 in regard to the Pacific salmon taking the fly, my mind reverts to some statement made on that subject some time ago. Referring to my notes, I quote as follows: 'It has been discovered that salmon will take the fly in Oregon waters away from tide water. In the Clackamas the fishing was best from May 20 to June 15. The favorite fly is or a reddish cast, and is hard to describe, but can be bought in Portland. The most killing fly is one with wine body and brown speckled wings. Others used were black-hackles, coachman, professor and bright red flies. In FOREST AND STREAM, Vol. 41, No. 8, p. 166, Podgers tells of catching salmon in the Navarro River, California, with the ordinary brown-hackles, with peacock body of the ordinary size for trout. On one occasion he caught twelve fine fish in succession on this fly.'"

If those who have had experience with Pacific fish on the fly would follow the example of Mr. Wells and specify the kind of fish killed, it would help to arrive at a clearer understanding of the question. It is the Chinook, quinnat, king or Columbia River salmon chiefly that is meant when the question has arisen, will they rise to the fly? The steelhead is a trout, and is called salmon trout, and there has been no question about its rising to the fly. Unfortunately, perhaps, the fish was first classified as "steelhead salmon," and the name sticks to it even now that it is recognized as a trout. The steelhead have been planted in New York waters, and where less than two years old have risen ravenously to the artificial fly, and they promise to make a valuable addition to our game fishes, but this is not the fish that is meant when Pacific salmon is mentioned as rising or not rising to the fly.

Carp.

A few years ago a public document contained a statement that the planting of German carp in waters inhabited by other fish should be discouraged, for instead of being strict vegetarians, as was heralded when they were introduced into the United States from Europe, they had been convicted of eating the spawn of better fish, and they were no more desirable as a food fish than some of our common fishes which they might displace. I was charged with being the author of this recommendation, and a newspaper published in the interest of the commercial fisheries intimated in an editorial article that the recommendation was not well founded because the carp brought a round price in European markets, where it was highly regarded as a food fish. Since the time that article was published, the carp has been growing more and more in disfavor in this country when planted in waters containing other fish, and its spawn-eating propensities have been brought out more clearly and more certainly. In one of my notes in FOREST AND STREAM I described the result of planting carp in one of the finest trout streams in this State, and mentioned them as great water hogs, fouling a once clear stream and unfitting it for the trout native to it. Very recently two committees of men waited upon the Fisheries, Game and Forest Commission of New York asking that the Commmission take steps to remove the carp from streams where they had been planted and increased to such a degree as to be detrimental to fishes native to the water. A member of the fish committee of the Tuxedo Club told me that carp had been seen to crowd black bass from their spawning beds that they might eat the bass spawn. This club has made great effort to remove the carp by netting and even by drawing down the water in the ponds containing them, with no success, which leads the club to believe that the carp may be disposed of and removed from the water to an extent which will insure the welfare of the black bass. It is so much easier to put fish into ponds and streams than to get them out once they are established that care, and great care, should be exercised in introducing new species of fish into any waters. Properly planted in proper waters the carp is a very good fish and much esteemed as food.

I have just read what is said of the carp by Mr. John Ritterhaus, of Pittsburg, and I wish every one in this country who has an itching to plant carp could also read the article, for there is more common sense in it about carp and carp centers than in any article I have read concerning this fish. If Mr. Ritterhaus could have spoken as plainly and as clearly years ago it would have been of vast benefit to those who have blindly planted carp without the slightest idea of what the result would be on the waters planted. He says many things I have been tempted to say about the carp, but which I have hesitated to say, because I am not a carp breeder, but his father was a famous carp culturist in Westphalia, Germany, and he speaks with authority on a subject which he understands, and does not handle it with gloves. I think every one who has had experience with carp in this country will agree fully with Mr. Ritterhaus, and it may not be too late to prevent the planting of carp in unsuitable waters if his advice is followed, as there is still a considerable demand for carp.

"The carp is the hog of the fish family. Would you turn a hog loose in the stubble field in which quails are nesting and expect to rear broods of the bird? No! Well, then, don't plant the carp where he can devour the spawn of game fish. Would you eat a hog killed fresh from the barnyard? No! Then how can you expect to find carp fit to eat that has got fat in a stream or pond reeking with filth? You fatten the hog on grass and roots and grain, and you keep him where he can't destroy other valuable animal life. Put your carp where he'll do no damage and feed him as you would a hog that is being fattened for prime pork. Artificial culture—that's the secret of carp raising."

Thus Mr. Ritterhaus proceeds to explain. His father was a general farmer in Westphalia, but made a specialty of raising carp for the market. The firmness, whiteness and flavor of flesh of his carp compared favorably with the finest of non-game fresh water fish, and brought big prices. Far from being a food for the poor, Ritterhaus' carp were eaten only in the families of the wealthy. His carp ponds were visited from far and wide, and furnished the text for chapters in many ponderous German books on pisciculture. As Ritterhaus also raised game fish, particularly pike, his farm contained a complicated system of ponds which could be emptied into one another. In the pike ponds it was a question of the survival of the fittest, so that there was but little danger of the water's becoming too populous of pike life. The carp ponds, on the contrary, became easily overfilled, but the surplus small fish were handy as live food for the pike.

The introduction of carp, as done by the United States Fish Commission, was a mistake, the younger Mr. Ritterhaus says, and why it was he explains thus: Two hundred years ago the carp was a favorite food fish in England, and about one hundred years ago the artificially raised carp acquired a similar fame in Germany. With the development of the sea fisheries in England and the improvement of facilities for transporting fish across that island carp culture died out, so that there is to-day hardly a reminder in an actual carp pond of the many former ponds on large estates. In Germany, however, fish has grown no cheaper and artificial fish culture is still flourishing. Ritterhaus points out that in ancient times, as is shown by German folk lore, the river carp was good eating; but that was before large cities had grown up and polluted the streams. The good reputation of the carp for the last half century in Germany is almost solely due to artificial culture, though excellent ones are to this day caught in the lower lying Alpine lakes.

The carp is naturally a gross feeder, but as Ritterhaus says, so is the hog, yet raising and preparation of hog meat is one of the greatest industries of the country. The Fish Commission, in his opinion, should not have introduced the carp promiscuously in the open streams, but should have established ponds, where carp culture could have been brought in all its stages, from the spawn to the grown and artificially fattened fish. This plan, if followed out, Mr. Ritterhaus believes would have resulted in a great industry which would to-day supply a large part of the people with a wholesome, good tasting food.

"Hardly had the carp been introduced," said Mr. Ritterhaus, "when the newspapers and other publications were full of tales about the fish enough to disgust any ordinary person. It was said that the carp could live best in almost stagnant water, that the food of the fish was refuse, that its flesh was coarse, soft and agreeable only to the commonest palate. Now, it is true that the carp will live in waters that will suit no other fish save the sucker and catfish; but it is not true that such water is the carp's favorite habitat. On my father's fish farm the carp ponds, as regards temperature of water and nature of bottom, were exactly like the pike ponds, and there is no gamer fish than the German pike. Only in the fattening pond was there a mud bottom; but this bottom was of clean yellow clay, which was removed every year and replaced with new, the pond being drained for the purpose. Even this mud was not requisite to the well-being of the carp, but was used for a curious purpose that is worth relating. We fed our fattening carp on boiled potatoes and whole wheat stewed to a pasty mass. The fish fattened rapidly, but they were very apt to get sluggish and loaf around for their meals. By putting a lively, hungry pike into the pond, one big enough to scare them, but too small to hurt a 5 or 6lb. carp, we kept our fattening stock on the go. Too much exercise would have meant a loss of too many pounds of fish meat, so the clay bottom furnished a handy place of refuge from the pike. The carp took advantage of it, too, but always rose to the surface when the gong that we used to beat told them their meal time had come.

"There is no comparison to be made between a carp fattened as I have described and one that feeds in a poluted river. Even carp that live in a bass stream are not the best eating. Not being a game fish, they are obliged to pick up their living as best they can, and no doubt their food is not of the choicest, although bass spawn is one of their delicacies. But a properly fed carp, raised in a pond fed by a constant stream of running water, cooked in the right way, makes an excellent dish. Has the carp as fine a flavor as a trout or a bass? It hasn't, I'll admit, but then pork isn't venison and the barnyard duck isn't canvasback, nor is the chicken grouse. Didn't you ever eat pork, or chicken, or tame duck?"

I am of the opinion that it might be money well invested to print the statements of Mr. Ritterhaus in a circular and spread it broadcast over the land that every would-be carp planter may be informed of the nature of the fish before it is introduced into any waters that do not now contain it.

End of the Salmon Season.

A letter has just come to me from Mr. Archibald Mitchell giving information about the fishing in the Ristigouche since the time I printed his last letter: "Have you observed that this has been an unusual fishing season on the Ristigouche? The fishing was much better in July than in June. Mr. Ayer killed seventeen fish the week after I left, and it took me five weeks, lacking one day, to kill thirteen. Rev. Newman Smyth and son fished our water after Mr. Ayer returned home and killed fifteen fish the first three days, two rods. They fished altogether six days and got twenty-one fish. Mr. Ayer's two sons, Fred and Nat, fished on the Tobique and killed eighty salmon, the two largest weighing 26lbs. each, killed by Nat. That was good enough fishing for anybody, and the river appears to have improved under protection."

Drouth and Trout.

On Aug. 18 I drove for ten miles through a cloud of dust which enveloped horses, carriage and occupants to reach a trout stream and follow it for a distance toward its source to examine its condition, as I expected to have a carload of fingerling landlocked salmon to plant in that and other streams early in September, having been so advised by the United States Fish Commission. I had heard that the brook was "running dry" and wished to see it in its worst condition, and even after what I had heard of it I was surprised to find the water so very low. There were pools of water here and there, but the stream itself was a mere thread, and in places where the bed of the stream was filled with cobble and boulders the water was not visible from the shore line. So far as my examination extended not a single trout or young salmon (salmon were planted in the stream last year) was seen in the brook, and I concluded that as the water receded the fish had worked their way down stream to a portion called "the meadows," where, with the aid of some tributary springs, there was more and perhaps cooler water. Not once did it occur to me that any of the trout or young salmon had been lost because of the extremely low water, for if the meadow water was not suitable the lake into which the stream emptied was near by and there the trout and salmon would find refuge and water in abundance.

On Aug. 22 I was reading some reports of the State Game Protector in Albany, and I noticed that one reported that on account of the low water and fires he had spent most of his time in watching the trout brooks; that he had seen many "dead fish," and he feared that the trout would suffer from the drouth. He did not specify the kind of fish he saw dead and they might have been minnows, but the question came into my mind, has any one ever seen dead trout in a brook, their death coming from low water? Do they not always work down and find cooler and deeper water, their movement keeping pace with the receding water?

A. N. CHENEY.

Canadian Angling Notes.

MUCH disappointment has been caused here by the cancellation on the part of the Vermont Fish and Game Protection League of their proposed visit to Quebec. The various fish and game clubs of this district were quite ready to do all that was possible to contribute to the pleasure of the Vermonters had they carried out their original intention, but they quite understand that the preparations for the homecoming of Admiral Dewey necessitated the change of arrangements. Quebecers hope hope to have an opportunity before long of introducing the members of the league from the Green Mountain State to the ouananiche and trout of the northern part of their province.

Since the date of my last letter some very large ouananiche have been sent down to Roberval from Lake Tschotagama, and some of them nearly 6lbs. in weight have been exhibited in Quebec. They were caught by a party of Boston anglers. Lake Tschotagama is nearly sixty miles northeast of Lake St. John, being a feeder of the Peribonca River, by way of which it is ascended. It is extremely picturesque, and furnishes some of the largest trout and ouananiche to be found hereabouts. It can be reached in two of three days from the mouth of the Peribonca River by canoe and portage. Several portages are necessary to surmount the magnificent waterfalls to be passed by the way.

Fishing in the Grande Décharge has kept up well this month. It ought to be equally good to the end of the season, while the month of September sees the angling at its best in the Metabetchouan.

Eugene McCarthy, of Syracuse, went up to Lake St. John a day or two ago, and Mr. Geo. E. Hart, of Waterbury, will be here in a day or two en route for the Triton tract. Mayor Carter H. Harrison, of Chicago, with his brother, W. Preston Harrison, and Graham H. Harris, chairman of the Chicago school board, went up to the territory of the Tourilli tract a few days ago on a three weeks' trip. On every hand I hear of visiting anglers arranging for September trouting trips. The harvest moon brings with it not only the finest fishing of the year in Canada, but also the most delightful weather for camping in the woods. The air is warm and balmy, there is seldom any rain, and the trees are donning their most beautiful colorings.

Much wonderment was exhibited among the passengers on board a Quebec & Lake St. John Railway train the other day, at the exhibition at Lake Edward of nearly a dozen brilliant specimens of the brook trout, which had been just taken from the lake, and which ran in weight from 4 to 6lbs. each. E. T. D. CHAMBERS.

QUEBEC, Aug. 26.

Bass in Trout Waters.

CHARLESTOWN, N. H., Aug. 23.—*Editor Forest and Stream:* The correspondence in the last number of FOREST AND STREAM has recalled to my mind a question on which I formerly had very decided opinions, and although I had to some extent refrained from asserting them, in view of what seemed to be good evidence presented by other parties, they are fully confirmed by the correspondence referred to.

The question was and is the desirability and propriety of placing black bass in waters naturally the home of trout, and for a long time I vigorously opposed it, but finally ceased protesting, from the apparent weight of the statements made by Dr. Quackenbos and others that the two varieties of fish inhabited different zones of water, and that when the bass were in shoal water the trout were down in the depths, and vice versa; and also that no young trout had been found in the stomachs of the bass.

Now, last week's letters controvert the latter statement entirely, and as the bass are known to hibernate in deep water the former one does not hold good all the year round.

My attention is more particularly called to the matter by a long letter from Dr. Quackenbos published in the Manchester Union a few weeks since, in which he complains of the poor fishing in Sunapee Lake, and attacks the Fish Commissioners vigorously for the same, accusing them of spoiling the fishing by propagating and planting hybrids in the Lake. Commissioner Wentworth answered in the same paper last week all the charges against the Commission, and I need not interfere in that matter; but I wish to call the attention of my friend, the Doctor, to the illogical point of his claim, i. e., that the introduction of a few thousand "barren hybrids" simply raised for a year or two as an experiment, could in any way affect the natural reproduction of the thousands of trout spawning in the natural way on the "lake beds," where they are claimed to school "by the acre," or of the winninish and salvelinus, which have not been hybridized (by far the larger quantity), and have been fertilized in the egg, raised in the hatching house, and planted in due form. I do not believe that the introduction of any number of hybrids, which would either simply live out their time of existence or be caught and eaten, could in any way affect the natural reproduction or the consequent supply of fish to the angler. Admitting Dr. Quackenbos' statement, which I do not dispute, but in which I agree with him, that the fishing in the lake is not what might be expected after all the stocking that has been done for twenty years—for it is now twenty years since Mr. Powers placed the first wannanish in Sunapee and Squam lakes—I think there are two other very different causes which have prevented the increase which might have been and was expected. The first of these was the practice of turning the young fry loose in open waters as soon as the yolk sac was absorbed, when they easily became the prey of larger fish, instead of keeping them in breeding ponds for a year, until they were able to take care of themselves to a considerable extent and escape from the larger fish. This breeding pond system I am glad to see is now gaining ground, for my own experience has shown me that plants of "young fry" which I made with great care years ago were to a large extent "gobbled up" by the older inhabitants before they were able to look out for themselves. When I planted the first winninish in Connecticut Lake, in 1880, some of the fry were placed directly in the lake at a point where some cold springs flowed in among a bed of loose pebbles, and while the lively ones at once hid among the stones, the infirm or dying ones were instantly seized by a swarm of leeches, which appeared on the spot from some hidden region of the lake. Some years later I stocked a trout brook here at home with fry, from which I never heard again, and I am now fully convinced that young trout should be kept in guarded and protected waters until they are a year old.

The second point, and following on the first one, is the destruction of young trout by the black bass, and here the correspondence referred to gives me exactly the evidence I needed and wanted, that the bass do live on young trout, and that they do not stop at the "small fry" only. Although there are smelt enough in Sunapee Lake for both bass and trout, the failure to put in an appearance of all the trout which have been planted there leads me to believe that the bass have eaten them when they were both in deep water in cold weather

As there are no bass caught then there is no opportunity to examine their internal economy to see what they have been feeding on; but I have no doubt that if Dr. Quackenbos could do so he would find some of the trout and salmon whose absence he laments!

It was a great mistake for Dr. Fletcher ever to put bass in a trout lake like Sunapee, and other people are continually making mistakes in planting trout and salmon in waters too warm and shallow for them to live in. My young friend, Mr. Hawkins, of Fall River, Mass., a subscriber to FOREST AND STREAM, called my attention to this point a few days since, referring to the proposed introduction of winninish into Watuppa Lake, which supplies Fall River with water for its mills. He told me that a few years since, 20,000 fry were placed in the lake, but had never been heard from, and that it was now proposed to plant a lot of fingerlings, to which I replied that, although the fingerlings might do better, and survive for a while. I did not think the experiment would ever be successful, as to the best of my knowledge the water was nowhere over 15ft. deep and got very warm in summer, and that I had never heard of its being the natural home of any of the trout family. When I was on the Fish Commission of New Hampshire, some years since, one of my colleagues, who was more of a politician than an angler, insisted on having his share of the young winninish to plant in certain shallow ponds in his section of the State, because, he said, his constituents demanded it of him, and we were obliged, in order to preserve harmony in the Commission, to yield to his wishes; but that was the last that was ever heard of the winninish.

VON W.

Santa Catalina Tuna Club.

AVALON, Santa Catalina Island, Cal., Aug. 19.—The Santa Catalina Tuna Club tournament came to an end on Aug. 15, the finale being celebrated by the annual banquet of the club at the Metropole, the occasion being unique in the history of rod and reel fishing. Never before had so many anglers with remarkable records met around the same table. The decisions are as follows:

For beating the record of the president of the club—C. F. Holder, 183lbs.—Col. C. P. Morehouse, of Pasadena, wins the $100 rod. For the largest tuna of the season, 251lbs., caught in five and a half hours, Col. Morehouse wins the silver champagne cooler. Col. Morehouse also takes the Tuna Club gold medal for largest tuna, and the Banning cup. The catch of the largest fish made him eligible to the presidency, and he was elected at the banquet on the motion of J. M. Elliott, of Los Angeles. The prize of an Edward vom Hofe reel, offered for the second largest fish, was taken by H. St. A. Earlscliff, of Santa Barbara. The fish weighed 180lbs., and fought five hours before it came to gaff, towing the boat twenty miles. For the first tuna of the season Charles F. Holder won, taking on May 26 a 96lb. tuna. This fish tipped over the boat, and it was brought to gaff in forty minutes. The prize was a $15 rod. For taking first tuna, Mr. Holder wins the first fish mounted by Charles B. Parker, of Avalon. The prize of a $15 rod to the boatman who gaffed the first tuna of the season goes to Jim Gardner, who was Mr. Holder's boatman, and made the remarkable swim with the living tuna.

For exceeding the club rod record of 327lbs., T. S. Manning, of Sierra Madre, wins the McDonald $100 silver-mounted rod. For taking the largest black sea bass, 330lbs., he wins the Rider-Macomber medal, the Tufts-Lyons silver Tiffany cup and an angling suit. This fish was fought for three and a half hours, and brought to gaff in a heavy sea, only by pouring oil on the water. The prize of a silver-mounted bass rod valued at $16 was won by Col. R. A. Eddy, of San Francisco, who caught a 240lb. bass. For the first black sea bass of the season, Col. R. A. Eddy wins line and hook offered by E. E. Beeson.

For the largest white sea bass, 58lbs., E. M. Boggs wins a silver net rod. For the second largest, 56lbs., Fred F. Garrish wins a rod.

For largest yellowtail, 37lbs., Fred Garrish wins the John C. Francis gold medal. For the second largest fish, 36lbs., Mr. Garrish wins a rock bass reel. The largest yellowtail of the season, taken by a lady, won a silver service. Mrs. H. M. Hoyt was the fortunate individual; her fish weighed 31½lbs.

For largest rock bass prize, silver-mounted rod, won by A. B. Bevans, Decatur, Ill. The fish weighed 5lbs. 12oz.

For largest sheepshead, 17lbs., Dr. George Gale, of San Francisco, wins a brierwood angler's pipe.

For largest whitefish, 7½lbs., Mrs. T. S. Manning won one dozen platinum photographs of record catches.

For best equipped launch for general fishing, the prize of a silver-mounted rod was awarded to Harry Elms. For best equipped small boat or launch, rods, reels, comfort, etc., considered, James Gardner wins for his boats Fortuna and Tunita.

E. L. Doran acted as chairman, and the judges were Messrs. Charles F. Holder, F. V. Rider, T. S. Manning, Dr. H. K. Macomber and Col. C. P. Morehouse.—Los Angeles Times.

Maine Trout and Deer.

BOSTON, Aug. 21.—Fishing in Maine waters is holding out in a most remarkable manner. Mr. J. Parker Whitney, than whom no man is better posted as to the Rangeley waters, says that there are more trout than ever there and that they are to be had by those who know where to go and how to take them. He has lately demonstrated his theory by showing a guest some remarkable fishing though in midsummer. He is quartered at his camps at Mosquito Brook, with his family. Mr. L. O. Crane, with Mrs. Crane, is enjoying a fly-fishing trip to the Megantic preserve. They are quartered at Big Island Pond. The first evening in, Mr. Crane writes, they caught a couple of dozen, all on the fly; they fish no other way. He speaks specially of the landlocked salmon there. They have been in those waters but a few years, and the little fellows—from ½ to 2lbs.—rise freely to the fly, and are specially gamy and add much to the excitement of trout fishing. The best part of all is that all the salmon caught are returned to the water, and will be till the managers of the preserve are sure of the stock. Mr. Crane says that the woods are specially beautiful, with the occasional sight of deer and partridges enough to satisfy anybody. Fishing at Mooselucmaguntic Lake is reported to be very good, though it is August. Mr. E. B. Haskell, of the Boston Herald, is in camp at Allerton Lodge, with his family and friends. They find the fishing all they want for the table, and that should be enough. At the Birches and at Billy Soule's the guests are taking a great many trout, and occasionally a salmon.

Aug. 28.—A letter from the Megantic Preserve says that Dr. Bishop and Mr. Raymond saw sixty-four deer in two mornings, hunting. The fifty-eighth one seen was shot. It proves to be a beautiful buck, with horns in the velvet; just the specimen the Doctor desires for the Paris Exposition. The working of the Maine license law that premits of a non-resident sportsman shooting a deer in September by paying $6 for the privilege, with $4 for a resident, is likely to lead to complications, if not to some injustice, if I may be allowed to judge from information that comes very direct. The granting of these licenses is put into the hands of guides and camp-keepers, and I know of two invitations to Boston sportsmen to come down and hunt in September, and from a letter, shown me in confidence, it may be inferred that if the hunter is successful in getting his deer—and the chances are good that he will be—he is to pay for the license; if not successful, the license matter can be straightened somehow. The Fish and Game Commissioners have put the selling of these licenses into the hands of a large number of guides, hotel and camp keepers, as well as a citizen or two.

Mr. L. O. Crane writes of the fishing in Spider Lake and Big Island Pond, Megantic Preserve, that it is all that could be desired and that his friend Hemmenway, to whom the letter is written, must surely make the trip next season. Two sportsmen a short time ago caught thirty-eight salmon in one day's fishing—all on the fly. The average weight was about 1½lbs.; the smallest 1lb. and the largest 2½lbs. A great many trout were taken at the same time.

Mr. Everett Hyde, Mr. L. B. Noyes, Mr. and Mrs. Crocker and Mr. Wentworth, all of Boston, have just returned from a very pleasant fishing trip to Mr. Hyde's camp, on Birch Island, Holeb Pond, Maine. This location is reached by the old Canada Road, and is among the mountains well up to the border. They saw deer almost every day, and counted about thirty in all, several being approached within a few rods. Mr. Noyes and two others of the party made a trip through the woods to Turner Pond, where they found excellent fishing, though it was midsummer. They caught about fifty trout. Mr. and Mrs. F. H. Talcott, of Dorchester, have recently returned from a fishing and canoeing trip in Aroostook county, Maine. They visited Machias Lakes, where they saw in one day fifty deer and eleven moose.

SPECIAL.

CHICAGO AND THE WEST.

Chicago Fly-Casting Club.

CHICAGO, Ill., Aug. 19.—The Chicago Fly-Casting Club to-day entertained Mr. W. D. Mansfield, of San Francisco, known all over the country as the champion fly-caster of the Coast and of America, and the outdoor caster who has put all his competitors to shame by his last outdoor record, 133ft., in the club competition of July 29 at Stow Lake. Previous to his coming, the members of the Chicago club had nothing but good impressions and recollections of Mr. Mansfield, and after his coming they cannot say enough for him. Mr. Mansfield is a sportsman and expert, and the best of pleasant gentlemen. The members of the local fraternity have resolved that since they can't tie him they will try to imitate him.

In person the expert from the Coast is of that athletic build which coaches value for crews and recruiting officers for soldiers. About 5ft. 9½in. in height, his weight is 160lbs. In complexion he is fair or florid, with light mustache and blue eyes. His expression is firm but pleasant, and in build he is the solid, muscular sort who excel in sports such as those of the open air. In wrist and arm he has surprising strength.

In casting, Mr. Mansfield works all over. The old-time advice to the beginner to keep his arm to his body is perforce discarded in this sort of work. With wrist, arm, body, leg, with mind and soul, Mr. Mansfield is a busy man while he is on the platform. Very often his foot leaves the board, and he leans and sways, with the action of his whole frame. It is force, and force well applied, that does the trick. He casts well because he understands the principles of the art perfectly, and is cool headed enough to know perfectly at any stage of his cast just what he is doing, where he is wrong and when he is right.

Mr. Mansfield gave some lessons to the members of the club to-day, and among his instructions were some very useful things, one especially, which he illustrated as he spoke.

"You need a draw, a pull, something to pull against, in casting a long line," said he. "Now if you stop to think, you can get such a pull with the rod tip best when you are pulling a straight line. When you lift a crooked or bellied line from the water with your back cast, you lose a lot of power. It ought to lie out straight before you, before you try to make your telling casts. If it does not lie straight before you before you begin the back cast, it is no use to wear yourself out working to make a long cast, for the line will not pay out straight behind you, either, and you can get the best pull there also on a straight line, and not one that is wabbly and bellied out. If you don't see things lying right in front of you, don't trust to chance, for there is no chance about it. Take your time, take in line, then pay it out, and when you find it lying far out, and directly along the buoys, use your strength and skill then to make your record casts, employing the 'shoot' to give you the last extra feet."

Mr. Mansfield showed what he meant, and his advice was eagerly noted by many very apt pupils. Mr. Bellows, 127ft. at an earlier date, is thought to be a coming caster, and Mr. Mansfield spoke very highly of him. Mr. Bellows to-day made 121ft., Mr. Fred Peet 111ft. Mr. Mansfield looked about him, remarked that it was a warm sort of day and he wasn't feeling very well, and then cast 125ft. with a strange rod and line, without seeming to try very hard either. The boys voted that he was a trifle out of their class, but resolved to steal his thunder and come to San Francisco some day and beat him on his own grounds. Mr. Mansfield said it was a long way from the Coast to Chicago, but if the Chicago Fly-Casting Club decided to hold a tournament here, he would feel that he had to come. Personally Mr. Mansfield said that he thought the members of this club were about the finest fellows he ever saw together in any body of sportsmen. It was a very pleasant little visit to-day, and the only regret it entails is the fact to which Mr. Mansfield calls attention, that it is too long a distance between here and San Francisco.

Mr. Mansfield tells me that in his club the length limit for rod is 11ft., but there is no weight limit. He uses a 10oz. rod himself, and thinks that a rod in that neighborhood, 10oz. or 9¾oz., is about the most effective tool for this long-distance work.

Mr. Mansfield left the club grounds early in the afternoon with Messrs. Bellows and Peet to catch a train for Twin Lakes, Wis. He wants some bass fishing, preferably with the fly, and it is hoped he may have the luck to strike a few fish at least. He returns to the Coast next Tuesday or Wednesday.

Work of the Club.

The weather to-day was distressingly hot. The wind was puffy and at times brisk, lulling toward sundown. The casting was done down wind, or toward the north-

cast. Only four members showed for the long-distance fly as company for the San Francisco crack—Messrs. Belasco, Bellows, Peet and Smith, Mr. Bellows winning.

In the distance and accuracy fly-casting, Mr. A. C. Smith had his eye on the buoys, and did some grand casting, going out with the phenomenal score of 96, the best made on the grounds. The same gentleman went out also for the delicacy and accuracy medal, and in this event was crowded by no one but Mr. Newkirk, both men going out with 95½—a very fine performance.

In bait-casting a very pretty performance was seen, with four men not very far apart. Here again Mr. Smith evidenced the avarice of his soul, for he set so hot a pace that no one could head him, and won also this medal, with a good bit to spare. Mr. Smith's casting in this event was well nigh perfect at times, and his average turned out 96½. Strange to say, he was not the favorite, and won more by steady plugging away than by brilliance Mr. Newkirk led for a long time, and was cutting in close to the buoys at all distances as they were called, doing the best work witnessed for many months. Newkirk had the contest won, hot as was the gait he had to go, but at a critical time made a fatal tangle, such as so often comes into this precarious art, and landed his frog some 60ft. or so from the buoy. He would have made a record-breaking score but for this fact, and some sympathy was expressed for him.

It was evidently Mr. Smith's day for casting. To show the skill which is attained by some of these members of the casting club, I may state a little incident which occurred. The judges' boat was anchored during the bait-casting some 60ft. or more from the platform, and while some were casting at the point of the platform, Mr. Smith and others amused themselves by practicing casting bait out toward the boat. Seeing the frog coming in close to us, I held out my hat and called to Mr. Smith to cast at it. He did so several times, and three times out of four I caught the frog in the hat, not moving the hat very much to do so. Once the hat was perfectly still, and he cast the frog plump into it, one of the best shots I ever saw with a bait rod.

All the bait-casting at the Chicago Fly-Casting Club is overhead strictly, the Chicago men having evolved this style and perfected it. The rods are short and stiffish, the reels and lines the best that can be bought, and the average skill of the members very high with these tools. One sees some splendid fly-rods, many heavy ones for the long work, and some lighter for delicate work, though the tendency is to rather heavy, serviceable tools, with a lot of backbone.

Following are the scores of the day:

	Long Distance Fly, Feet.	Distance and Accuracy, Per Cent.	Accuracy and Delicacy, Per Cent.	Bait Casting, Per Cent.
I. D. Belasco...	93	90 1-3	.....	84 14-15
I. H. Bellows...	121	.....	.....	.....
L. I. Blackman...	...	85 1-3	.....	93 1-15

Holders of Medals.—Long-distance fly, Bellows; distance and accuracy, Smith; accuracy and delicacy, Smith and Newkirk tied; bait-casting, Smith.

Movements of Western Anglers.

CHICAGO, Ill., Aug. 19.—Mayor Carter H. Harrison and his oldtime angling companion, Graham H. Harris, of the Board of Education, are this week absent from the city, fishing in Canada. Our Mayor is not only an ardent but a very skillful fly-fisherman, and is none of the pseudo sort of sportsmen.

At the close of the exercises of the Chicago Fly-Casting Club to-day Mr. W. D. Mansfield, the guest of the club, champion long-distance fly-caster of America, and no doubt of the world, went bass fishing with President Itha H. Bellows, of the club, and Mr. F. N. Peet. They went to Twin Lakes, Wis., and one hopes they may have success, though it is doubtful this very warm weather, unless it may chance that the bass are feeding on the ephemeræ at dusk. The city is full of sand flies just now.

Word comes from Harry Hascall and Rev. Lippincott, of this city, who have been absent for some days on the Pere Marquette, Michigan south peninsula, that Mr. Hascall has taken two rainbows of 4lbs. each, and several over 3lbs. He is represented as superlatively happy, and has expressed the intention of staying there the rest of the season.

Messrs. Geo. Lanz, of Lanz, Owen & Co., and his friend, Mr. Cowles, of this city, started yesterday for Cable, Wis., whence they go into the woods twenty miles for bass and trout fishing, and later for grouse shooting. They will not return till late in the fall. This is reported to me by Dr. C. H. Brown, of this city, to be a fine fishing country.

Mr. A. Hirth, manager of the retail tackle department of A. G. Spalding & Bros., of this city, with his friend Mr. A. W. Roth, also of this city, left to-day to spend Sunday at Delavan Lake, or at least they showed tickets for that place. Pop Hirth will now be enabled to add to that large fund of angling reminiscences with which he is wont to beguile the innocent. I can recommend to these gentlemen the wall-eyed pike of Lake Delavan, and they can purchese them of very excellent size and quality of Carrie, the negro cook at the hotel. We had a canoe meet there once, so I know what I am talking about.

Dr. C. H. Wright, of this city, who last winter had a very interesting trip to the Isthmus of Tehauntepec, is contemplating a trip this fall into some Northwestern country after big game and general sport. He was figuring on the Canadian Northwest, but will probably compromise on Upper Minnesota, where he can get fishing also. Dr. Wright tells me that the flight of water fowl does not go as far south as the Isthmus, but reaches the city of Old Mexico in great abundance.

Mr. J. Page Laughlin, of Pittsburg, Pa., outfitted this week at this city, and passed west for a fishing trip in the region of the National Park, going in at Livingston, Mont.

Mr. Harry W. Thayer, of Chicago, left this week for a muscallunge trip to the Mason lake chain, Fifield, Wis., over the Wisconsin Central Line. The Fifield region is reported as very good this season, and the 'lunge are due.

Mr. Geo. W. Kiesel, of Dubuque, Ia., outfitted here this week for Wells P. O., via Cora, Wyo., going, I believe, to Mr. Wm. Wells, the guide of that district. Mr. Wells will show him sport with the big game, for this Wind River Range is reputed to be one of the very best game countries which we have left.

Mr. R. F. Wilson, of Chicago, left this week for Plum Lake, Wis., where he will spend some time trying for some of the big 'lunge which have been coming from that vicinity this season.

Messrs. C. W. Bray and W. N. Crain, of this city, are just back from Mt. Kineo and Moosehead Lake, Maine. These gentlemen say that they had fine sport and saw some splendid fish. Mr. Crain starts this week for Kabekona Camp, in Minnesota, where he will have a try at the fall fishing for muskelunge.

Mr. W. A. Sharp, of this city, is one of the Western anglers lucky enough to take a very large bass this season. On July 30 he caught, in Lauderdale Lake, Wis., a big-mouth bass weighing 5lbs. 15½oz. This fish has been mounted, and looked nearly as big as a yearling shote.

The Lauderdale Lakes, reached via Elkhorn, on the Milwaukee road, have this season been rather well patronized by Chicago fishers, and the angling has been noticeably good.

From Star Lake, Wis., on the Chicago, Milwaukee & St. Paul spur which runs up from Minocqua, there come reports of a few muscallonge taken within the last week or two. Mr. F. F. Gaylord caught in Ballard Lake two muscallonge weighing 15 and 10lbs. respectively. He was fishing with a No. 10 Skinner spoon when he had another strike, which he played for a time. The fish finally broke the spoon and got away, and Mr. Gaylord says it must have been a monster. Mr. C. H. Blair caught in Star Lake a 'lunge weighing 11½lbs. Star Lake is connected with Plum Lake, and the two are good 'lunge waters. Miss Minnie Smith caught in Lake Laura, near Star Lake, fourteen black bass, including one which weighed 5¾lbs. In the same lake Mr. W. F. Schneele caught fifty-six bass, the heaviest 4½lbs. In Razorback Lake Mr. Anson took thirty-two bass, weighing up to 4lbs.

Mr. Julian H. Youche, who recently went up to the Brule River, Wisconsin, for a fishing trip, writes me under date of Aug. 17:

"I promised to write you about the fishing on the Brule. The first ten days we were here the fishing was fine, the trout averaging about a quarter of a pound, and about thirty to forty per day to each rod. The flies which are most successful are the dark Montreal, royal-coachman, brown-hackle and black gnat. The trout have not risen well for the last few days, either on account of the high water or on account of the coming of the spawning season. The fishing is from a boat altogether. We caught several rainbows over 2lbs. The brook trout do not run as large here as the rainbow. We met Col. Fred Mather here last week. He has charge of Mr. H. C. Pierce's fish hatchery. We leave here next week for Manitowish, Wis."

Mr. Joseph Irwin, of Little Rock, Ark., earlier mentioned as fishing on the White, north of Glenwood, Colo., has returned and writes me the following letter:

"I took some fine baskets of trout the last few days I was there, and I was loth to give it up. We failed to get up in the cañon of South Fork, where the big ones lie, but we caught two nice baskets the last day, all over 10in. and some very fine ones."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Three Hours with a Lake Trout.

THE MANSE, Saranac Lake, N. Y., Aug. 22.—*Editor Forest and Stream:* It occurs to me that a recent experience may be of interest to your readers.

On the morning of Aug. 1 I was fishing at a buoy in Long Pond, a few miles from here. My rig was a split bamboo fly-rod, 8oz. in weight, a waterproof silk fly-line, wire leader and No. 1 sproat hook, with single snell. My bait was a live minnow. At a few minutes before 11 I hooked a fish. The guide let loose from the buoy and we drifted away. In about an hour the fish came to the surface near enough to the boat for us to see him, but not near enough to gaff. We then saw that it was a lake trout. He went down again, keeping about 10ft. under water, occasionally making a rush, though never taking more than 15 or 20ft. of line. He did his best to get us into the lilypads and the shallow water, where there were plenty of sunken logs. At 2 o'clock, though I had kept all the strain I thought the rod would bear upon him all the time, I made up my mind to risk something, fearing the wearing away of the snell. In ten or fifteen minutes the added strain brought him up, in spite of a series of rushes, and at 2:10 the guide gaffed him, still swimming strongly. It proved to be a female, weighing just 5½lbs., hooked way down the throat much as the pestiferous bull pout usually hooks himself. It was not a buoy-fed fish, so must have come in to take my live bait. The guide knew of no equal run for a lake trout of the same size, and I have found no one who does. Three hours and over for a fish not regarded as particularly gamy is certainly a record-breaking run.

WILLIAM TATLOCK.

Vermont Bass.

POST MILLS, Vt., Aug. 28.—I wish to report the luck of the past week fishing in Fairlie Lake. R. A. Williams, of Boston, five black bass that weighed 14lbs. 5oz. T. Sliney, of Boston, two bass, 4lbs. each. P. E. Lynch, of Boston, four black bass, two pickerel, 3½ and 4lbs. each. Bass fishing has been extra good on the lake this season.

R. A. WILLIAMS.

Fishing Up and Down the Potomac.

Cabin John's Bridge.

THE water supply of Washington is taken from the Potomac at Great Falls, fourteen miles above the city, through a conduit carrying 75,000,000 gallons. Nearly midway it crosses the ravine of a run, formerly called Captain John's Run, but afterward Cabin John's, about which mythical personage has grown up a generally accepted romance of hermit life, mysterious disappearance and subsequent ghostly visitations. It was firmly believed of this spot as the Scotch believed of the Clootie Hole, of which they said: "When the devil comes to Ross-shire, wherever he may spend the day, it is here he bides the night." Over this an aqueduct was carried, supported by a single stone arch, remarkable as the greatest now in existence. It is above 100ft. high over the creek bed, and has a span of 220ft. A prominent stone carries the names of officials who occupied high places at the time of the building of the bridge. Ask any chance visitor of these and he will probably have forgotten every one. But one of these names has been erased since, and any visitor will tell you that. It is part of the original cussedness with which we are endowed.

When Erostratus burned the Temple of Diana the authorities decreed his name should be lost, and it was forbidden to be spoken. Nobody knows or cares who these powers may have been, but the name of Erostratus will probably last as long as that of the goddess herself. Thus fate makes monkeys of the brief authorities, and their decrees go oft by contraries.

The run a short distance below the bridge is carried by a small culvert under the canal bed, and reaches the river hardly half a mile away. The drive to this point over the macadamized road under which the conduit runs is kept in excellent condition; it passes over the palisades of the Potomac with the river often in sight, and the scenery about the breaks and the Virginia Hills beyond is very attractive. The consequence is that it has become a popular resort, and any summer evening sees here a double procession of carriages and wheels, while the two or three electric roads to the place are generously patronized.

For the very reason of its popularity there is comparatively little fishing done here, for your real fisherman loves a quiet life, undisturbed by any noises except of his own making, or any neighbors save of his own choosing.

The run itself has been once or twice stocked by the Fish Commission. Trout were put in several years ago, and last year rumors were current of good catches of trout made a couple of miles above the bridge. This seemed plausible enough, since native brook trout are still found in the tributaries of the Difficult, a few miles further up on the Virginia side, and they were formerly supposed to occur in Rock Creek, nearer Washington. At any rate, several anglers considered it worth investigation and tried this season to verify the report; but a tramp up and down the creek with fly and bait developed no better foundation for the trout story than the existence of the chub or fall-fish, which undisturbed had reached a fairly good size. They are gamy little fellows, nearly as lively and shy at a fly as the trout. These, with a few sunfish, seem to be all there is to be found in the creek, though this is far from conclusive, for a failure to catch a fish is not always proof positive that he is not at all there.

At the mouth of the run there are of course bass to be found, and a few fishermen who know their hiding places will never pass without a try for those which come, as fish do, to all confluents, to feed.

Leaving the run, the canal furnishes some fishing here as along its whole length; the grassy fringe on the bank opposite the towpath gives shelter for an occasional bass or pickerel, and at the foot of the wastes around the locks bass and sunfish are sometimes found playing in the make-believe waterfalls.

Crappie of late years have been found in increasing numbers, and the usual sliders, snappers and eels pester the still-fishermen here in this usually muddy ditch as in other nearly stagnant waters.

The river at this point has some beautiful fishing water. One of the largest pools of the upper river is made here by the Feeder Dam above Little Falls, and gives elbow room plenty to bait fishermen. Above this the river is crowded with little islands and puds, which are planted so thickly as to suggest that Jason had been here, and instead of the fabled golden fleece had laid in the river bed a leopard skin to catch the shining sand. And well he might do this, for here, as well as Colchis, the green hillsides have a yellow streak, and there are several gold mines in operation in the Maryland Highlands along these banks.

In this broken water, with charming scenery on every hand, the angler would be hard to please who could not find delight. From Dennys to Lang no poet of the little rivers had ever a finer inspiration, and one will write of this some day. If his verses have a rhythm half so sweet as the music of its waters, and a dress half so rich as nature has bestowed herself, in this wild glen, their laurels will be lost. Till then these charms will be monopolized by the fisherman who does not still-fish.

There seems to be no fitting term for the man who casts his lure. Whether fly or spoon or bait, he is in reality a fish hunter, and his methods of advance and attack like those of the so-called still-hunter; the quiet of the still-fisherman is the absence of motion; the quiet of the still-hunter is the concealing from the quarry any evidence of an almost perpetual motion.

Casting fisherman would nearly describe him, but the word is rarely used save in connection with the particular lure he uses.

Still-fishing covers all baits and tackle, but there is lacking any adequate word to embrace that other restless class, who wander up and down the waters of the earth seeking what they may impale.

Through this whole stretch of water, of pools and breaks, the anadromous fishes pass on their way to Great Falls, which has hitherto held them up, and local anglers have little hope of the fishways there, though they may be better than they promise.

This year has not been a fair test, as there was no spring flood to carry the water around over the channel in which the ways are set. These fish have no difficulty in getting up the Little Falls and the Feeder Dam, so

there are caught here, besides the regular citizens of the river, these spring visitors, and sometimes first-rate rock fishing is found in all these waters to the White Eddy at the foot of Great Falls.

Though the canal has for many years furnished anglers some sport with pike, their antipathy to rough water keeps them out of the river until below where it meets the tide; none seem ever to be caught in these waters. It is no great loss except the sport of catching, for few fishermen who can get better have any great fondness for its flesh; but there are a good many city people who do not fish who find in a freshly caught pike a flavor superior to the stale fish of the stalls, and there is no difficulty in disposing of the catch where it is really enjoyed, in spite of the worthless regard in which it is held by the majority. It is something like the carp in requiring artificial aids to impart any richness of flavor. In Temple Bar (vol. 92, p. 211) are quoted the words of a modern chef on its treatment: "Yes, it is costly to cook; I stuff it with chopped oysters and pounded anchovy, and after baking it cover with port wine sauce." Reading this, it seems a little reckless to insist that pike are not first-rate eating, but the verdict must stand.

The shad and herring pass here, but are not dipped until they reach the basins at the falls, and of course are never fished for with hook and line, though they have

CABIN JOHN'S BRIDGE.

been caught with both fly and bait. This is of so seldom occurrence as to be always food for wonder.

A foot bridge below the mouth of the run leads to Sycamore Island, a densely wooded knoll now controlled by a fishing club. There are more fish caught at some other points on the river than here, but none which excels it in the character of its surroundings—in its variety of scenery or the beauty of its waterscapes.

HENRY TALBOTT.

Terrapin Farming.

[Crisfield (Md.) Correspondence of Louisville Courier-Journal.]

A DIAMOND-BACK terrapin farm with more than 15,000 terrapin in stock and worth at a conservative estimate $40,000 is one of the new and interesting industries of Crisfield, the very heart of the famous eastern shore of Maryland.

When Washington and Lafayette were forced to eat terrapin at Yorktown because the army supplies were low, when counties in Maryland passed laws prohibiting the feeding of slaves oftener than twice a week on terrapin meat in order to save pork, and when the succulent reptile was cooked as food for fowls and swine, and could be bought for $1 an ox-cart load, no one ever dreamed that the day would ever come when the terrapin would become almost extinct and worth as much as $160 a dozen. But such is the exact situation to-day, and in this section, the most productive of the luscious diamond-back of the Chesapeake, they are cared for and guarded with greater anxiety for their safety than were the slaves in the days when they protested against being gorged on terrapin meat. In those days the diamond-back terrapin were as numerous in the Chesapeake Bay and its tributaries as are crabs at the present time, but now there is a shipload of crabs where there is one terrapin found.

Believing that good money could be made in "cultivating" terrapins, A. L. La Valette, a grandson of Rear-Admiral E. A. F. La Valette, decided to embark in the business, and according to his own statement he has no cause to regret this decision. He knows the Chesapeake Bay thoroughly, having been actively engaged in the terrapin, oyster, crab and fish business for more than fourteen years, and there was no question in his mind that it would only be a few years before terrapin would bring fabulous prices. Selecting a pretty site for a home on the shore near Crisfield, he had erected a splendid house, adjoining which he built his terrapin farm, covering about seven acres, everything being arranged to suit their habits as regards water, grass and sand. The farm is divided up into pens, with high board fences and wire screens across the sluiceways. In these pens are water, grass, wet and dry sand, and "Mister Tarrapin" can take his choice as to where he spends his time.

Plank walks high above water and marsh are constructed over the farm, and when Mr. La Valette wishes to feed his valuable reptiles he simply goes out on one of these elevated walks and claps his hands together, making a loud noise. In an instant the terrapins come helter-skelter from the sand, marsh and water and huddle under the walk where he stands, while those in the other pens crawl against the wire screens and fence in an effort to get through. They sometimes crawl on top of each other until they are piled up 2ft. thick, and occasionally there are some pretty lively fights, though a terrapin is not generally very pugnacious. They are fed on crabs, fish and meats of any kind, but are small eaters, and it is seldom that a terrapin will attack any live thing larger than a fly, bug or very small fish.

Mr. La Valette has terrapin of all sizes, from the largest to the tiny little fellows not yet quite one year old and not larger than a silver half-dollar. Their growth is remarkably slow, and it is estimated that at least thirty or forty years is required for a terrapin to attain its full growth. The diamond-back—said to be the finest known—seldom grows to be over 9in. in length measured by the stomach or under shell. It is the opinion of Mr. La Valette that no man can accurately estimate the number of years it takes for a terrapin to get its full growth, but believes it cannot be less than thirty-five or forty years.

Notwithstanding the fact that every pen appeared to be full of terrapin of all sizes, Mr. La Valette said that he did not think he had more than 15,000 in stock, that orders were heavy last winter and the severe weather last February had killed a large number. The terrapin is by nature a cold-blooded reptile, and with the coming of the first frosts he begins to locate himself for the winter, and it is necessary on this farm to keep a close eye on the weather and use artificial means for keeping the terrapins from freezing. The favorite place for the hibernation of the very large size is a few inches below the soft oozy mud at the bed of a three or four-fathom V-shaped channel in the bed of a creek of about the same distance from shore to shore. Thousands of such creeks penetrate the shores and islands of the Chesapeake, and those less frequented by man are instinctively selected by the terrapin for its haunts. No matter how long they may remain hibernated they never lose an ounce in weight, and come out as gay as crickets in the warm spring, though for months they have not tasted food nor water.

The time of hibernation usually lasts about six months, beginning with the approaching frosty weather in the fall and continuing until warm spring weather. They bury a few inches in the mud and leave at the spot where they disappear a mound, in the middle of which a hole can be discerned. It is the mound and the hole which first attract the attention of the fisherman. During this period terrapin are caught in their torpid state. They receive no noursihment whatever while in this condition. At least 90 per cent. of those taken from the beds of deep creeks will measure from 6½ to 8½in., with an average weight of 2¾lbs., and are females, while 80 per cent. of those bedded in the marshes have an average weight of ¾lb., and measure less than 5in. The males invariably bed in the marshes and among the rushes of very shallow ponds, only venturing in cold water during the summer and warmest spring and fall months, in which time they lead a migratory life in search of food, consisting principally of small shell fish and the soft-shell crabs. There being an abundance of these in the bay, the few remaining terrapin have no difficulty in finding all the food they wish, and have plenty of time for lazing in the grass and sand. At this season of the year terrapin are caught occasionally in dredges and drag nets, but most of them are found in the marshes and sand. They are easily tracked, and their market value being so high the shores are always dotted with hunters, and it is mainly from these that Mr. La Valette buys.

A few of the hunters still employ dogs in tracking them, but a dog trained to track terrapin is seldom suited for any other purpose, and the result is that but few dogs are utilized in this way. Years ago nearly every resident of the eastern shore had his terrapin dog. When a dog tracks and finds a terrapin he places his fore feet on the terrapin's back and holds him until the hunter comes, the hunter being notified of the "tree" by the barking of the dog. A man might follow a terrapin track which had been made several days, but a dog knows at once by the scent whether it is an old or fresh track. Dogs also locate the nests of terrapin and hunters take the eggs, worth but little as food, but going far toward hastening the extermination of the terrapin. Both male and female are very shy and active, swim well and run with considerable speed, but like a cow or woman on the run, are very awkward. Terrapin manage to evade dredges and nets unless the handlers are skilled in their work. Nothing has perhaps speeded the scarcity of terrapin more than the habit of some hunters of firing the grass in the marshes in the early spring, causing the terrapin to come from their places of hibernation under the impression that warm weather had set in and that it was safe for them to venture out. Thousands are burned to death this way, and there are stringent laws against firing the marshes, but the hunters get out of it by testifying that the fire was accidental.

Rats will dig up and destroy the eggs, and as a terrapin does not deposit eggs but once a year the breaking up of a "hatching" is regarded as a heavy loss. Mr. La Valette says it is a great error to state that terrapins place eggs in dry sand and that they are hatched by the sun's heat. He showed the writer a nest of eggs and these were in wet sand, covered at a depth of 5 or 6in. Incubation is brought about by atmospheric conditions, and it requires from forty to forty-two days for the eggs to hatch. The eggs resemble those of the snake, having no shell, but a thin, tough skin, and are about the size of the egg of the American partridge, though not as well shaped. It is from three to five days after the little fellows are released from the eggs before they are sufficiently strong to go waddling about, and it is always necessary to keep a close watch to prevent their being killed by rats, crabs and large fish.

The young receive but little attention from the mother, and almost from the first are left to look out for themselves and get along as best they can. Mr. La Valette has separate pens for the very young, where it is almost impossible for anything to get to and destroy them. After a few months the little terrapins sport around in the shallow water and crawl out in the sand banks as frisky as colts in a pasture. Eggs are always deposited in the months of May and June, the female terrapin crawling out on the sand, and when she finds a suitable location she scratches out a hole to the depth of 5 or 6in., lays her eggs, and then carefully covers them over, drawing her stomach over the sand in such a manner as to hide all traces of the nest. This being done, the terrapin goes back into the water or grass, and as far as is known she never returns to the nest until time for the eggs to hatch. A terrapin does not begin to deposit eggs until she is four years old.

About fifty years ago Capt. John Etheridge sold in Norfolk about 3,000 fine diamond-backs for $400, and a little later he shipped to Baltimore about the same number, receiving something over $350. This, it is said, was the beginning of the onslaught on the terrapin, and from Cape Fear to Baltimore men engaged in the work of terrapin hunting. It is known that terrapin formerly lived in colonies, but constant dredging caused them to scatter, and from that time until the present the catch has grown smaller each year. According to Mr. La Valette the annual shipments from this section and its tributaries will not exceed $400,000. It has not been more than twenty years since those who were familiar with the facts began to realize that there was danger of a terrapin famine—that the reptiles would soon be almost exterminated.

Naturally, with the increase in price, there were thousands engaged in the work of hunting them, and it was found expedient for the States of Maryland and Virginia to enact laws governing the taking of terrapins and the sizes which should be sold in season. These laws have been added to and enforced as rigidly as possible, but the scarcity of the Chesapeake diamond-back grows more apparent each year, and even now it requires many days of laborious and tedious work and many miles of walking over soft, boggy marshes, prodding in deep, narrow channels with long-shafted tongs by men experiencel and skilled, familiar with the terrapin's cunning habits, before one is taken from its hiding place.

The people have robbed themselves by trapping incalculable quantities of terrapin before they had matured sufficiently for breeding, and by digging eggs from beneath the sand shores, where they had been deposited by the females to hatch. While the laws enacted by the Legislatures of Maryland and Virginia for the protection of the terrapin differ somewhat, they are both excellent, and had they been rigidly enforced this spectacle of ultimate extermination would not exist.

It takes an epicure to detect the difference in the Chesapeake diamond-back and those of North Carolina and Mississippi. Ordinary mortals do not know the difference. Of course, it is not infrequently the case that other terrapin are palmed off by unscrupulous caterers for the genuine Chesapeake diamond-back, and it is also true that male terrapin are substituted for females by placing eggs in them when served. Those thoroughly up on terrapin, however, can readily detect fraud. The terrapin season is from November to May, inclusive. It is claimed by some that penned terrapin are not as succulent as those freshly caught, but it is reasonable to imagine that the "stall-fed" terrapin is good enough. The small species are divided into two classes, "heifers" and "bulls." The undershells of the heifers never measure more than 5in. in length, and bulls from 5 to 5½. Measurement is always made from the collar-bone under the stomach to the tail. The larger the terrapin the greater the value a pound. For instance, a terrapin measuring 7¾in. and weighing 64oz. is worth, say, $2.05 a pound, or $8.20—$98.40 a dozen. The diamond-back terrapin is always high and brings a much larger price than any other. The outlook is that the price will be much larger than ever this coming season. The largest shipment ever made by Mr. La Valette was in 1890, when Jay Gould gave a banquet at Delmonico's. It required twenty-eight barrels to make the shipment, and the bill was something over $4,700.

Bass Fishing at Henderson Harbor.

Dr. John H. Meyer, of New York, sends us the accompanying photograph of his catch at Henderson Harbor. He writes: "I was looking about for a place to spend my vacation, where I could get good bass fishing as well as good pure air for myself and family. Mr. Van

A CATCH OF HENDERSON HARBOR BASS.

Etten, of the New York Central & Hudson River Railroad, suggested that I go to the Gill House, Henderson Harbor, N. Y. I at once wired Mr. Gill for rooms. Receiving a favorable answer I packed my trunks and left for Gill's. The accompanying picture tells the story of my first day's catch. The eighteen bass weigh from 1¾ to 3¾lbs. each. I have heard a great deal of good bass fishing, but the story of the pleasure awaiting the angler at Gill's has never half been told.

"John H. Meyer."

New Jersey Coast Fishing.

Asbury Park, N. J., Aug. 26.—The past week has been one of positive delight to bass fishermen at nearly all points along the coast. It is safe to say that never have more bass been taken at a corresponding date. While the size perhaps may have been excelled, still when numbers and all considerations are regarded we may safely claim it as a banner week. If the easterly winds continue we look forward to a continuance of the sport, as at this season of the year no bass are to be expected unless we have a turbulent sea. Some few weakfish are being taken in the surf, and an occasional kingfish, but the main sport is confined to the bass. Bluefish have been much in evidence outside the bar, but none have ventured inside. Westerly winds will fetch them in, as the surf is fairly alive with bait fish, and expectation runs high as regards the blues. Conditions have improved some at Barnegat; I have a letter from there stating that the weaks are again on the feed. Still, the run in the upper bay is small. One had much better take in the lower grounds, viz., Waretown, Harvey's Cedars and the lower thoroughfares. Good bass fishing is to be had at Warner's, and channel bass are now due in the surf at the inlet. I expect to give them a trial within the next few days, and will have something to say if they are there. Leonard Hulit.

Mussels After Crabs.

East Rockaway, L. I., Aug. 29.—Mussels have always been recognized as the enemy of oysters, but the crab has been supposed to be altogether too lively for almost motionless bivalves. It now appears that the scarcity of crabs may be largely due to the great number of mussels in the bay. Thomas Jackson found a sea crab one day last week with a string at least 6in. long of young mussels attached to him. The crab was still alive and tried desperately to get away, but was firmly anchored by the mussels. They were about the size of a pea, and it was estimated that there were several hundred of them in the bunch. Bay men are inclined to attribute the scarcity of crabs to anchor ice, which settles on the bottom of the channels over the crabs during the time when they are hybernating in the mud, and smothers them, but the discovery of the mussels on a crab raises the question as to whether the mussels are not helping to exterminate the lively crustacean. Quahaug.

A Michigan Reward.

The Detroit & Mackinac Railway Company, headquarters at East Tawas, Mich., is out with this notice:

"Trout and grayling fishing is about over for the season. In order to maintain the high reputation of our part of the State for good brook trout and grayling fishing, it is necessary for all parties to help in carrying out the fish laws and in seeing that they are obeyed.

"This company will give a reward of $100 for the evidence that convicts the first person found guilty of spearing, netting or dynamiting brook trout or grayling, or taking same by any means out of season. The law protects these fish between Sept. 1 and May 1. This offer applies to the following counties: Arenac, Iosco, Alcona, Alpena, Presque Isle and Cheboygan, and reward will be paid for first conviction in each of said counties."

Where are the Bluefish?

Queenswater, L. I., Aug. 28.—Fishermen have waited long and anxiously for the advent of the big bluefish. Every little while a few of the big fellows would be hooked and expectation would run high, until the fishing fleet came in as usual with nothing but porgies and bass. The cold water until the middle of July was considered a satisfactory explanation of their absence, but why they still delay their usual annual visit to our shore is a mystery. Quahaug.

Central New York Waters.

Ithaca, N. Y., Aug. 25.—Mrs. Gertrude Ostrander, of this city, at present stopping at Carlton Island, caught while trolling one day last week a mascalonge that weighed 30lbs.—the largest taken at that point this season.

A lady whose name, unfortunately, has slipped my mind, caught an 8½lb. lake trout from Cayuga Lake last week. I supposed this a very heavy trout for Cayuga waters, but Al Hazelton, the veteran angler, says, through the Journal, that he saw last fall a trout taken from a seine at Union Springs that weighed 22lbs. Isn't this a remarkably heavy trout? Lovers of black bass fishing can find plenty of these noble fish in the waters about Cayuga village. M. Chill.

Lake Mahopac Record Bass.

New York, Aug. 28.—I take pleasure in informing you that on the 24th inst. I hooked and landed a small-mouth black bass at Lake Mahopac that weighed 7¼lbs.; length 23¾in.; girth, 17in. The proprietors of the Forest House weighed it and took the measurements. With the single exception of the fish in possession of A. J. Dean, of the Dean House, this is the largest bass ever taken from the lake. There have been a number of large fish taken this season from Mahopac; two were landed last week, in addition to the one I caught, weighing respectively 6½ and 6lbs., and quite a number from 5 to 6lbs.

Clifford L. Lutkins.

BENCH SHOWS.

Sept. 4-7.—Toronto, Can.—Toronto Industrial Exhibition Association's eleventh annual show.
Sept. 12-15.—Milwau'kee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.
Sept. 19-21.—Rutland, Vt.—Vermont Kennel Club's inaugural show.
Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Aug. 31.—Emmettsburg, Ia.—The Iowa Field Trial Association's second annual field trials. M. Bruce, Sec'y.
Sept. 4.—La Salle, Man.—Western Canada Kennel Club's annual amateur field trials. A Code, Sec'y.
Sept. 6.—Morris, Man.—Manitoba Field Trial Club's thirteenth annual trials. William C. Lee, Sec'y.
Oct. 23.—National Beagle Club's tenth annual trials. G. Mifflin Wharton, Sec'y.
Oct. 25.—Hampton, Conn.—Connecticut Field Trials. E. Knight Sperry, Hartford, Sec'y.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ——, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Dogs in Battle.

Dogs in Manila and all over the Philippine Islands are long and white, with ears that stick up like the ears of a fox, and bodies that are not over fat. Their ribs stick out a bit, and they are always hungry. The dogs that creep back into the towns where the American soldiers are howl when "tattoo" sounds at night, and again when "taps" or "lights out" is given by the buglers later in the evening. They are up early, too, and if any one is awake their howls can be heard when the buglers sound "reveillé" in the early morning.

On April 25, the day of the fight between the American and Filipino armies at Bagbag, the dogs played an important part. The Signal Corps was back along the railroad track stringing telegraph wires so that Gen. Otis could be informed of the progress of the fight. Not a gun had been fired. Suddenly a white dog went streaking along through the grass at the side of the railroad. The Signal men called to it. But he paid no attention; just kept his head due south and ran as fast as his legs could carry him. How it was he knew bullets were going to fly over that place is more than can be told by dog experts. But he knew, for it was but a few minutes after he passed when a shot rang out on that still air. It was a signal for the beginning of the battle.

More dogs came running past. Bullets knocked the dust in front of them, and stuck in the bamboo trees over their heads. They could not run faster and they dared not stop. No one knew how far they ran. Perhaps until the din of that battle was entirely lost to their sharp ears.

There was one dog wiser than all the rest. Had he had human intelligence he could not have found a safer place. We found him as we hurried along the railroad grade to the river lying in the deepest part of the ditch, covered on one side by the high embankment and protected on the other by a grass-covered mound. We thought he was dead, he lay so still, and some passed on with their bodies bent, for the bullets still whistled in the air, though the enemy had been routed and was on the retreat. I looked closer. The dog's eyes were wide open. But when he was spoken to he only winked, never stirring a muscle. The look which came into his eyes asked as plainly as human tongue could speak that he be left alone. He was left behind, this wise dog was, but he saw the charge of the Kansas volunteers—they rushed past him. He heard the shrapnel explode and the bullets cut the air. But he was safe and knew it.

That night he came to the camp timidly, and some one threw him meat. So he grew braver, and followed the army on its advance to Calumpit. Where he was during this fight no one seems to know, but he came up to us the night after and lay down near where a group of officers were talking.—Manila Correspondence Chicago Record.

The North American Field Trial Club.

Windsor, Ont.—The North American Field Trial Club has recently been organized by some prominent sportsmen of the United States and Canada. The officers are: President, J. B. McKay, of Detroit, Mich.; First Vice-President, D. G. Revell, Windsor, Ont.; Second Vice-President, M. K. Cowan, M. P., Windsor, Ont.; Third Vice-President, J. B. Dale, Petrolia, Ont.; Secretary and Treasurer, R. M. Morton, Windsor, Ont.

The advisory board will consist of the officers and Messrs. F. H. Marcome and Wm. Revell, of Windsor, Ont., and W. E. Warner, of Detroit, Mich.

Owing to the late orgnization of the club, the trials this year will be open to members only, and consist of a Derby and All-Age Stakes, but it is the intention of the club to run open trials next year with guaranteed purses. The club will arrange the dates for running its trials so that handlers who participate in the Manitoba trials can stop off at Detroit on their way south, give their dogs eight or ten days' work on quail and run them in the trials.

It will be the endeavor of the North American Field Trial Club to make its trials one of the most popular events of the season. Their game preserve consists of four square miles on the Canadian side, about twenty miles from Detroit, on the main line of the Canadian Pacific, where the fields are large and open, with sufficient cover and game abundant. A new brick club house was built this summer, which will accommodate from thirty to forty guests, with commodious kennels for their dogs.

Aided by a good bank account, all natural facilities and enthusiastic sportsmen, the North American Field Trial Club is bound to be a success.

R. M. Morton, Sec'y.

Connecticut Field Trials.

New Haven, Conn., Aug. 26.—We are to have another State field trial of setters and pointers in Connecticut this fall, and it will take place at Hampton Hill, Hampton, Conn., beginning Oct. 25. A meeting will be held the evening before at Whitaker's Hotel to draw the positions of the dogs in the trials, and for the purpose of forming a permanent club. All interested are cordially invited to be on hand. N. Wallace, of Farmington, Conn., and Arthur R. Sharpe, of Taunton, Mass., will officiate as judges. There will be two classes—all age and Derby. We are very late about making the announcement, but our secretary has been a very busy man, so I thought I'd drop you a line. E. K. Sperry.

The Texas Kennel Club Show.

Chicago, Aug. 20.—I send you to-day cut of Texas Kennel Club new building. We are furnishing free transportation on all dogs from Chicago to Dallas and return to Chicago, also from Kansas City and return, which should be quite an inducement to exhibitors to show with us.

Since mailing premium lists, we have added classes for bull terrier puppies, Bedlington terrier dogs and Bedlington terrier bitches. Mr. James Cole, of Kansas City, will judge bull terriers. Geo. W. Clayton, Supt.

The Dachshund Standard.

Dr. Alfred Boultbee, of Toronto, sends us his translation of the German standard of dachshund, as published in the Teckel Stamm-Buch. Dr. Boultbee expresses a hope that his translation may serve to correct many prevalent errors in what he terms "the distorted standard as adopted by English breeders and the mongrel mixture of American Dachshund Club."

Points and Flushes.

The Greyground Stud Book, Vol. V., compiled by Mr. Louis F. Bartelo, Keeper of the Stud Book, Denver, contains the addresses of coursing club secretaries, registrations, addresses of judges and slippers; constitution, by-laws and code of rules and list of officers of the American Cousing Board; registered partnerships; reviews of coursing in the Dakotas, in England, at Ingleside, at Los Angeles, winners of meetings, etc. It is neatly and substantially bound, and is a valuable work in the interest of coursing men.

Here is a good yarn from Cedar Lake, Ind.: Jabez Perkins and Joel Harkness had one of the most exciting experiences of their lives while fishing in Cedar Lake last Sunday. The fish were ravenous and seemed numberless. The sport was exciting and the bottom of the boat was soon a floundering, splashing mass. Suddenly Perkins struck what was apparently the king of the tribe, and a desperate fight began. After a half-hour's work a big 5-pounder was hauled to the side of the boat and Harkness reached out with the landing net to capture him. The bass made a last furious struggle, and the men could see the hook was nearly torn loose. Harkness, in his haste to get the bass, leaned out too far and capsized the boat. In the mixup the bag of frogs used as bait caught on Perkins' belt and hung there as the men clung to the keel. All at once Perkins uttered a cry of pain and dashed his hand into the water toward his leg. "They're biting me," he cried. Then the anglers discovered they were surrounded by a tremendous school of bass, attracted by the frogs that were kicking and jumping in the bag. The fish seemed to have not the slightest fear of the men, and plunged and darted around them, making efforts to climb on the boat or right the vessel futile. Hundreds of bass, big and little, cut the water around the nearly submerged fishermen, dashing against them, biting and fighting. For fully fifteen minutes the men were in the water, endeavoring to drive away their tormentors and yelling lustily in the meantime. Another fishing party heard the cries and came to the rescue just in time. Both Perkins and Harkness were severely scratched and lacerated, but were able to work the next day.—Springfield Republican.

16. Philadelphia, cup, Philadelphia, Delaware River.
16. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Riverside, fall regatta, Riverside, Long Island Sound.
24. Williamsburgh, annual fall regatta, Bowery Bay, L. I. Sound.
27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

IT is most gratifying to be able to chronicle an international yacht race without a dispute or a protest, and in which both sides accept the result in a true sporting spirit. Both in the negotiations and the final carrying out of the races, there was evident the same disposition on the part of the two clubs to sail a fair race. The taking of the cup to Chicago is certain to help yachting on Lake Michigan; and as for Lake Ontario, there is little fear that her yachtsmen will rest until the cup is brought back. In presenting the Canada cup to the Chicago Y. C., Com. Plummer pointed out that while the eagle on one side was erect and in a fighting attitude, the lion on the other lay *couchant*. He promised that until the cup came back the lion would be equally alert and active.

THE one unpleasant incident of the contest was the attempt to cover Genesee's mistake on the first day by the plea that the course was incorrect. Apropos of this, the report of the race in many American papers not only omitted all mention of the error, but stated that Genesee withdrew because she would not take the race on a sailover from a disabled antagonist. On this point the Boston Globe says: "In deliberately refraining from going around the last buoy in the first Canada cup race, that the race might be declared off, the skipper of the Genesee showed a sample of true American sportsmanship." So far from this being the case, Genesee did exactly what the rules call for, continuing over the course alone to the best of her ability, the judges, of course, making no effort to recall her.

The Canada Cup.

Chicago Y. C.—Royal Canadian Y. C.

TORONTO—LAKE ONTARIO.

Aug. 21-24.

THE contest of last week at Toronto between the Chicago Y. C. and the Royal Canadian Y. C. for the possession of the Canada cup was in every way the greatest event in the history of yachting on the Great Lakes. Apart from the immediate interest attaching to a match between two countries or localities, it was of special importance as marking the successful advent of a new factor in lake yachting. Up to the present time the sport has been most strongly and permanently established on Ontario, the most easterly of all the lakes, decreasing from lake to lake toward the west. While a certain number of fast yachts have always been found on Lake Erie, and a smaller number on Lake Michigan, the Ontario fleet has long been the largest (including clubs from the Canadian and American sides alike), the best organized, and with its classes better filled. Though long since established at Chicago, the sport has labored under various natural disadvantages, such as poor harbors and few followers, many of the Chicago yachtsmen preferring to follow the racing of small open boats on the inland lakes, rather than to tempt the rude and boisterous Michigan.

The challenge of this year for the Canada cup is the result of a new attempt to place the sport on a permanent and successful footing on Lake Michigan, and as such the winning or losing of the cup meant much to the small number of yachtsmen concerned in it.

The loss of the cup in the initial match in 1896, when the Chicago yacht Vencedor was defeated by the Toronto yacht Canada, left yachting on Lake Michigan where it had been for some years—struggling for existence, with little hope of immediate success, no one of the several local clubs in Chicago being strong enough to unite the yachting element. In the spring of 1898 a new attempt was made under the leadership of Com. F. W. Morgan, of the steam yacht Pathfinder, and a few other Chicago yachtsmen, to revive the old Chicago Y. C., a once strong organization, which had lain dormant for some years. The task of building up the old club on new lines has been by no means an easy one, but the work has been carried on with enthusiasm and energy. Those interested in it were quick to appreciate the facts that success could only come through popular support both in the sympathy of the public and the addition to the limited number of active yachtsmen; and that the surest way to secure such support was through the bringing to Chicago of the Canada cup, the emblem of yachting supremacy on the Great Lakes. This cup, won in 1896 by Canada in the matches with Vencedor off Toledo, became the absolute property of the owners of Canada, but in 1897 it was dedicated by them as a perpetual trophy for international racing on the Great Lakes, being first intrusted to the Royal Canadian Y. C. as defender.

Early last fall it was determined to issue a challenge for this year, and the following was sent to the R. C. Y. C.:

Royal Canadian Y. C., Toronto, Canada:

Gentlemen—I have the honor to notify you that the Chicago Y. C. will challenge for the Canada cup. If agreeable to you a committee will meet you in Toronto to present formal challenge and to arrange all details of the races.

An early reply, stating when you wish to meet our committee, will greatly oblige, respectfully yours,

(Signed) CHARLES H. THORNE,
Sec'y Chicago Y. C.

Chicago, Oct. 25, 1898.

The proposed meeting was held at Toronto on Nov. 15, the formal challenge being presented by Messrs. Thorne, Berryman, Warrington and Crawford, the special committee of the Chicago Y. C., as follows:

CHICAGO, Nov. 14, 1898.—F. J. Ricarde Seaver, Hon. Sec'y R. C. Y. C.: Sir—We have the honor on behalf of the Chicago Y. C. to challenge your club to sail a series of races for the Canada cup, subject to the deed of gift and other conditions to be agreed upon. As required by the deed of gift, we name the 35ft. class as the class in which the races shall be sailed, and Aug. 22 as the first of the days upon which the races shall be sailed.

(Signed) W. R. CRAWFORD,
GEO. WARRINGTON,
J. B. BERRYMAN,
C. H. THORNE, Sec'y.

VIEW ACROSS THE ISLAND FROM GROUNDS OF THE ROYAL CANADIAN Y. C. LAKE ONTARIO IN THE BACKGROUND.
From Photo by Bruce, Toronto.

At the meeting the following conditions were agreed to:

Conditions governing the match for Canada's cup, to be sailed between yachts representing the Chicago Y. C. and the Royal Canadian Y. C.:

Rules.—The racing rules shall be those of the Yacht Racing Union of the Great Lakes, as existing at this date, subject to such additions and variations as are herein provided, and in accordance with the deed of gift dated Jan. 16, 1897.

Construction.—The yachts shall be of wooden construction, in accordance with the scantling table in the rules above mentioned.

Size of Yacht.—The competing yachts shall be in the 35ft. class.

Number of Races.—The winner of three out of five races shall be declared the winner of the match.

Dates of Races.—The first race shall be sailed on ————, and the other races on consecutive days thereafter until completed, Sundays excepted.

Courses.—The races shall be sailed on Lake Ontario, off Toronto Harbor, on courses to be hereafter agreed upon.

The first course shall be triangular.

The second course shall be windward or leeward and return. The tug bearing the buoy shall start at the time the preparatory gun is fired.

The third and fifth shall be similar to the first.

The fourth shall be similar to the second.

The triangular races shall be once around an equilateral triangle of twenty-one nautical miles.

The windward or leeward races shall be nine nautical miles to windward or leeward and return.

The triangular courses shall be so sailed that one side of the trangle shall be to windward if possible.

In windward and leeward races all buoys shall be left to starboard, and in triangular races all buoys shall be left to starboard or port, as directed by the judges.

Time.—All races shall be started at 11 o'clock A. M.

Any race not sailed in five and three-quarter hours by the winning yacht shall be resailed.

The start may be postponed by the judges:

First—In case of fog.

Second—If, in their opinion, the space round the starting line is not sufficiently clear at the time appointed for starting.

Third—In case both yachts consent to a postponement.

Fourth—In case of serious accidents to either yacht, as hereafter provided.

Fifth—Should such a course appear to them desirable. And in case of postponement the judges shall determine the time for starting, but in no case shall a race be started later than 1 P. M.

A yacht crossing the line before the starting signal is given shall be recalled by five short blasts of the whistle, and the hoisting of her national flag.

Unfinished Races.—An unfinished race shall be resailed until completed.

Accidents.—In case of accident to either yacht prior to the preparatory signal, notice thereof shall immediately be signaled to the judges, who shall have power to postpone the race if the accident in their opinion is sufficiently serious to warrant such a course; or, if an accident occurs during a race, the yacht to which the accident has happened shall have sufficient time to make repairs before being required to start in the next race.

Scrutineers.—Each yacht shall have on board during the races a representative named by her competitor, whose weight shall not exceed 150lbs.

The names of the scrutineers shall be given to the judges not less than twenty-four hours before the first race, and the scrutineers shall report to the judges within six hours after the termination of each race.

Management.—The races shall be sailed under the management of three judges, none of whom shall be interested in either yacht. One shall be appointed by each club, and the two so appointed shall select a third on or before the first day of July, 1899, and they shall act as judges and time-keepers, and settle all disputes. The decision of a majority shall be final in all matters.

The judges shall be the regatta committee referred to in the rules of the Yacht Racing Union of the Great Lakes.

Measurements.—The yachts shall be measured by the judges or by a disinterested person appointed by them, and each yacht shall be entitled to have a representative present when measurements are taken.

The yachts shall be measured not less than two days before the first race.

Crews.—The crews shall be limited to six men, whose total weight shall not exced 1,050lbs.

Instructions.—Charts of the course and instructions shall be furnished to the competing yachts not later than 7 o'clock on the morning of the race.

Alterations.—These conditions may be altered or amended by mutual agreement at any time.

The date was left open, but later on Aug. 21 was selected.

The challengers set to work at once and a fleet of yachts was finally constructed—Vera, Josephine, Prairie, Genesee, Briar and Bald Eagle. The trial races, as already reported, were held on July 4 and the following days at Chicago, resulting in an overwhelming victory for Genesee.

The defending club has through its two syndicates built three boats—Beaver, Minota and Toronto, while Hamilton contributed three more—Myrtle, Weir and Hamilton. The trial races at Toronto two weeks since showed Beaver and Minota to be far ahead of the others, leaving a small margin of choice between the two, the former being finally chosen as the defender of the cup.

The challenging yacht, Genesee, was built by a large syndicate of the Rochester Y. C., of which the leading spirit is Mr. J. E. Burroughs, secretary of the Y. R. U. of the Great Lakes, a yachtsman well and favorably known on the Canadian as well as the American side, and an old hand on Lake Ontario. Genesee was designed by her builder, C. C. Hanley, formerly of Cape Cod, and now of Quincy, Mass. Mr. Hanley won his reputation long ago in the Cape cat class, with Harbinger and other fast boats, and he has added to it of late years with such sloops as Meemer, Ashumet, Privateer and Acushla. His work has been confined exclusively to the shoal or moderately deep centerboard types in the classes below 50ft. As a class the Hanley boats have been among the best of the centerboards, many of them fairly deep, able and seaworthy. The Hanley boats have been noted for their strength with but moderate weight of construction and for the good surface of the planking. Most of them have been built under some form of length rule, with no limit to sail, but Harbinger, Acushla, Almira and many others have either been built to or have succeeded under the old Seawanhaka rule of length and sail area.

CHART SHOWING CITY OF TORONTO, TORONTO BAY AND SHORE OF LAKE ONTARIO; WITH STARTING LINE AND ANGLE OF 21-MILE COURSE.

In Genesee Mr. Hanley has made his first trial under the new English girth rule as adopted by the Y. R. U. of North America. Practically the sole object in view was speed under the rule, the scantling regulations and the special conditions of the Canada cup trial and final races at Chicago and Toronto. The keel contour of Genesee is practically an arc of a circle, with a waterline of 27ft., about the same amount of overhang at each end, and an extreme draft of but 18in. The descriptions previously published are misleading. There is no "double chin," as described, indicating a reverse curve at each end of the waterline; but as above stated a fair circular sweep from the scarf of the stem and keel a few feet from the extreme bow to the transom, which is very wide and cut off square across, showing a handsome piece of mahogany. The midship section has no straight deadrise, but shows a slight round from the rabbet, with a rather hard turn to the bilge, the Cape cat section. There is no ouside keel, the garboards and keel being flush. The lowest point of the keel is forward of and 2in. below the point of girth measurement. The centerboard is comparatively narrow, to meet the girth measurement, and is very long. Abaft it is a scag, on which is hung the wooden rudder, nearly 4ft. broad and about 2½ft. deep, a shoe being added to it to increase the original area. The sternpost has a slight rake. The fore body is quite fine near the stem, but full abreast the chainplates. The quarters are wide and full, making a long side when heeled; but there is no suggestion of the modern scow type. The model is that of a Cape cat cut away everywhere, both in body proper and in appendages outside the rabbet to give speed.

The yacht is built with a steamed and bent oak frame; all timbers small and of uniform size, with an extra frame of doubled moulding bent inside the single chainplate frame; the chainplate, a 3in. bronze strap, being between the two. The floors forward are also of steamed oak. The planking is rather wide, 6 or 7in. on the topsides, but it shows a smooth surface, with small smooth seams.

There is a long cabin house, 12 to 15in. high, on the side, and giving about 5ft. of head room; and abaft it is a large cockpit. The cabin is divided by the long centerboard trunk, and the head room is limited even under the trunk, and especially under the fore deck; but with this exception there is a good deal of available space below. There is a wide transom on each side, and six hammock berths are swung, two being under the fore deck. The mast step is a very solid block of oak. A double span of wire rope runs from the keel up in the bows to the fore end of the centerboard trunk just below the deck, and a similar tie aft serves to make, with the centerboard trunk, a fore and aft truss to prevent any sagging of the ends. There are a clamp and a shelf together, with a good bilge stringer; the deck beams are mainly of oak. The material and workmanship are very good, and while there is nothing specially novel about the construction, it is strong and durable. The centerboard is of wood, about 2in. thick; the single bronze chainplate on each side carries two shrouds, one to the hounds and one to masthead. The steering is done with a tiller about 5ft. long.

The rig shows two high narrow sails, a large mainsail and comparatively small jib, with a lofty mast; a solid stick, with a track on the after side in place of hoops. The sails, by Wilson & Silsby, are crosscut, a new mainsail being made on three days' notice for the final races. The rigging is light and simple, with no superfluous gear, but heavier and less leaborate than that of Beaver. The bottom is potleaded up to a point several inches above the waterline, and the topsides are painted white; the transom is of mahogany, with a light mahogany rail about an inch high around the deck edge.

Beaver was designed by Arthur E. Payne, of Southampton, England, and built by George Andrews, of Oakville, just west of Toronto. She was, with Minota, constructed for a syndicate of the R. C. Y. C., organized by Mr. Jarvis last spring. The original idea was to raise sufficient money to build from the McLeod design, but as more than the required amount was tendered it was decided to build a second boat, and the design was ordered of Mr. Payne. Both Minota and Beaver were rigged as sloops, with no topmasts nor topsails, at Mr. Jarvis' suggestion, the original sail plan of Beaver by Mr. Payne showing a topsail and jib topsails.

Beaver has been described as a fin-keel, but this statement requires some qualification. She is not structurally a plate fin like the Herreshoff yachts, but she is of the

YACHTS OF THE GREAT LAKES. AT ANCHOR OFF THE ROYAL CANADIAN Y. C. STATION.
From Photo by Bruce, Toronto.

S-section, with an extreme hollow in the bottom, something of the type of Syce and Quissetta, with a wineglass section. She is of handsome model, with a moderately full waterline, the upper level lines in the bow showing a very slight hollow. To all appearances the original design may have been a foot or more longer, with the forward lines cut away to shorten the bow at the water and above to meet American conditions.

The contour of the stem above water is not as pleasing to the eye as in many of Mr. Payne's boats. The center is cut off by a rather wide square transom, set on a slight rake. The bottom of the keel, a cleverly bulbed lump of lead, is parallel with the water. The rudder follows the sternpost in the usual way, the post having a moderate rake. The section is a shoal one, giving but a limited head room at best. As fitted for racing, there is an opening aft for the helmsman, and one amidships; the floor is placed at such a height that when a man stands on it his arms are well clear of the deck, so that he can reach the different lines and cleats.

The frame is all of elm, double-sawn, and bolted with screwbolts; a shelf and clamp are used together. The seams are not caulked, except about the garboards, being made with a groove rubbed down in each plank edge, with a light cotton thread laid in the groove. The deck is entirely flush, with no pretense of a rail, but a light batten or handrail runs along amidships about 18in. in from the edge. All the spars are hollow; the sails, made by John Leckie, of Toronto, of a very fine imported cotton, are crosscut. The blocks and small fittings were specially made for this yacht and Minota, and are models of neatness and lightness. The wire rigging was imported from Scotland, and is of very small diameter. The entire rig, above deck and below, is perfect for its purpose—light, well arranged, and from the trials thus far apparently strong enough. All the gear is led below, the halyards making fast to a heavy thwart at the foot of the mast, or leading to jigs on the cabin floor, where the cleats are placed.

After her formal selection as the defender, Beaver was hauled out and 500lbs. of lead were removed from her keel, as she was amply stiff. A small sprit topsail was also fitted, to increase her sail area down wind. Her outside was carefully smoothed, and the topsides painted with marine black, with a wide bootleg of silver bronze above the waterline. The bottom was finished with a special black composition sent out by Mr. Payne, making a smooth and glossy surface.

On the long trip of nearly a week on the steamer from Chicago to Buffalo, the crew of Genesee was busy rubbing her down and giving her a coat of red lead. When she reached Charlotte she was docked and again smoothed and painted under Mr. Hanley's supervision. She sailed on Aug. 16 for Toronto, arriving at midnight on Thursday, after a slow passage. She drifted for a time, her crew bending the new mainsail while in the middle of the lake.

The conditions call for the selection of one judge by each party, the two to choose a third. The challengers selected E. P. Warner, of Chicago, and the defenders E. H. Ambrose, Royal Hamilton Y. C. The Toronto yachtsmen named as their preference for the third judge several well-known yachtsmen, among others Messrs. Oliver E. Cromwell, Oswald Sanderson, John Hyslop, of New York, and L. M. Clark, of Boston. The Chicago yachtsmen objected to any one from the salt water, and suggested J. H. Monck, of Hamilton, a Canadian, or Allen Ames, of Oswego. Finally the two parties agreed on Mr. Louis M. Clark, of the Hull-Massachusetts Y. C., of Boston, president of the Y. R. U. of N. A.

The work of measuring was begun on Friday afternoon by Messrs. Warner and Ambrose, assisted by Mr. Geo. E. Evans, ex-secretary of the Lake Y. R. A., and an old hand at this work. Beaver was measured for girth on the ways, and on Saturday morning she was launched and Genesee took her place, the blocking being first arranged so as to admit of the dropping of the centerboard.

The official measurements of the two yachts were as follows:

	Genesee.	Beaver.
Length—		
Over all	44.63	44.00
L.W.L.	27.69	28.55
Overhang—		
Bow	8.18	8.00
Counter	8.76	7.45
Beam, extreme	11.63	9.43
Draft, hull	1.50	6.00
Girth—		
Hull	11.76	17.68
Added for centerboard	2.82	.....
Added for draft forward	0.34	.....
Total	14.92	17.68
Sail area—		
Mainsail	1101.00	908.00
Head triangle	357.00	427.00
Topsail	.....	70.00
Total	1458.00	1405.00
Boom	37.52	36.66
Gaff	25.40	21.51
Hoist	29.45	25.35
Leech	59.80	51.69
Linear rating	34.78	34.92

In this measurement Genesee paid for 2in. of depth of hull forward of the point of girth measurement and also for twice the distance from the lowest point of the hull to the center of area of the centerboard. Her total sail area was made up of a big mainsail, with a long gaff and very high peak and a comparatively small jib. Beaver's total girth was the plain tape measurement under her keel. After the removal of 500lbs. of lead, following the trial races, her L.W.L., beam and girth allowed her to carry 1,408sq.ft. of sail, but it was impossible to put this amount on her without an entire new rig, the spars being too short. Her head triangle would have allowed a mainsail of 1,003sq.ft., or 105 more than she actually carried. To utilize in a measure some of this allowed area, a topsail of 70sq. ft. was fitted for use off the wind, though it was subsequently used to windward; but it was a narrow and ineffective sail, owing to the high peak of the mainsail and the small space between the gaff and the pole of the mast. To make up the remaining area the spinaker boom was cut to exceed the base of the fore triangle by 1ft. 3in.

In the matter of canvassing to the exact limits of the rule and class Genesee had the advantage, with all that she could possibly carry in her big mainsail; Beaver, on the contrary, was plainly undercanvassed in a moderate breeze; at no time in the races was she feeling her sail, and while she badly needed another 100ft. if it could have been put on, she would have carried still more in ordinary weather.

The final arrangements for the races were as follows:

Triangular Course.—The course will be once around an equilateral triangle, seven miles to the side. The start will be between the flagstaff on the bow of the judges' steamer Augusta and the starting buoy. If the blue flag be hoisted on the judges' boat the start will be to the southeast, and all buoys (including the starting buoy) will be kept on the starboard hand. If a red flag be hoisted the start will be to the southwest, and all buoys (including the starting buoy) will be kept to port.

At 10:30 A. M. a gun will be fired from the judges' boat as a signal for the yachts to approach the starting line. At 10:50 A. M., or twenty minutes after the first gun, the preparatory gun will be fired and the red or blue flag hoisted. At 11 A. M., or ten minutes after the preparatory gun, a gun will be fired as a signal to start, and the red or blue flag lowered.

Should the first gun be delayed, the same intervals will be observed. In case the gun misses fire the hoisting or lowering of the flag will be the signal.

A boat starting before the signal will be recalled by five short blasts of the whistle and the display of its national flag on the judges' boat.

Windward and Leeward Course.—The start will be between the flagstaff on the bow of the judges' steamer Augusta and the starting buoy off Toronto Island.

The course will be nine miles to windward or leeward and return, leaving all buoys on the starboard hand.

The outer mark will be a buoy carrying a red ball.

The starting signal and intervals will be the same as in the triangular races.

The boat (not the judges' tug) bearing the outer buoy will start at the preparatory signal. The compass course will be given on application to the judges.

With but two yachts, starting within a quarter of a mile of shore and at all times within reach of a megaphone, all that was necessary was a preparatory interval of five minutes between the preparatory and starting guns, but for some unexplained reason a preliminary interval of twenty minutes was provided, with a second interval of ten minutes; the result being an annoying and trying delay to the skippers.

The challenger was manned as follows: Skipper, C. G. Davis; mate, J. E. Burroughs; crew, M. A. Duff, Chas. Van Voorhis, C. C. Hanley, and E. Thompson, paid hand. Scrutineer, George E. Evans, R. C. Y. C. Beaver was sailed by Æmilius Jarvis as skipper; J. Wilton Morse, mate; crew, J. S. McMurray, A. A. MacDonald, H. O. Hughes, and J. Young, paid hand. Scrutineer, E. MacDonald, Rochester Y. C.

The location and surroundings of Toronto are peculiar and of such a nature as to offer exceptional facilities for all water sports. The city extends along the lake shore for some half-dozen miles, the ground rising with a gentle ascent from the water. Directly opposite to the center of the city is "The Island," a big sandbar, about three miles long and less than half a mile wide at the center, the surface being only a few feet above the lake level. This island forms Toronto Bay, three miles long and a mile wide, completely inclosed save the two entrances, the "Western Gap" and the "Eastern Gap." This sheltered water is sufficiently open to the sweep of the lake winds across the island to make a good sailing course for the larger yachts of the fleet, and at the same time it is equally well adapted to shell rowing, canoeing and boat sailing. The "town house" of the Royal Canadian Y. C. is on the water front within ten minutes' walk of the business center of the city; a large and well appointed building, with moorings close at hand for the largest yachts and houses for small boats. Directly across the bay is the "island club house," surrounded by trees and green lawns laid out in tennis courts and greens for bowling. Meals are served at this house, and a cottage on the grounds houses those members who prefer to live there. Off the club pier is another good anchorage.

The island is owned by the city and the ground is leased for terms of twenty-one years each. The lake front is a sandy beach, protected by a stone facing, on which is a wide plank walk, and just inside of this, some 50yds. back from the water, are summer cottages, some small and cozy and some large and pretentious. The island is cut in every direction by natural lagoons and by small canals, dredged out with a sand pump, the sand being used to raise the general level of the land. Where a house fronts on the lake the rear is not far distant from some one of the canals, and by means of the open canoes, lying about by dozens, it is an easy matter to reach the different cottages, the club house, the public ferry wharves and other points. Parts of the island are still wild and isolated, and given up to camping parties. The west end, Hanlan's Point, the home of Edward Hanlan the famous sculler, is a public picnic ground, exhibitions of various kinds being given.

The island, with its open outlook over the lake, is a convenient summer refuge for the people of Toronto, especially the yachtsmen.

The gathering of the fleet began on Saturday, when the Com. Gardner, of Cleveland; Siren, of Chicago; Minx and Result, of Detroit, and the steam yachts Thistle, of Chicago, and Pastime, of Walkerville, arrived. The flagship of the Chicago Y. C., Pathfinder, with Com. Morgan and party, arrived on Sunday afternoon; the lake fleet re-

GENESEE.

GENESEE. BEAVER.

From Photos by Bruce, Toronto.

turned from Hamilton, and Onward, of Rochester, and yachts from other Ontario ports came in.

The gathering was a notable one, including yachtsmen from all the lake ports. The Chicago party included Com. and Mrs. Morgan, Mr. and Mrs. Thorne, Mr. and Mrs. Warrington, Messrs. Warner, Crawford, J. B. Berryman, Peare and others. From Cleveland came the veteran Com. Gardner, with his son Harry, E. W. Radder, Percy Rice and others. Detroit was represented by the Walkers and Pres. W. C. Jupp, of the Detroit Boat Club. The steel cutter Sultana came from Toledo with her owner, "Kid" Wild. Rochester sent a large and enthusiastic delegation, some in their own yachts and more coming by steamer. The Royal St. Lawrence Y. C. was represented by the steam yacht Alcyone, with her owner, Mr. H. M. Molson, and Mr. E. Kirk Greene. The only visitor from New York was Mr. N. D. Lawton, Atlantic Y. C.; while the only Boston yachtsmen were Messrs. Clark and Bockus, Hull-Massachusetts Y. C.

The town club house was full of visitors, American and Canadian, all eagerly discussing the prospects of weather and the merits of the respective champions. Both of the yachts were under way, but late in the afternoon Beaver was hauled out, as the paint on her bottom was scaling, having been still wet when she was launched on Saturday.

On the evening preceding the first race the two skippers met, with the judges, and discussed different points in connection with the racing rules, so that there should be a thorough understanding between all parties.

The week preceding the races was marked by light weather. Friday was hot and Saturday was still hotter, with no wind, the record day of the summer. On Sunday there was a light breeze, from S.W., holding through the night, but very light in the early morning, though by 10 o'clock it was blowing moderately with a light roll of sea.

Genesee turned in three reefs before leaving the dock at the town house, while Beaver came out under full sail.

Immediately on her return, Beaver was hauled out and the bottom again rubbed down and polished, while a new pendant and spreader were fitted.

Tuesday was cool and cloudy, with a moderate wind from the west. The fleet started from the bay about 10 o'clock, working out by the Eastern Gap; steam yachts, steamboats, yachts, small and large, and even open boats. The judges went out in Pathfinder, while the tug Augusta was at hand to lend assistance if needed. When they reached the line Genesee was knocking about with one reef in her mainsail, while Beaver swung whole sail.

The conditions call for an interval of twenty minutes between the first and the preparatory signal, and another of ten minutes to the start. This makes a full half-hour after everything is ready before the yachts can cross the line, a wait that is not only unnecessary but most trying to the crews. The first gun was fired at 11 A. M. and the second at 11:20, the blue signal indicating all marks to starboard being set at the same time. The wind was then W. by N., or almost down the western leg of the triangle; a broad reach to first mark out in the lake, a beat to the second, and another reach home along the island shore.

Five minutes before the start Beaver set her little sprit topsail. The two kept wide apart, inshore of the line, and made no attempt to bother each other. They jibed over just before the gun, still at some distance from the line, Beaver having her spinaker boom ready to starboard. She crossed the line next to the buoy at 47s. after the gun, Genesee being 11s. later. Genesee set her spinaker and within three minutes shook out her single reef. Beaver went ahead and soon put clear water between them. Genesee took in her spinaker and set her balloon jib, starting to luff, but abandoning this and trying for a passage to leeward, which she failed to make. She then went at Beaver's weather again and worked up astern. Beaver had her headsails down to give a fair chance to her spinaker, now braced well forward, and she was in no shape for a luffing match. As the wind was, Genesee proved the neither made any mistakes. Genesee's crew showed the better judgment in choice of canvas in the early part of the race.

There was next to no wind early on Wednesday morning, a very light northerly breeze, and by 10 A. M. there was a flat calm about the starting line, with the smoke blowing slowly in different directions on shore and out in the lake. The preliminary gun was fired at 11:30, but there was no wind, and the yachts were notified by megaphone to stand by for orders, for the ten-minute preparatory gun. By noon the wind seemed to have settled about S.W., and at 12:11 the preparatory signal was given and the tug sent away to log off nine miles S. by W.¾W. The start was given at 12:21, Beaver going over first in the weather berth after a little maneuvering, both, of course, under whole sail. Going over with a little better way on, Genesee at once walked through Beaver's lee, amid cheers from the surrounding yachts. After getting her wind clear she footed ahead, while Beaver made up by better pointing and holding on. For a time Genesee's gain, though apparent, was very slight, both moving slowly; then she gained on Beaver as the wind grew still lighter, and again near the middle of the long nine-mile leg Beaver came up very close to her. The wind fell again and Genesee drew away as they neared the windward mark, where they were timed:

	Time.	Elapsed.	Gain.	Lead.
Genesee	3 15 19	2 54 19	0 01 19	0 01 19
Beaver	3 16 38	2 55 38	. . ..	. .. ..

It had taken nearly three hours to cover the nine miles, and in this time the boats were never much further apart than at the turn.

Genesee was slow with her spinaker, and it was set no sooner than Beaver's, which went up just as she turned the mark. There was a turn in the head of Beaver's, however, and it came in for a moment, being at once reset. As they ran very slowly with booms to starboard, Beaver began to creep up, and after about twenty minutes she was on

PATHFINDER, COM. F. W. MORGAN, CHICAGO Y. C.

TORONTO.

From Photos by Bruce, Toronto.

The assembly signal was given at 11 A. M., with an interval of twenty minutes to the preparatory and ten minutes more for the start. There was no sharp maneuvering, but just before the starting gun Genesee came for the middle of the line under a three-reefed mainsail, crossing soon after the gun, close hauled on starboard tack, the orders being for the course to be sailed with all marks to port. Beaver was but a few seconds astern, in a good berth on Genesee's weather quarter, under whole sail and moving much faster. As she hardened her sheets on the line there was a sudden snap aloft, and her throat dropped a little; she luffed up and a hand went aloft, then she lowered her mainsail and started home under her jib. The wire rope pendant of the throat halyard block had parted and the halyard block struck the starboard spreader and doubled it up. The damage to the throat might have been repaired, but the spreader was ruined.

Genesee kept on, holding the starboard tack for a long time, finally shaking out the reef, then going on port tack. The judges' tug ran out to the S.W. mark and awaited her, but she did not appear, and two hours after the start the tug started in, meeting Genesee as both neared the line.

After crossing the line Genesee reported that she had rounded the first mark, but after sailing more than seven miles to the eastward she had failed to find the second mark and had not rounded it. To the surprise of all on board, they were informed that the judges' boat had gone straight to the first mark and laid by it for two hours. The blunder was due in part to Genesee's compass being out and in part to the fact that Pathfinder, Thistle and other steam yachts ran out from the start to the second mark instead of the first. On sighting them, Genesee assumed that they were at the first mark and steered east, instead of west, where the judges' tug was waiting.

There was a noisy gathering at the town house as yacht after yacht came into the bay and the men rowed ashore. The Canadians were jubilant over the bad blunder by which their opponents had thrown away one leg after it had given been to them, and the Americans were looking for something to cover the plain facts of the case. Before long the rumor ran around that the marks had been wrongly placed, in spite of the fact that the course was laid out under the personal direction of the Chicago judge and that the first mark was known to be correctly located. This rumor went so far that the three judges finally took the tug and ran over the third leg once more, finding the second mark in its proper place,

better canvased, and she steadily drew ahead until near the middle of the leg she had a clear lead.

It was now a procession to the first mark, Genesee slowly increasing her lead. The wind was quite as heavy as Genesee wanted, for her whole mainsail, but too light for Beaver's small sail plan. There was no sea inshore to bother the boats. The first mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Genesee	12 24 35	0 54 35	0 01 28	0 01 28
Beaver	12 26 03	0 56 03	. .. ..	. .. ..

Genesee luffed around the mark and started on port tack, blanketing Beaver for a moment as she passed close to windward. Beaver trimmed in and stood by on starboard tack, taking in her little topsail.

After a minute she came on port, Genesee tacking at the same time. They worked on together, never very far apart, and never near enough to bother each other, for the next two hours. The wind was light and there was a roll to the sea, which bothered the two at times. The fight was exciting, as there was evidently very little to spare, and a slight error or a little change in the wind might determine the race. At first Genesee held her own, but gained nothing; she footed faster, but did not point as high or hold on quite as well as Beaver. In the middle of the leg Beaver, with a freshening of the breeze, did her best work, and by a steady gain to windward was at least even or a little ahead. As they neared the second mark the wind fell a little and Genesee took the first place, turning with a lead of 52s., or a loss of 36s. in two hours of fair sailing. The times were:

	Time.	Elapsed.	Gain.	Lead
Genesee	2 27 35	2 03 00	. .. ..	0 00 52
Beaver	2 28 27	2 02 24	0 00 36	. .. ..

The race was now over, as it was plain that Genesee could outreach Beaver in a whole-sail breeze—for her—and nearly smooth water. It was a hard fight, however, and a close finish, but 1m. 22s. apart in four hours' sailing. Beaver set her topsail for the reach home. The final times were:

	Time.	Elapsed.	Gain.	Elapsed.	Lead.
Genesee	3 25 10	0 57 35	0 00 30	3 55 10	. .. ..
Beaver	3 26 32	0 58 05	. .. ..	3 56 32	0 01 22

Before the fleet reached the Eastern Gap a strong breeze was blowing; Genesee beat in with jib stowed and all her reefs tied down.

The race was a most exciting and interesting one, especially when it is considered that there was no jockeying or close maneuvering, but plain, straight sailing on the part of each boat. Both were well handled, and Genesee's port or inshore beam and then out clear ahead. Genesee did not like this, as Beaver was quite as good or a little the better dead before the wind, and she took in her spinaker and began to luff, Beaver meeting her. They luffed out into Humber Bay, and finally Genesee squared away and took the lead, on the outside. As they neared the island the wind was nearly dead aft and shifting so that the booms were liable to come over at any time. There was another luffing match, with jibing and shifting of spinakers, in which Genesee gained a further advantage by clever handling, and they came for the line with booms on opposite sides and she in the lead. The finish was close enough to be exciting, there being but 39s. between them.

		Leg.		Course	
	Time.	Elapsed.	Gain.	Elapsed.	Lead.
Genesee	5 06 57	1 51 38	. .. ..	4 45 57	0 00 39
Beaver	5 07 36	1 50 58	0 00 40	4 46 36	. .. ..

As on the previous day, the breeze freshened materially before the fleet reached the Eastern Gap.

On Thursday the triangle was again in order, and with no more wind than on the previous day, the little that there was being about S.E., with perfectly smooth water and a sunny sky. The start was made at 11:14, with all marks to starboard, Beaver, with her little topsail set, again going over first and to windward of Genesee. With her crew to leeward, however, the centerboard boat soon footed from under Beaver's lee, the latter not having enough wind to give her a list. It was the same story as in the previous races, but in even a lighter wind, as Genesee footed away, Beaver made a determined but fruitless effort to hold her by better windward work. About four miles from the start the wind shifted a little to the south, allowing Genesee to lay her course for the mark. Beaver was not far away, but she lost the wind entirely for a time. She set her balloon jib and carried it nearly to the mark, but on a reach and with a streak of wind to help her. Genesee gained nearly ten minutes in three miles. As she neared the mark the wind headed her so that a couple of short hitches were necessary, but she finally rounded with the greatest lead she had had thus far, 11m. 11s. As they sailed over the first half of this leg, under equal conditions she would have beaten Beaver to the mark by three or four minutes, the greater part of her gain being due to chance. The times were:

	Time.	Elapsed.	Gain.	Lead.
Genesee	1 05 39	1 50 39	0 11 11	0 11 11
Beaver	1 16 50	2 01 50	. .. ..	. .. ..

The second seven miles was a free reach. Genesee car-

ried her spinaker for a time, but shifted to a balloon jib. Beaver set her spinaker well forward and made it draw over the whole leg, but she lost over a minute more. The second mark was timed:

	Time.	Elapsed.	Gain.	Lead.
Genesee	2 35 48	1 30 09	0 01 17	0 12 28
Beaver	2 48 16	1 31 26	. .. ..	. .. ..

They had the wind about abeam on the last leg, and considerably more of it; with almost a whole-sail breeze and smooth water, it was expected that Genesee would add a good deal to her already large lead, but on the other hand Beaver picked up nearly two minutes, the final times being:

		Leg.		Course.	
	Time.	Elapsed.	Gain.	Elapsed.	Lead.
Genesee	3 32 11	0 56 23	. .. ..	4 17 17	0 10 47
Beaver	3 42 58	0 54 42	0 01 41	4 27 58	. .. ..

After the finish the loser sailed up and cheered the winner, amid salutes from the large fleet in attendance.

The delivery of the cup took place in the evening at the island club house, the band of the Forty-eighth Highlanders being present and the handsome grounds being illuminated. A large party of American and Canadian yachtsmen, with many ladies, completely filled the club house in the evening, after the two crews and the judges had dined together as guests of Mr. MacDonald, the scrutineer on Beaver. Com. Plummer introduced Mr. John Shaw, the Mayor of Toronto, who welcomed the visitors in a short speech. The Commodore then tendered the cup to Com. Morgan, of the Chicago Y. C., who spoke briefly, being followed by Mr. Crawford, of the C. Y. C. race committee. Speeches were then demanded of Messrs. Hanley and Davis, Mr. Burroughs and Mr. Jarvis. The latter spoke of the good feeling which had characterized the entire contest, from the first negotiations to the last race, and of the close sailing of the two boats, widely different in model, promising that the Chicago Y. C. should not wait long for a challenge.

The contest was marked on each side by a devotion to the work and a personal attention to detail on the part of the principals which is rather exceptional. When Genesee was hauled out, Mr. Burroughs was present, working underneath the bottom in the dirt and slime from the oil works which befouls a part of Toronto Bay; and each time Beaver was hauled out, by night as well as day, Mr. Jarvis superintended everything, taking a hand himself in polishing the bottom. On each boat nothing was left to chance, but every possible effort was made to eliminate defects and to avoid all possibility of accident.

The handling of the two boats was very even, there being few mistakes on either side. The crew of Beaver was smarter with the spinaker and other light sails. Mr. Davis did excellent work as skipper throughout the races, though his opponent, Mr. Jarvis, is generally recognized as the best amateur on the lakes. In the first race on the first leg Genesee profited by using a balloon jib instead of a spinaker, thus being able to luff and get by Beaver, and on the second leg of the second race, after Beaver had passed her down wind, the race was won by Genesee's clever maneuvering in the luffing matches.

There was a general feeling on the part of the Canadians that the very light weather suited Genesee, while it gave no opportunity for Beaver to show herself at her best in a moderate or strong breeze.

As the Rochester Y. C. now holds the Fisher cup, it is probable that Genesee and Beaver may meet again this fall off Charlotte, as the R. C. Y. C. proposes to challenge.

The America's Cup.

During the past week Shamrock has been at the Erie Basin drydocks, as closely guarded as the conditions will admit, though visitors are able to look at her topsides from an adjoining wharf. It is expected that Sir Thomas Lipton and Mr. Will Fife, Jr., will be here by Sept. 1, as they sailed on Aug. 26 on the Campania. The yacht will not be docked until they arrive. Her mast was stepped on Aug. 28, and she will have her first sail on Aug. 31.

Columbia's steel mast was stepped on Aug. 24, having been repaired, and about three tons of ballast was stowed aboard. She was under way on Aug. 26, but her new steel topsail yard buckled at the slings, making almost a right angle. It has been decided to sail a series of trial races between her and Defender off Newport, as per the following official circular:

New York, Aug. 25.—Trial Races—The committee on the challenge from the Royal Ulster Y. C. have decided to hold trial races between Columbia and Defender at Newport, on Sept. 2, 4 and 6, and have placed the event in the hands of the Regatta Committee.

The courses will be both triangular and to windward, or to leeward and return, out from Brenton's Reef L. S.

The start will be at 11 A. M., wind and weather permitting. The races will be subject to postponement at the discretion of the Challenge Committee, or at the request of either of the competing vessels.

Sailing directions can be obtained at New York Y. C., Station No. 6 (Newport), after Aug. 29.

The America's Cup.—For this event the Regatta Committee have chartered the side-wheel steamer Republic, formerly of the Philadelphia & Cape May Transportation Company, and with a licensed passenger capacity of 2,500.

For each race, members will be provided with tickets at the club's expense, and may procure extra tickets for their friends at $5 each. Members' tickets will be non-transferable, and, as well as the extra tickets, will admit but one person each. All tickets will include lunch, exclusive of wines, etc.

Tickets will be issued according to priority of application, which should be made to Mr. J. V. S. Oddie, the Secretary of the club, who, at the request of the Regatta Committee, will have the management of the vessel.

S. Nicholson Kane,
Chester Griswold,
Irving Grinnell,
Regatta Committee.

Before sailing from the Clyde, the skipper of Shamrock received the following instructions:

Greenock, July 31.—Sailing instructions for the yachts Erin and Shamrock, while making the voyage from the Clyde to Sandy Hook:

1. Erin will only tow Shamrock in calm weather.
2. Whenever there is any wind Shamrock will proceed under sail.
3. Vessels will sail from the tail of the Bank, Greenock.
4. Vessels will proceed down the Irish Channel and rendezvous at Fastnet, if not in company (and report at Browhead if possible).
5. If vessels are in company, they will pass to north of Flores Island, in the Azores.
6. If vessels are not in company, they will proceed to Horta Bay, in Fairyland, and report, waiting arrival of either vessel.
7. If vessels are not in company when in vicinity of latitude 38 north, longitude 50 west, the Erin will wait for such a time as in the opinion of the captain of Erin is necessary and reasonable to allow Shamrock to join company. And after such time to proceed on voyage to New York. It is understood that ample time will be allowed Shamrock to join Erin.
8. Speed of towing will be regulated by the captains of Shamrock.

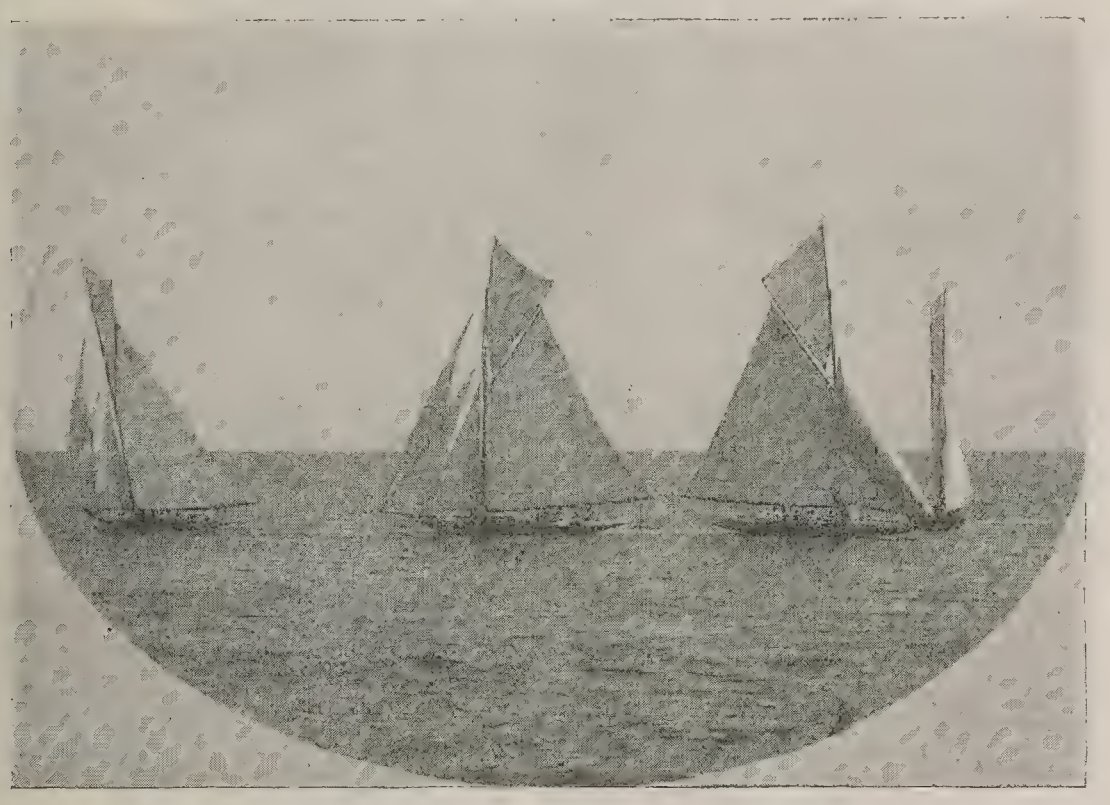
Glencairn III and Akabo.

Chippewa Yacht Club, Chippewa Bay, Aug. 14.—Capt. Duggan, Royal St. Lawrence Yacht Club, Dorval, Quebec—Dear Sir: The international races recently sailed by you and Mr. Crane were witnessed by a number of our members and closely followed through the public prints by the rest of us. We think we have a faster boat than Glencairn, and I write to ask if you can bring your yacht to Chippewa Bay for a race. To make it interesting we herewith offer to sail you a race over our regular course of about eleven miles, $300 a side, naming the Akabo, Mr. C. Allen Hayden, as our boat. The purse of $600 is yours if you win. If we win we will allow you $50 for your expenses, give $50 to the crew of the Akabo and the balance of $500 to some charitable object agreed upon by the officers of this club. In order to insure a good honest race, we make the condition that the time limit shall be two hours and fifteen minutes. I will add that our yachts have sailed the course in less than one hour and thirty-one minutes. Any date that may be agreeable to you between Aug. 25 and Sept. 2, both inclusive, would be satisfactory to us. Trusting you will accept this challenge, I am Yours sincerely,

Jas. G. Knap, Sec'y.

James G. Knap, Esq., Sec'y Chippewa Bay Yacht Club, Chippewa Bay, N. Y.—Dear Sir: In answer to your favor of the 14th inst., I fear it is quite impossible for me or my crew to sail the race you suggest at Chippewa Bay. If, however, you are anxious to try conclusions with Glencairn III., we should be glad to sail you a friendly race at Lake St. Louis on Saturday afternoon over the regular international course, either triangular or to windward and return. I would not be willing to make a bet such as you suggest, but would be glad to subscribe to a small trophy, to become the property of the winner. If you could arrange to send your boat down here for Saturday, Aug. 26, there is on that day an open race for the Lake Two Mountains Challenge cup, to be held on the Lake of Two Mountains, a fine sheet of water on the Ottawa, about fifteen miles west of the St. Lawrence Y. C. I have communicated with the officials of the Lake of Two Mountains Club, and have ascertained that they would be very glad to have entries from one or more of your craft. The race is open to all, but there will be nothing competing but our 20-footers. Yours very truly,

(Signed) G. H. Duggan.
Aug. 19.



The American Bottle Fleet.

From the Army and Navy Register.

A very interesting report giving the operations of the "Bottle Fleet" for the past year has been prepared by the hydrographic office. It shows that during the last fiscal year 151 returns were made to the hydrographic office. There is no way of ascertaining the exact number of bottles cast adrift during that period, but it is thought to be a thousand or more, thus showing that only a comparatively small percentage of those released are recovered. A great majority of those that were picked up and sent back to Washington were found on the coast bordering the Atlantic. This undoubtedly was the result of the bottles being thrown overboard in the Atlantic by captains leaving ports in this country. The map prepared by the hydrographic office shows that with one or two exceptions all bottles cast adrift in the Atlantic between Florida and Halifax, within a few hundred miles of the coast, took a northwesterly course, winding up on the English or French coast. The lines described by them are practically straight, and show little variation. One bottle adopted a rather eccentric path. It escaped the currents followed by most of its fellows, and starting from a point opposite the Massachusetts coast, took a wider detour to the south. It passed within a few hundred miles of the Cape Verde Islands and then fell into the strong current that sweeps along the northern coast of South America. It had straightened out in the direction of the Gulf of Mexico, when it became stranded on one of the Windward Islands. It was two years and six months on its journey, during which it traversed 3,600 miles, an average of four miles per day. Decidedly the most remarkable drift of one of these bottles in recent years occurred last fall.

A messenger, known officially on the chart of the department as No. 26, was thrown overboard from the Hamburg-American liner Fuerst Bismarck May 1, 1898, about 350 miles southeast of Cape Race, and recovered, according to the letter of transmittal from the United States Consul at Hamburg, Aug. 1, 1898, at Twielenfleth, in the vicinity of Gluckstadt, on the Elbe. The distance between these two points, following the indicated route through the English Channel, is 2,400 miles, and as the bottle was at sea a total of but 92 days, this gives it a daily average of 26.1 miles as the lowest possible speed it could have traveled. This is far in excess of any similar drift hitherto reported to the hydrographic office the nearest approach to it being a daily average of 21.2 miles, which was attained by a bottle thrown overboard Dec. 25, 1895, about 200 miles distant from the point at which No. 26 was dropped into the sea, and recovered March 28, 1896, on one of the Shetland Islands. One of the bottles recovered last year had been afloat since Oct. 15, 1893, while another, also recovered last year, had been drifting since August, 1894, having covered 1,500 miles, at an average of one mile per day. In the case of the bottle from the Fuerst Bismarck, the officials were inclined to doubt the accuracy of the information contained on the slip sent in, and an inquiry was made of the steamboat officials in regard to the matter. Capt. A. Albers promptly looked into the affair, and reported that the date on which the bottle was thrown from his ship was correct, as shown by his ship's log.

The speed made by this "floater" is equal to that of the majority of slow-going sailing ships. In the early history of the investigation of ocean currents by this system a bottle was known to remain afloat for ten years. This is the most remarkable achievement of this kind on record. Of course there is no absolute rule by which the distance traveled by these messengers may be ascer-

tained, as one of them may be landed on a beach and be washed out to sea again before being picked up. Thus, it may go off on another long voyage and get no credit for its first trip. Occasionally bottles are fished out of the midocean, the discoverers sometimes thinking that they may contain messages from people in distress. An examination of the various drifts or bottles last year shows that near the equator the velocity of the ocean currents is much greater than in higher latitudes. This brings up the old question of whether or not a bottle is more subject to the action of the waters in which it is submerged or to the action of the wind. This is still a disputed point, some claiming that the influence of a steady current is stronger than that of the wind, while other take the opposite view.

Instances are on record of a bottle having moved thousands of miles in opposition to the direction of the prevailing wind. No cases, however, have been reported to the hydrographic office of bottles proceeding in opposition to the direction of the current; so it would seem that the theory that the force of currents is stronger than that of the wind is the right one. It is no unusual thing for a bottle to make a complete circuit of an ocean. One dropped overboard in the vicinity of Cape Verde Islands could do this by crossing the Atlantic, entering the Gulf of Mexico by the Strait of Yucatan, emerging again through the Strait of Florida, thence drifting northward and eastward of the Gulf Stream to the neighborhood of the Azores, and then back again to its starting point in the Cape Verde Islands. The length of time occupied in a drifting voyage of this character could hardly be less than two years, covering in the round trip about 12,000 miles.

During the year just closed the Russian Government, through Vice-Admiral Kaznakoff, requested permission to assist the American hydrographic office in its work. This being gladly granted the imperial Russian cruiser Duke of Edinburg was instructed to distribute bottle papers during two cruises, the first from Cronstadt to Windward Islands and return, and the second from Cronstadt to Cape Verde Islands, by way of the Mediterranean Sea and return.

During the coming winter some interesting experiments are to be made with floating receptacles, which are expected to develop much valuable information regarding the North Pole. The geographical society of Philadelphia has arranged to distribute a number of iron-bound, oaken casks among the sailors visiting the extreme northern waters, with directions to set them adrift in the Arctic Ocean north of Alaska and the Behring Sea. The expectation is that one or more of these casks will succeed in drifting across the Arctic to the north of North America and be recovered in the entrance to Baffin Bay or Davis Strait. The result of the experiments will prove of the greatest value to future seekers for the pole, as it will either confirm or deny not only the existence of a northwest passage, but will also tell whether or not it is possible for persons to reach the pole by drifting.

A Short Trip in 1620.

Speaking of short yacht voyages across the Atlantic, it may be worth while to recall for comparative reference that Gosnold the navigator made his midsummer trip from Martha's Vineyard to Exmouth, England, in five weeks, in the year 1620. That was a pretty good sailing craft of his for those days. Chas. Hallock.

Rifle Range and Gallery.

Fixtures.

Sept. 1-2.—Jersey City, N. J.—Twenty-fifth annual shooting festival of the Zettler Rifle Club at Armbruster's Shooting Park. G. A. Nowak, Sec'y.

Sept. 4.—Sea Girt, N. J.—Meeting of the New Jersey State Rifle Association. De Lancy G. Walker, Sec'y.

Sept. 4-5.—Denver, Colo.—Fourth annual tournament of the Colorado Rifle Association.

Cincinnati Rifle Association.

The regular shoot of the Cincinnati Rifle Association was held on Aug. 20. Weather was very warm, and a light wind prevailed. Conditions were off-hand, at the German ring target:

Rifle Note.

The twenty-fifth annual tournament of the Zettler Rifle Club, to be held at Armbruster's Greenville shooting park, Jersey City, N. J., Sept. 1 and 2, has a most attractive programme. The ring target event, open to all comers, has twenty-one prizes, from $1 to $50; the bullseye target, open to all comers, has eighteen prizes, the first of which is $20; the target of honor, open to members only, twenty prizes; the special 25-ring target, open to everybody; the judges' target, open to judges only; and the ladies' target of honor, open only to femal relatives of club members, for prizes presented by the club. The shooting committee is H. D. Muller (chairman), B. Zettler (shooting master), G. A. Nowak (secretary), C. G. Zettler, F. C. Ross, L. P. Hansen, and A. Begerow. Shooting commences at 9 o'clock and closes at 6.

Trapshooting.

Fixtures.

Aug. 30.—Elkwood Park.—Dewey handicap, 15 birds, $15; 1 o'clock.

Aug. 30-31.—Auburn Me.—State tournament on the grounds of the Auburn Gun Club. L. A. Barker, Sec'y.

Aug. 30.—Pottstown, Pa.—All-day shoot and clambake of the Schuler Shooting Club.

Sept. 2.—Elkwood Park.—Country Club handicap, 20 birds, $20; 11:30 o'clock.

Sept. 4.—Brockton, Mass.—Semi-annual silver cup handicap. A. A. Barrett, Sec'y.

Sept. 4.—Meriden, Conn.—Labor Day tournament and sheepbake of the Parker Gun Club. C. L. Howard, Sec'y.

Sept. 4.—Schenectady, N. Y.—Schenectady Gun Club's Labor Day shoot. H. D. Strong, Sec'y.

Sept. 4.—Providence, R. I.—Labor Day shoot and State pennant contest of the Providence Gun Club.

Sept. 4.—Dover, N. H.—Third annual tournament of the Dover Sportsmen's Association. John B. Stevens, Sec'y.

Sept. 4.—Elkwood Park, Long Branch, N. J.—Labor Day handicap, 20 birds, $20 entrance; 10 o'clock.

Sept. 4.—Brooklyn, L. I.—Fulton Gun Club's Labor Day shoot.

Sept. 4.—Cleveland, O.—Cleveland Gun Club's tournament.

Sept. 4.—Junction Park, Pa.—Junction Park Gun Club's tournament.

Sept. 4.—Canton, O.—Lake Side Gun Club's tournament.

Sept. 4-5.—Vincennes, Ind.—Vincennes Gun Club's amateur tournament.

Sept. 4-5.—Brantford, Ont.—Brant County Rod and Gun Club tournament.

Sept. 5-6.—Kalamazoo, Mich.—Michigan Trapshooters' League tournament.

Sept. 5-7.—Omaha, Neb.—Du Pont Gun Club's fourth annual tournament. G. H. Moore, Sec'y.

Sept. 5-7.—St. Paul, Minn.—St. Paul Gun Club's tournament.

Sept. 6.—Elkwood Park.—All-day sweepstake shooting, and two special 5-bird events, $5 entrance.

Sept. 6.—Lyndhurst, N. J.—John Wright's live-bird shoot.

Sept. 6-7.—Portsmouth, Va.—Tournament of the Interstate Association, under auspices of the Portsmouth Gun Club. W. N. White, Sec'y.

Sept. 7.—Lyndhurst, N. J.—One hundred live-bird match between Messrs. F. W. Moffett and G. A. Hopper.

Sept. 12.—Worcester, Mass.—Worcester Sportsmen's Club shoot. Mr. A. W. Walls, Sec'y.

Sept. 12-13.—Wyoming, Ill.—Wyoming Gun Club's tournament.

Sept. 12-15.—Middleton, N. Y.—Trapshooting tournament on the grounds of Orange County Agricultural Society. John B. Rogers, Manager.

Sept. 13.—Elkwood Park, Long Branch, N. J.—Long Branch Handicap, 25 to 30yds., 15 birds, $15; 1 o'clock.

Sept. 15.—Hackensack River Bridge, Paterson Plank Road, Heflick's Hotel.—Shoot of the Hackensack River Gun Club. John L. Chartrand, Sec'y.

Sept. 15.—Burnside Crossing, Ill.—Medal contest on John Watson's grounds.

Sept. 15.—Newburgh, N. Y.—Glenwood Gun Club's tournament.

Sept. 16.—Elkwood Park.—Allaire handicap, 27 to 31yds.; 10 birds, $10; 1 o'clock.

Sept. 19-20.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.

Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.

Sept. 19-22.—Detroit, Mich.—John Parker's eighth international tournament; live birds and targets; $500 cash added.

Sept. 20.—Elkwood Park, Long Branch, N. J.—Oakland handicap, 30yds., 7 birds, $7; 12:30 o'clock.

Sept. 23.—Elkwood Park.—Belmont handicap, 25 to 30yds.; bird allowance; 15 birds, $15; 12 o'clock.

Sept. 23.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Sept. 23.—Hartford, Conn.—All-day shoot of the Colt Gun Club. L. H. Bradley, Secy.

Sept. 26-27.—Squaw Creek Park, between Niles and Girard, Trumbull County, O.—Tournament of the Rummell-Gaston Gun Club. Dr. James E. Gaston, Sec'y, Mineral Ridge, O.

Sept. 26-27.—Muncie, Ind.—Magic Gun Club's tournament.

Sept. 27.—Elkwood Park.—All-day sweepstake shooting.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Sept. 30.—Elkwood Park, Long Branch, N. J.—Autumn handicap, 25 to 31yds.; 20 birds, $20; 1 o'clock.

Oct. 2.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Oct. 3.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Review cup.

Oct. 4.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Republic cup.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 21.—Yardville, N. J.—Cast iron medal contest—J. A. R. Elliott, holder, against C. Zwerlein, challenger.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $500 added. W. R. Elliston, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The third annual tournament of the Piasa Gun Club, Alton, Ill., Sept. 28 and 29, has an attractive programme. There are eleven events on each day, with a total entrance of $18.50 each day. All averages will be figured on a basis of 350 targets for the two days, not including miss and out events. The division of moneys in the regular events will be: Twenty targets, 30, 20, 20, 15 and 15 per cent.; on 15 targets, 30, 30, 20 and 20 per cent. In the final miss-and-out there will be five moneys, Rose system. In lieu of added money, targets will be thrown at 1 cent, a most commendable departure from 2-cent targets and added money, since this is a saving of money to all winners instead of being a gain to the few who are the best shots. One-half cent per target will be deducted from purses to go into a purse for high average for the experts, to be divided 30, 25, 20, 15 and 10 per cent., class shooting. Contestants making an average of 85 to 90 per cent. will be charged $1.50 per day; those making 90 per cent. or better will be charged $3 per day. This money will be shared equally among contestants who shoot through the programme but who do not share in high averages. Sergeant system will be used in trapping. Ammunition sent care of A. L. F. Goss will be delivered free on grounds.

The Labor Day shoots offer opportunities for wholesome diversion to those who seek rest and recuperation in an active manner. The Parker Gun Club, Meriden, Conn., holds a tournament, with a sheepbake added. The Brockton Gun Club, Brockton, Mass., gives its semi-annual silver cup handicap. The Schenectady, N. Y., Gun Club gives a Labor Day shoot, while the Dover Sportsmen's Association, Dover, N. H., and the Fulton Gun Club, of Brooklyn, L. I., also observe the day to the music of the gun. At Elkwood Park a Labor Day handicap at 20 live birds, $20 entrance, 10 o'clock, will be shot.

Under date of Aug. 28 Mr. N. F. Reiner writes us as follows: "Mr. H. G. Wheeler, the well-known shot of Marlboro, Mass., and Mr. E. C. Griffith, of Pascoag, R. I., have practically been matched to shoot a 100-target match on the Providence Gun Club grounds, Providence, R. I. The shoot will be held in conjunction with a tournament some day (to be decided later) during the week of Sept. 11. This match will undoubtedly draw a large crowd of shooters, as both are very hot amateurs. Will send programme and particulars later."

The new repeating Marlin, grade D, which denotes the highly finished product in repeaters made by the Marlin Fire Arms Co., will be furnished in 26, 28 and 30in. barrels. The barrel is Damascus, is specially bored and finished, while the stock and fore-end are of the finest Circassian walnut, finely checked. Beautiful engraving on the frame adds to the attractiveness of the arm. The Marlin Fire Arms Co. on application will send their catalogue on receipt of three stamps.

There is $50 high gun money at the State tournament of the Maine clubs, on the grounds of the Auburn Gun Club, Auburn, Me., Aug. 30 and 31. There are ten events on the first and second day respectively. Shooting commences at 9 o'clock. Shooters may shoot for price of targets. High gun money and $60 guaranteed purse event each day open to all shooters; all others open to Maine shooters only. Rose system, four moneys. Dinner served on grounds.

Work has begun at Interstate Park, men and teams working on the preliminary breaking of ground. There will be a thorough fixing of level turf taking the place of crops and weeds. The material part of the work having begun, it will progress as fast as is possible. Those who take interest in the business features of this great enterprise will find them fully set forth in our business columns.

Under date of Aug. 25 Mr. John B. Rogers, Warwick, N. Y., writes us that "there will be a trapshooting tournament on the grounds of the Orange County Agricultural Society at Middletown, N. Y., during the four days of the fair, Sept. 12-15. There will be an Orange county championship, conditions of which I will send you later. Programmes will be ready Sept. 1."

Mr. R. C. Root, president of the Providence Gun Club, writes us as follows: "The Providence Gun Club will hold a shoot Labor Day, Sept. 4. The shoot for the State pennant will also take place, as the challenge from Woonsocket Gun Club has been accepted this date named."

Mr. J. A. R. Elliott, in his recent contests at Atlantic City, N. J., Aug. 23 and 24, lost the E C cup to Mr. W. R. Crosby, and held the cast iron medal against Mr. C. A. Young. In the E C cup contest the scores were 139 to 128. In the cast iron trophy contest the scores were 95 to 93.

The performance of Mr. O. R. Dickey in breaking 183 out of 185 at the Worcester Sportsmen's tournament Aug. 22, a fraction short of 99 per cent., is a matter for deep and quiet meditation on the part of those who contemplate sallying forth to pluck a high average.

Mr. Rolla O. Heikes, of Dayton, O., is next in line for a contest in respect to the E C cup, his challenge being put in for him in due form immediately after the contest was concluded between Messrs. Elliott and Crosby, at Atlantic City, Aug. 23.

In a practice shoot at Atlantic City, N. J., on Aug. 22, Mr. Charles A. Young killed 25 straight. Mr. J. J. Hallowell scored 24. Mr. H. M. Clapp, of Philadelphia, scored 24. The conditions were favorable for good scores.

On Tuesday of this week Messrs. J. J. U. M. C. Hallowell and Harold B. Money journeyed from New York to Maine to attend the State tournament on the grounds of the Auburn Gun Club.

The live-bird match, arranged to take place on Thursday of last week, between Messrs. F. W. Moffett, of Bloomfield, N. J., and G. A. Hopper, of Paterson, N. J., was postponed to Sept. 7.

The Pawling Rod and Gun Club, Pawling, N. Y., is earnestly preparing for its target and live-bird tournament, Oct. 6 and 7. This is an event which shooters should keep in mind.

Mr. J. A. R. Elliott has fixed upon Oct. 3 and 4 as the dates for his contests with Mr. W. R. Crosby for the Review and Republic cups respectively, and Kansas City as the place.

On Sept. 12 the Worcester Sportsmen's Club, Worcester, Mass., will hold a shoot, at which some left-over events of Aug. 22 will be completed. Mr. A. W. Walls is the secretary.

Mr. Charles Zwerlein, of Yardville, N. J., has challenged for the cast iron disk, and the debate for it will occur on Mr. Zwerlein's grounds on Oct. 21.

Mr. W. Reed Quimby started early this week for an extended trip in the West in the interest of his house.

Bernard Waters.

Pawling Rod and Gun Club.

Pawling, N. Y., Aug. 26.—The scores of the monthly club shoot, together with the postponed cup shoot of July 29, are subjoined. Frank and George Stevenson, of the Crescent Athletic Club, gave us all a scare by their steady shooting, G. Stevenson carrying off the $5 cash handicap with a 20 and 4 out of his handicap of 6.

Old reliable Tallman came down with a lot of misfit shells and suffered in consequence. We pounded him right merrily. Holmes made 10 points on the members' cup, and if he holds his gait will become a factor in the total for the eight months. The same old wind blew, which made the targets fly like bats in a hurry. The scores:

Members' cup, 50 targets, 50 cents entrance:

			Points.
Tallman, 4	1011111111101101111101111—21

H. Nelson, Capt.

Cambridge Gun Club.

Cambridge, Vt., Aug. 24.—The Cambridge Gun Club held their annual tournament at their grounds to-day. It was not attended so well as formerly, probably on account of a rainy day before and threatening weather in the morning. The day, however, turned out fine for shooting, and all had a good day's sport. The visiting shooters were C. O. Barrett, Montpelier, Vt.; E. E. Morgan and W. Phelps, of Burlington, Vt.; W. Austin, Highgate, Vt.; A. Partlow, Johnson, Vt.; G. Soule and H. Soule, of Fairfield, Vt. The following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot	
Targets:	5	10	15	20	*	15	20	20	25	10	at.	Broke.
Barrett	5	6	11	19	7	15	19	19	24	7	147	132
Morgan	4	10	13	16	7	10	19	17	..	7	122	103
Phelps	5	8	10	17	8	13	18	15	19	6	148	119

WESTERN TRAPS.

Eureka First Annual.

CHICAGO, Ill., Aug. 25.—The first day of Eureka Gun Club's first nual target tournament ended to-day very successfully and pleas- tly. Something like two dozen different shooters took part, out as many from out of town as from the city. Saturday is the g trapshooting day for the Chicago shooters, and the attendance morrow will in all likelihood be double what it was to-day. om out of the city Messrs. Henry, Haines and Jarvis came m Rockford, Ill. Mr. Vernon came from Freeport, Ill. Puck a well-known shooter, and as much may be said for Mr. W. D. ompson, of Tennessee. Mr. Henry Carson was on from Daven- rt, Ia., and F. C. Riehl, of Alton, Ill., upheld his shooting nors very nicely.

To-day there were about 6,000 targets thrown from the magau- p and the five expert traps, the twenty events being run off ry handsomely. A nice attendance of spectators was on hand, cluding several ladies. The Rose system was employed very tensively and gave great satisfaction. Professionals were barred. r. C. W. Carson, the secretary of the club, handled the cash ost systematically, each shooter getting his money on the min- e, accurately and without delay. Dr. Carson was assisted in the shier's box by Mr. Charles Antoine. Mr. H. B. Morgan ref- eed. The traps worked well, and in fact the whole shoot was smooth as one could ask, and marred by no kicks or grumbling. uring the day Frank Butler and Annie Oakley, of Buffalo Bill's ild West, paid the grounds a visit, Miss Oakley complimenting ry highly Mrs. Carson's shooting, that lady being one of the gular attendants at Eureka grounds. Another prominent visitor is John Watson, of Burnside. Mr. Watson is something of a e-bird shooter and a bad man on snipe.

The following are the scores of the day:

Second Day.

Beautiful weather to-day, as yesterday, favored the Eureka Gun ub and added to the pleasure of an event pleasant in every way. e shoot did not turn out to be quite so large to-day as was pected, the top entry being twenty-two, although thirty-eight ferent shooters took part at one time or another. A little over 00 targets were thrown during the two days, not enough for the ib to make any money at 2 cents, with $100 added. The club ll play about even on the first annual tournament, its profit not ceeding $10 at the outside. This will not deter the members m giving a target tournament next summer, and these annual urnaments of the Eureka are to be a fixture, win or lose. The te chosen this year was well on toward the close of the shooting ason, and it was hard to get out much of an attendance.

To-day a few new men came from outside the city, Mr. H. W. ark, of Hinckley, Ill., Dr. Bell and Mr. Knoeser, of Hammond, d., among others. Mr. A. W. Adams, the worthy president of e Eureka Gun Club, who returned some ten days ago from his it East, was on hand and took a leading part in that necessary k of management which falls always upon a few. Dr. Carson the cashier's desk, with Charlie Antoine, did yeoman service, d as for the conduct of the shoot, it could not have been better. erybody declared that the day was as pleasant as could be, d although it was sundown when the tents were struck and the dwich man folded his pies and stole away, it was none the less ery happy and contented crowd which took the cars for town.

Among the good winners to-day were Puck, of Indianapolis, and ble and Cunnyngham, of Chicago, the latter having a stack of all envelopes due him toward the close of the day. Puck was ky enough to select a good partner, Boa, of Chicago, for the m race, and the two scored 49 out of 50, winning this competi- n. F. P. Stannard and his son, W. D. Stannard, put up a good ht at 46, but with that fell behind two other teams beside the nners, those shooting being of a pretty warm class in this con- t. The team shoot did not fill yesterday and was abandoned.

e following are scores of the day:

Canton Tournament.

The twenty-fourth annual tournament of the Canton Gun Club, for amateurs, was run off very smoothly on Wednesday of this week, about twenty shooters participating. The Sergeant system and bluerocks prevailed, and everything was nicely conducted. In the team race between Lewistown and Canton there were five men to a team, 25 birds per man, and Canton won handily with the score of 107 to 88. The following are the scores of the tournament:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	
Targets:	10	15	15	10	15	15	10	15	15	10	15	15	10	15	15	10	15	Av.

Team shoot, Lewistown vs. Canton, 25 birds per man:

Lewistown.—Gray 17, Groat 17, McGuire 19, Butler 19, Love 16; total 88.

Canton.—Thompson 24, McQuaid 21, Kerstetter 22, Bump 19, Moran 21; total 107.

St. Paul Tournament.

The twenty-second annual tournament of the St. Paul Gun Club, of Minnesota, will be held at the Minnesota State Fair Grounds, Sept. 5, 6 and 7. Bluerocks, Sergeant system, magautrap, $300 added, targets at 2 cents. Mr. F. W. Ramaley is secretary. This shoot will be, as usual, a hummer. The programme calls for 160 targets per day. High guns take $276 in cash, prizes being distributed from $5 to $20 cash.

Minnehaha.

At the last club shoot of Minnehaha Club, of Minneapolis, the following scores were made at 20 targets: Symons 5, Bryant 10, Adler 7, J. Cooper 12, J. Mooney 10, Gus 9, Melich 13, E. Cooper 16, S. Cooper 12, Mrs. Melich 9, Hall 10, Heller 15, Adams 11, Paulson 3.

Five singles and 5 pairs: Symons 6, Bryant 5, J. Cooper 8, Mooney 9, Gus 7, E. Cooper 10, Mrs. Melich 3, Heller 8, Adams 8, Paulson 2, Korman 6.

Chicago—Milwaukee.

A party of six or eight Chicago shooters, representatives of the Sheridan Gun Club, leave on the evening boat for Milwaukee Saturday night and will shoot a little team race or friendly sweeps with the Milwaukee Gun Club, of Milwaukee. Among those representing Chicago will be R. Dwyer, A. C. Paterson, Wm. Bress, T. Barrett, J. Flanagan, W. Bieneweg. During the day Messrs. Paterson and Dwyer, of Chicago, will shoot a 50-bird race, $50 a side. In the team races between these two clubs thus far, Chicago has won two out of three contests. The coming contest was to have been seven-men teams, but it is thought the Milwaukee Club will be unable to produce that many men for its team.

Okoboji.

An Eastern contemporary locates the Budd & Gilbert tournament at "Okoboji, Wis.," this week. It will be a good shoot, without a doubt, but it might be stated that Okoboji is not in Wisconsin, but Iowa. There is but one Okoboji, and it is known as the lake near the place where Fred Gilbert was born, just as Des Moines was named after Charlie Budd.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Aug. 26.—The appended scores were made on our grounds to-day, several of our regular shooters being absent. Class A medal was won by Hicks on a score of only 18. Class B medal was won by Northcott on a score of 21. Class C medal was won by Smith on a score of 17. The two latter scores were very good for those classes.

The weather was nearly perfect, only an atmosphere which was rather hazy making a somewhat uncertain light.

Team shoot: Hicks 9, Northcott 9, Jones 4, Fanning 8, Pollard 4, Dorman 1; total 35.

Hellman 8, J. Wolff 3, Dr. Meek 7, T. Eaton 8, Cornelson 4, Graves 7; total 37.

Trophy shoot:

DR. J. W. MEEK, Sec'y.

Arkansas and the South.

Kansas City Gun Club.

LITTLE ROCK, Ark., Aug. 25.—This organization is made up mostly of sportsmen who were actively engaged in making trapshooting history fifteen years ago, and numbers among its members many of the best shots of those days. It must not be inferred from this that they have not kept stride with the times, for such is very far from being the case, and the scores of to-day give ample evidence of this. J. B. Porter, the high man in the club race, is none other than the two-time winner of the Missouri championship. Frank Smith, the old-time veteran, is second with but a single loss.

The club race is 25 pigeons per man, and the last one is as follows:

J B Porter	11112211112112112122212112—25
J F Smith	21211121222211221211220012—24

R Elliott	20100021000222210222102222—16

Capital Gun Club.

The reactionary effect of the tournament was in evidence to-day, as only one of the regulars, Fletcher, put in an appearance, and the balance of the gathering was made up of the newer element of the club. That youngster, Weigel, who has lately shown up so strong, was again in good form to-day, and by his excellent performance maintained possession of the club medal. He scored 45 out of his original 50, and then broke 4 of his allowance of 5, giving him a total of 49. Dr. Lenow had a possible chance to tie him by breaking all of his allowance of 9, but he was unequal to the occasion, and 7 was the best he could record.

After the completion of the club event Fletcher made the good score of 40 out of 25 pairs, which came very near being the local record.

The prairie chicken season opens on Sept. 1, and the next weekly shoot will likely wind up the target shooting season here. It is rarely the case that much shooting is done after the State shoot has been disposed of.

Omaha Tournament.

Recent advices from Omaha are to the effect that everything promises well for the tournament, which is scheduled to take place there under the auspices of the Du Pont Gun Club on Sept. 5 to 7, though the programme has not yet come to hand. Mr. W. D. Townsend writes me that the club will add $10 to each event, and further there will be $100 for average money, also some very valuable merchandise prizes. This club is amply prepared to take care of a big gathering of shooters, and it is very probable that such will be on hand on the opening day of the tournament. Last year the entries ran over seventy, and this year the tournament will be conducted on more liberal lines.

PAUL R. LITZKE.

ON LONG ISLAND.

Brooklyn Gun Club.

Aug. 26.—The main event of to-day's shoot was the free entry to the Grand American Handicap next year. There were ten contestants, and of these five scored the maximum of 10 points, namely, Blauvelt, Dr. Creamer, Lane, Woods and Waters.

Dr. Gardiner was accompanied by his wife, who shot in one event, but was handicapped by using a strange gun, she not having her own with her.

A two-men team race at 25 targets per man was shot, Drs. Kemble and Gardiner on the one side against Dr. Creamer and Waters on the other. In the first race Dr. Creamer's team won by the score of 42 to 41. In the second, Dr. Gardiner's team won by the score of 42 to 39. In the rubber, Dr. Gardiner's team won again.

The G. A. H. event resulted as follows:

Dr Gardiner	11111011011111101111111110—21	
	11111001111111110111111101—21	— 5—47

Trap at Toronto.

TORONTO, Can., Aug. 22.—An enthusiastic company of sportsmen was assembled at Bluerock Park, just west of the race course, to witness what proved to be a close and most exciting bluerock contest. The match was at 100 targets, known angles, for the gold medal held by Mr. W. Felstead. The challenger was Mr. Albert Hulme, of the Stanley Gun Club. Both men went to the score in excellent form and shot with remarkable steadiness throughout the long match. Hulme made a straight 22 and led in the first 25. Felstead made a clean 25 and led by 4 at the 50 mark, and held the same lead at 75, finishing with the good score of 93 out of 100. Hulme made a good struggle in the last 25, but only succeeded in reducing the champion's lead by 1, scoring 90 out of 100. Mr. G. H. Briggs was referee, Mr. J. Douglas scorer, W. McDowall having charge of the shoot.

The day was favorable for shooting, though exceedingly hot. After the match, Messrs. Lucas, McDuff, Davidson and Ellison had a number of fancy shooting matches, such as picking gun up from boat, standing with back to the traps, etc., until birds were in air. The old veteran made lots of fun for the spectators by leading the party with a more difficult shot each time. The scores:

W. Felstead	11110111101111111111011111	—22
	11111111111111111111111111	—25

	11111111111111111111111101	—24—90

Auburn Gun Club.

AUBURN, Me., Aug. 26.—The Saturday shoot of the Auburn Gun Club was well attended, there being twenty-six shooters present.

The day was fair and cool, and the scores, although good, could not come up to those made on the preceding Saturday.

Hunnewell broke 89 out of 90 targets, also won the gold badge in the weekly handicap match of 25 targets. Twelve men tied for the badge in this event, the shoot-off being a hot one.

Hunnewell and Ashley were at last defeated in the 30-target race for the challenge cup, Norton and Conner being the victors, and winning it by 1 target. Following are the scores for the cup:

Norton	11111111110111111111111111111111—29
Conner	11111111110111111111011111111—28
Hunnewell	11111111111111111111111111111111—30
Ashley	11111111110011111111110101111—26

Other scores were:

The Providence R. I. Gun Club's Labor Day target shoot, Sept. 4, commences at 1 o'clock. There are nine events, of which Nos. 3, 4 and 5, 50 targets in all, are for the team contest for the pennant. The total programme calls for 140 targets, with a total entry fee of $7.50. All sweeps are optional. Moneys divided 40, 30 and 20 per cent. Take Crescent Park or Riverside electric cars. H. J. Bain is the president.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., Aug. 24.—*Editor Forest and Stream:* The third and last 50-bird match with the Leominster Gun Club was held Monday, Aug. 21, on the Fitchburg grounds, and the Leominster team won by 24 birds, making it three straight for them. It was very plain after the first match that the Leominsters had the stronger team. Their many years of shooting together enable them to pull themselves together to meet most any occasion, while the Fitchburg boys, never shooting in a match before, many were unable to do their average work. The matches were very much enjoyed by both teams, so much so that after the Leominsters had got the two out of three all were eager to shoot off the third match, and many regret that that was the last one.

While the Leominster team beat the three matches with a margin of 58 birds, the Fitchburg team are able to claim the highest individual score for the three, with 125 out of 150 shot at, while the Leominsters' highest score was 119 out of 150. "And we ought to be thankful for that."

After the match a special event was shot off at 10 reverse angles, Burbank and Stickney, of Leominster, and Cutler and Wilbur, of Fitchburg, making the squad. They walked from trap to trap, making dust of the targets for 22 straight. Then Wilbur failed to connect with the 23d, that being the only one missed out of the 40, a thing not often seen on reverse angles. Burbank, not being satisfied with that record, walked around in the next squad and broke 10 more, making it 20 straight for him. Out of 80 birds he shot at he broke 74, which was considered all right.

Below I give scores of the three matches, which some may like for reference.

First match, at Fitchburg, July 19:

	20 Regular.	15 Unknown.	15 Reverse.	
Leominster.				
Burbank	17	14	12—43	
Stickney	13	11	11—35	
Rice	15	11	9—35

Estabrook	17	9	8—34	
Converse	13	8	11—32	
Hawkins	10	7	8—25	—202

M. A. CUTLER, Treas.

E C Cup Championship.

AT Atlantic City, N. J., Aug. 23, the contest for the E C cup between Messrs. W. R. Crosby, of O'Fallon, Ill., the challenger, and J. A. R. Elliott, of Kansas City, Mo., took place according to arrangements. This cup is emblematic of the target championship. Inlet Park baseball grounds were secured for the occasion. The gate receipts were very small. Some delay in adjusting the traps made the start later than the time appointed, which was 11:30. The traps worked very badly, breaking many targets and thereby making harder conditions for the shooters. It was necessary to lower the flights of the targets several times on complaint of people outside the park, who alleged that the shot flew over the high fence and struck people on the outside. The targets thus were thrown as low as the rules would allow; they also were fast, and the conditions were such as to try out the contestants in approved manner. The background was very unfavorable.

Mr. J. J. Hallowell acted as judge for Mr. Crosby, while the like office was filled by Mr. Ed Johnson, of Atlantic City, for Mr. Elliott. Mr. Edward Banks was trap puller. Mr. W. J. Black had charge of the indicator in such parts of the race as it was necessary to use it.

There was no wind, the high board fence which surrounded the grounds breaking all air currents. The weather was clear and sultry. The sun shone clear and hot.

Crosby was first to the score. Each man shot and walked to the next trap. Elliott missed his 14th, while Crosby missed his 21st, each making 24 out of the first 25 at known traps, unknown angles. In the second 25 Crosby repeated his previous performance, while Elliott lost 3. Thus Crosby led by 2 targets at the end of the first 50, known traps, unknown angles. Score, 48 to 46.

In the 50, expert rules, Elliott had a hard bunch of goose eggs in his third time up, missing 4 straight. He shot at a number of pieces during the race, and while he succeeded in breaking most of them he missed some, after which he steadied down to a more sure system of shooting at whole targets.

Crosby led also at this style of shooting. Score, 46 to 43.

In the doubles it was anticipated that Elliott would gain a lead, but he apparently was not in his best form, and finished with 39 to his opponent's 45. Crosby thus won by the score of 139 to 128. Crosby used 48grs. of E. C., 1¼oz. 7s and 44grs. E. C., 1¼oz. 7½, Leader shell, factory load. Elliott used his $28-Winchester pump gun, 40grs. Hazard Blue Ribbon, and 1¼oz. of No. 7s.

Immediately after the contest was decided, a challenge from Mr. Rolla O. Heikes was presented in due form.

Each contestant shot at 3 pairs alternately, when competing on doubles. The scores:

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., Aug. 24.—At the Thursday's shoot of the Minneaplis Gun Club the honors of the day were very evenly divided, McKay winning first average, Jones second, Johnston third, Biffton fourth, Hays fifth, Mrs. Johnston and Ramaley tieing for sixth, Neeley seventh and Gilfillan eighth.

The weather was unusually fine and the targets were thrown good and swift.

A large number of spectators were present, among whom were several ladies.

Next Thursday will be the last regular badge shoot for four weeks, during the field season.

Several new members were elected and teams selected to compete at the State shoot Sept. 5, at the tournament to be given by the St. Paul Gun Club at the State Fair Grounds. The following are the summaries in the badge events:

Event No. 1.—Val Blatz diamond badge, 15 singles, unknown angles: Ramaley 11, McKay 14, Biffton 13, Neeley 14, Hays 12, Mrs. Johnston 12, F. Kennedy 5, Stone 9, Morrison 11, Gilfillan 11, Melich 9, Mrs. Melich 3, Cooper 9, Root 2, Poehler 2, Jones 14, Johnston 12, Nelson 12, Davenport 11, Cat 11. Neeley won badge.

Event No. 2.—Schlitz diamond badge, 25 singles, unknown angles: Ramaley 19, McKay 23, Biffton 19, Neeley 17, Hays 21, Mrs. Johnston 20, F. Kennedy 14, Stone 15, Morrison 14, Gilfillan 18, Melich 13, Mrs. Melich 12, Cooper 13, Root 8, Poehler 19, Jones 22, Johnston 22, Nelson 15, Davenport 18, Cat 18, Hoffman 14, Donaldson 22, Rouble 22. McKay won badge.

Event No. 3.—Paegel challenge badge, 25 singles, unknown angles: Ramaley 21, McKay 21, Biffton 22, Neeley 18, Hays 22, Mrs. Johnston 19, F. Kennedy 11, Stone 9, Morrison 13, Gilfillan 20, Jones 21, Johnston 22, Nelson 16, Davenport 16, Cat 17, Hoffman 17, Donaldson 23, Barber 7, Poehler 19, Cooper 13.

Biffton 5, Hays 4, Johnston 4. Biffton won badge.

Event No. 4—Club badges, 10 singles unknown angles,, 5 pairs known angles:

Ramaley	1101011110	10 10 10 01 10—12
McKay	1110111111	11 10 11 11 11—18
Biffton	0011111111	00 10 11 11 00—13
Neeley	1011111001	10 10 11 10 01—13
Hays	1101000111	00 00 00 11 01— 9
Mrs Johnston	1111110111	00 00 10 10 10—12
F Kennedy	1111101000	10 10 10 10 10—11

Davenport	1100111100	01 10 10 10 10—11
Capers	0110000100	01 00 00 01 00— 4

McKay won senior badge; Nelson won junior badge; Neeley won amateur badge.

Worcester Sportsman's Club.

WORCESTER, Mass., Aug. 25.—The tournament of the Worcester (Mass.) Sportsman's Club, Tuesday, Aug. 22, was budded for a grand success, but the fates were against us and meted out some of the most horrible weather possible, for a tempest of rain, thunder and lightning was given us in three instalments during the afternoon and made it impossible to complete the programme before darkness compelled us to quit shooting.

Thirty-six shooters took part in the day's sport, and some of the highest scores were made that I have ever known of on this ground. Dickey made the remarkable average of nearer 99 per cent. than 98 per cent., as he shot at 135 and broke 133, making an average of 98 14-27 per cent.

Wheeler was close behind him, and Griffith right after Wheeler. Jack Hull, of the Parker Gun Co., was on hand, but had little to say, as the Parker guns were doing their own talking.

The tenth event was omitted on account of darkness, and as it was the last 15 birds of the 100 which counted for the average money, and also the 25 birds, $15 added, was left over, the club will hold another shoot Sept. 12, and the 15-bird event and also the 25-bird event will be completed and the money paid to the winners. An additional $20 will be put in the programme and Mr. A. B. F. Kinney, the sportsmen's friend, will be on hand ready to spring something clever on the "boys."

The 100-bird race which was shot during the tournament of the 22d between E. C. Griffith and C. E. Forehand was a complete walkover for Grif, as he broke 94 out of his 100, while Charlie was getting but 79. Forehand has done but little shooting this season and was not in his usual form of shooting, and is not in Griffith's class when at his best.

Following are the scores of the tournament:

	Shot at.	Broke.		Shot at.	Broke.
Dickey	135	133	Noonan	100	77
Wheeler	135	130	Burbank	65	60
Griffith	135	125	Vermont	80	65
Snell	115	105	Forehand	70	59
Leroy	135	125	McLellan	80	65
Herbert	135	127	Coffin	115	70
Eager	135	125	Crabtree	100	51
Allison	135	123	Sawin	55	46
Hoyle	135	119	Cutler	50	44
Hull	135	123	Parker	100	85
Whitier	135	110	Chapin	50	38
Reiner	135	115	Nichols	45	37
Davis	125	117	Kinney	40	21
Campbell	135	111	T Davis	15	11
Bain	135	118	Goodell	20	11
Getchell	135	117	Hutchison	20	14
Winchester	135	69	Emory	55	44
Williams	135	99			

We hope for a large attendance at the next shoot, Sept. 12.

A. W. WALLS, Sec'y.

Trap Around Reading.

READING, Pa., Aug. 21.—The fourteenth of the series of target shoots for a Parker gun offered by the Mt. Penn Gun Club, of this city, was shot to-day on the Mt. Penn grounds. Thus far Yeager leads in percentage, having .89, while Capt. Ball is second with 85. Each man shot at 25 targets, with added targets as a handicap to the number broke. Scores:

	Broke.	Hdcp.	Total.		Broke.	Hdcp.	Total.
Rhoads	18	1	19	Lyons	18	0	18
Ball	16	2	18	Yeager	22	0	22
Gilbert	16	4	20	Osborne	14	0	14
Hunsberger	15	0	15	Schauver	19	0	19
Dietrich	19	0	19	Laird	15	4	19

Pottsville, Pa., Aug. 21.—An interesting target match was shot here to-day on the grounds of the Pottsville Gun Club, the following scores being made in the principal event, at 25 targets: Battersby 16, Canfield 12, Moran 12, Robinson 13, Callery 9, Eisenhuth 4.

Reading, Pa., Aug. 25.—At a meeting of the tournament committee of the South End Gun Club, held this evening, the secretary, Peter Texter, reported as having received up to date three acceptances of the invitations to compete in the team shoot for the South End trophy. The clubs thus far who have signified their intention to compete for the handsome serling silver "Roman shield," valued at $45, are the Penn Gun Club, of Norristown, Independent, of Sinking Spring, and Mt. Penn, of Reading. It is thought that by the time of the next meeting, Sept. 8, there will be acceptances from the Phœnix, of Phœnixville; West Chester, Keystone, of Lebanon; Schuler, of Pottstown, and one or two other teams. The committee intends sparing no expense to make this shoot the banner shoot of the year for this season, and as the boys remember having a good time last year, they can all expect a still better reception this year. All shooters will be welcome whether a member of a gun club or not. At the next meeting of the committee the date will be selected.

DUSTER.

Norwich Gun Club.

NORWICH, N. Y., Aug. 21.—The Norwich Gun Club held their regular weekly shoot at Norwich, N. Y., Aug. 19. Unknown angles and the Sergeant system were used. The scores follow:

S. E. SMITH.

The Cast Iron Trophy.

THE cast iron trophy was the great event of the day shooting world, and Inlet Park baseball grounds, Atlantic N. J., were fixed for the scene of the contest. The dat Aug. 24.

Mr. J. A. R. Elliott, the holder, had consented to defe against a formidable antagonist—Mr. C. A. Young, of S field, O.

A baseball game occupied the grounds from 2 o'clock to when they were yielded to the shooters. Seven innings played, the time was up, and they promptly withdrew. The dary was already marked with flags, and white places marked the traps and scores were to be set. Each trap was fastened small platform, which was soon fastened down in place with s and the match was begun at 4 o'clock. It ended at 4:50.

The weather was warm and clear, though the light varied bright to shadowy as the big white clouds sailed by the fa the sun.

The pigeons were a superior lot of summer birds, flying in instances promptly when the trap was pulled, yet they wer from fast birds as a whole, and were easy to kill when st None of them had the superabundant energy to struggle fo boundary when hard wounded, as is the case with very s birds. Still, they were against shots who placed the center c load about where the pigeon was flying, which of itself is a factor in keeping birds within bounds.

There was no wind to help the birds, so that while the s were high, the most favorable conditions prevailed for high sc Elliott had much the best of the draw, most of them being quarterers, but when he got a corking fast driver he negotiat in as good time and judgment as he did the slow ones. He in much better form and time than did his opponent, and centering his birds better as a whole.

Elliott missed his first and then killed the rest of the 25 str Young held the lead to the 18th, when he lost a left-hand terer dead out; and the loss of his 21st, a twisting outgoer him one behind at the end of the first 25.

Elliott lost 3—his 11th, 15th and 24th—all dead out, in his se 25, while Young lost but one—his 23d—a left-quarterer from trap. Thus the latter was one ahead at the end of the 50th r

Elliott killed his third 25 straight, while Young lost 3, 2 of were dead out. The latter was not shooting in as good for in the previous part of the contest.

Elliott lost his 24th bird of the last 25, which would have a run of 50 straight had he killed it. He was shooting in fine Young lost his 19th, and had a very good piece of luck ir losing his 14th, an incomer, which apparently was unhurt, b a few yards in front of the shooter, between him and the trap began to pick its feathers under its wing, and while in this tion the dog darted at it and picked it up. The retrieving done by two dogs.

The trap pulling, a most arduous task, since there was n 2yds. stretch of the ropes when the traps were pulled, was skillfully done from start to finish by Mr. E. B. Coe, of more, while Mr. J. K. Starr, of Philadelphia, acted as scorer Mr. B. Waters as referee.

There was quite a large audience, of which a small perce were shooters, the bulk being left-over baseball enthusiasts remained over after the baseball game was finished, one admitting the holder to both the ball game and the trap cont

Elliott used 45grs. of Hazard Blue Ribbon and 1¼oz. of chilled in a Leader shell. Young used 3½drs. of Du Pont 1¼oz. of No. 7 in a Trap shell. The scores:

—FOREST AND STREAM, Feb. 3, 1894.

FOREST AIDS IN THE WEST.

THE interest in forestry and in tree planting in this country, to whose growth we have frequently referred within the past two or three years, is now greater than ever. This is due in large measure to the enthusiasm and intelligence of Mr. Gifford Pinchot, at one time member of the National Forestry Commission and now United States Forester. Mr. Pinchot has not been satisfied with carrying on his work in a perfunctory manner, but has been fertile in plans to interest farmers and land owners, lumbermen and miners, people in the East and in the West, in tree planting, by making them see that it was to their material advantage to take such an interest.

One of his most effective and wisest actions looking to this end was announced in circular No. 21 of the Division of Forestry, and was described in the FOREST AND STREAM in December last. This was a co-operative plan by which farmers, lumbermen and others in the wooded regions of the United States should be assisted in handling their forest land by the officials of the Division of Forestry without expense, and this plan met so hearty a co-operation that it has now been extended so as to aid farmers and other land owners who desire to establish forest plantations in the woodless regions of the West.

Although forest tree planting in the West has been carried on for many years, it has not always been successful. Its failures have been due largely to lack of knowledge as to what is required in a given locality—that is, to unintelligent planting. The average man, knowing nothing of trees, their habits and their adaptability to the places which are to be planted, is rather more likely to go wrong than right in setting out the timber on his claim. On the other hand, there are regions where tree planting has been extremely successful, and where this success has added enormously to the value of the land and has made the labors of the farmers much more profitable than they would otherwise have been.

The value—direct and indirect—of forests to farmers is fully understood by comparatively few people. In the wooded regious, where nearly every farm has its wood lot, this tract supplies most of the fuel used by the farmers, much of the wood for fencing and a considerable portion of the lumber used for building purposes. And when we consider that in the humid portions of America the total of the woodland is more than 200,000,000 acres we can form some rough estimate of the money value of its product. To residents of the woodless plains, and generally of the dry regions, all these things are even more valuable than to the dweller in the wooded country of the East, because they must be bought for money, and owing to their scarcity and the distances which they have to be transported their price is comparatively high. So that a successful plantation on the plains has in the fuel and in the fencing that it furnishes a high and direct cash value to its owner.

The indirect benefits derived from forests are less obvious, but they exist just as truly, for by conserving the moisture and tempering the winds, the bodies of timber tend very greatly to modify the local climate. Persons who remember the valley of the Platte River in Nebraska as it was thirty years ago, and see it as it is to-day, have there an object lesson in tree planting which is very forcible.

The recently issued circular of the Division of Forestry contains not only a sketch of Mr. Pinchot's plan, but also much information which is good reading for every land owner. In addition to this he announces the organization of a section of the Division which has been placed in charge of an expert tree planter, assisted by a number of experts residing in different States and so familiar with local conditions. This section will devote itself to investigation in tree planting and to the assistance of those who may avail themselves of the co-operative plan outlined. For areas under five acres in extent the Department of Agriculture will prepare plans for increasing the usefulness of the land to its owner by forest planting, without charge, but for larger areas the actual necessary expenses for traveling and subsistence of the Department agents must be paid for by the land owner.

Under a provision of Mr. Pinchot's earlier circular, issued in 1898, about 400,000 acres of woodland have received attention, while applications have been received for assistance in the management of about 1,500,000 acres and these are being attended to as rapidly as the small appropriation of the Division will permit. It cannot be doubted that a very large number of land owners in the West, as in the East, will take advantage of this offer, and it is certain that in this way the public interest in this very important subject will be greatly increased and the material wealth of the country largely added to.

FISHING.

TAKING it all in all, there is no other outdoor recreation in the world that begins to afford so much satisfaction to so many people as fishing. The fisherman numbers his thousands where the sportsman in any other field counts his hundreds or his scores. It is the most "all-round" sport known to man. It is as universal as the flow of the rivers and the ebb of the tide. Its speech is of every language, dialect and lingo. Its disciples belong to all races, all creeds, all colors, all ranks. The variations of the sport itself are as diverse as phases and shades of the human nature of its followers. What constitutes the enjoyment of fishing for one fisherman may be something very unlike that which gives pleasure to another; but travel the world over and you will find mankind—careless youth, lusty manhood and decrepit age—fishing, and fishing not for the fish alone, but for the fishing. That is true of your score fisherman emulous to outdo his last big string, and of your fisherman on the Seine tickled and exultant over a nibble.

Taken all in all there is no other common recreation which gives so much for so little as fishing. We hear frequent gibes at the expensiveness of the angler's trout, but in the aggregate the cost of fishing is ridiculously slight. The fisherman has yet to be found so poor that he may not fish. For the vast majority of fishermen the sport costs so little that the little does not count.

Go where you will, in one personification or another, you find the fisherman. His ubiquity on a holiday near a great city is marvelous. Fresh water, brackish and salt, all lure him to reward or disappointment. And if from the day's outing he does not return with some winning beyond the full creel or the empty basket, the default is not in fishing but in himself.

MAINE SUMMER PARTRIDGES.

A PRESS dispatch from Bar Harbor reports that Mrs. Jules Reynal, of New York, described as one of the Maine resort's "most popular summer visitors and the recognized leader of the fashionable set," has been made to pay a fine and costs of $254.98 for the unlawful possession of twenty-five partridges in the close season. This was the result of some detective work by State Game Warden Walter I. Neal, who had information that the serving of illicit partridges at the Reynal dinner parties had been going on for some time; so that the sum collected in fines was in the nature of a compromise. The Bar Harbor summer residents are not slow to express their indignation at what they consider the "outrage" of the warden's activity, and the offending and offended woman, it is reported, has incontinently left Bar Harbor in disgust and for good. The papers have given attention to this particular case because of the prominence of the parties involved; but it differs in no essential respect from the common, everyday disregard of the game laws by summer residents and summer hotels. The market afforded by these people for snared and summer killed immature game birds is one of the agencies with which not only Maine but many other States find it difficult to cope. We are accustomed to hear the grouse snarer and the chicken partridge killer roundly denounced; but the truth is that they are less to blame than the people who prompt them to their lawlessness by rewarding them for the game they take out of season. The consumer should be counted the principal in the unlawful transaction. He or she ought to know better and to be governed by a higher standard of ethics than one which permits encouragement of another to violations of the law. What can be expected of Maine summer partridge killers if New Yorkers constitute themselves summer partridge consumers? We commend the action of Warden Neal in having gone right to the responsible parties and not contenting himself with prosecuting the partridge killers. If this case had been one simply of the arrest and fining or jailing of an obscure Maine pot-hunter, it would have been passed over by the press without a word. Now that a "recognized leader of the fashionable set" has been punished for violating the Maine game law, the case is given wide publicity, and other leaders may discover that the law applies to them and be governed accordingly.

A FEATHERED TURNCOAT.

MARYLAND wardens have been enforcing the reedbird law, and now we are told by the shooters who have been arrested for shooting in close season that any protection of reedbirds in Maryland is a mistake since the birds are migratory, are fitted for game only for a short time while passing through the State, and when they reach the rice fields of the South they are killed by the wholesale on the rice fields. This illustrates one phase of the life of a bird which is an anomaly among our American species. The robin shares something of the bobolink's double character as a cherished song bird in the North and a prized game bird in the South; but more than this, the bobolink when it becomes the ricebird of the Carolinas is a positive nuisance, regarded as vermin and treated as such. So that we have the curious spectacle of a feathered creature which is welcomed and defended by the New England farmer and made the subject of verse by the New England poet; and a little later in its life, having run the batteries of sportsmen and market-shooters on its southern flight, is greeted with anathemas and bird shot in the further South, and at length betaking itself with hardly diminished ranks out of the country for the winter, to return in due time for another cycle of alternate regard, pursuit and warfare. From time to time inquiries are made for the bobolink as a bird which has disappeared from its old haunts; and there appears to be no question that in certain restricted localities where it was abundant it is not now found in the old supply; but on the other hand, the rice planters assert that they can perceive no diminution in the hordes of the bird, and that they are obliged to lay out as much as ever in the purchase of powder and shot and noise-producing devices and daily labor of gangs of men, women and children, to save the fields from the ruinous onslaughts of the birds. To the Northern farmer denunciation of the bobolink as a crop-devastating nuisance would be received with open amazement; while the Southern planter would find himself equally at a loss to comprehend the sanity of a plea for the bird's protection based on sentimental reasons. Between the immunity given it in the North and the warfare waged upon it in the South, the bird has held its own; and probably the Maryland sportsmen are right who argue that whatever happens to Maryland reedbirds does not materially affect the parent stock.

CAMP COMRADES.

As the years go by and separate us by distance or by death from the outing comrades of former years, we come to realize more and more strongly how much the element of human companionship has to do with the enjoyment of field and stream and the hunting trail. There are very few men who are so constituted that they can get the most enjoyment out of a solitary sojourn in the wilderness. However much satisfaction we may find in going alone during the day, we look for the cheer and comradeship of others about the camp-fire at night. We want some one to "talk it over" with; and the talking over makes up a large and important part of camp life.

Some of the firmest and most cherished of our friendships have been cemented—perhaps they may have begun—in camp; and one mutation of time we find it most difficult to reconcile ourselves to is that which comes when the old companion of our outings may no longer join us in them. Not infrequently to the FOREST AND STREAM comes the plaint of one and another thus bereft of their wonted companionship, and the pity of it is that only in rare and exceptional cases can the void be filled. Once the old associations are broken up, it is not easy to form new alliances. Most of lasting friendships are made in early life; it is much simpler for the youngsters to make up to one another than it is for their elders.

The Sportsman Tourist.

In the Mountains.

One by one our ambitions are fulfilled or abandoned. It was ten years ago that one was born in the writer's mind, that has but recently been fulfilled. The ascent of a high mountain was the literal fulfillment of this lofty ambition.

Spending a few days in a valley lying between the Holston and Iron range of mountains, in that point of the State of Tennessee that projects up between North Carolina and Virginia and prevents their touching elbows. I had mountains to the front, to the rear and in almost any direction.

A kind and candid native assured me that only darn fools climbed the mountains "for fun," and offered to take me up if I was fond of squirrel hunting. So squirrel hunting it was, and the Holston range was selected. Not anticipating any shooting on the trip, I had not brought any tools, so was compelled to borrow the necessary artillery. Two weapons were available, a heavy shotgun and a light rifle. I chose the latter. My guide urged me to take the shotgun, assuring me that squirrels were plentiful and the shotgun would yield better results, but after "hefting" it, and measuring the distance to the mountain top with my eyes, I refused to reconsider my first decision.

The start was made from the house early in the morning, and to my surprise I was allowed a horse to ride, the guide knowing a trail that could be ridden almost to the mountain top. Had it not been for this favorable condition not more than one-half of my ambition would have been accomplished that day, for I never could have made the entire ascent on foot.

Fifteen minutes of climbing put us in the laurel, and a half-hour later we were in the big timber. My horse was a practiced mountain climber, and followed carefully after the guide, leaving me nothing to do except to avoid limbs of the trees and to try to keep from slipping off over his tail.

Several times I dismounted and crawled up steep places full of loose rocks, while my guide hauled the horse over them, practicing new ways of falling, both up and down, and collecting a fine assortment of contusions, but neither the horse nor guide lost footing once, nor seemed to have the slightest trouble in getting over the roughest places. Our route led us along some steep places, where I could look down into the tree tops and safely estimate that one misstep of the horse would land our remnants at least a thousand feet below, but it was more fascinating than nerve trying. Our path followed for some distance along the bank of a stream that pitched and tumbled down the steep mountain side, just a succession of waterfalls and rapids.

After turning off from the stream and traveling some distance, my guide halted on a rough rocky slope and bade me listen. A distinct roaring and humming, like the blended noises of a busy city street, heard from the sixth or seventh story of a building, seemed to come from under the earth at our feet.

"That noise," said he, "is the stream we followed up for some distance, that along here has an underground channel. It runs underground for nearly a quarter of a mile, and can be heard on the surface all the way, but this is the only place our road crosses it."

Resuming our climb we soon began to see signs of really getting up in the world. The valley began to spread out wider and flatter at our feet, and the tops of the opposite range of mountains, instead of towering above, seemed just about our height. The timber also changed gradually from tall, straight, spreading monarchs of the forest to small, rugged, misshapen trees, struggling for very existence with the storms above and the rocks beneath.

Arriving at the crest of the mountain where it dipped down in a saddle-like depression, we left the horse and proceeded to make the last of the climb on foot.

The timber on the summit of the mountain was small and sparse, and looked as if it had struggled long and hard against the storms that swept over it.

A luxuriant growth of blue grass covered the ground as thickly as in the most fertile meadow, making an excellent grazing place for the hardy cattle that roamed at large on the mountain. In the valley we had left the trees in fresh spring foliage, leaves almost matured, while on the mountain top the buds were just beginning to swell. The earliest wild flowers were barely peeping out, and among them I recognized many that I had supposed would grow only in the valleys. May apples, wild violets and mint grew in profusion. Coming directly from the valley where the wild flowers were in full bloom, the contrast was very marked.

On the crest of the mountain the timber was especially thin, and in many places a large space would be free from trees, affording excellent opportunities to view the surrounding country. A grand view was had from the highest point, and here I spent some time in spite of the impatience of my guide, who was anxious to get to what he considered the real business of the day.

We had been followed up by two small dogs, insignificant looking things, but little larger than cats, which, to my surprise, were taken seriously by the guide. "The yaller one," he explained, "ain't much good; but the black and tan is the best squirrel dog on the mountain." He did not look it, but after events led me to believe that if there were any better squirrel dogs anywhere they were surely artists.

We walked along the top of the mountain, allowing the dogs to hunt the slopes on each side. I felt rather skeptical about finding many squirrels, but did not much care, as climbing to the top of the mountain had been my real object, and that was accomplished. The low, bare trees and a haze that had dimmed the intense brightness of the sun made me feel that the conditions were most excellent for good results with our guns if game was found.

Walking along on the top of the mountain I found the greatest surprise of the trip in a covey of birds—fine, strong-flying quail, on a mountain top. A herd of elephants would hardly have surprised me more, and yet my guide assured me that he often found birds up there.

It is a very short trip that even an experienced woodsman takes without the suspicion dawning upon him that there are really quite a lot of things that he don't know all and everything about.

The small pair of canines soon found game and notified us of the fact by a series of short, sharp barks. We found them on either side of a tree watching a squirrel that had located himself well up in a fork.

My guide left me on the upper side of the tree in the best position for a shot, and went on the lower side to "stop him if I missed." At the crack of my little rifle the squirrel pitched out, shot through the neck, and was brought in by my evidently surprised companion.

The dogs started off and in a few moments treed again. This time I held a little high and only succeeded in lifting a tuft of hair from the squirrel's back. My companion tried him running with both barrels without success. We were both loaded and ready for him when he reached a large dead tree, and fired together. Hard hit he managed to crawl into a hollow, well up, and there we finally left him, after firing a number of shots and throwing a volley of stones in a fruitless endeavor to dislodge him.

Another squirrel was soon found, which obligingly lay still on a limb after I missed him with the first shot, and was killed by the second. The next one was a long shot, but came down to my first invitation.

Exhausted by the rough climbing, I now suggested that we work down to the nearest water and get a drink. My guide then assured me that we were within a hundred yards of one of the best springs in the country, to which we directed our steps. There, not twenty steps from the highest point on the mountain, was a spring of pure, cold water, bubbling over a sandy bed from under a large rock. Here we rested and drank, while our dogs lay and cooled off in the stream below.

On the return trip to our horse the dogs tree again. Walking up to them we found a veritable covey. Two squirrels were up one tree and one up another close by. With two shots, right and left, I dropped a pair, and missing the third my man got it with the "scatter gun." We now had enough of both hunting and game, so started on the return trip.

Reaching my horse and mounting him, I traveled but a short distance before concluding that walking was healthier. On the very steep places he would put all four feet together and slide anywhere from 3 to 30ft., bringing up suddenly, with me on his neck. Dismounting, I proceeded to make the descent on foot, with little more muscular exertion and much less wear and tear on my nerves.

The next day I went into, instead of onto, the mountains after that ounce for ounce, and "inch for inch, the gamest fish that swims," the mountain brook trout.

After a day of unalloyed pleasure, a season of forgetting that this mundane sphere had a seamy side, that wickedness, sorrow or suffering existed, I met my companion at the foot of a spreading birch tree and there on a flat rock we counted out sixty of the dappled darlings, twenty of which were from my creel.

I am a lowlander by birth and breeding, but the mountains, under favorable conditions and circumstances, pay big dividends to the real sportsman. My companion on the squirrel hunt exacted a promise from me to return in the fall for a hunt in the famous Cross Mountain country, a little further back, and guarantees me a bear if I will bring a heavier gun. I hope to go, and will if I can cash my inclinations.

Lewis Hopkins.

A Midsummer Journey.—II.

The departure of the surrey was a token to us that pleasure must give way to business. Our wagons wheeled slowly through the unbent grasses and unbroken sagebrush to Currant Creek, which marks the line between upland and desert. On the way we met several parties of Utes, and of course guns and rods were kept out of sight. On approaching Currant Creek the highway drops 625ft. in half a mile, and slow, careful driving was required. The little flat at the bottom of the hill is a camp ground of no small merit. Three white-topped outfits were moving as we drove down. We were not after company, and went a quarter of a mile up stream into the willows before stopping to feed.

Currant Creek Valley was beautiful beyond description. It is from one-fourth to one-half a mile in width, the grassy plots being checkered with willows and service berries. Pines and cedars covered the hillside, and from this shade birds warbled at noontide as they had warbled with the dawn. I was not sorry that a lame horse rendered a halt until morning imperative. King, Sr., slept; Brimfull and Junior rode down the cañon to establish a grade, and I, despite warnings to the contrary, wandered up creek with my fly-book. To leave cañon fishing, with cascades and boulders, black holes and deep currents, and find level meadows, over-arching sod, wild flowers and rest was a most welcome transition. So narrow was the horizon that the snow-topped Wasatch to the west and Uinta to the east were completely hidden. Only the painted-cup, shoulder high, and the track of buck and bear in the white sand was a reminder that it was in the wild and wooly West. There was no great score made. Occasionally I would get a rise from a little spotted side, but for the most part I was contented to wander on until the shadows grew long and I knew that the smoke of the camp-fire would be signaling supper. About 7 o'clock Brimfull and King, Jr., returned. They brought with them a male golden eagle—extent wing to wing, 6ft. 11in. It was shot at a distance of 106 paces with the little Colts, and the height of the cliff from which it fell was estimated at 80ft. Junior swore by that Colts .22, nevertheless he traded it a week later with a hungry prospector for a half-interest in a copper claim.

Knight, Sr. and Jr., left us at Currant Creek. The boys went with them, and space is too valuable to tell of the three days' adventures of the remainder of the party to Ashley's Fork. Prairie dogs, burrowing owls and black buzzards were our only game, and we did not hanker for them. Allegiance to the Stars and Stripes prevents my giving our impressions of Ft. Duchesne and the colored cavalry. They were not first impressions, but the result of many summer trips to the post. I can, however, say a good word in the return letter.

It was late on the afternoon of the twelfth day from Provo when we crossed a sand ridge and looked down upon Vernal and the beautiful Ashley Valley—a valley that is yet redolent with tales of Indian raids and frontier duels, a valley that needs only some Joaquin Miller or Bret Harte to make its history the last tid-bit of border romance that our new West is to perpetuate. I fifteen miles the cottonwood ribbon curves amid lucerne and grain, orchard and bee garden. This is the great apiary of the mountains, rivaling even southern California in its output. A week of rest was delightful, and yet every day we were off looking at claims that finders would sell for little or nothing, and finding quartz-stained prospects which no money could buy. Almost every evening I cast my fly over the irrigating ditches of Vernal, and always a few trout would be my reward. Especially did I wonder at the great number of Eastern songsters that are making their homes in the newly planted orchards. So far as habitat is concerned, new editions of Cones and Ridgeway will soon become imperative. The eastern mountains, which belong to the plateau province, are wild and broken on their sides, but on their summits are moist, level parks, grass-grown, shaded with heavy timber, the home of deer and elk. On our rambles we saw few chickens, but scores of cottontails furnished us plenty of fresh meat. Either at Vernal or at Meeker is the best place for outfitting for a mountain excursion in this part of the Rockies.

One afternoon the Kings returned. They wanted Brimfull and myself to accompany them as far as White River and especially to make an exhaustive study of the gilsonite and asphaltum deposits on the old Uncompahgre reservation. So we started out, with Charlie Glines as guide, on a chase that will either make or break us. We drove for seventeen miles through farmland, only stopping to satisfy my taxidermical propensities. At Green River Ferry we had lunch. When we crossed the muddy stream we were in a new country. Greasewood and sagebrush, lofty mountains and rugged cañons, mighty dykes of porphyry, barren islands in a desert sea—that was all to attract the eye. Even water was a luxury, and yet this was the country that the Uncompahgre Utes strove so long to retain. About 5 o'clock Glines and I took saddle horses and left the party, ostensibly to hunt rabbits.

For myself I want to make a personal explanation. I am neither a guide nor a prospector. I have neither mines nor stock to sell, and I have no advice to give. Two or three incidents on this trip have shown me that many people have been bitten by salted propositions right in the country we were exploring, and I have concluded that any man with money is *non compos mentis* if he buys even a fractional interest of his bosom friend's holding without personal investigation of the property in question. So far as getting money back, I would rather trust a faro layout on "Barbary Coast" than advertised options in Utah and Colorado. Our route took us to great prospects. It was a matter of business, and the record here is merely incidental, though some points may be of interest to geological friends.

Well, Glines and I shot rabbits and rode southward to a series of dykes that from a distance appeared to be recent lavas. They proved to be porphyries, and I was not surprised to find them banded with gypsum and scarred with iron and copper streaks. By chance we stumbled upon a black vein, apparently bituminous coal, and we were filling our pocket with samples when a "woof" called our attention from things mundane, and we saw above us on a narrow ledge a bear that might have been either a cinnamon or a small grizzly. Our horses were more alarmed than we, and I shall never understand how the brute gave us warning unless it was a case of mutual surprise. I had only a shotgun, shells loaded with No. 3 and No. 8 shot. My partner had a heavy .44cal. revolver. Naturally I was foolhardy, and tickled ursus major with two barrels of my heaviest. They both took effect, but only served to increase his wrath. Lud! (as the old stories say) it was fun to watch that creature fall a dozen feet and then amble toward us. Charles is a splendid marksman, but to shoot from a bucking horse requires more than ordinary skill, and he did not succeed in bagging the game. My second volley may not have hit him, but it was an excellent bluff, for he turned tail, and Charles' horse, now brought under control, gave the rider a chance to plant a quietus in the right place. We had considerable trouble with the horses, both while skinning and while packing the hide. It was late when we arrived in camp at K ranch, and perhaps our bear had magnified our coal location, for between the two we managed to keep the crowd up until midnight.

K ranch is deserving of an historian. Midway between Green and White rivers it is a stopping place for the mail and a haven for travelers. Its small patch of lucerne and grove of cottonwoods invest it with a peculiarly peaceful charm, and the "K" brand is on all the cattle that roam the adjacent hills. K ranch can tell many strange stories. It is on the borders of Utah and Colorado. It has withstood Indian siege and cloudburst fury. After the Meeker murder, the White River Utes determined to wipe out the white settlers of Green River and Ashley. Here they held their council. Word was brought to them that soldiers were in pursuit and they changed their plans. The result was the Thornburg massacre and the escape of the Mormons. Hither, before the reservation was thrown open, the Utes would come and inquire as to trespassers on the gilsonite beds, and then a brave would visit the prospectors with intimation that the band was near and hungry for scalps, but for $20 would not put in an appearance until next sunup. I have great respect for these Indian police. They remind me much of the rattlesnake. By the way, in talking with an Uncompahgre Ute, I note the difference between them and the Strawberry Indians and Pah Utes in sign language. To denote a liar, forked tongue, the Pah Ute uses the first and second fingers of the right hand, while the Uncompahgre crosses the index fingers of each.

After supper one of our party threw a piece of the so-called coal into the fire, and in a few moments exclaimed that we had struck a bed of elaterite. To prove his assertion, he pulled from the coals a semi-plastic, sputtering mass. It was composed of bacon rinds from the grease in which the rabbits had been fried. There might be a moral to adorn this tale.

In our waking moments we heard the patter of raindrops on the canvas, and the sun came out of a threatening cloud bank. In spite of storms we left shelter to examine a claim far up the mountains. On our trip we saw many deer and some magnificent scenery. In the afternoon my friends went back to the coal prospect that Charlie and I had stumbled upon on the previous afternoon. I devoted my time to birds, and the rarest acquisition was Audubon's hermit thrush.

K ranch was behind us, and we traversed the deserts of the Centennial State. It seemed that we had chosen a rainy season for our trip. These mountain cloudbursts

have no regard for travelers, and they furrowed out gulleys that made great detours a necessity. When, at intervals, the sun broke out, we shot mountain hares, and amid the wild horses that roamed the mesa were bands of antelope. They were not very shy, and had the game law permitted, we should have enjoyed excellent sport. In one cedar thicket I found an ancient camp, and in it were a pair of Indian snowshoes, an old percussion lock smoothbore rifle barrel and a bone awl. Antelope and relics were alike forgotten when we struck the great black fissure veins that ran like section lines across the country. They varied from 20in. to as many feet in width. I admire the honesty of the St. Louis Gilsonite Company when it made application for a Government patent to the entire reservation and claimed that only one small vein of mineral could be found.

Our last camp was pitched between two veins of the gilsonite, and in the evening we started a hot sagebrush fire, and over it heaped a pile of the black stuff. It glowed, became plastic and gave off fumes like a Hunter's Point oil refinery. From the base of the pile molten streams gushed forth and ran like lava over the sand. We made volcanoes in miniature, and ran the liquid into molds where it cooled in black, shiny masses. A reheating gave a smokeless, incandescent result, almost like coke. Two days were spent in prospecting, and then, amid storms that dampened interest amazingly, B. and I returned to Vernal, while our friends journeyed on to Meeker.

SHOSHONE.

On Kansas Prairies.

LOST SPRINGS, Kan.—*Editor Forest and Stream:* We are in camp in the midst of a great wheat field, but as it rained yesterday the grain is too wet to thresh, so I am sitting here under my own little tent with the fresh, pure air of the prairie drawing through. As my eyes wander over the fields, it is across acres almost unbounded of wheat and oats already harvested, to the great cornfields standing in all their magnificence, stretching away, rank after rank, field after field, until the eye is sated with their richness. Kansas is very rich this year, and the cornfields are beyond description, standing in great blocks up to 600 acres with tassels like an army of banners, with their luxuriant garment of richest green and silken tresses of gold and purple, softer and more beautiful than any that ever human hands have formed; while overhead from the edge of the prairie on one side to the edge of the prairie on the other reaches the bonnie blue sky of Kansas, unbroken save by a few white, drifting clouds—soft and fleecy enough for the wrappings of a new-born babe. Surely as I sit here, life is well worth the living to-day. The air is pure and clear, and I so love to be out in it. Although I have my own tent, yet even in that at night I feel too much shut in and so usually (unless it is stormy) take my blankets, climb up on the straw stack, wrap up in them, and with the stars for watchers and the sky for a roof, sleep as I have not been able to sleep in a house for years. But none the less my thoughts wander from the boundless level of these waterless plains back to the brooks and rivers, the woods and rocks and hills and valleys of my boyhood playground. And as the expression of these thoughts seems to lead others into pleasant ways, I have thought it were worth while to write them out.

When the rainy day came and with it the coveted permission to go a-fishing, there would be a consultation among the tribe which way to go. There were the Cowles Meadow and Running Gutter trout brooks, the old mill pond to the northwest, the Mill River to the eastward. The pond and river held goodly store of pickerel, sunfish, shiners, eels and bullheads, and were close by; but further away to the southeast, down in the big meadows, was "The Nook," where the waters of the Mill River join those of the Connecticut. Here, in addition to the fish mentioned, we caught dace and perch. It was, and must still be, a beautiful place. The great elms and maples gave a delightful shade. In places the grass-clothed banks sloped down to the water. When the south wind blew the great waves came rolling in from the Connecticut. The water, black and deep, held the fish so dear to boyish hearts; and tradition told of Indian ways, of the capture of otter and other wild creatures. The old men whom we sometimes found fishing there would tell of the days when the shad, the sturgeon and even the salmon were drawn from the waters, when in the woods the wild turkey and pigeon and gray squirrels were as plenty as heart could wish.

It was a long walk down there for short legs, and so one spring day, so early in the season that it was uncertain if the fish would take the bait, when the older ones decided to fish at "The Nook," and I was eager to go, the tribe decided I was too small to go so far. Appealing to the mother, she said I could go, and as her decision always settled any matter, I got ready and went. Trailing down a little brook that ran past the house, we went through fields of grass, which within the memory of men—then not very old—had been covered with a dense pine forest. The stumps still formed the fences around the fields; one of the pines was such a giant that its stump—stubborn and immovable—remained for years where it grew, and gave in its lifetime the name of "Pine Tree," later corrupted to Pantry, to the school district in which it stood. Along the railroad track, then down the "Meadow Hill," through "Little Ponsett," and so to the fishing grounds we found our way. Then the fishing began, with good success for the older ones; but the little fellow for a long time caught but one small dace, and so grew tired and discouraged, until at length Dave C——, the "Sam Lovel" of the neighborhood, came along hunting muskrats, and the older ones gathered around him for a pow-wow. I was too young to be admitted to their counsels, but could stand in the outer circle and listen. So laying down my fish pole, I went up to where they were gathered, and for a long time fish and fishing were forgotten, but when the council was broken up I went back to my fish pole. It was undisturbed, but the cork, used as a float, was invisible, so I proceeded to find what had become of it. At first I could not start the hook, so thought it had got snagged. As hooks were not so easily obtained in those days as now, to lose one was looked upon by the tribe as a bad loss, so I started slowly up the bank, which fortunately sloped to the water, and "snaked" out—not as I expected a water-logged stick of wood, but the biggest dace ever caught by any of our number. It came from the water as lifeless as a chunk of pork, but the fighting qualities of a fish in those days did not count to me, and I felt about the richest boy that ever carried a fish pole There was no more fishing for me that day, for I was in too much haste to show my prize and receive the congratulations of the home powers, and we were soon on our way, plodding up through the meadows homeward, passing on our way Dave C——, of whom I have spoken. But what so "successful as success," for from that time on I was a warrior in good standing, and never looked upon as too small to join the expeditions, however far afield or difficult they might be, and even Dave condescended to receive me into his councils, and afterward to friendship, that lasted as long as I lived in that vicinity.

The mousing hen seems to have set other hens a-mousing, so I will say, for an answer, that I have seen staid, well-fed New England hens try to do a great many strange things in an awkward way, but environments change habits, and Kansas hens early learn to roost high and wander far afield; and to husk shock after shock of corn with a trim built Biddy, keen-eyed, alert and watchful, pouncing with all the pent-up energy that Kansas climate gives upon each poor mouse as it appeared, was to me a source of keen pleasure.

PINE TREE.

Yukon Notes.

Lying Out at Fifty Below.

(*Continued from page 123.*)

MAC and I kept the trail as long as we could see, and made camp after dark. Sometimes we slept on the ice of the river, but never when we could help it. At other times we went ashore and with our snowshoes cleared away the snow from a space sufficiently large for our bed and fire. Then, while one of us got dry wood for cooking supper and breakfast, the other made the bed. We could not wait to eat first, for then we would have become numbed with the cold before arrangements for the night were completed. We had to go at the thing while still flushed with the exertion of the trail, fell two or three or perhaps half a dozen small firs, throw the coarser portions up to the windward side of our hole in the snow for a wind break, and the springy ends down on the bottom for the bed. Then on top of these latter we laid our caribou skins and blankets, and at the head put a 6in. log for a pillow. By the time the bed was finished and the coverlet turned down so that we should lose no time getting inside, there would be a goodly pile of dead spruce firewood, cut in cordwood lengths and split into pieces 4 or 5in. through, ready for the fire. A handful of the smaller chips and splints were gathered up and shaken to free them of the mineral-like snow which sifted into the grain like fine sand, and then the heavy gauntlets were taken off for an instant and a match rubbed over a knife or pistol handle and the flame applied to a bit of candle which was always carried for this purpose.

A bed for the fire had been arranged by laying some of the larger pieces of wood on the snow that still remained in our excavation, and on this the kindling was laid and the flame applied. Then larger splints were gridironed over the others and the flame carefully nursed, for the shivering devil over the fire realized that he was getting colder and colder each minute, and that if the fire failed him he might become too numb to start another. This might very easily happen with matches alone. At Lake Marsh Dr. Sugden told us of two men who arrived at his camp partly frozen one night in the hours just before dawn, who had tried to camp ten miles below, and who were so numbed that they could not strike a match.

Fortunately the spruce was very dry, and with the candle's aid we never failed starting our fire quickly Soon it would be giving out a comfortable warmth, and then Mac and I would crouch over the fire and revel in the heat and grow very sleepy, while the ice was melting in the kettle that was to furnish the water for our tea and mush and beans, and while our moccasins and socks were drying out. These made a formidable array hung on poles on the opposite side of the fire, for each of us wore three or four pair of heavy socks and two pair of moccasins—often twenty-four separate articles for the two of us.

How sleepy we were over the fire! Time and again my head would sink low and my eyes involuntarily close, only to be brought back to consciousness by Mac's warning voice, "Look out for that moccasin. It's scorching, man," or "Judas! there goes the mush kettle."

Thawing Out a Watch.

One of the last tasks before retiring was to thaw out our timepiece so that we could know when to get up in the morning. The period when it was light enough to see the trail was so very short that we had to be up in the morning several hours before dawn in order to waste none of the precious daylight.

I had left my good watch behind, and Mac's good watch had broken down, and the only timepiece we had between us that could be persuaded to go at all was a cheap open-face watch with a broken crystal. To keep the hands from breaking off we had improvised a case from an old condensed milk can. A hole had been cut in the bottom and a piece of ground glass from a camera let in and held in position by tin clips. Then the can had been split down and the sides bent around the back of the watch to hold it in place. The stem of the stem-winder projected through an opening at the side, and the watch could be wound and set without removing it from its case.

Unfortunately the watch would not keep running cold days, and it would freeze up and stop even though suspended by a string inside our clothing next our hearts. Before going to bed, therefore, the watch was brought out and toasted in the ashes of the camp-fire till thoroughly thawed, and then started and set by guess. It was often consulted during the hours of darkness. Matches were struck and the candles lighted under the bedclothes, and the poor old watch, pitiable as was the makeshift, was a real source of comfort and aid.

The reason that a cheap watch freezes up is that all such watches have soft bearings and a certain amount of lubricant is necessary to keep them running, which thickens and clogs the action. Only the best full-jeweled movements should be taken into cold countries.

The trip from the fire to the bed was never a pleasant bit of travel. As a preliminary, I dusted Mac's back and he dusted mine. Sitting by the camp-fire, as Mac once remarked, it was "50 below zero in your back and 1500 above in your face." When water simmers in one side of a kettle set by the fire and freezes solid in the other it is little wonder that a man accumulated ice on his back. The hoar frost on our rough coats was often quarter to half an inch thick, and it would never have done to have taken this mass of ice to bed with us.

When we were reasonably free from the ice, we crept over to the blankets and then inside, carrying with us parts of our foot gear that we were desirous of keeping pliable so that they could be gotten on in the morning, and wearing our fur caps, heavy gauntlets and a full outfit of socks and moccasins.

It was a cold, icy bed that we crawled into, but we knew that we should soon thaw it out. The blankets accumulated so much ice, from our breath chiefly, that we soon had to give up packing them on the sleds in a compact roll, and had to leave the stiff, board-like mass extended its full length, bending it once in the middle lengthways. It is hard to get used at first to sleeping with a great weight of blankets over the head. There is a very real sense of smothering and nightmare, of drowning in bottomless maelstroms, or death under avalanches of thousands of tons of soft, suffocating snow, and one wakes with a start to find that he has recklessly thrown the covering half off his body and is lying under the cold icicle-pointed stars at the mercy of his enemy, the frost.

Playing Dog.

One of the doggerel verses of the "Cheechako's Lament," printed in the Klondike Nugget, runs:

"We had no yelping malamoot
To mush along our sled,
So, with the gee-pole in our fist,
We played the dog instead."

Playing dog is the hardest kind of hard work. The sled runs easily enough over smooth ice or snow for short distances, but when the way stretches out ahead for scores and hundreds of miles, and the ice rises into miniature mountain chains abounding in precipices and pitfalls, and there are sheer lifts of half a dozen feet, and drops of the same distance, and detours along the shore have to be made over steep and slippery hills several hundred feet in height, or over fallen timber, it is a very different matter. The iron-shod oak sled itself weighs 30 or 40lbs., and with its load of 160lbs. it is considerable of a lift in rough places for one man. As a rule, each man wrestled with his own sled, and we only doubled up over the very hardest going.

Sometimes the sleds were jammed in narrow defiles among masses of upturned ice, and at other times were half-buried under the snow which rolled up over the projecting corners of the load and left a beautiful furrow in our wake. The snow was marvelously light and fine and dry, and back in the woods it never crusted, and rested as softly as sifted wood ashes, but out on the river it was packed by the wind till it would support the weight of a fox or a dog, but not a man or a sled.

The early part of our journey we did not have much experience breaking trail, but later on the tide of travel had almost entirely passed, and we had our share of path making.

La Grippe Under Difficulties.

As a memento of the flashlighting experience in the Indian cabin at Selkirk, I developed a full-fledged case of the grip two days later. Colds are almost unknown on the Yukon in winter. The air is pure as the atmosphere on the summits of the highest mountain peaks, and uncontaminated with germs of any kind. I remembered the coughing, feverish Indians and the unmistakable symptoms of grip only half noticed, and not before thoroughly understood, and I knew that if I had not gone into the cabin I should have escaped an experience in shivers and nausea which is a haunting nightmare even to this day.

There had been a day or two of unprecedentally mild weather, and under the influence of the Chinook wind the thermometer climbed until it reached the freezing point and even went a little above. After that it began going down again, and in forty-eight hours had about resumed its normal level of 20 or 30 below zero. There was a difference of something like 130 degrees between my temperature and the surrounding air. It was a battle royal between the frost and the fire, and never for one moment was there a truce. A warm place would have been very grateful where some kind of an equilibrium could have been maintained, but it was an impossible luxury, and there was nothing to be done but to worry through to the time when the disease should run its course. Aside from tea and bouillon made from capsules, I ate practically nothing.

It was hard to understand how Mac could relish the meals, mainly composed of scorched mush and burned beans and greasy bacon and flapjacks. We found it a practical impossibility to keep our mush kettle clean. A portion of the contents persistently clung to the sides and froze there, and could not be scraped off, and when we set about getting our water supply for the next meal by melting ice, the remnant of mush always scorched and contaminated the new portion. At times we tried melting several kettles of ice in succession, pouring off the brown, foul smelling water each time, without materially improving the flavor of the mush. The trouble with cooking beans arose from the fact that we never had the time to boil them the requisite four hours over any one camp-fire, and consequently had to carry on the process over successive fires. Between times they froze solid, and when put on the fire invariably burned before they thawed. Once or twice we baked our beans by burying them in the coals of the fire over night, but generally our fuel supply was too limited and our time too short to resort to this process. And yet to the healthy appetite, stimulated by the arctic cold, the food, poor as it was, was not only satisfying, but absolutely delicious.

Mac was very much worried over my condition, and wanted to go into camp till the worst was past, but the food question would not permit of this. We knew our

supplies would hardly last us to the coast, and it was essential that we should get as far as possible before they gave out.

Jan. 5 the grip was at its height, and the ice the roughest of any previously encountered. We were in the immediate neighborhood of Rink Rapids, where the current is swifter than for any considerable distance, with the exception of the stretch below Le Barge, called the Thirty-Mile River. Our advance was over a succession of long ice ridges, and one moment we were exerting our strength to the utmost to draw the sleds up one of the steep faces, and the next holding back desperately on the gee-pole steering stick to retard the progress down the frozen slant, or running and jumping to keep out of the way of the coasting sled. Frequently there were upsets at the bottoms of these ice ridges, and the sleds had to be righted and at times the loads rearranged. At night, when we came to look up our position on the map, we found we had gained only two miles all day. This was our poorest day's travel. The maximum was twenty-five miles, made when our loads had become much lighter, over a particularly good stretch of ice above White Horse Rapids. Our average for the journey out was something more than thirteen miles a day, measured by the map. As a matter of fact, the distances actually traveled were considerably in excess of the figures given, for the trail, as already stated, was very tortuous.

Meetings by the Way.

The first party to pass us was composed of A. T. Walden, of Boston, Mass.; J. E. Dauchy, of New York; E. H. Wells, of the Cincinnati Post, and C. J. Dumbolton, who was a Nebraska man, I believe. Dumbolton, who went by the nickname of Buckin' Joe on the Islander, was one of the few men in that boat who got through to Dawson.

Wells was an Alaska pioneer, having been a member of the Arkell expedition. Walden had been in the freighting business between Circle and Dawson, and between Dawson and the mines. He had with him a fine dog team, consisting of two Tanana dogs, three Malamoots and one Siwash.

Three months later Dauchy called on me in New York, and it is hardly remarkable that I did not recognize in the well-dressed man of the world the husky, fur-clad giant whom I had last seen with frost-covered eyebrows and mustache, trotting beside a dog team on the upper Yukon.

Men of a different stamp were Harris and partner, who passed us Jan. 4, ten days out from Dawson. We had a few words with them, and learned that they had gone from Dawson to the Stewart River in two days, and were endeavoring to break Jimmy Jackson's twenty-two-day record to the coast. As we learned afterward from "Black" Sullivan, they had good reason to be in a hurry, having, according to his statement, stolen the dogs composing their team.

Further on, one night when the moon was shining brightly, we heard a jingle of bells, and raising on our elbows in our blankets—the hour was close to midnight—we saw two dog teams in procession hurry past and disappear in the luminous darkness. It was an unusual circumstance, and later, when mentioning the fact, we were told that the teams were probably those of the ——— Kid and a stockman who followed him 110 miles to secure his arrest for theft.

At Fort Selkirk the stockman hid under his blankets his gold sack, containing $8,000 in dust, the proceeds of a herd driven in over the Dalton trail, while he walked across to the store to make a purchase of furs. Coming back, he casually kicked the blankets with his foot, to find the gold gone. The Kid was the only other man in the neighborhood at the time, and the stockman suspected him of the theft. He did not mention his suspicions to any one, however, or even the fact of his loss, but when the Kid started, the stockman's dogs were in harness and ready to move, and for four days he lagged on his heels and never let him out of his sight during the hours of travel. The Kid made record time, and traveled day and night, but he could not shake his pursuerer, and they reached the police post at the Little Salmon less than a pistol shot apart. Here the stockman called on the police to take a hand in the game, and the Kid was arrested. In real life such stories generally have unsatisfactory endings. In this case nothing could be proved, and the Kid got off scott free. In relating the story, my informant at the post added that the case was one where it was absolutely impossible to administer justice or get at the rights of affairs. "For all we know," he said, "the drover may have robbed himself. By his own admission he was only entitled to one-third of the sum he carried, having partners who were entitled to the remainder. He may have cashed the gold at some camp on the way, and gotten up his story, which I admit is plausible, to put him in possession of his partners' two-thirds.

"If this supposition is correct, I shall expect him to come in again next year, as a miner, and I shall be on the lookout to see if he strikes it rich. If he does, the police have some questions to propound that he may find it hard to answer."

Personally, my sympathies are with the stockman. It is a terrible responsibility to have to handle other people's money, and whether he yielded to temptation or not he will always suffer from the stigma of suspicion.

Near Rink Rapids we caught up with a party of good Samaritans who were making arrangements for taking a sick man out with them to the coast. The poor fellow, who was said to have consumption, had been deserted by his partner and was living entirely alone in a damp dug-out on an island. Later we learned that he reached the coast in safety.

Jan. 7 we found a shelter from the wind at the noon halt in a water-worn niche in the conglomerate rocks that form the west side of Five-Finger Rapids. The snow, propelled by the north wind, was flying in horizontal streaks through the rifts in the ancient dam, and though the rapid was ice-bound and harmless for the time being, we well knew its power for evil, and experienced something of the fairy story sensation of crouching in the anti-room of a hot-tempered sleeping giant who might awake at any moment.

Suddenly, and without warning, a dog team trotted around the corner of the rock and up to our fire, and then another, followed by two furred and snow-covered men whose appearance in a city at Christmas time would have attracted the children far and near. The men exchanged a hearty greeting and halted a minute to take a cup of tea with us. One was Dr. Savage, of Chicago, and the other was Mr. McNeil, who, at his trade of carpentering, had made $50 a day in Dawson for some months past.

Five minutes later they had taken the trail again with a cheery godspeed to their slower fellow travelers. Such meetings were common enough at this stage in our journey.

Five Fingers.

Four miles above Five Finger Rapids was a little settlement. Here four parties had been frozen in at the time the river closed and gone into winter quarters. Among them was Col. Samuel Ward, a wealthy lawyer and mine owner of Helena, Mont., who went to the Klondike simply because he could not keep away from a mining excitement of such prominence. In a nearby cabin lay Willie Byrne, waiting for the time when the ice would run again and he could take boat for Dawson City and so on to the outer world and his home in Chicago. We visited Willie, and talked with him, and left a remembrance of our visit, as was the custom. All the men going out had done something for the delicate little fellow, who bore his hardship and suffering so uncomplainingly.

Nigger Jim gave him $60 in nuggets, and others had been correspondingly liberal.

We heard from others how Willie had walked five days on frozen feet, and never knew the seriousness of his trouble till one of his toes came off through a hole in his moccasin. He thought his feet were sore from the travel, and he did not realize it was the frost in them that made them rigid at the ankles. Report said that the man who had charge of Willie was wild from fear of the cold and gave the boy no proper care.

At Five Fingers, where the boy's condition was discovered, the man tried to desert him, and would have done so had he not been taken in hand by the miners, who saw to it that privision was made for the lad's maintenance and traveling expenses back to civilization.

Just above the settlement we met two men of a rare and picturesque type. They were lean, rangy creatures, with the half wild look of domestic animals that have been turned loose to forge for themselves. Their clothing showed a curious knowledge of ways and means for fighting off the cold from the blanket footgear to the rude homemade fur caps, with their great flapping sides that were not called into use with the thermometer short of forty below.

The most striking thing about the men, however, was the color of their faces, which, instead of being the usual dark tan of most of the Yukoners, was an apoplectic red. I do not know the reason for this, but fancy that an experience with scurvy may have been responsible for the color.

We learned from the men that they were old cassiar miners and that they had crossed from the Stikeen River to the headwaters of the Hootalinqua and so on down to the Yukon over the ice. They had not seen a human being until within a few days since November, and they had been out of food, and knew what it was to starve more than once on the trip. Their names were Alexander McMillan and Joseph Pickett.

J. B. Burnham.

Pioneer Days.—XV.

BY ROWLAND E. ROBINSON.

Bennington.

Josiah found part of his regiment at Manchester, and there, also, not long after, detachments began to arrive from Charlestown, whence Gen. John Stark was sending them forward as fast as they could be supplied with their "much-needed articles: rum, kettles and bullets." Then, disregarding Gen. Schuyler's order to join him, Stark marched as far as Bennington, where he encamped at the request of the Vermont Committee of Safety, and so was ready to repel Baum's attempt to seize the public stores there.

Warner was with Stark, but the remnant of his regiment in which Josiah Hill was, remained at Manchester under command of Lieut.-Col. Safford. Therefore, Josiah had no part in the first conflict of that memorable day, which, though the troops were insignificant in numbers, was one of the decisive battles of the world, for it sealed the fate of Burgoyne's army.

The Hessian redoubt made upon the hill with infinite labor in a pouring deluge and the smothering heat of dog-day weather, was stormed by the raw Yankee militia with their bayonetless guns against the well-appointed, trained veterans, who were slain and captured till but few were left to be routed. Their Tory allies suffered as overwhelming a defeat, the Indians fled yelping from woods that were alive with terrible Yankee marksmen, the day was won and the victors scattered far over the field to gather the spoils of war. Then, when no one suspected the coming of an enemy, there arose a martial din of fifes and drums, and Breyman's fresh troops came marching along the miry highway with two field pieces belching fire and smoke and hurtling showers of grape from their brazen throats.

The scattered Yankees gathered in squads to meet them, but were forced to fall back, until Warner's battalion, hurried on from Manchester by Safford, stood like a strong tower to shelter them. Now the dispersed militiamen rallied and poured deadly volleys upon the red ranks of Hessians; riflemen swarmed like hornets in the woods on their flanks, and every bullet struck its living target. Again the Hessians were routed; their cannon were abandoned, hub-deep in the mire; their brave colonel mortally wounded was taken with many of his soldiers; many were dead and many wounded.

As the shadows of night fell and a halt of the pursuers was called, Josiah Hill, standing among the foremost, was thankful to be one of them to retrieve Hubbardton's day of disaster. Next day as he was strolling over the battleground he was accosted by a little gray-bearded man, begrimed with powder smoke, though the half-dried corn husk in his hat proclaimed him to be one of yesterday's assailants of the redoubt. There was, moreover, something familiar in the toothless grin of greeting when he shouted, "Why, boy, have you forgot your ol' mate, Sir Kenelm Dalrymple? An' who've you got tu be, n tu know ol' friends?"

There was much for them to talk of, but of all t news Kenelm heard, nothing astonished him so much Josiah's marriage. "Oh, boy, boy!" he sighed, "th come o' my not stayin' with ye!"

Strolling about among the prisoners, they saw in o group of Tories a tall, lank fellow, who kept his h drawn over his black brow.

"D'ye know this ol' friend?" said Kenelm, as going sly behind the fellow he twitched off the hat and revealed t sanctimonious visage of Anthony Capron. "I wish they turn him over tu us," said Kenelm, "but they've got nice pen built to fat such swine in—an' won't they git f though?"

Josiah had his desire of revenge more fully gratifi when, during the deep snows of the following winter, being now a sergeant, received the following order:

"Jan. 12, 1778.

"To Capt. Sam'l Robinson, Overseer of Tories:

"You are hereby required to Detach Ten effective m under your Command with proper officers to take char and March them in Two Distinct files from this pla through the Green Mountains to Col. Wm. Willian Dwelling house in Draper Alias Wilmington within th State, who are to March & Tread the Snow in Sd. Ro to suitable width for a Sleigh or Sleighs with a Span Horses on Each Sleigh, and order them to return Marc ing in Same manner to this place with all convenie Speed, By order of Council, Jonas Fay, V. P.

"N. B. You are to order 3 days provisions to each such men & the same to be cooked this day & to March 6 o'clock to-morrow morning.

"Attest: Joseph Fay, Sec'y.

"Jonas Fay, V. P."

To this was appended this order:

"To Sargant Josiah Hill, you are hereby ordered execute the within, and make due return thereof.

"Sam'l Robinson, Overseer of Tories."

Accompanied by a guard, Josiah went at once to t prison which had been specially built for the confineme of Tories—a double-walled log house, the space betwe the walls being filled with earth, and the place provid with an ample palisaded yard for the exercise of t prisoners, for they were treated with due regard to the health in this respect, as well as providing wholesor food, as may be gathered from an order to furnish the "a wagon load of sauce," presumably garden vegetable which is still "garden sass" in the parlance of ol fashioned folk. He presented the order to the keeper, w gave him a list of the prisoners, and he proceeded make the required draft.

"Naow, men, I'm tu give ten on ye a' strornary chan tu limber up your laigs an' git a maou'ful o' fresh air he said, addressing the motley crowd. "Don't holler for chance, 'cause I can't take only sech as is suited for t business. Anthony Capron, step out. Long-laigged a big-footed, you're built to order ezackly. Abram Benn step aout. Hot-tempered they say you be—stubbed, y sartinly be. You'll du. Peter Bell, step aout. You' gittin' tew logy, an' some o' your fat needs workin' off."

So he went on until the tally was completed, the m wondering on what disagreeable service they were d tailed. They were not long in doubt nor well pleas when they were set to trampling and wallowing throu the deep snow, when, if one lagged or shirked the for most place, when it fell to his turn, he got the prick of bayonet, while the guard marched comfortably in t beaten track at the rear.

"Capron, I'm a-cal'latin' for you tu hev you work ao what you owe me at tew shillin' a day," said Josiah, the other, short of breath and weary of limb, took his tu at the rear of the file. "Le' me see, twenty-five paou York money'd be five hund'erd shillin', tew'll go in th tew hund'erd and fifty times. By the Lord Harry, o winter hain't long enough. Wal, I owe you suthin' f takin' that gal off'm my hands."

Anthony Capron thought when he was back again in t Tory prison, with every muscle sore and every bo aching after three days of wading through the snow, th he was not very deeply in debt to the man he h swindled.

The Smooth-Bore.

Josiah served in one or another of the Vermont reg ments until the end of the war, and was retired from t service with the rank of captain. He bought a right land under a Vermont charter in the then almost uni habited township of Danvis, and again began pione life in the heart of a wilderness.

Again the quick resonant strokes of his axe we echoed from side to side of a widening clearing. Aga he rejoiced in the conquest of the forest giants, venerab patriarchs, concerning whose fate he felt no sentiment emotion. Again he let a flood of sunlight down upo fresh acres of virgin soil, and out of their roughne molded grain field and meadow; and again he reared t log walls of a new home, soon made truly a home b the presence of his wife. The brood of younger Torre found in it a home also, to which they gave willing ar helpful hands until they were well grown boys ar girls, able to shift for themselves.

Josiah was again an owner of oxen, also of cows ar a horse, and a flock of long-legged, bare-bellied shee ranging the woods as untamed as deer except when fe of wolves and bears became more terrible than fear man, or deep snow and starvation made shed, fold ar fodder more desirable than freedom.

The sheep and young cattle were turned out to rang the budding and blossoming woods, and their owner w out one day with his rifle to look after their welfar when he heard the scared bleating of the flock, mingle with the spasmodic jangle of the leader's bell. As th came tearing down the mountain path close upon t heels of the hindermost the cause of their flight, gaunt she bear, galloped at top speed, her faded, ragge coat fluttering like the tatters of a beggar. The shee swerved aside to pass Josiah when they saw him, but sh held straight on, and when he fired, inflicting a sligh wound in her head, she charged furiously upon him. H swung the gun aloft and brought it down with all h might. By good luck that he was truly thankful for h struck the beast a blow on the skull that checked her o slaught. Another brought her down quite stunned, s that he had no trouble to dispatch her; but it was th

last service of the rifle. The barrel was bent, the stock broken past mending, so that it was only a question of a new gun of some sort.

Arguing the question with himself, his wife the audience, he said: "If I got tu be sech a blunderin' ol' numbskull I can't git a bead on a bear's head three rod off, I better git me su'thin' I can shoot buckshot in—a' ol' Queen's arm or a 'paseraro,' mebby! By the Lord Harry, she wa'n't three rod, an' a comin' stret at me! But she was a-bobbin' up an' down, ju' like a sawmill gate. It don't signify, though, I'd ort tu ha' fetched her. Fact on't is, I guess I can't shoot a rifle no more—don't practyce none. Guess I'll git me a smooth-bore—it'll be handy for pigins, an' shoot a ball well 'nough for what bear an' deer an' varmints I run on tu naower-days. If the' was any sech thing as fixin' up ol' 'Sartin Death' I wouldn't think o' nothin' else, but she's past prayin' for," he siged ruefully, regarding the bent barrel, the broken lock and splintered stock.

The result was that after fully setting forth the case of each weapon he made a pilgrimage to the shop of Thomas Hill in Charlotta, the most famous gunsmith of the region, and after long consultation with that cunning craftsman, he ordered the building of a 16-gauge smooth-bore, with four-foot barrel, brass mountings, curled maple stock of rifle pattern, with patch box. He awaited the appointed time of completion with the degree of patience that usually attends the gun lover while he awaits possession of a new weapon, and knowing the value of a craftsman's promise, added a week's grace therto.

Then he haltered the two-year-old heifer that was to be the price, trade being then chiefly conducted by barter, and set forth on foot, leading the heifer.

The gun proved to be all that was promised and more than was expected. It was a beauty, according to the fashion of the day; it made a target almost as good as a rifle at twenty rods, and patterns with both coarse and fine shot that were all that could be desired. Josiah Hill was pleased enough with the gun to give it ungrudged praise, and proud to have so skillful and honest a workman as its maker for a namesake. So treading more lightly with this easiest of burdens on his shoulders he set forth on his homeward journey, now making a target of a white patch on a beech trunk, now of an unwary crow, now of a pigeon just arrived from so far south that it had green wild grapes in its crop, while in Danvis woods the vines were but just in bloom.

He was at the beginning of the last mile, when he brought down one of these travelers from afar, and debating a moment whether he should reload with shot or ball decided on the latter, so that he might as soon as he reached home show Ruby how well the new smooth-bore could fill the place of the rifle. As he was returning the ramrod to its pipes, his roving eyes caught the lithe movement of some animal where the next turn of the road closed the forest-walled vista. His first thoughts were that it was a deer, and that it was out of season. Then he saw that, thought it was of the color, it was not of the form of a deer. It was a panther sneaking along at a loose-jointed, cat-like trot, halting now and then to look backward with intent, alert eagerness; then resuming its slouching advance.

Josiah brought the gun to his shoulder, but could not find a certain aim at the distance, though that was not more than twenty rods. So he waited, with his head a little raised and gun muzzle lowered, for the animal to come within closer range. At fifteen rods it halted and looked backward again, and then as Josiah aimed at the curved side just behind the shoulder, it sprang lightly to the roadside, faced about, and swiftly climbed the trunk of a great maple to the first large limb that stretched out above the road, upon which it crouched, eagerly watching in the direction from which it had come.

A-layin' for suthin'—one o' my idgit y'erlin's, mebby," Josiah whispered to himself, the eye and aim following every movement, only diverted for an occasional quick glance down the road. The last of these revealed a glimpse of a checkered blue and white sunbonnet and the flutter of a brown homespun gown, and then Ruby appeared in full view, picking her way along the edge of a muddy road, not 30yds. beyond the tree where the panther crouched, watching her with cruel, eager eyes—ears pricked, the end of the tail twitching nervously, and hinder paws nestling under the belly for the leap.

"Ruby! Ruby! Stand still where you be, for God's sake!" he cried out in a sharp, strained voice that compelled her to stand stock still before she comprehended whose it was or whence it came.

The panther turned the glare of its yellow eyes full upon him at the sound; the long barrel trembled a little as it was brought to an aim; then became steady as a rock under the strain of the tense muscle; and obedient to the flash of priming spat out its shaft of fire. A yell of pain and rage shot through the boom of the report and echo as the panther, pierced through the heart, lurched aimlessly from its perch and came down a-sprawl and half lifeless midway between Josiah and his wife.

Still calm and collected, he began reloading as he stepped forward a pace, closely watching the great cat blindly biting and clawing the earth, and writhing and rebounding in all the lithe contortions of feline death throes. The last snarling gasp went out, the muscular limbs stiffened, quivered and relaxed, but he did not go nearer the motionless tawny form until his piece was reloaded. Then, with thumb on the cock and finger on the trigger, he advanced and stirred it with his foot. Not a muscle gave a responsive twitch, and he went over to Ruby sitting in a dumb daze, clutching the leaves with rigid hands, never moving until, when she saw her husband so near the terrible beast, she made an involuntary warning gesture.

"Thank the good Lord, Ruby!" he cried, all of a tremble now, and his voice shaking as he knelt down beside her; and she, with her head on his shoulder, fell to weeping.

"I do' know what made me, but I consaited you'd be a-comin', an' I was a-comin aout tu meet you."

"An' I was a-comin' jest in the nick o' time, an' blessed be this gun, for she saved ye. We'll call her 'Deliverance.' Ju' look what a beauty she be! There, don't ye cry ontu her—salty tears 'll rust her."

The smooth-bore, having done such saving service, was ever after a prime favorite, and a weapon of great renown in the township. Her owner achieved a wider fame as an expert marksman, woodsman and hunter. He was famous as the slayer of three panthers, and more deer fell to his gun than to any other. Many wolves and bears he trapped and shot, and as these larger animals became scarce he got at great pains a hound of Peleg Sunderland's noted breed, a gaunt blue-mottled dog, most melodious and far-sounding of tongue, and whose face grew more serious year by year with pondering on the wiles of the cunning fox.

Josiah Hill did not neglect husbandry for sport, and never became a shiftless hunter, good for nothing in aught else. Out of primeval roughness he wrought smooth fields, his well-tended crops were bountiful, his flocks and herds throve. No house was better provided nor more neatly kept than his, nor resounded more constantly with the musical droning of the great wheel and the livelier whir and beat of the flax wheel.

Neighboring homsteads drew closer around his own: those of Elisha Peggs, the shoemaker; the Lovels, the Goves, the Puringtons, the Bordens, and Briggses; the staid Quaker folk, the Bartletts—to all of whim he was a kind neighbor, helpful in sickness and the many privations of pioneer life; rough-tongued, but soft-hearted.

When Timothy Lovel fell sick of a fever it was Josiah Hill who rallied all the neighbors within two miles to do the sick man's haying, and Timothy, worried almost to death's door by the thought of his unfinished work, was made happy and set on the road to health, when told that it was all done, the log barn full of hay and five good stacks in the meadow. Every one had a logging-bee when the felled trees were ready for piling, but Josiah was first at all, organizing the work and keeping all hands at it till it was finished, before the inevitable black bottle went its rounds, oftener than necessary, and sky-larking and practical joking began too soon.

Once when early in the day Jerry Morrison was overcome in too frequent bouts with this sable antagonist and was laid behind a log heap to recover, some of the jokers of the company rubbed his milk-white oxen, the pride of his heart, as black as jet with smut from the charred logs. In due time nature's great restorer got Jerry upon his unsteady legs, and he meandered home, his oxen none the less tractable for their outward metamorphose.

"Say, Betsey, look a-here!" he called to his wife, as he came to an unsteady halt before his own door and brought his oxen to a stand with a "Whoa, Snowball! Whoa, Silver! Back, ish! If this 'ere's me, someb'dy or 'nother's got my oxen. If it haint me, where in thunder be I gone tu?"

In the October evenings every farm had its husking bee, an industrial merrymaking in high favor with the young folks and matchmaking mothers. The uncertain light sprinkled from the tin lantern, the deep shadows, the continual rustle of the corn leaves and husks were great aids to the bashful wooers.

When the young orchards came into bearing, paring bees became as common and as popular entertainments—a way of making work light with many hands.

Quiltings were more the affairs of matrons and maids, but the men were in demand when the "quilt was shaken," and dancing was in order. In winter there were spelling schools in the log schoolhouse that Josiah had been instrumental in building, and even taught school in one winter when no one else could be found better fitted for the place. In his youth he had learned to read and write, and had ciphered to the Rule of Three in the district school of his old Connecticut home, thereby being qualified to lead or drive the youth of Danvis one winter's journey in the path of learning. The schoolhouse was furnished with rough desks and seats for the larger scholars, while the smaller ones were provided with two long benches of slabs supported on rough-hewn legs driven into holes on the bark sides of the slab. There was a huge stone fireplace in one end of the room, by which an attempt was made to warm it, with the result of roasting those who sat nearest, while those who sat furthest were freezing.

In the bitterest weather there was a continual movement of the frozen and the thawed to and from the fire, occasioning considerable disorder. Nevertheless Josiah's scholars learned obedience as they stumbled along the rough pathway in pursuit of the three Rs. Abner Borden, standing in the reading class, balanced himself on one leg and slowly scratched it with the other foot as he spelled and respelled a puzzling word to himself.

"Skip it an' go 'long!" his next classmate whispered.

"Skip it an' go 'long," Abner repeated, in his high-pitched reading voice.

"Don't you know what b-a-r-r-e-l spells?" the master asked, when the laughter subsided. "What does your father put his cider intu?"

A great light broke upon Abner's intellect, and he blurted out, "Hunh! int' the bung!"

"Master, may I speak?" a scholar asked, eagerly, after a stolen glance out of the window one day in early winter, and getting permission, reported that he had just seen Mr. Briggs' dog tree a bear not forty rods from the schoolhouse. When the master was satisfied of the fact by occular proof, he sent the discoverer for the long smooth-bore, powder horn and bullet pouch, and when it was brought and carefully loaded he dismissed school for half an hour, and with all the scholars at his heels went out and shot the bear. He turned over the bounty and skin to the committee to be applied on school expenses.

Josiah had not been many years settled in Danvis when his old comrade Kenelm Dalrymple came to him broken with age, infirm and homeless; but the latter no longer when he came to this hospitable shelter.

"I useter 'most wish when I was wanderin' hither an' yon wi'aout kith or kin or friend, I could come tu my own ag'in," he said, sitting in comfort by the glowing hearth, with his pipe ablast; "but I guess I'm better off here 'an I would be in boughten clo'es, a-lordin' on't or tryin' tu, for I reckon a Yankee wouldn't make no great fist on't. Seventy-five or eighty year amongst 'em have pooty nigh made me one on 'em."

Then following Ruby with his eyes until she left the room, "You did make a lucky hit when you got her, boy! But I 'spect it all come o' my puttin' ye on guard ag'in 'em. It made ye kerful a-choosin'."

"The' wa'n't no ch'ice," Josiah protested. "We had tu an' so we did—that's all."

Yet Kenelm could scarcely believe that he was not entitled to some credit for Josiah's selection.

He could not be reconciled by any argument to his pupil's abandonment of the rifle for the smooth-bore, which he held in utter contempt, though he would sometimes condescend to use Josiah's, and always came home blaming its inaccuracy for the fair shots missed.

His days went by in tranquil enjoyment, and at last, as he dozed in his seat by the fireside, he passed into the profounder sleep of death, and came to his own in the land of the leal.

Josiah was the first captain of militia in his town, and held the office long, for though he was a martinet his company was the best drilled in the regiment—a distinction of which the members were too proud to depose their old commander, whose scolding had brought them to its achievement.

He started with them for Plattsburgh, but could get no further than Burlington, where he fretted and fumed till the roar of battle ceased, and the news of the glorious victory came; and wondered how it was gained without his aid.

He became the patriarch of a populous town whereof he was once almost the sole human inhabitant. The contemporaries of his early manhood were all gone, and to him alone were left memories of the old pioneer days, their hardships and the unsung deeds of humble heroes and heroines.

Through the mists of years the events of the past and his part in them loomed large to his vision, and lost nothing in the telling when there was no one left to dispute the garrulous tongue of old age. Yet if he was given to boasting, who shall say that even the humblest of those heroic pioneers had not a right to be proud that he was a founder of the Republic of the Green Mountains?

ROWLAND E. ROBINSON.

New Hampshire's Homecoming.

FROM the roar of the streets and the city's dull hum,
Hear the cry of her sons: "To New Hampshire we come;'
While an answer is echoed from black Sandwich dome:
"To the arms of your mother we welcome you home!"

To broad Winnepesaukee, with all her fair isles,
Where the legend relates that "The Great Spirit smiles,"
To swift Pemigewassett, which leaps from the hills,
As it garners the tribute of thousand clear rills.

To Connecticut's valley and Penacook's plain,
To Umbagog, asleep, on the borders of Maine;
To Chocorua's cliffs and Agischook's crest,
The sons of New Hampshire are coming to rest!

To bright Sunapee's waters, high lifted in air,
Where "the points of the compass" by mountains show fair,
For Cardigan, Kearsarge, Sunapee rise
To mark "north, east and south, as they point to the skies,

While Ascutney the circuit completes in the west,
Though she's not in New Hampshire, like all of the rest.
But in those old grants of her pioneer claim,
Which now of Vermont have adopted the name.

To Monadnock, whose rocks, from their girdle of green,
Look so quietly down on Ashuelot's fair scene;
To the rivers, whose voices persistently call:
Ammonoosuc, Contoocook, Souhegan and all.

To the cottage or schoolhouse on hill or in dell,
Where "the old oaken bucket" still hangs in the well;
Or the spring from the mountain flows limpid and clear,
To the trough by the roadside, the thirsty to cheer.

To the brooks which they fished and the hills where they strayed,
And rested their limbs in the broad chestnut shade,
While they watched for a sight of the squirrel's gray fur,
When the first frosts of autumn had opened each burr.

To the knolls where the mayflower opened its bloom
To fill the spring air with its fragrant perfume,
To the meadows, where tall yellow lilies were spread;
Or the pastures ablaze with their cousins so red!

To the holes of the woodchuck, the den of the fox,
Who sheltered his brush in a cleft of the rocks;
To all the loved spots to each memory dear—
The sons of New Hampshire call out "We are here!"

We answer their greeting: "Come, one and all,
From workshop and counter, from office and hall;
No matter how widely your footsteps may roam,
Dear sons of New Hampshire, we welcome you home!"

Aug. 31, 1899. VON W.

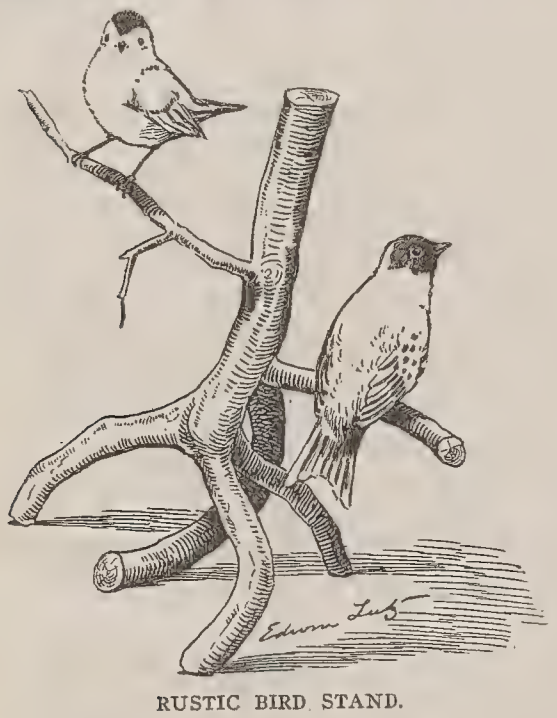
Crabs to be properly killed should, before boiling, be thrust through the mouth and body with a sharp steel at one blow.

When a lobster is required, insert a narrow-bladed knife into the third joint of the tail, severing the spinal cord; this will cause instant death and is much less cruel than to put it into the water alive, especially if it is not boiling, as the lobster then suffers a slow, lingering death.

Terrapin also should be mercifully killed before being cooked.

The eel tribe is said to be a terrible sufferer from man's inhumanity to fish. So difficult is it, apparently, to kill eels, that people have even ceased to try to kill them at all. If their heads were cut off before they were otherwise handled, they would at once be out of their misery.—Boston Transcript.

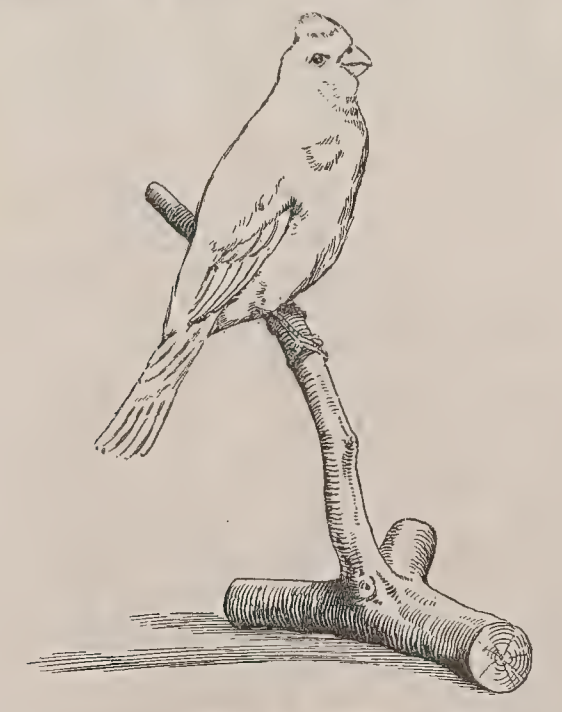
"Fain would I write a poem on the delights of fishing; but, ah me! I cannot find a word to rhyme with 'angle worm,'" sighed Pisistratus, as he gazed thoughtfully into the dark, sullen waters. "But why must you put that word at the end of a line?" queried Eucalyptus. "Because an angleworm is always at the end of a line," hissed Pisistratus between his set teeth; and for a long time it was so still that one could distinctly hear a peach blow.—Puck.



Natural History.

Snails on the Bill of Fare.

So little is known of the dietary of some of the commonest mammals of the United States, that we may confidently expect interesting developments when economic zoologists abandon their scrutiny of bird-stomachs and look more closely into the food habits of squirrels, mice, moles and shrews.



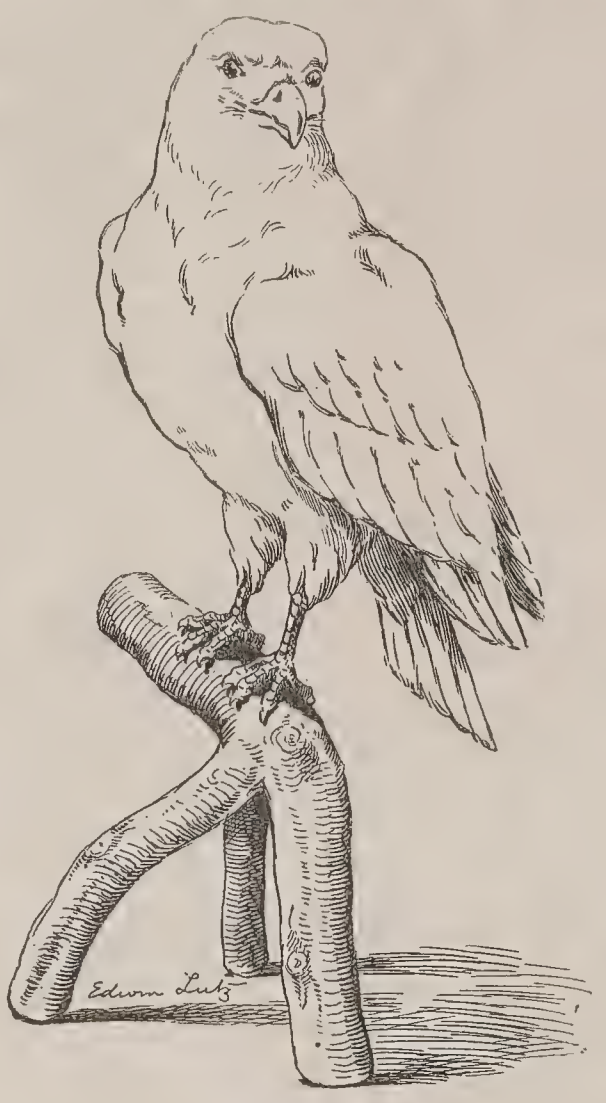
As the case stands at present, we have no recorded data which would either verify or disprove the assertion that certainly one-half and probably 80 per cent. of the species of mammals found east of the Mississippi are more or less addicted to eating snails. Such an assertion would excite no little surprise, if not incredulity, if made to-day before any gathering of zoologists. Five years ago I would have been among the most skeptical of the truth of such an assertion, but a more intimate experience with the smaller mammals which constitute two-thirds of the species found in the eastern United States has now convinced me that there is a large element of truth in it. This intimate acquaintance has been gained during several years of systematic trapping and preservation of squirrels, rats, mice, moles and shrews in Pennsylvania and New Jersey. In this pursuit many secrets, known best to foxes, cats, weasels, skunks, snakes and other creatures endowed with horizontal locomotion and extraordinary powers of scent, have been incidentally revealed. To this knowledge have been added interesting notes on the larger mammalia taken in part from personal observation and more largely with my friend and hunting comrade, Mr. Seth Nelson, of Round Island, Clinton county, Pennsylvania.

From a layman's standpoint, we might class our mammals, according to food habits, into the pseudo-scientific

RUSTIC BIRD STAND.

divisions of omnivorous, carnivorous, herbivorous and insectivorous, and place men and swine in the first class, the bear, fox and wildcat in the second, squirrels, muskrats and meadow mice in the third, and moles and shrews in the last class. The child of to-day is soon taught the inadequacy of any zoological classification based solely on food habits, but few grown-up and thinking people realize that the bear is less carnivorous than the shrew, the mole or possibly even the red squirrel, while he is par excellence an insectivore and a vegetarian. The fox does not belong at all in the same dietary class as the weasel, for two-thirds of its summer and autumn forage consists of fruit, berries and nuts. Red squirrels and chipmunks delight in flesh food, and are among the worst bird-nest robbers we have. Meadow mice (by which popular term are included four species of our commoner voles) are carn-

RUSTIC BIRD STAND.



ivores, a wood-hunting species (*Evotomys*), frequently eating large numbers of insects and snails, while the muskrat eats large quantities of mussels.

Enough has been said to show that the subject is one of interest and that research into the mysteries of the mammalian menu will well repay the patient student, as well as place the conclusions of economic zoology on a more stable basis.

Man, the great omnivore, even in his so-called "best estate," has been known to eat snails. It has never been a modern American propensity, however. As to the eating of snails and other mollusks, by aboriginal Americans, we have circumstantial evidence in the great shell heaps and kitchen middens of the Eastern States.

In the ancient shell heaps of the St. John's River, Florida, Prof. H. A. Pilsbry, of the Academy of Natural Sciences, Philadelphia, finds three species of fresh-water snails and two of Unios to be most abundant. In Prof. Pilsbry's opinion, snail shells were collected by the Seminoles solely for eating, being boiled, and the animal extracted by twisting so that the shells are uninjured. If they had been roasted the shells would have quickly crumbled with exposure.

In the Tennessee shell mounds I have found only 5 per cent. of the whole mass to be unbroken Unios, and these confined almost entirely to the small rounded sub-circular forms. Water snails, or "wrinkles," are abundant, as are also land snails in such large numbers that it seems im-

RUSTIC BIRD STAND.

possible these could have got there by accident. Undoubtedly all these were chiefly used for food, though much of the matrix of comminuted shells was probably composed of Unios destroyed in the manufacture of shell beds, wampum and articles of apparel as well as in the search for mussel pearls.

In the Middle and New England States our common mussels, as well as some of the larger land snails, are found in the cave middens of the Delawares and other tribes of the interior. On the sea coasts aboriginal shell-heaps contain tons of the shells of oysters and clams used for the joint purpose of getting food, wampun, beads, pearls and instruments of daily use in camp and the chase.

It is asserted that much of the winter diet of these Indians consisted of the dried and smoked bodies of the mollusks whose shells are yet so perfectly preserved in the depths of those historic heaps.

Among the carnivora, the black bear is undoubtedly the largest feeder on snails. In hunting these incidentals to his insect diet in summer, a bear makes almost exactly the same kind of a trail through the forest as a conchologist in his overturn of logs, stones and leaves and the stripping of bark and moss from decayed stumps and trees. Any one who follows the trail of a foraging bear in the hope of adding to his shell cabinet will quickly realize what a thorough conchologist Ephraim is by the total absence of specimens where his nose has been rummaging. They appreciate the slimy *Limax* quite as much as the shelled species, and the fragile and tiny *Selenites* and *Vitræa* are no more beneath notice than the nimble ants that swarm under the same piece of bark. The raccoon is another omnivore whose predilection for water courses brings him in frequent contact with aquatic and moisture-loving species of mollusks. Whether it devours mussels the writer has no personal knowledge, but those living on maritime shores are reputed to eat the flesh of several species of the larger univalve and bivalve shells.* Mr. Nelson assures me that they eat the *Helicidæ*, etc.

The last remark equally applies to the highly omnivorous skunk. The otter sometimes eats mussels. I have found their remains on otter rocks in the lakes of northern New Jersey and Pennsylvania, whose valves had been crushed near the muscular attachment in order to get at the live animal. In this habit the methods of the otter are distinguished from those of the muskrat, the latter animal preferring to bring the live mussels to the shore, where they suffocate and open from exposure to the air, and are then easily eaten by the rats.

A fisherman of Porter's Lake, Pike county, Pa., told me he had seen otters swimming in the lake with mussels in their mouths.

Regarding the weasel, mink, marten, pekan, lynx, wildcat and panther, there seems to be no evidence that they eat mollusks under normal conditions.

The wolf, coyote, Indian dog and the red and gray fox eat land snails, mussels and maritime mollusks with avidity, especially when hunger-pressed.

The omnivorous maw of the opossum is probably a frequent receptacle for land and fresh-water snails, but no authentic instances of such have yet come to my notice.

The *Insectivora* are represented in the Eastern States by three species of moles and about ten species of long and short-tailed shrews, all of which probably devour land snails in small quantities. I have found freshly eaten specimens in the burrows of the short-tailed shrew

* Dr. Merriam, in "Mammals of the Adirondacks," states that the raccoon often subsists on mussels.

(*Blarina brevicauda*), the masked and the smoky shrew (*Sorex personatus* and *S. formeus*), where these animals were trapped. No definite data have come to hand of the use of snails by moles, but it may be confidently expected that evidence of this will be quickly forthcoming when they are studied. From the nature of their habits, Brewer's mole (*Parascalops breweri*) and the star-nosed mole (*Condylura cristata*) are the most likely to affect a molluscan diet.

Among the *Rodentia* we might look for the fewest instances of the mollusk-eating habit, but this is a mistaken view. Of the typical *Muridæ*, or mice and rats closely related to the genus *Mus*, most of the species are well known to be omnivorous, and the fact that they are known to eat snails would cause no surprise. In this group we may include several species of deer mice (*Peromyscus*), the wood rat (*Neotoma*), the harvest mouse (*Reithrodontomys*), two species of jumping mice (*Zapus*), and the rice field mouse (*Oryzomys*), all of which are native, and add to these four species of naturalized Old World *Mus*. Of these I have proof that the deer-mouse and the wood-rat devour several species of land snails of various genera, and no doubt it is only a question of time when all on the list will be found to do the same in greater or less amount.

Another large sub-family of the *Muridæ* in this region is the *Microtinæ*, including the voles and lemmings, commonly called meadow mice. Among these are two species which devour mollusks quite frequently, as can be determined by examining the burrows. Of these voles the pine vole (*Microtus pinetorum*) and the woodland or red-backed vole (*Evotomys gapperi*), are more subterranean and forest-haunting species than their near relatives, the common meadow or field vole, which I have not yet observed to vary its vegetable diet with such entrees. The species eaten by the pine and red-back voles are very much the same as those eaten by the deer mouse.

Closely related to these is the muskrat (*Fiber zibethicus*), which is the largest shell gatherer we have in our fresh-water streams, next to man himself. If we are to judge by the large quantities of mussels collected by these industrious animals and deposited in scattered heaps along the margins of fresh-water streams and lakes, they must subsist in certain localities very largely upon animal food during no small part of the year. In the Mississippi Valley drainage, where the *Unionidæ* are represented by an astonishing number of species and individuals, the

RUSTIC BIRD STAND.

operations of the muskrats can best be observed. They seem to show little preference for any particular species, but rarely handle those weighing over a quarter of a pound, the young of all species being preferred to the older ones. As their plan is to let the mussel do its own opening, it makes no difference how thick its shell. Exposure to the air for a few hours soon makes the most obdurate *Unio* accessible to the muskrat that takes the trouble to dredge it out of the mud and deposit it on some shady log, rock or sand bank and await developments. I have not yet observed an instance where the rat had forcibly broken the shell of a *Unio* or *Anodonta* to get at the contents. In bringing the mussels to the surface the rats are said to clasp them in their arms and swim along by means of the hind legs and tail. It is probable that

RUSTIC BIRD STAND.

they sometimes carry them in their teeth, as it would be impossible for them to place the shells on a slippery log overhanging the water unless they had free use of all four feet.

Unless disturbed, the rats devour the entire animal, as neatly cleaning away the muscular attachments as if done with a knife and at the same time leaving the ligamentous hinge intact.

Among the *Sciuridæ*, or squirrels, we have one species in the eastern United States to which my attention has been specially attracted as the ne plus ultra snail eater. Any one who has been following the discussions in FOREST AND STREAM regarding the carnivorous appetite of

he red squirrel, will not be surprised to hear that he occasionally stoops to eat a fat snail. So far as I have noted him, however, the red squirrel rarely picks up snails. They are a bit too terrestrial for such a high flyer, but they come right in line with his humbler cousin, the chipmunk. For years I have noted how frequently the fresh shells of our larger species of land snails could be found lying about upon stumps and rocks, their spires broken into and the animal deftly extracted.

Supposing the robber to be a bird, I often wondered why they chose such conspicuous positions for their meal, and why I had never seen a bird in the act. While overturning logs in a wood near Cresson, Pennsylvania, this summer, I found the burrow and storehouse of a chipmunk which contained a quart of the empty shells, and living ones of large, handsome snails of two genera. Upon the logs and on stumps in the vicinity were numerous similar shells, all eaten in like manner, viz., through a hole neatly gnawed in the apex, and often so small that it was a marvel how the snail could have been thus abducted through its back door. It then quickly dawned upon me that chipmunks, and not birds, were responsible for the majority of dead shells lying about the woods in conspicuous places with small holes in them. I once watched a catbird eat a large snail, which it accomplished by beating the shell to pieces and devouring both the house and its inmate, and it is a fair question whether any of these empty shells with small holes in them fell a prey to a feathered enemy. Having had my attention directed to these facts, there was no difficulty in confirming them and proving by numerous observations that the chipmunk is one of the greatest snail hunters in this part of the country.

Besides the mammals above noted, I know of none in the region covered by this paper which vary their staple diet with molluscan tid-bits. The small amount of attention given to the subject shows the possible surprises along this line of investigation.

SAMUEL N. RHOADS.

Eagle Crow and Osprey, also Scoters

THERE are eagles on Mt. Desert, quite a few, though a census has not been taken. A neighbor of mine has one half-grown captive which feeds on flounders. Flounders are so abundant here that I can fill a big basket in a tide with a hand line baited with clams. The gulls come up the head of Somes Sound and waddle over the ledges at low tide, making much noise with their cat calls; and now and then an osprey drops down upon a kelp bed and seizes a fish. The other day I saw one capture a prize which he was in the act of making off with, when a big eagle shot out from some cleft on Mt. Sargent and gave chase. The osprey dropped his fish and the eagle took it. It was highway robbery of the rankest sort, but ospreys are persevering, and soon afterward our victimized bird had another fish; and sure enough, the eagle, which had been watching from some point of vantage, gave chase again. But this time he failed, for a couple of crows suddenly took wing from some tree tops and headed him off, and the osprey had his fish to himself. Was this act disinterested, do you think? Was it pure sympathy for the abused and bereaved fish hawk? or did the crows stand in with him on a "divy" or a royalty or some other sort of reciprocity or a combine? Verily, the ways of birds are unaccountable to one who is not versed in the motives which prompt them. And do you know, I don't think that birds, or any other creatures, act always upon impulse. They are prompted by different motives at times, according to circumstances. All the same, why does the kingbird chase the crow and the crow chase the eagle and the eagle chase the fishhawk and the fishhawk chase the fish and the fish chase the etc.?

By the way, shooting coots and scoters over decoys outside of surf which dashes 20ft. high on the rocks on the coast is a sturdy and exhilarating pastime in its season for the storm-beaten gunners of Mt. Desert. The decoys tail in shore from boats anchored just outside of the combers which break on the ledges, and the ducks, which are searching the landwash in company with the gulls and kittiwakes, pitch down to them naturally, on the hypothesis that where the birds gather the food is. It takes good marksmen to wing shoot driving waterfowl from the crests of bounding billows. Ordinary duck shooting from points along sounds pales into insignificance beside this, for a fact. Perhaps I may be able to write something more descriptive by and by from my own experience. If the ducks were even fairly good eating sportsmen would swarm here, but they are rank and fishy. I would sooner eat a mud hen.

I started a spruce partridge yesterday in the woods. They are seldom seen on Mt. Desert, but the timber grouse (*Bonasa umbellus*) are abundant.

CHARLES HALLOCK.

MT. DESERT, Aug. 30.

Rustic Stands for Specimens.

THE ingenious taxidermists of the Museum of Natural History in Central Park have hit upon a novel way of mounting their stuffed birds. This new method does away with the clumsy wood turnings consisting of a circular plate, in the center of which rises an upright piece of turning, surmounted, T-shaped, by a block on which the specimen is stiffly wired. The new stands are made from the natural tree, utilizing knotty and tangled root stems, and those parts of the branches and twigs where the forked character is most decided. The greater number of these stands, as, for example, the ones on which the larger birds are set, take on the tripod form. To make one of this sort, that part of the bough is used where three branches shoot out at different angles from the same or nearly the same point; the three branches are then cut off at equal distances from the crotch, so that when inverted the branches serve as three legs, appearing not unlike a three-legged milking stool. The main branch of this stand affords a seat-like perch on which to mount the stuffed bird. In some instances, as in the case of the stands for the smaller birds, gnarly bunches of roots and distorted meshes of twigs have been used, the diverging rootlets and twigs lopped off evenly and making usually four or five legs.

Birds mounted on these rustic stands are bound to have a look of naturalness, as the curved and crooked branches afford a varied opportunity for placing them in life-like attitudes. Another way in which the natural wood has been employed is in the use of old tree stumps on which to mount large birds, such as herons, hawks, eagles and owls. An effective mount is that of a hawk set on a charred and blackened pine tree stump.

Thus far the only specimens treated by these methods are some of the birds in the assemblage known as the "seasonal collection of local birds," which exhibits birds for the time only that are actually in this vicinity. When the living birds leave us in the fall for their southern haunts their respective proxies are taken from our view and set aside, to be displayed again when they come back in the spring.

E. LUTZ.

NEW YORK.

Game Bag and Gun.

CHICAGO AND THE WEST.

Movements of Western Sportsmen.

CHICAGO, Ill., Aug. 31.—Mr. Edmund Orgill, of "The Cedars," near Memphis, Tenn., is in Chicago to-day for a brief stop on the way home. Mr. Orgill has spent some weeks in a long trip to the Pacific Coast and Rocky Mountains. He has visited the Catalina Islands, tried the sea fishing of the lower coast, paid a visit to Portland, Ore., and made a tour of the Yellowstone Park. Mr. Orgill said the thermometer went nearly to freezing and they had 2in. of snow while he was in the park, something different from the climate here or in Memphis. Mr. Orgill said that everybody in Memphis was well when he last heard from them, and adds that he has some very choice thoroughbred quail left on his place in Tennessee. The old pointer, Rake, over which Irby Bennett, Mr. Will Orgill and myself shot when I was at "The Cedars" once upon a time, is still living, hale and hearty. Mr. Orgill himself is now seventy-four years of age, and still looks fit for a day afield. As I have often said, there is not anything allowed at "The Cedars" which is not thoroughbred.

Mr. Cy Warman, author of "The Story of the Railroad," and well known as a writer of short stories in the leading magazines, paid this office a visit this week. Mr. Warman was just back from Dawson City, Alaska, and did not seem to think he had accomplished so very much of a feat in getting there and back inside of six weeks. He says that Dawson City is only ten days distant from Chicago, and that getting there is as simple as falling off a log. The White Pass railroad is to be extended below the White Horse Rapids, and after that is done it will be steam transportation all the way. According to Mr. Warman, Dawson is not a bad place to live, and the gold fields are hardly yet prospected. I regret to state that Mr. Warman threatens to write a book about Dawson, on the strength of his six weeks' trip. I tried to persuade him not to do this, but it was of no avail. As it is, I should say that this will be a very much better book than most of the hurried travel stories. I told Mr. Warman that he ought to go up there and live ten years before writing his book, but he said that he had not time.

Ex-Congressman Spooner, of Madison, Wis., with his son, Mr. Charles P. Spooner, outfitted in Chicago this week on their way to a trip to the Yellowstone National Park. They visit this wonderland at a very pleasant time of the year, and in common with all who have ever been there, will be glad that they made the trip.

Mr. Westinghouse, of the Westinghouse Air Brake Company, Pittsburg, Pa., is at present in Wyoming on a hunting trip east of the National Park.

Mr. H. O. Wilbur, of Philadelphia, with his friend, Mr. Edward A. Selliez, of the same city, paid the FOREST AND STREAM office a pleasant visit here this week on their way west for an extended hunting trip. They go into the Jackson's Hole country after elk, and will have a trip of a month in that country, thence returning east to shoot quail for a time in Nebraska.

Col. Dudley Ward, late of the Fourteenth Hussars, of the English Army, passed through Chicago this week in company with Mr. C. B. Sterling, of New York City, on a hunting trip in Montana. Nothing else but grizzly bear will satisfy Col. Ward, and I am sure I hope he may find one, though they do not grow on every tree.

Mr. Elmer E. Critchfield, of the Frank B. White Company, this city, came into the FOREST AND STREAM office to compare notes for a while to-day. Mr. Critchfield was on the Prairie River in Wisconsin last spring, and had very good success with the trout. He usually hunts deer each fall from Mann's Place, on Trout Lake, and is laying advance plans for his annual campaign at this writing.

Mr. Oswald von Lengerke, of this city, with his friend, Mr. J. L. Jones, also of Chicago, start to-night for St. Anne, Ill., where they will shoot chickens for half a day to-morrow.

Mr. Douglas Charnley, of this city, left this week for a trip of some duration at Lac du Flambeau, Wis.

Mr. N. B. Bortvin, of New Albany, Ind., outfitted this week for a trip at Woodruff, Wis., for which point he departed a few days ago.

Mr. George H. Gurley, of De Kalk, Ill., left this week for the Devil's Lake country of North Dakota, where he will shoot chickens and stay for the fall flight of ducks and geese.

Mr. F. B. White, of this city, returned this week from an outing at the Thousand Islands, St. Lawrence River. He had good sport with muscallunge and bass, and says he would rather catch bass than 'lunge.

Mr. R. F. Seymour, a young but able artist of this city, is just back from a trip to the Yellow Dog River Club near Marquette, Mich. Mr. Seymour had very good fishing in Lake Independence, and caught in one morning more fish than he could carry—pike, bass and muscallunge, according to his story. This lake drains into Lake Superior, and though Mr. Seymour says that his guide told him he had taken muscallunge, it is fair to hold the question in doubt, for the supposition is there are no muscallunge in the Superior waters. Mr. Seymour had never before seen any muscallunge.

Mr. R. B. Organ, of Chicago, on a trip to Maksawba Club this week, caught twenty-three bass and one big wall-eyed pike. He reports the water low, but the fishing pretty good.

Mr. W. P. Mussey and wife, at Maksawba Club last week, caught fifteen black bass, one of 3lbs. and one of 4lbs.

Messrs. W. H. Haskell, W. P. Mussey, Jack Wiggins and one or two others leave to-morrow for Maksawba Club.

Mr. F. N. Peet, of the Chicago Fly-Casting Club, returned this week from a successful trouting trip on the Père Marquette, Michigan south peninsula.

Contents of a Frog.

My friend Mr. Organ, earlier mentioned as having been fishing on the Kankakee River, tells me quite a frog story. It seems that Mr. Organ and his pusher discovered a very large bullfrog sitting in aldermanic quiet under the shade of a tree which overhung the river. This creature Mr. Organ managed to hook under the chin with his bass hook, and after something of a struggle got him into the boat. An examination of this frog, which was about half as long as a man's arm, showed what appeared to be a couple of horns sticking out of the corner of his mouth. Meantime a faint squeaking was heard coming from the interior of the frog, and it was discovered that the old fellow had swallowed another frog, one big enough for good bass bait, and that the latter was not yet sufficiently acquainted with his surroundings to like the place. In the stomach of the bullfrog there was found yet another frog, partially digested, and a great quantity of grasshoppers, flies, crickets, etc., which showed that the big one had been very industrious in his time. A little further along on the bank they captured the mate of this frog, and in the stomach of this one there was also a partially digested frog. It need hardly be said that Mr. Organ revenged this death of good bait frogs by frying the legs of the cannibals which had eaten them.

Chickens.

CHICAGO, Ill., Aug. 31.—To-morrow is opening day in Illinois and Wisconsin, and I presume that the trains out of the city to-night will carry several hundred people bound for shooting trips. The sale of guns and ammunition at the sporting goods stores for the past week has been phenomenal, and I think that there are more shooters going out this fall than at any time for the past six years. From all available reports it seems that this is a very good chicken fall, though later reports may not bear out this supposition. In Illinois there are certainly very fair numbers of these birds at this writing. In Lee county, about seventy miles west of Chicago, a good many birds bred this year, and there will be good shooting there, though that country is pretty hard to get into on account of the Farmers' League.

Near Bloomington, near Springfield, and other points in the central part of this State, there come quiet tips that there are birds enough for sport, and Champaign, Ill., also reports a decent showing. Near Davis, Ind., along the Kankakee marshes, I hear of a few coveys. Some birds are reported near Aurora, Ill., and along the Illinois River bottoms at different points the number of chickens on opening day will be in direct proportion to the activity of the sooners. A good many birds have bred in this State this year, and the season is thought to have been favorable.

In Wisconsin I am told that there are more chickens than at any time during the past ten years. The Horicon Marsh country has had a good head of game this summer, and near Berlin, Princeton and other Wisconsin points there should be decent grouse shooting. Wherever the wheat country runs up into the joining line of the hardwood and pine country there are some prairie chickens and very often sharp-tailed grouse in Wisconsin, with once in a while some ruffed grouse in the covers about the farms. Mr. Neal Brown, of Wausau, Wis., a gentleman whom I have never met, but who I am confident is the best kind of a man to meet, invites me to meet him at Babcock, Wis., to-morrow morning to properly celebrate opening day, and this I think I shall do. I have wired the Secretary of State for a shooting license, and if everything connects I shall probably have killed forty or fifty chickens by noon to-morrow, or anyhow maybe two or three. Good chicken country is more precious than much fine gold in these days. I have confidence that Mr. Brown knows what he is about in going to Babcock. He is to be accompanied by his wife, also a very good field shot.

Out in Minnesota the chicken crop, so near as I can learn, is about what it was last year. I wrote to Mr. Fee, General Passenger Agent of the Northern Pacific Railroad, for any possible tips on chicken country, and Mr. Fee replies, "Information comes from P. O. Stevens, game warden, that chicken shooting will be good along our line, from Lake Park west as far as Hawley, and up our Manitoba Division as far as Red River Falls."

I also wrote to Mr. Callaway, General Passenger Agent of the Soo line, at Minneapolis, and from him have advices which make me think that Fessenden, N. D., or Bordulac, N. D., or Valley City, the same State, are more than usually good chicken points for this fall. Barrett, Minn.; Kensington, Minn., or Elbow Lake, Minn., are all points about 150 miles from St. Paul, and the shooting at all of these points is said to be good on chickens and ducks. Fingal, N. D.; Wimbledon, N. D.; Courtenay, N. D.; Kensal, N. D., and Lidgerwood, N. D., are all good points for mixed shooting. From all I can learn, I would rather chance Bordulac or Fessenden than any of the points named.

A Worthy Dakota Official.

I was looking around this week, naturally, for chicken news, and also naturally it was pretty hard to get, for nowadays if a fellow has any good chicken country, he mostly doesn't like to tell any one else about it until he comes back, and the FOREST AND STREAM has the reputation of sending a good many people to the good things which now and then it uncovers. Being shy of a good chicken story, and somewhat perturbed in mind, I sauntered into my club, flung my hat and stick carelessly into the arms of the nigger, and asked the girl to fry me two eggs on top of the stove. As I turned to sit down at the table, I saw a friend sitting on the revolving stool next to me, and expressed to him my anxiety to get a good

chicken story. Now my friend is a very good fellow, but does not know one end of a gun from the other, hence I am disposed to believe what he says in regard to game, for he does not have to live up to the expectations of his friends.

"About chickens, is it?" said he to me. "Well, you know I don't shoot any, but you know I have a brother-in-law who is a shooter. He lives in North Dakota. The wife of my brother-in-law wrote to my wife this week, and from all I can tell they seemed to have pretty fair shooting out there in North Dakota. There are not as many birds as there used to be, but my brother-in-law and his son killed 460 chickens the first day they went out."

"What on earth is that you are saying!" said I, and I fairly fell off the stool. "You don't mean to say that they killed that many prairie chickens in one day and in this summer?"

"Why yes, of course I do," said my friend, serenely, and I could see that he really saw nothing unusual in the statement. I asked him if he did not think there might have been more than two guns in the party, and he said that perhaps the writer of the letter was inaccurate in that regard, but he was positive in regard to the 460 chickens in one day.

"Why, I tell you," said he, "you don't know how thick the chickens are out there. You see my brother-in-law is sheriff of that county, and he is also manager for the big ——— wheat farm. The birds come in on those wheat fields in great numbers. I have been out there, and I want to tell you that I have seen my brother-in-law bring in a wagon load of prairie chickens in one day. Early in the summer I have seen my own sons kill young prairie chickens when they rose by throwing clubs in among them. You know you can get close on to them then. Later in the fall they get together in big flocks, and then my brother-in-law says you have to be pretty careful when you go over the top of a ridge so as to get close enough to shoot before the birds fly. He is an awfully good shot, and so is his son, and they kill hundreds of prairie chickens. You needn't laugh at me. I tell you, I know what I am talking about. Of course, you see he doesn't shoot for the fun of the thing, but for what money there is in it. He makes a business of it in the early fall. Yes, it seems to me I did hear that it was against the law to send them out of the State, but, of course, you see, he being sheriff of the county, he stands in! He doesn't ship these as 'chickens,' of course. I guess he marks them as 'poultry' or something of that sort. He has been at it for quite a while, and makes a pretty good thing out of it."

"Well, B.," said I, as I turned toward him, "I think I have got my chicken story all right."

"Why, how is that?" said he.

"You say he is sheriff of the county?"

"Yes, sheriff of L. county" (I do not give the name of this county in full, for reasons which will be stated).

"And he kills more than twenty-five birds a day, you say?"

"Well, he'd think he was doing a pretty poor business if he didn't."

"And he ships them out of the State?"

"Sure! What would he want them for if he didn't? Say, what's the matter with you anyhow? Ain't this all right?"

"Well, this is a pretty good story," said I, "but it ain't quite all right. Now, please don't tell me the name of your brother-in-law."

Another friend who sat close to us at table pointed out to B. that he was talking too much about his brother-in-law. "Say, Hough," said B., "you mustn't say anything about this in the FOREST AND STREAM, you know, for I wouldn't have told you a word of this if I had thought you would get my brother-in-law into any trouble about it."

"That's right," said the other friend, also a newspaper man. "You mustn't print names."

Of course, under these circumstances, since this news was obtained from an innocent party, and hence practically confidential in its nature, I cannot give those details which I would gladly do. I want to say, however, that I have no doubt in the world that the details above stated are practically correct. I think I could without any difficulty have the sheriff of L. county arrested, and perhaps make for him very serious trouble, as I know my friend, Warden George Bowers, of North Dakota, would not tolerate this sort of think should he learn of it. The name of the man I purposely did not learn, and I contented myself with asking my friend B. to write a personal letter to his doughty brother-in-law and to ask him to please stop shipping prairie chickens out of the State of Dakota. B. promised to do so, and I hope he will thus make some sort of a fitting end to one of the weirdest Western chicken stories I have heard in many a day.

This is the way the law is not enforced in some of our Western States, and this is why so many shooters go out into the Western chicken country and come back disappointed. I have no doubt whatever that there is a big game fence run in that particular county of North Dakota, and I wish that I could do something at once honorable and effective toward breaking it up. Sometimes a fellow who is looking for a story gets more of a story than he wants, and I have some hesitation about printing even this blind rendition of the facts which my friend innocently gave me. I think I shall send both B. and his brother-in-law a few copies of the FOREST AND STREAM. If you seek a pleasant heathen, look about you! There is no need going to Africa or New Zealand if you want to do missionary work.

Notes of Travel.

It is curious and very interesting sometimes to observe how generally the FOREST AND STREAM is read in all those parts of the country which can produce a lover of the rod or gun. Sometimes persons ask me where the FOREST AND STREAM is chiefly circulated, and I always tell them "Everywhere." A while ago I was up at La Crosse on a fishing trip, and I met the night agent of the C., B. & Q. railroad at that point, Mr. Simonton, himself an enthusiast in shooting and fishing matters. Mr. Simonton and I had a very pleasant talk together. The next morning I put on my old clothes—and I always look particularly tough in old clothes—and took an early train up the river a little ways, going over the Milwaukee & St. Paul road. I had to get a permit for my boat, and as the agent in the window handed me out the necessary slip, made out in my name, he remarked calmly, "I thought it was about time you were coming up here to see about this bass fishing!" This remark occasioned me some surprise, coming as it did, but I learned that the young gentleman was not a detective, and only a reader of the FOREST AND STREAM.

That Upper Mississippi Valley country is a beautiful one, the river flowing by a series of lofty white-faced bluffs. The tallest of these, not far from Winona, is known as the Queen Bluff, and is said to be the highest point of land between the Alleghanies and the Rockies.

It is 8ft. higher than any other bluff on the river. Still another bluff is called the Chimney Rock. Yet another, near Winona, has been cut into for the last thirty years by a limestone quarry. A tall pinnacle of rock has been left by this quarry, and on the top of this the owner has attempted to roughly carve the face of an Indian. The outline is only half completed, but is visible at a distance of a couple of miles. If properly executed it will of course be a striking thing. I presume the face would be 20 or 30ft. across, though it looks much smaller from the river. "That feller," said Ash Spicer, my boatman, as he called my attention to this incipient work of art, "has been working at that thing for quite a while. Everybody says he is a bit touched in his upper story. He could sell all that limestone in the top of the bluff just as well as any of the rest of it."

One day out in Wisconsin my train stopped in a little village, and the car window was directly opposite the yard of a cottage where a little girl was playing on the grass. "Here, Dewey! Dewey! Dewey!" she cried, and repeated this call so often that I was curious to know who or what "Dewey" might be. I presumed he might perhaps materialize into a mastiff, a Great Dane, or at least an all-conquering bull terrier. I confess to a mild surprise when I saw the little girl dive under the house and bring forth a small and much scared cat. "Dewey is a reg'lar fool about the cars," said she, looking up at me and smiling sweetly.

Speaking of cars, while rambling along, I presume everybody has seen the warning sign boards posted along Western railroad crossings, bearing the warning legend, "Look out for the Cars!" It is reported that some roads once put up signs reading "Beware of the Locomotive," but this seemed to be so pedantic that it did not work. People got run over while they stood looking at the sign. I am told that in a certain session of the Iowa Legislature a resolution was introduced impressing upon that body the necessity of warning people to look out for the cars. The Legislature passed a law literally requiring the railroads to post signs to that effect; so the warning seems to be more legal than accidental in its phraseology.

Our friend El Comancno, author of the "Boy" stories in FOREST AND STREAM, is at present loose somewhere in the East. He writes me that he "has to take in New York and a few more country towns" before he comes back home to Chicago. He says, "I want to get back to where the country is civilized. This is a dead one." I infer that El Comancho has been listening to the meadow larks singing in the morning around Madison Square, and that he wants to get back here and have a look at the limpid Chicago River, and to hear the steady hoof prints on the sidewalks of a town which is the real thing. By the way, it may be news for FOREST AND STREAM readers to know that El Comancho's "Boy" stories are to be printed in book form.

Mr. Geo. Thorne, secretary of Montgomery Ward & Co., of this city, in company with his friend Mr. N. Munn, will start the first week in September for a big game trip of some duration. He wants either elk, moose or caribou, and has been looking at all sorts of country. Talking it over together with him I rather counseled him to take a Rocky Mountain trip, where he could be sure of getting an elk. He will either go east of the National Park or southeast of the Park into the Wind River country, which Mr. Wm. Wells has often told about. Mr. Thorne will probably have either Billy Hofer or Gardiner or Van Dyke, of Red Lodge, as his guide if he goes east of the Park, and he has also written Mr. Wells at Wells P. O., Wyo., for details regarding the length of time it would take him to make the trip into that country. With any of these guides and a couple of weeks' time in the mountains at his disposal, Mr. Thorne ought to be pretty sure of getting his elk. He looks forward with great enthusiasm to his mountain trip. He has never seen the Rockies, but has done a good deal of mountain climbing in Norway and Switzerland, and has made the ascent of Mt. Blanc. Methinks he will make some of those mountain men look down their noses before he gets through with them.

In Chicago.

To-day I was riding along on the trolley car through the foreign settlements penetrated by Wentworth avenue of this city, when chancing to look out I saw standing on the sidewalk a Mexican. He was a regular story-book Mexican, with tight buckskin trousers and very much of a hat. He was talking on apparently very friendly terms with a somewhat dirty citizen in shirt sleeves. Of course in a big city, one would hardly be surprised if he saw an angel, let alone a Mexican, so I let the Mexican go without mental query. Two blocks further on, however, I saw a genuine cowpuncher rolling along in company with two story-book Indians who wore better Indian togs than I ever saw west of the Missouri River. This was too much, and I sat up and rubbed my eyes. A few blocks further on there burst into view the big spread of canvas of Buffalo Bill's Wild West. That explained it. I had forgotten that this was circus week. All things come to Chicago. You can see better Mexicans, better Indians and better frontier stuff than you could ever see in the West. I have even seen the downfall of Nero pictured here in Chicago, and every one must admit that Nero could not carry a ward caucus in Italy to-day. Ancient Italy and the ancient Plains are pretty much on the same footing nowadays.

Minnesota Reserve.

Progress is still making in the preparations for the big trip about Oct. 1 in the interests of the Minnesota Forest Reserve. Practically all the preliminary work has been done, and it remains to be seen now what the members of Congress will do in the way of accepting the invitation of the gentlemen who have organized for this purpose. The Dewey exercises at New York and Chicago are the most serious of conflicting events, but it is thought a date can be determined which will enable the trip to be made without inconvenience to any who attend. If all the members of Congress knew in advance how delightful this beautiful lake region of Minnesota is during the fall they surely would put many things of importance to one side and accord themselves this pleasure.

Col. J. S. Cooper, of this city, prominent through his recent exertions for the Minnesota forest reserve, returned this week from a hurried trip to upper New York. Col. Cooper reports that the invitations for the Congressional party are now in process of engraving, and will be sent out at an early date. We shall therefore presently arrive at some interesting news regarding this movement, for now that the preliminary work has been completed it becomes a matter of great curiosity to know how many Congressmen will respond to the invitation to make the Minnesota trip this fall.

Out in Minnesota the situation in regard to the proposed reserve is much as earlier reported. Some parts of the State are in favor of the park and some bitterly opposed to it. At Walker, Minn., the majority of sentiment is in favor of the park. The Indian trader for the Leech Lake Indians is in favor of the idea. Citizens of Melrose, Minn., say that the lumbermen want that pine and are going to have it. Bemidji is divided, some citizens being favorable to the reserve and others against it. Sentiment is also generally divided as to the amount of agricultural land which would be included in the reserve. At Cass Lake there is bitter opposition to the park project. Duluth, of course, is more frantic than ever. The Pioneer Press of St. Paul commented on the matter as follows:

"That the opening of such a park in this section would bring a big summer population here there seems to be little doubt. Thousands of Illinoisans and people from Missouri, Kansas and Nebraska come up here and spend a goodly portion of the year. Lake Miltona, in Douglas county, is given as an illustration of the summer settlement of the country. Twenty years ago a party of Monmouth people, among whom were James H. Stewart, Dr. J. R. Webster, Hugh Henry and H. F. McAllister, journeyed 600 miles to Alexandria to fish. They discovered this chain of lakes, Miltona among them. They built there a club house, and ever since they have annually brought their families this long distance and spend the whole summer in the wilds. Others followed, and now Chicago and Kansas City have well organized clubs on the lake.

"It is the argument of the proprietors of the park that just such clubs and companies would populate a wide area; that little towns would spring up in the preserved timber where fish and game would bound to be taken only within the law."

E. HOUGH.
480 CAXTON BUILDING, Chicago, Ill.

Boston and Elsewhere.

BOSTON, Sept. 2.—The coming of September has started the deer hunters. A number of Maine $6 non-resident licenses to shoot deer in September have been obtained, and the hunters are off. The opening of the deer shooting season, Sept. 1, in Canada and New Brunswick will also draw a number of early sportsmen. Mr. E. E. Hills and Mr. C. L. Howes started for Mr. Howes' camp on Lake Magaguadavic, New Brunswick, Friday. They intended to be on the deer grounds on the first day of the open season. They were to go to Prince William Station, a few miles from McAdam Junction, which station is but a short distance from the lake. Thence they go by canoes up the lake to their camp. Their guide writes them that deer are very plenty, coming down to the water every night and morning. Doubtless most of the early deer shooting will be done at the water, the hunter simply waiting in ambush for his prey.

Some good shore bird shooting is noted occasionally, but the boys are taking the lead. Master Merton L. Alden, son of Charles H. Alden, of Quincy, is a good deal of a Nimrod as well as boatman. He has won several races with his catboat, though only fourteen years old. This season he is shooting. The other day he made a trip to Paddock Island, off Hull, all alone. When he returned he brought seventy-two birds, all shot by himself. That he is a wing shot appears, when it is stated that he used but twenty shells that day. In the lot he had chicken plover, black and red breasted plover, nodies, summer yellowlegs, with a few peep. Some good scores have lately been made on shore birds at Chatham and vicinity. C. A. Brown is down there this week, and he almost always has good success. Robert Pierce brought up twenty birds yesterday. Mr. Houston took a couple dozen the same day.

The partridge shooters are making ready for the 15th, the opening day of the season in this State. It seems that the interest is unusually good, and reports mention more birds than last year, the dry weather being thought to have been favorable to the chicks. The dogs are being taken out for training, and the first day will be a lively one.

BOSTON, Sept. 4.—Reports from Bangor and eastern Maine suggest that the preliminary open season on deer is being thoroughly patronized by both residents and non-residents. Many licenses have been taken out by both, and those who desire to extend their summer outing into September may legally shoot a deer for camp use by paying for it. Saturday evening trains at Bangor from the west were well supplied with sportsmen, and some went in on Friday. But the Canadian Government is going Maine one better, in that the new regulations permit the sportsman to bring out his deer shot in September, as well as the rest of the open season, while in Maine the deer taken in September can be used for camp purposes only. I have not the new Canadian regulations from authoritative sources, but hunters understand, and it is published in the newspapers, that sportsmen going to Canada or New Brunswick to shoot will be permitted to bring back the carcasses of one or two deer, the only restrictions being that such export of deer will be limited to the open season and fifteen days thereafter, and the

porter will be required to get a permit from a collector customs at a customs port.
Boston and other New England sportsmen are de-ited with this new regulation, since it opens up to them reat tract of sporting country to early shooting and moves the old drawback to their comfort in the shape not being allowed to bring back their game. Several ters have already gone to the upper Tobique region.
The Massachusetts Fish and Game Protective Asso-ion is doing a good work this season. Being aware of many infractions of the fish and game protective s, the committee on publications has had prepared a e number of posters, some on cloth and others put in nes, setting forth the State regulation in plain type. far over 500 of these copies of the laws have been put in different post offices in the more remote districts the State. A great many more have been sent to the eral railway stations and put up. While it is the inten-of the Association to follow up this crusade of ters with punishment for breaking the game and fish s, it is intended that everybody shall be informed as he nature of the laws in the first place.
o the height of a tremendously successful fishing and ing season at the Rangeley Lakes has just been added excitement of a bad forest fire, which early last week eatened the whole region. It started in the section of ur Ponds, about three miles from Bemis, and but for tremendous exertions of hundreds of men it would e burned over the whole section of country to the t of Mooselucmaguntic and up to Rangeley Lake on north. At one time it threatened to go around to the tion of heavily timbered country on the south of ooselucmaguntic and run over the whole Richardson ke Country. Hundreds of men were hurried to the ne of the fire by the lumber companies and land owners railways, and their efforts prevented the spread of the to some extent till the rain on Friday and Saturday ped eliminate the danger for the time being. The rst feature of all is that it is claimed that the fire was work of careless or vicious sportsmen at Four Ponds. e timber land owners threaten a thorough investigation dire vengeance upon the guilty parties.

SPECIAL.

Breechloaders in the Civil War.

NEW YORK, Aug. 27.—*Editor Forest and Stream:* Will please tell me if there were any breechloading muskets rifles used in the Southern army toward the end of the vil War, using paper cartridges, which might have been dered useless by any one opening the breech of a loaded ce and biting the bullet from the shell? I am ac-ainted with the ordinary weapon in use at that time ich was loaded by a paper cartridge rammed down the uzzle after the paper end had been bitten off to allow the from the cap to reach the powder, but know of no tridge used in a breechloader other than a copper rim or brass center fire similar to those now on the market.

STORLAX.

[Although precise information on this subject is not at nd, and might be difficult to obtain, yet the question y be answered in a general way.
Toward the end of the war there were in use in the rthern army a variety of breechloading arms, some of ich used paper cartridges, others so-called linen car-dges, and others still had the powder inclosed in a me-lic shell. There is little doubt that some of these arms und their way into the hands of troops of the Southern my, though in what quantity is uncertain. Among arms this sort were the following, usually named from the ventor or manufacturer: The Merrill, Sharps, Smith, arr, Burnside and Spencer. The last was in use to me extent after the close of the war, especially in the est. The Sharps, which was the predecessor of the er Sharps carbine—long used by the United States valry arm of the service—and Sharps rifle, which twen-years ago was in general use and was perhaps the best gle shot weapon of the day, used a so-called linen rtridge, and the breech block was provided with a little ife which, as the breech was closed, cut off the end of e cartridge, exposing the powder.
The Merrill carbine, we believe, was manufactured in ltimore, and perhaps on that account might have more sily gotten across the lines into the hands of Southern ldiers.
It may be that some of the old war veterans among our aders in the South can give us more precise informa-n as to the arms used in the Confederate army.
The method suggested by our correspondent for render-g the cartridge useless would have been as effective with e of the old-time metallic shells as with a paper shell, r the balls were easily removed.]

Forestry at the Paris Exposition.

DR. TARLETON H. BEAN, Director of Forestry, United ates Commission, Paris Exposition, says: Preparations r the exhibit of forest industries of the United States the Paris Exposition of 1900 are now rapidly nearing a se. The opportunity for the display of the wonderful sources of our country and for attracting favorable tention of European buyers is undoubtedly the best at has been offered. The exports of forest products ncluding furniture) from the United States in 1898 gregated $38,000,000. There is not the slightest ques-n that this may be greatly exceeded if the wealth of r resources and the excellence of our wares are properly ought to the attention of the people who will visit the aris Exposition. Not only exporters of lumber and aves, but also manufacturers of wooden ware are pecially invited to take part in this competition for vard. Every effort will be made to set forth the superi-ity and abundance of American products, and it is confi-ently expected that the efforts of Commissioner-General eck will be entirely successful through the co-opera-n of firms especially interested in our export trade.
Circulars containing general information as to loca-n of the grounds, character of the exhibit, system of stallation and labeling, details as determined by the rench classification, and blank applications for space, ay be obtained by request from the Chicago office of the nited States Commission.

Buffalo Jones' "Forty Years."

Hon. C. J. JONES, of Kansas, better known under his sobriquet of Buffalo Jones, is accustomed to do unexpected things. A good many years ago he captured by wholesale buffalo young and old in the Panhandle of Texas, and subsequently possessed the largest herd of domesticated buffalo and stock of crossbred between buffalo and domestic cattle in the country. Later he sold all his buffalo, and soon after took part in the great rush for land made by the boomers at the opening of the Cherokee strip in Oklahoma Territory, and was perhaps the first to reach the neighborhood of the town of Perry. Quite recently—in fact but little more than two years ago—he made a trip to the barren grounds of Canada for the purpose of capturing musk-ox calves, taming them and bringing them to civilization.

The last and not surprising thing done by Col. Jones is to write a book. It is called "Buffalo Jones' Forty Years of Adventure," which is still further explained to be "a volume of facts gathered from experience by Hon. C. J. Jones, whose eventful life has been devoted to the preservation of the American bison and other wild animals, who survived the perils of the frozen north, the land of the midnight sun, among Eskimos, Indians and the ferocious beasts of North America." This volume of nearly 500 pages, with very many illustrations, has just reached us. It bears on the title page the legend, "Compiled by Col. Henry Inman," but the book is Col. Jones'.

Col. Jones' volume is divided into two parts, the first being devoted to his early history and to his experiences in the Southwest with buffalo, antelope and Indians. The second portion has to do with his expedition to the arctic regions in search of musk-ox and his sojourn there for more than a year.

In whatever situation Col. Jones has found himself during the period covered by the narrative of this book he has shown himself a typical American of the most energetic type; sanguine, self-confident, not easily discouraged and a tremendous worker. Sometimes he was at the top of the wave and sometimes down in the trough of the sea, but whatever his situation he was always a believer in Jones. It is certainly a good thing that the story of his adventures should have been written, for it is brimming over with small happenings of one sort and another which throw light on the life of the old-time West; with matter which has more or less bearing on what Roosevelt has happily called the "Winning of the West," and on the character of the people who accomplished that winning.

The story of Col. Jones' capture of buffalo calves has more than once been told in FOREST AND STREAM, yet it may be well to quote from this volume portions of his journal printed in this book which tell of the capture of a herd of more than twenty adult buffalo, all of which unfortunately died shortly after capture, for the full-grown buffalo, it would seem, cannot be tamed.

It was in May, 1889, that Col. Jones started out with the idea of running down a herd of twenty-five or thirty buffalo, tiring them out, and then driving them to his ranch. When, however, he reached the buffalo ground he found the herd broken up into small companies, and it was decided to rope one by way of experiment. He describes how he and his two assistants captured and hobbled a cow in the following language:

"Lee Howard was appointed to do the lassoing, but it was to be on the foreleg only, as we all well knew that to attempt to catch a buffalo cow around the horns or neck would be as fruitless of results as to lasso a locomotive going at the rate of thirty miles an hour. De Cardova, the moment Howard had succeeded in roping the foreleg, was to 'heel' her (catch a noose around the cow's hindleg), and then stretch out so quickly she would not have time to gather herself in her surprise.

"Everything now ready for the attack, I took the hobbles, consisting of two log-chains, 2ft. long, with exceedingly heavy straps at the ends, having strong buckles. We cautiously maneuvered until within 150yds. of the cows, when at a given signal we dug our spurs into the sides of the horses and dashed frantically over a small hill which had hidden the buffalo from our view.

"Howard was on his horse Charlie, De Cardova, an expert roper, on Cannon Ball, while I 'held the fort' on Kentuck.

"Our opportunity had now arrived; we all realized it without a word or sign from any one. Howard's lasso began to swing around his head; Charlie appeared to, and I really believe did, intelligently know what was demanded of him, for the moment he heard the whiz of the rope above him he made a gallant spurt up to the cows, which were fairly plowing up the earth in their efforts to escape.

"Howard unfortunately allowed Charlie to crowd too close, and not being able to watch the eyes and quick motions of the three cows at one time found himself in a critical condition. One of the frightened beasts, the second cow from him on his right, made up her mind that 'leg bail' would not any longer serve her at this particular juncture, and acting upon her decision dashed furiously at the horse, but in the moment lost in changing her huge quarters half-way round was balked in her desire to disembowel the active animal. She got in just behind Charlie and in front of De Cardova, when seeing she would miss her original mark she threw her head around and struck Charlie a well-directed blow with the side of her horn, causing him to stagger for a few steps; yet he still dashed bravely on, the rope whirling in the air all the time.

"I had about made up my mind that Howard was really afraid to throw the lasso under the close circumstances in which he was placed, but was deceived; he was only waiting to make a sure thing of it, for in a few seconds away went the rope like a flash of lightning, while my heart alternately fluttered between hope and fear, and I almost held my breath, waiting for the result.

"No sooner did the lasso leave the skilled hands of Howard than Charlie was so suddenly stopped that he fell back on his haunches as if he were shot. The rope had struck its mark. How the great shaggy monster rolled over and over like a grizzly turning somersaults! But De Cardova, knowing his part in the tragedy full well, by a simple twist of his right arm placed his rope over her hindleg as he swiftly dashed by, before she could gain her equilibrium.

"Now for the crowning struggle! Each horse understood his duty, just what was expected of him, and pulled back, with his head to the enemy, like a bulldog holding on to the ear of an antagonist in the pit. Howard had caught the right foreleg around the fetlock, the exact place intended, and all the efforts of the cow to get on her feet were in vain; she was tighter than any vise could have held her.

"It was now my turn to finish the last act of the drama, and I was determined not to be behind in my part. I slid off Kentuck, but took care to hold fast to the rope, one end of which was tied around his neck; and as I approached the cow the vicious beast grew more desperate than ever in her rage, acting as if she were a carnivorous animal and wanted to devour me. She struck at me with her horns until her ribs rattled, as her head pounded her sides in her fruitless efforts to reach me; then she used her loose foot, kicking and striking until she was actually exhausted. I finally buckled the hobble on her loose front leg, but could not manage to get it on the hind one; so I took my lasso, threw it around the hindleg, ran the rope through the ring of the chain next to the foreleg, drew the two near together and fastened them in that position. I then had no difficulty in adjusting the hobbles firmly. Now everything was ready to turn her loose.

"The ropes slackened, she was on her feet in a moment, with her back bowed, tail curled over her back, nose almost touching the ground, hair all bristling in her rage, eyes green as goggles—in short, the very incarnation of fight to the death! She made all sorts of attempts to charge upon us, but would only tumble for her pains; and when she tried to run the only effect was to shake the ropes off her feet—which was just what we desired, only the boys had to ride forward and pick them off the ground withor dismounting.

"We watched her a few moments, then bade her farewell for a few days and returned to camp, where we discussed the advisability of hobbling instead of driving the remainder of the buffaloes into captivity.

"We started the buffaloes and followed them continually day and night for forty-two days, changing horses about twenty times. The buffaloes became very thin and footsore, and seemed so lame they could scarcely walk, yet would not allow us to approach nearer than 200ft., when they would start off and run with as much alacrity as though nothing was the matter with them. Often we could trail them for miles by the blood left in their tracks.

"I determined to single out, lasso and hobble them, as we had done with the cow previously (although it had died of a 'broken heart'). We finally succeeded in accomplishing this, employing the same tactics as before. Mr. Howard was always depended upon to make the first catch; he seldom miscalculated, and nearly always caught with the first attempt. We captured all except four, but one-half died within twenty-four hours after being hobbled. They usually took fits, stiffened themselves, then dropped dead, apparently preferring death to captivity. It appeared to me they had the power to abstain from breathing.

"We worried along with the remainder, but they eventually died before arriving at my ranch in Kansas. We were fortunate enough to bring seven calves safely in, all of which lived and helped to materially swell the herd."

Mr. Jones' trip to the North after musk-ox seems—perhaps because it was made into a land so little known—more full of danger and of hardships than any of those within the United States of which he tells us. Starting alone, he proceeded to ferry himself and all his supplies from the Athabasca down the McKenzie toward the frozen ocean. Many of the dangers that he must encounter were of a character quite unfamiliar to him, but he appears to have succeeded in overcoming them quite as successfully as he did those in the waterless Southwest. Finally with one white companion he succeeded in reaching the musk-ox country and in killing a number of the animals. He also captured five yearling musk-ox, and how he did it may be told in his own language:

"When I arrived at throwing distance one yearling stood alongside the old cow, his head close to hers. I whirled the noose in the air till it fairly hissed, and let it fly for the prize. The rope went fairly well to the mark, but a little too far, and hooked over the point of the old cow's right horn, where it hung up. The little dog was biting at the heels of the animals, which kept them twisting around in all directions, while our sled-dogs stood in front of the old cow, keeping up such a continual barking that it held her steadfast facing them.

"I paused a moment; just then Scrapper nipped the heels of the yearling that I was after, which caused it to make a bound forward right into the loop, knocking it from the cow's horn, when with a quick jerk I fastened it safely around its neck.

"Mr. Rea was on hand, and we commenced to pull the rascal in, in about the same style as if there were a hundred-pound trout at the end of our line. Now came the danger of the others escaping, as all the dogs left the old cow and made for the animals we had caught, as we anticipated they would; and for that reason we had spiked the old cow to the very earth by breaking her legs. She made several lunges in her frantic effort to escape, but finding she was doomed, she suddenly stood still.

"The other four yearlings, relying entirely on her generalship, waited and lingered with her. We drove the dogs off as quickly as possible, but not until they had made several bleeding wounds on the legs of the one we had on the line.

"Mr. Rea held the rope, while I threw a lasso on one of the animal's hindlegs, by means of which we soon stretched the stubborn little brute on the snow. We hastily tied all four legs together in the same style I used to tie a hog when a boy on my father's farm. Then I took the lasso and walked up until quite close, and as soon as one of the yearlings came darting around the cow I gave my rope a whirl and threw it over another, but the little beast went right through the loop, excepting its hindlegs. By a quick pull I caught it just above the ankles, and soon pulled it out in sled fashion. The dogs did not trouble it much, as they had learned in the melee with the first one caught what was expected of them.

"One by one we dragged the little beauties out and tied them, until we had four safely in the toils. I was so nearly exhausted that I could scarcely stand, and the dogs were making things 'red hot' for the last yearling.

Sometimes it would be fighting them; sometimes running around the old cow, becoming so frisky that I made several throws at it, but missed. Finally Scrapper nipped it so sharply it sought other protection, and came bounding over to me. I was sure it had selected me to take vengeance on, and made ready to jump aside to let it pass, but it ran to my left side, and as it did so I whirled around and laid the noose over its head without throwing it at all.

"As soon as it winded me it darted toward the old cow, jerking me headlong in the snow; but the dogs were after it, so it came bounding back. Mr. Rea grabbed it as it endeavored to pass between us, and threw it. I was soon on its neck; its legs were quickly bound like the others. Our dogs were then whipped off and made to lie down. I was completely exhausted, and was obliged to ask Mr. Rea to go to camp, half a mile away, and bring some water. He brought a small pail of cold tea, which revived me very much. Before leaving for the tea, however, he put an end to the cow's misery by sending a ball through her vitals.

"We had not taken time to size the animals up, and it was a very interesting hour of my life when I could quietly stand and see every twinkle of their eyes. The long shaggy fleece that covered the little creatures was of a browner color than that on the old bulls. They looked more like doll animals than like real live musk-oxen. Their short legs made me liken them to a little Shetland pony colt as compared with a racehorse. They had a tuft of long hair on the shoulders and also on their necks. The males had small sharp horns that pointed straight out from the side of the head and protruded about an inch through the thick mat of hair; while the females' horns were not visible at all, yet could be felt beneath the clump of hair. Though they seemed diminutive, they were deceiving in size and weight of their bodies. I had seen several of different ages, mounted in museums; but it is evident the taxidermist never had seen one alive, or these specimens would have been filled out more plumply, and their bodies taken almost exactly the shape of a barrel. The very little nutrition contained in the moss compels them to gorge themselves until they have assumed an abnormal shape. These we captured really resembled a domestic yearling calf in the springtime, that has been wintered at a strawstack.

"We now commenced to gather up the captives. We first took our long hemp rope, and tied five loops in it about 12ft. apart; we then fastened each end of this rope to large rocks, and drew it quite tightly. From the loops a small rope was attached, at the end of which was a swivel, which in turn was fastened to the small rope around the animal's neck, in order to prevent tangling or choking to death. While marching our yearlings up to the anchor line, we loosened only two of their legs, but when they were securely fastened to it, gave them the freedom of all their limbs, and the way they made the long line jerk and whirl for an hour or more was amusing. It was so long, however, that it relaxed at every surge of the animals, thus preventing the possibility of injuring, that would have otherwise occurred, as it yielded to every effort in their attempt to escape. I had handled buffalo so often that my premeditated plans for the capture of musk-oxen were very easy for us to put into execution.

"We moved our teepee over to the south side of the hill, within about 100ft. of one end of the anchor line, and watched the frisky little captives endeavoring to regain their freedom, until the sun had sunk in the west.

"No sooner had the king of day passed beyond our vision than we heard a pack of wolves just over the ridge. We knew what it meant—no sleep for us that night. As there was plenty of meat lying a little to the southeast of us, we had hoped they would be content to let us alone. Not so, however. It appeared as if they had not found the carcasses of animals we had killed, but drew nearer and nearer our little live ones, evidently wanting meat they had themselves killed.

"As night advanced the ravenous messengers of death came on. Our dogs were loosened upon the supposition they would be in no danger as long as we remained outside with them, but little Scrapper, one of our best shepherd heelers, anxious to measure his strength with them, dashed over the divide after one, where he had a "scrap" that the poor fellow hardly anticipated; that was the last we ever saw of him. Doubtless he was devoured in a minute by the pack we knew he had encountered.

"It was warm and pleasant that evening, compared with others we had experienced; so I took my stand at the end of the rope furthest from our teepee; Mr. Rea at the other. We both had our guns and plenty of cartridges, and one by one we rolled the white monsters over as they appeared. We never pretended to shoot when they were more than 40yds. away. Sometimes they would come singly, then in howling groups, two to a dozen in the pack.

"All night long—about nine hours of darkness—the crazy fools would trot up to be slaughtered; most of them running as soon as shot, unless we put a ball in their head or breast. Those wounded would drag themselves away, to be instantly devoured by the others. When morning came they were just as numerous as during the night, and the sun was high in the heavens before they commenced to skulk away or attempt to get under cover. About noon we determined to try to get out of the horrid place. We had killed twelve wolves outright, and twice as many more, wounded, had gone off, to be devoured by their companions.

"We tied one end of our anchor line to the carryall, I walking behind, holding the other. We set our only shepherd dog at heeling the yearlings up, as they were very stubborn at first, refusing to be led; but within an hour we succeeded in cooling them down somewhat. We fixed hackimos* in the mouths of our animals, so they could not pull very hard on the line, which saved me many upsets."

When the start was made, some of the animals pulled back on their haunches and stopped the whole train. At this juncture all I had to do was to point my finger at the refractory animal, when Don would fly at them, nipping their heels, at which they would take a spurt forward and I be pitched headlong in the sloppy snow; then they would change ends in order to fight the dog. Sometimes the animals would become tangled in the line; the hind one in front and the front one behind. It was certainly discouraging. If we undertook to untangle them we were sure to receive a butt or two that would send us rolling over. My shins that night were "as black as the ace of spades."

* * * * * * * * * * * *

We again slept during the middle of the day, and about 3 o'clock started on our journey. We reeled off from fifteen to eighteen miles during the day, and had the yearlings so subdued that they gave us much less trouble than on the previous days. The day had been dark and cloudy, and the wolves appeared much earlier than on the day previous, having no doubt followed us from the last camp. We did not have more than a dozen cartridges left, and depended upon our guns alone for meat for ourselves and dogs. The situation began to look serious. Our bread had been all gone for two weeks. We battled all night with the wolves and managed to keep them "from the door," and from devouring our animals. The weather turned quite warm during the night: we were having an old-fashioned January thaw, and all the musk-oxen worked diligently, filling themselves with such provender as they could paw out. The wounded one appeared convalescent and refreshed. We had secured two bulls and three heifers, and were now in high spirits over our golden prize; yet dreaded our possible fate, on account of the constant pursuit of the wolves and our short supply of cartridges.

We were off early that morning, bearing directly south for Doobaunt River, as only a few sticks of wood were left with which to cook meat and to melt snow for water to quench our thirst and refresh our exhausted bodies. We expected certainly to reach timber the next day. About 11 o'clock we halted, having worried along fully ten miles that morning. Here, after taking a slight lunch and drinking cold tea that we carried in a rubber bag (the life preserver I bought at Edmonton), we rolled up in our blankets, and I was soon dreaming of my far-away sunny home in Oklahoma. About 3 o'clock Mr. Rea woke up and went out to look after our animals. He returned and said, "Jones, we are ruined! some one has killed all our musk-oxen. They have cut their throats!" I awoke from my happy dreams, and thought him only joking. I raised the side of the tent, looked out, and saw it was too true! Then my heart that had been throbbing so buoyantly with joy in the past few days sank within me; a dizziness seemed to come over me, and I fell back on my blankets and was soon lost in a deep slumber. Mr. Rea said afterward that it was quite difficult to arouse me again.

We went out and inspected the situation of affairs. There had been twelve or fifteen Eskimos or Indians there on snowshoes, and they had cut the throats of all of our animals, leaving them lying dead with the ropes around their necks. We had only one dog (Don) left that would bark at the appearance of Indians, and he was so badly mangled by the wolves he could scarcely heel up the animals on the marches, and we had allowed him a caribou skin inside the tent to sleep on. Had he been outside, doubtless he would have given the alarm, and we would have saved the yearlings, or shared their fate ourselves. The marauders left a peculiar-looking knife on the snow near the animals, having a handle about 18in. long, made of caribou or some other animal's rib, or tusk, with a blade 4in. long, riveted to the large end of the bone. If we had known whether this knife handle was from a land or sea animal, I could have decided who had committed the dastardly deed—Indians or Eskimos. If it belonged to a sea animal, it would implicate the Eskimos; if to a caribou, more than likely the Indians.

We followed the snowshoe tracks for nearly four miles and discovered that the party had been following our trail and had retreated by the same route. We returned to our camp sad and weary, not able to tell if they were Eskimos or Indians. Apparently we were on the neutral grounds between the hunting fields and these two savage tribes. We had been warned time and time again by the Indians not to take any musk-oxen alive, but had paid no attention to them, as we were well armed, and knew they were cowardly and dare not open fire on us. We expected to guard our animals day and night while passing through the enemy's country. It did not enter our minds that there was an Indian within 200 miles of us, and we did not suspect the Eskimos of such treachery. We were so worn out and depressed in spirits that we rolled up in our blankets and slept until night was fully on, when we were awakened by the dogs barking and running around the teepee, occasionally screaming as though they were being devoured. We soon saw the wolves were closing in on them, and called all the dogs into the teepee. Then we took turns in keeping watch, in fear of being destroyed, as we had no cartridges to waste.

After the failure of the expedition, as above detailed, Col. Jones and Mr. Rea proceeded to Fort Reliance, and from there by long and difficult journeyings crossed the mountain, reached the waters of the Yukon, and at last took a steamer, which landed them in Seattle.

Col. Jones had been absent from home between fifteen and sixteen months, and it may be imagined that he was glad to return, and that his family were glad to see him.

* Hackimo, a headstall made with the rope after one end is fastened around the neck so that it passes through the animal's mouth, whereby it can be held with but little effort.

Camp-Fire Rules.

THE New York Fisheries, Forest and Game Commission fixed these rules for the conduct of campers and others on the State land:

Fires for clearing land near a forest must not be started until the trees are in full leaf. Before lighting such fires three days' notice, at least, must be given to the fire warden and occupants of adjoining lands. After such fires are lighted, competent persons must remain to guard them until the fire is completely extinguished, and the persons starting such fires will be held responsible for all damages, notwithstanding notice has been given to the fire wardens.

Fires will be permitted for the purposes of cooking, warmth and insect smudges; but before such fires are kindled, sufficient space around the spot where the fire is to be lighted must be cleared from all combustible material; and before the place is abandoned, fires so lighted must be thoroughly quenched.

All fires, other than those hereinbefore mentioned, are absolutely prohibited.

Hunters and smokers are cautioned against allowing fires to originate from the use of firearms, cigars and pipes; and all persons are warned that they will be held responsible for any damage or injury to the forest which may result from their carelessness or neglect.

Girdling and peeling bark from standing trees is prohibited. Fallen timber only may be used for fire wood.

Fish and game protectors and foresters, fire wardens and all citizens are requested to report to the Fish, Game and Forest Commissioners immediately all cases which may come to their knowledge, of damage or injury to forest trees arising from a violation of these rules.

By order of the Fish, Game and Forest Commission.

B. H. DAVIS, President.

Sportsmen and so Forth.

Editor Forest and Stream:

That which we call a sportsman by any other name might tell as much. It includes the following:

The man who always thinks his guides are over paid and who strives to beat them down to the ultimate nickel.

The man who, having engaged his guides, fails to come and never thinks of whacking up for the loss and disappointment he has caused.

The man who loses his nerve, misses his game and then condemns his gun.

The man who is morbidly suspicious that guides, hotel men and all parties concerned are putting up a job of some kind for his benefit.

The man who lies awake at night planning how to circumvent or get ahead of his brother sportsman.

The man who fires at the moving bush.

The man who revels in the destruction of animal life—who never knows where to stay his hand in the presence of game.

The man who stands proudly before the camera with his game trophy or string of fish and wants to know: "Who can beat this?"

The man who is always performing for the grand stand, claiming to have shot the biggest moose and caught the biggest fish on record.

The man who goes home in triumph with the game his guide has shot and outrivals Ananias.

Verily, the only true sportsmen are they who remain at home and read FOREST AND STREAM.

PESSIMIST.

FREDERICTON, N. B., Aug. 28.

New Hampshire Deer.

DUNBARTON, N. H., Aug. 31.—*Editor Forest and Stream:* I recently wrote an account of a deer and a bicycle, and spoke of the frequency of deer being seen in this vicinity. Nearly every day recently some one speaks of seeing one or more deer on our roads. A few days since, one afternoon I went to a meadow a few minutes' walk from my house. I had an idea I might see a deer or two. The first thing I saw on reaching the edge of the meadow was a fine looking doe standing in the brook looking at me some 50yds. away. She stood perfectly still for some time, and then, as I moved a step or so nearer, she jumped out of the brook and with tail high sailed across the meadow, stopping again on the edge and looking back until I waved my hand, when she went into the woods. There was evidently a fawn somewhere near the doe I saw, as I found quite fresh tracks.

A few days since, some two miles from here, one of my neighbors was looking after some cows, when he ran onto a young buck. The deer started to run and came against a wire fence, falling over on his back, but was up and away in an instant.

Mr. Wentworth, of our Fish and Game Commission, is very energetic in looking up all cases of reported deer killing, and our deer are pretty safe. Some of our old croakers, however, are starting the old story, saying, "If them deer get much thicker they will be eating up our crops." I hardly think we need to worry for some time on that account.

Sea and River Fishing.

Proprietors of fishing and hunting resorts will find it profitable to advertise them in FOREST AND STREAM.

Autopsies of Salmon.

LAST year the Scotch Fishery Board published a very scientific and interesting series of papers on "The Life History of the Salmon," the details having been carried out by several of the best-known physicians in Edinburgh in the laboratories of the Royal College of Physicians. The pith of these observations is that the salmon ceased to feed before he came into the estuaries, and in addition he is said to suffer from acute catarrhal conditions of the stomach and intestines. The experience of all sportsmen in rivers will bear out the truth of the fact that salmon do not feed in rivers—that is, do no feed as they evidently do in the sea.

I have been examining salmon stomachs ever since this report was issued; last autumn on the Upper Shannon on chiefly large grilse, this spring on a few odd fish from the Hampshire Avon and the Dart, and all through the spring and summer on fish taken from the nets and sold in Billingsgate. More than 150 of these latter fish have been examined by naked eye inspection after freely opening the digestive tract from pharynx to anus.

The abstruse and extremely scientific examinations by the Scotch physicians made it very advisable to use naked eye inspections over very many cases, and above all to notice the interior of the digestive organs of other fish, as it at once struck one on reading the Scotch report that the observers had applied all their knowledge of the microscopical appearances of pathological (disease) states in human beings to explain what they found in microscopical examinations of the salmon. Simple reasoning would suggest that if salmon do not feed after entering the rivers, of necessity the conditions of the digestive

organs would deteriorate from the normal; the longer the fish were in the river the more would this be expected.

Every one is agreed that salmon run up the rivers to spawn, and also it is well known that no river could supply food to the natural run of fish that would enter a river, not even to the limited number that nowadays escape the nets. According to the Scotch physicians the salmon gets a desperate catarrh of his digestive tract before he leaves the ocean. Excepting that it is like the gastric catarrh of the glutton, there is no sense in this supposition.

The theory that the salmon goes to sea to feed up and recuperate after the spawning is over is almost impossible to controvert, and presumably after he has fattened up and regained strength, his or her sexual organs, beginning to reform once again, impel the fish to seek the rivers. If the stomach is to be diseased, it is much more likely that it will become so after a long residence in the river without food than when living in the open sea on the best of food.

The chance of nature sending the whole salmon tribe with acute intestinal catarrh up the rivers to accomplish the arduous duties of spawning is so absurd that it is impossible to believe such is the case. If naked eye appearances had been taken first, and the microscope had been left to a later stage in observations, a clearer conception might have been arrived at.

The autumn fish and early river fish examined by me were caught by rod and line, and in all cases these fish must have been in the rivers several days, if not weeks. The amount of mucus fæces in all these fish was, of course, slight, and the amount of mucus material in all parts of the digestive tracts was small but varied. In the case of some autumn grilse, which had evidently not been very long up from the sea, there was manifestly digested material in the appendages and fæcal material in the intestines.

The examination of over 150 fish straight from the sea, as caught by nets in the estuaries, reveals quite a new light on this supposed acute gastro-enteric catarrh. I am quite certain the natural healthy physiological conditions have been utterly mistaken by the physicians in Edinburgh. They state in the most positive manner that never have they found traces of any food in the interior of any fish, even if taken in sea near estuaries. I can state that I have turned out of the enlarged stomach of a salmon six herrings of large size in every stage of digestion, the one within the gullet having only its outer surface digested, each succeeding fish being more digested, till, just before the duodenum is reached, the attenuated spinal column of a 6in. herring remained to tell the tale. In every salmon that has contained recognizable food, it has always been parts of, or the whole of, a herring, just as in sea trout it is invariably sand eels. The wonderful descriptions of pus in the appendage tubes is nothing more than the digested meals of the feasts of the salmon undergoing absorption. I quite agree that the majority of salmon in the estuaries have ceased to feed, but the appearances which the Scotch doctors call acute catarrh are merely the rich digestive mucus idle from want of work, and as always happens in nature, quickly beginning to waste and degenerate from having no duties to perform. The thick juice in the pyloric appendages is merely the remains of the last meal, and has nothing whatever in the nature of the purulent catarrh in it. In autumn fish this juice has diminished much in quantity and consistency, and in fact a cæcal appendage often looks like a narrow tube of biscuits, the juice having shriveled up. The purulent appearance of the mucus in the first part of the stomach is undoubtedly due to bacterial changes brought about by exposure to fresh water and to air after capture. Even in these cases the mucus in the pylorus which has been kept from water and air by the firm contraction of the walls of this part is absolutely free from any bacterial contamination, and is a pure hysiological juice.

The digestive juices of all fish seem potent, but that of salmon seems very much so. The bones of all the fish eaten by them are digested before the small intestine is reached, and in well fed fish the fæcal remains are never much, showing how active is both digestion and absorption. The small size of the intestines will also be an extra proof of this. It may be of interest to say that what is described by many as the œsophagus of a salmon is really its stomach, as digestion begins just within the gullet where it arises behind the branchial clefts, and the digestion of every part of the fish food down to the spinal column takes place in this stomach, where the bend occurs and several inches of a tubular part commonly called the pylorus; here, the bones are finally dissolved so that excepting a stray part of a bone, all has been digested before the juices pass into the duodenum. The more recently that such has taken place, the more are the cæcal tubes filled with rich digested juices; or, as the Scotch scientists would have us believe, of dreadful purulent catarrh.

Of the fish examined, the majority have come from the Scotch estuaries, a few from Ballyshannon, and several from Norway. There are many further points bearing on this subject, which have been noticed; but sufficient, for the time being, to protest against physiological health appearances being mistaken for disease.—J. Kingston Barton, M. R. C. P., in London Field.

Trout of Lac a l'Eau Claire.

Montreal, July 13.—*Editor Forest and Stream:* I send you a photograph of a portion of a catch of speckled trout made in Lac a l'Eau Claire, St. Maurice county, by the Hon. Geo. W. Stephens, Mr. Albert E. Brown and myself, all of Montreal, in May, 1899.

This lake and the territory around it is the property of the Hon. Mr. Stephens, and has been protected, to a certain extent, by him, for over twenty years, and it is doubtful if its equal for producing the largest speckled trout can be found within the Province of Quebec. The largest fish shown in the photo weighed 8½lbs., and this is the fourth fish of over 8lbs. weight that has been caught in this lake since it came into Mr. Stephens' possession.

The twenty-two fish shown in the photo weighed 104lbs. This score will stand "some beating," I think.

Robert B. Ross.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

The Cass Lake Country.

From the Report of Fire Warden Andrews, of Minnesota.

The Itaska State Park.

In August I spent a day looking over the Itasca State Park in company with the superintendent, and walked several miles through thick primeval woods. I saw some handsome exclusively pine forest, also considerable forest of large-leaved trees mixed with pine, balsam and spruce. Though not as rich in forest as some other localities in the State, it is yet well enough wooden to make a desirable park, aside from the interest attaching to it as containing the source of the Mississippi River. Evidently there is much wild game in its limits.

The only means of travel through the park at present is by boat. Its benefit to visitors would be very greatly promoted by the construction of paths and roads; and as soon as practicable the State should employ a landscape engineer to lay out and construct a system of roads and paths. Such improvements would add immensely to the attractiveness and value of the park. Toward this park Congress contributed as a gift 7,000 acres on condition that the State would protect the timber; and the only means for its protection from fire provided thus far, besides what the superintendent can do individually, is through the fire warden law. Another portion of the park, comprising 2,452 acres, was bought by the State of the Northern Pacific Railroad Company at 50 cents per acre.

The State is to be congratulated on the wise and fairly liberal action of the last Legislature in appropriating $20,000 to purchase timbered tracts within the boundaries of the park which still belong to private individuals and which, through lumbering, were liable soon to become denuded of forest cover and in a way to expose the rest of the park to serious danger from fires.

Chapter 303, of the General Laws of 1899, making the above-mentioned $20,000 appropriation, further provides that in case said appropriation shall become exhausted, and it shall transpire that timber is liable to be cut from any land within the limits of the park, the attorney-general shall endeavor to secure from the owner of such land an option to purchase the same, for a term not exceeding two years, which shall contain an agreement that the timber thereon shall remain undisturbed. He may pay for said option, if secured, a sum not exceeding 4 per cent. per annum of such term, upon the value of said land as the same may be estimated by him. An appropriation of $1,000 was made to enable him to secure such option.

Cass Lake.

In my tour of inspection August last I took special pains to visit Cass Lake, situated about 200 miles northwest of Duluth, and found it to exceed my highest expectations in the beauty of its forest shores and availability for a health and pleasure resort. What attracted me particularly to Cass Lake was hearing that the new Fosston extension railroad, running west from Duluth, as a part of the Great Northern system, passed through a very fine body of white pine near the lake, being the only considerable body of pure white pine adjacent to any railroad now left in the State except one in the eastern part of Carlton county, on the same road. I felt that it was desirable for the State to procure and hold as a park such a forest of white pine, near a railroad, while it was possible to do so. This body of white pine extends about two miles east and west by about a mile in breadth along the railroad near the south shore of Cass Lake. Going straight north to Cass Lake from the railroad the distance is not over a mile. Half a mile from the lake the forest changes from white to red (generally called Norway) pine in pure stand; that is, without mixture with any other sort of trees. The surface then begins and continues to slope very gently half a mile to the lake over an east and west extent of about two miles. (I am speaking now of the south shore, the only part I visited, but other parts of the shore are very fine.) The trees on the south shore have been growing about a hundred years, are tall and hansome, average a foot and a half in diammeter breast high, and stand so thickly that a horse and buggy could not be driven through them. The soil is a sandy loam, the surface is free from underbrush and carpeted with pine needles. The clean, beautiful forest extends to within a step or two of the beach, which is of clean sand and just wide enough to be pleasant. There is not a weed or rush anywhere in sight. The water, which is remarkably pure, is shallow for a few hundred yards, making it an ideal place for bathing. The lake is ten miles long by eight miles wide, and contains two handsomely wooded islands, the larger of which is two miles across, and itself has a lake remarkable for its abundance of black bass. I have seen the most of the principal lakes in Minnesota, but have never yet seen any bordered with pine forest that could in any way match Cass Lake for availability as a health and pleasure resort. Fir forest is especially healthy. Scientific men have ascertained that the air of such woods is richer in ozone than that of open country. Twenty-five per cent. of the patients with incipient consumption who visit the Adirondack forests return cured. The State Medical Society should send a committee to visit Cass Lake to report on its advantages and help mold public opinion so the Legislature will make provision for the State buying a few thousand acres on the shore of the lake*. It all now belongs to the Chippewa Indians, and the Government estimators of timber now have their camps there in the midst of this beautiful south shore forest. They had dug a well, and I drank some of the water, which was cold and pure. These estimators were enthusiastic on the wonderful beauties of the place, and declared that it would be a shame to have the timber cut off. However, unless the State or the railroad company buys it to hold as a park, the timber land is liable to be sold in course of a year to lumbermen and the timber removed as soon thereafter as it suits the owner to cut it. Under the treaty it can only be sold in forty-acre tracts and to the highest bidder.

The president of Dartmouth College estimates that 30,000 people visit New Hampshire every year, attracted by its scenery, who leave in the State about $6,000,000 a year. Minnesota has no White Mountains, but this Cass Lake, with its thickly standing, clean and magnificent border of pine, is one of nature's gems, which probably, take it all in all, cannot be matched anywhere in our whole country. To cut the timber would simply ruin it for scenery and health. The State should buy it and manage it as a place of resort and rest for teachers and others who need the recreation it affords. What is everybody's business is nobody's business; and I fear this will not be done, unless people with influence wake up to the importance of very prompt and energetic action. I repeat—and I cannot emphasize the matter too much—that it would be simply wicked for the people of Minnesota to allow the south shore of Cass Lake to be denuded of its forest. He would be a true benefactor who would buy the tract and donate it to the State for park purposes.

A SHOW OF LAC L'EAU CLAIRE TROUT.

First row—6¼, 5½, 5¾, 5¼, 4¾, 5¼, 9¾, 4½, 8½, 7, 4—64lbs.
Second row—5¾, 4¾, 4⅔, 2, 2½, 4, 2½, 3, 3, 3, 4¾—40lbs.

* This was written in August last. A committee of the State medical societies visited Cass and Leech lakes during the following autumn.

Boy Killed by Alligator.

Jacksonville, Fla., Aug. 16.—Delano Wood, a lad of fifteen, was caught by an alligator at Trout Creek, Panama Park, six miles from here, while in bathing the other evening, and so badly mutilated and bitten that he died soon after being rescued by an older brother. The latter fought the 'gator with a club and finally blinded it, after being knocked down himself by the 'gator's tail.—New York Sun.

Canadian Angling Notes.

THE Messrs. Cove, of London, sons of the proprietor of the English Field, and Mr. Boulter are among the English sportsmen now hunting and fishing in the Lake St. John district. Lieut.-Col. Haggard, D. S. O., has folded his tent and done up his rods and sails in a few days from New York for his English home.

Mr. B. Tiffany and family have recently returned home from a two-weeks' sojourn at Lake St. John. Mr. Tiffany killed over thirty ouananiche at the Grande Décharge, besides a number of very large pike.

The trains on the line of the Quebec & Lake St. John Railroad have generally been very well filled during the last few days with anglers anxious to have a final tussle with the ouananiche before the close of the season on the 15th inst. As a rule the specimens of the fish now being taken are much larger than those caught during the heated term.

Mr. Bouchard, of the French sporting paper, Le Sport Parisien, has been on a visit to Mr. Menier's game preserve on Anticosti Island.

There is every prospect of a most successful month's trout fishing during September. The season closes on the 30th, and up to a day or two ago the heat was so intense that anglers began to fear it would be very late in the season before the fish would leave the deep holes and cold bottom of the water. A severe change set in on the last of August, however, and the temperature is nearly 30 degrees below what it was two or three days ago. A day or two more of such weather will materially lower the temperature of the water and send the trout to the shallows and to surface food. Already the fly-fishing is very good in many northern streams, and Mr. L. Jones, of the New York Journal, has returned with a fine catch of speckled trout from the Ouiatchouan. Local fishermen are leaving daily in large numbers for the trout waters, and the Governor-General of Canada, Lord Minto, accompanied by Lady Minto and the members of his staff, leave to-night for Lake St. John by special train. Those well-known sportsmen Mr. Edson Fitch and Mr. Pentland have left on a two-weeks' fishing and hunting excursion to the preserves of the Stadacona Fish and Game Club.

There are over a score of anglers on the territory of the Triton Club already, and several more are expected. Mr. Geo. E. Harb, the superintendent of the Waterbury Watch Company, has been whipping the waters of the Metabatchouan and Nonantum clubs with good success, and will wind up with three weeks' trouting on the Triton tract, where he will be joined by Mr. Chase, of Waterbury.

Mayor Carter Harrison, of Chicago, who was on the Tourilli tract, has left for home, but may return next week, and has left his brother, W. Preston Harrison, and his friend, Graham H. Harris, behind him. The Mayor was fortunate enough to get a 5½lb. trout before leaving the woods.

I should advise sportsmen coming here for the September hunting and fishing, and intending to camp out at night, to bring a supply of warm clothing with them, as the weather at night is often quite chilly here this month. Dark Montreal, claret, grizzly-king, professor and scarlet-ibis are reported to have been very killing flies here during the past week. Anglers on our northern waters should never be without the Parmachenee-belle and some small Jack-Scots or silver-doctors.

Several moose have been seen lately about Riviere a Pierre and the Belle Riviere, and red deer are rapidly increasing. The indications of caribou are very abundant, especially on the Triton and Tourilli tracts and in the neighborhood of Lake Edward. The fish and game department of the local government is investigating the charges that American sportsmen killed moose in the Lake Temiscouata district before the season opened, and it is probable that prosecutions will follow.

E. T. D. CHAMBERS.

QUEBEC, Sept. 2.

The Spruce Cabin Inn.

I DON'T count any place good enough to spend a week with rod and reel or with my gun, unless it shall be off the line of the all too frequent railway. This is one reason why I always have such an unmitigated good time at Canadensis. The Spruce Cabin Inn at that point is three miles away from post office or railway station, in the very heart of that thirty-thousand-acre tract of wilderness in Monroe, where the stray troutsman is very apt to run across a black bear, near the deep holes along the valley fringed with rhododendron bushes. It was only last summer that my friend, Mr. Stokes, of the New York Stock Exchange, who spends the months of June and July at Canadensis, with a creel full of trout encountered a good sized black bear half a mile down Broadhead Creek, much to the disgust of Broker Stokes.

The fisherman had done well with his fly-book that dull morning, and it was early in June, and with his back up against an oak tree he fell sound asleep, leaving his creel a few feet away, for the wading soon makes one foot-weary. An unusual noise disturbed him—Stokes sleeps lightly—and jumping to his feet, his first gaze fell upon a black bear doing his best to get his nozzle into a small trout basket. The bear dropped the fish and stood up straight, with a well-pronounced "Whoop," unlike anything Stokes had ever heard in the New York Stock Exchange on the merriest days.

Mr. Stokes sides with the "bear" element of the stock market, and says he didn't dream that a live bear would so make his hair stand on end.

His first impulse was to frighten him with a look. But Bruin showed an incisive desire "to move immediately on the enemy's works," and Stokes, by this time, was wide awake, dropped his rod and line, crossed the creek in haste, jumped the fence, and made a straight wake for the house. He called it "double quick." The next day the two Price brothers, accompanied by Mr. Stokes, went a-bear hunting, armed with shotguns and rifles, but they only found a mutilated fish basket. Empty, of course, but the rod and reel were in good condition. Stokes still fishes Broadhead Creek, but never goes without a horse pistol, which looks like one of the Rough Rider rifles at San Juan. But there are not bears enough in Monroe county to scare the fishermen. The evening of my second visit to the Spruce Cabin the violets were in bloom, and there was a human tenderness of feeling and the perfume of flowers in the atmosphere; and when I rose in the morning, aroused by the chirping of a dozen red-breast robbins, the lilac tree was fragrant and beautiful with bountiful sprays of the white lilac. How sweet it smells!

Martin Price was in command of the hotel, as his brother, Wesley, was off electioneering to be treasurer of the county of Monroe, a desirable office in a worldly point of view. I told him he "had become such a fisher of men that I feared he would give up the trout."

This he strenuously denied. Milton had promised to teach me to catch trout with a fly. This was a new pleasure to me, as I had hitherto been content with a minnow or a worm as bait. Poet Chaucer says "Emily rose with the sun," but we beat the sun half an hour, and after a breakfast with coffee the color of Sammy Bettles' Quaker coat, trout, broiled and basted with butter, corn bread pone, maple molasses and hot cakes, we were off behind a pair of fine-stepping bays for a five-mile ride where I could find a clean sheet of water on which I could safely cast my virgin fly without the worry of finding an impending oak tree limb to catch my fly, or worse, impale my first fish. We fished. We had fun. My share of that morning's work was just thirty-three good sized, lovely, red-spotted trout. Whether my dear friend, Milton—John Milton Price—desired to flatter me, I know not, but "Milt" said, "I made those bran-new flies skitter along the water with the hand of a master," and as evidence of my skill there were the thirty-three beautiful fish I had bagged, and I promised Milton that I would henceforth abjure the red worm and the lively minnow for the cunning fly. We had a gorgeous day—a bridal of the very earth and sky; and we got home to dinner—I with thirty-three fly-caught trout. Pardon, dear FOREST AND STREAM, the seeming repetition of this number.

I can see the trout now running after those new flies. That simply knocked the worm out of the game. Who would fish with a worm after such a morning? Not J. M. S., certainly!

I have got a new rod and reel, to be devoted to Monroe county trout, and whenever I go you shall hear from me, for if I am at times reminiscential, I do not belong to the old staff of FOREST AND STREAM back to Hallock's time; and we yield to no magazine on earth a place equal to in our sporting affections FOREST AND STREAM.

Long may she wave, a blessing to the boys of the county and a genuine joy to those like me who are slowly climbing the long road that ere many years will cross the "great divide." J. M. S.

Carp in California.

IT has been observed frequently that the tendency of civilization generally, and particularly in wealthy America, is toward centralization and metropolitan life, and that means artificial surroundings, and a great many other results. I think it has been computed that only about 80 per cent. of the population of California lives in the cities and towns, but California is becoming more and more civilized, and is very young yet. After a while perhaps we will all centralize to such an extent that we can dispense with game laws, giving all outdoors over to undisturbed natural serenity. If this state of affairs can be brought about those of us who hunt, fish and fowl will find it easy.

On the other hand, if anything should happen to send any more people into the woods and mountains, chiefly for fish and game, some attention will have to be given to the propagation of things to hunt and fish for. The most successful effort at propagation yet noticeable in the State has been the supplying of the Sacramento River with carp and catfish. This principal stream is alive with carp from tidewater to three or four hundred miles into the mountains. The carp are good for hog feed and fertilization, but other fish have other various virtues that most people would prefer. Both the carp and the catfish were foreign to the Pacific Coast. RANSACKER.

Chicago Fly-Casting Record.

CHICAGO, Sept. 2.—These are the scores of contest of Chicago Fly-Casting Club held to-day:

	Long Distance Fly, Feet.	Distance and Accuracy, Per Cent.	Accuracy and Delicacy, Per Cent.	Bait Casting, Per Cent.
I. D. Belasco...	95	.....	.....	91 1-5
I. H. Bellows...	122	95 2-3	97 1-3	96

GEO. A. MURRELL, Sec'y-Treas..

Lake George Bass.

SILVER BAY, N. Y.—On Aug. 28 Mr. T. P. Hoffman, of Roseville, N. J., and Mr. H. E. Burr, of East Orange, N. J., had a fine catch of small-mouth black bass, the bait used being crawfish. The weights were 7¼, 6¼, 5¾, 5¼, 1½ and two weighing 1¼lbs. each. Caught at Silver Bay, Lake George.

"I guess Jim can get away for that fishing party all right." "What makes you think so?" "I was up to his house last night. His wife used to be an amateur elocutionist before they were married, and he asked her to recite! She'll never refuse him now."—Cleveland Plain Dealer.

The Truth Triumphed.

From The Denver Evening Post.

A silent man stood thinking in the cañon of the Platte,
His thoughts seemed almost wrecking his dollar-fifty hat,
His hands were oft uplifted in sort of pantomime,
As though his active thinker was working overtime.
Along the shore he wandered with slow and measured pace,
A maze of thoughful wrinkles twined o'er his sun-tanned face,
For in his troubled bosom there was a vicious fight
As Wrong strove to deliver a knockout blow to Right.

All day with Job-like patience he'd cast his fly for trout,
But not a speckled beauty had let him yank it out,
And to his mind was clinging the boasts he'd made in town
Of what a string he'd show them ere yet the sun went down.
In his imagination he heard the laughing jeers
Of taunting, teasing townsmen vibrating in his ears,
And oft his glances wandered to ranch-boy sitting nigh.
Who had a string of beauties he knew that he could buy.

He was an honored deacon in Hill of Zion Church,
And never did a falsehood his pious lips besmirch,
And never had the tempter got in its work so pat
As at that trying moment up on the dashing Platte.
"No one will ever know it," the tempter whispered low;
"Go buy the jay-boy's captures and take them home to show,
And all your friends and neighbors will stand with staring eyes
And laud you as a troutist up to the arching skies!"

But Right by skillful sparring got in a blow at Wrong,
And down the grand old cañon he fishless trudged along,
And unto all his townsmen was brave enough to say
He never got a nibble through all the heated day.
He told about the jay-boy who yanked the beauties out
While he sat right beside him and never caught a trout,
Nor offered he excuses, but freely did admit
That as a trouting expert he reckoned he was nit.

The people stared in wonder and thought he'd gone insane,
The minister embraced him again and yet again,
The grocer on the corner assured him o'er and o'er
His credit would be gilt-edged in future at his store.
He soon was nominated for justice of the peace
And beat the other fellow as slick as axle grease;
And oft he kneels in secret and thanks the Master that
He didn't make a purchase from that jay-boy on the Platte.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 12-15.—Milwaukee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.
Sept. 19-21.—Rutland, Vt.—Vermont Kennel Club's inaugural show.
Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Sept. 6.—Morris, Man.—Manitoba Field Trial Club's thirteenth annual trials. William C. Lee, Sec'y.
Oct. 23.—National Beagle Club's tenth annual trials. G. Mifflin Wharton, Sec'y.
Oct. 25.—Hampton, Conn.—Connecticut Field Trials. E. Knight Sperry, Hartford, Sec'y.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ——, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

Hydrophobia a Disease Easily Cured.

BY BEVERLEY OLIVER KINNEAR, M. D.

From the Medical Record.

THE subject of hydrophobia has attracted much attention from the medical fraternity, especially during the last nineteen years. It may be fairly divided into three heads: (1) Is it a disease at all? (2) Is it a nervous disease? (3) Is it a disease due to an absorbed poison?

It appears to the writer that these three queries cover the present ground of discussion of this malady. The first question may be answered in several ways. Do those who take this stand infer that there is no poison generated in the mouth of the so-called mad animal, to be absorbed by the person bitten? Or do they infer that no such set of symptoms as compose an attack of the disease can be induced by the bite of an animal lacerating terminal nerves, causing an irregular cicatrix and thereby generating central nerve-cell irritation, and responsive muscular and sensation disturbance? Or do they mean that fright alone will excite all the well-recognized symptoms of an attack? Or finally, do they suggest that the statements of a host of honest and intelligent observers count for naught against their opinions, simply because they themselves have never seen a case of the disorder? It would appear unnecessary to enter into a discussion of this query more profoundly until these questions are answered.

Is it a nervous disease? Let us glance at the symp-

toms of a typical case as presented in the "Twentieth Century Practice of Medicine," in an article upon this disorder. First stage: "Loss of appetite and headache; agitated, depressed, gloomy; ill-tempered, apprehensive, irritable; sleepless, restless, with bad dreams; speaks quickly, with sharp articulation; aversion to fluids and often cannot take solid food; and itching and pain at seat of bite."

Second stage: "Breathing sighing and labored; muscles connected with medulla become affected, inducing spasmodic contraction of larynx and pharynx; hyperæsthesia of sight, feeling, touch, hearing, smelling may all occur; sensation of suffocation causes patient great anxiety; violent homicidal attacks come on, for which the patient expresses regret during quiet intervals; snaps with jaws, both tonic and clonic spasms; aerophobia, and sometimes delirium. The conjunctivæ are injected, pupils dilated, retina hypersensitive to light; pulse full, moderately strong and accelerated—weaker after paroxysms; skin moist and perspiring, and the respiration, during the paroxysms, gasping and irregular. There is also decided thirst."

Final stage: "Death may be preceded by general paralysis; it may take place from convulsive paroxysms and asphyxia, or from coma. The disease may be confounded with hysteria, tetanus, epilepsy, delirium tremens, acute mania and uræmia."

The testimony of symptoms in all these stages denotes nervous disease predominantly; while the injective conjunctivæ, the full strong pulse, the delirium and maniacal tendency, the hypersensitive retina, and death by coma or convulsions all signify to the writer a condition of hyperæmia of the brain and central nervous system.

During the past eighteen years I have speedily subdued delirium tremens, acute mania and uræmia temporarily, by contracting the arterioles in the spinal cord and brain and making the general circulation active. Many cases of hysteria can be rapidly cured by expanding the general circulation, thus inducing good nutrition of the body, and at the same time withdrawing the excess of blood from overstimulated nerve centers. Five of these disease are understood to be nervous, and only one of them—delirium tremens—is due to a poison absorbed. The uræmia of Bright's disease, with the resulting coma, is considered due to a poison acting upon the brain, but Bright's disease does not come under the head of nervous diseases.

According to this evidence, then, hydrophobia may be due either to a poison absorbed, or it may be caused by constant direct irritation carried from the seat of the bite to the central nervous system, giving rise to hyperæmia of nerve centers, and thus an increased function or abnormal action upon their part, inducing thereby all the symptoms of hydrophobia. The fact that there are, in many reported cases and among the early symptoms, itching, pain and heat at the seat of the bite, would tend to confirm the hypothesis that from the time of the bite by the dog there had been more or less constant direct irritation carried to the central nervous system. But the apparent truth which is brought out by the foregoing, to my own mind, is that in all nervous forms of disease the main factor inducing the symptoms is active hyperæmia within, and therefore excessive function of, central nerve cells.

Does the pathology of hydrophobia bear out the above conclusion? The post-morten examination in man shows general congestion in nerve centers and softening around the spinal cord. Ross, of Manchester, says that tetanus and rabies are alike, the lesions in the former being spinal, in the latter cerebral; and that the nerves leading from the congested centers are congested and enlarged.

Keirle ("Twentieth Century Practice," vol. xv.) says that the lymph glands are always enlarged in rabies. The under surface of the medulla is very vascular, the gray matter of the cord is hyperæmic, the larynx is red, the spleen is dark red, the liver is congested.

There is practically an immense amount of evidence proving hyperæmia of the nerve centers in hydrophobia.

There is also hyperæmia of mucous membranes and of many organs and glands, which last I have been for many years of the opinion may be due to excitement or hyperfunction of the vaso-dilator nerve centers, and that when conditions of hyperæmia or inflammations are shown by post-morten demonstration to have existed during life, it is a proof that vaso-dilator nerve centers distributed to the part affected are hyperæmic, and therefore abnormally active. If this is so, then the hyperæmia of glands, of organs and of mucous membranes noted in cases of hydrophobia would be simply another proof that the cause of the attack was central nerve-center excitement, or active congestion in the centers.

It appears that the conclusions we may now draw are as follows: (1) The majority of the symptoms denote central nerve-cell excitement. (2) Others testify to the writer, after many years of treatment of nervous diseases and conditions, that there is hyperæmia of the brain and cerebral nerve centers. (3) Treatment which will withdraw excess of blood from nerve centers and at the same time make an active systematic circulation will subdue and cure nervous diseases, whether caused by poison absorbed, by terminal-nerve irritation, by worry, pain or overexertion, mental or bodily. (4) Pathological conditions evidence hyperæmia of the brain and cerebral nerve centers, as well as hyperæmia of organs and tissues, which may be due to the same central nerve excitement.

If these four propositions be true, the next query which arises is, What is the best treatment, the most rapid and efficient to withdraw the excess of blood in active circulation from the congested brain and nerve centers, and which will at the same time so act as to expel from the body the poison of the disease, if the disease is due to a poison? If it is not due to a poison, how can we most speedily withdraw the excess of blood from the nerve centers and brain, without injury to the patient? Is it best to inject the hydrophobia virus which has presumably caused the disease, and thus secure a hoped-for immunity to the poison already absorbed; or will it be better to excite active secretion from some great emunctory organ, in order to expel the poison if there is one, or to attract so much blood to the secreting surface that any excess of blood must perforce be withdrawn from the congested brain and nerve centers—even if no poison exists—and their undue excitement be subdued, the symptoms banished and a cure effected? There appears to me to be no "halting between two opinions here." It will be far better to expel the poison and withdraw the excess of blood from the congested cerebral area, than to attempt to immunize the party bitten by the further absorption of the same poison which induces the disease. But has such a method ever been used successfully to cure hydrophobia? It most certainly has, and in a large number of cases.

It is hoped that by what has been set forth, and by what is to come, the attention of the profession may be drawn to that which seems to the writer a much more simple, physiological, effective and less dangerous method of treating and curing this much-dreaded disease, or set of symptoms—whichever one may be pleased to call it—than Pasteur placed before the profession and the public. There is no doubt that a large body of the medical fraternity consider Pasteur's treatment a cause of hydrophobia, instead of a cure; and that it is a danger to be guarded against rather than a cure to be relied upon.

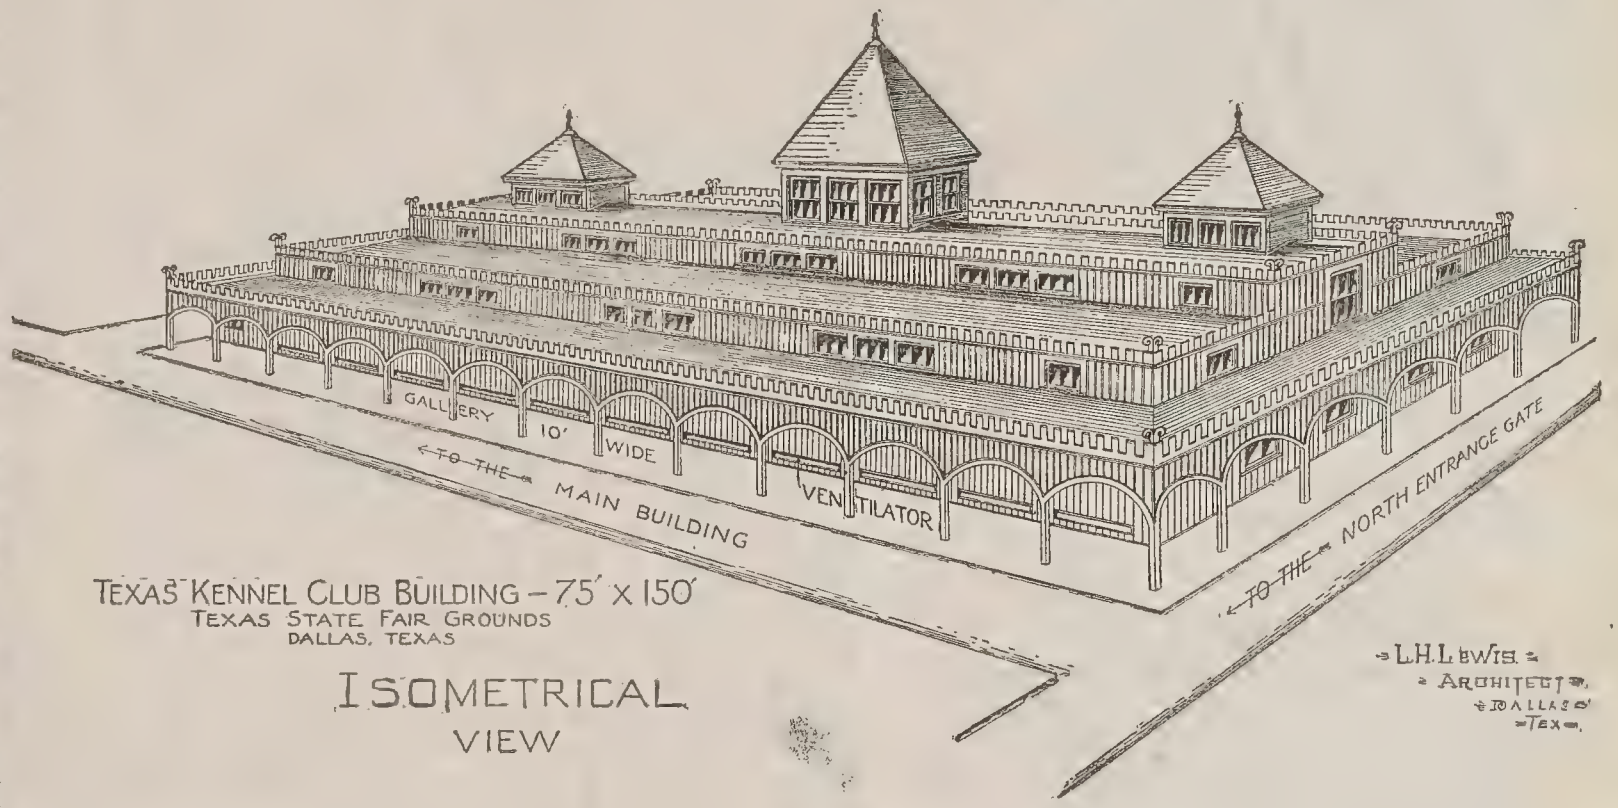
Let us glance at the opinions of some eminent observers. Professor Peter, the greatest clinician France has produced in this century, a man described as the Sir William Gull of Paris—the able editor of the Medical Journal—writes: "M. Pasteur does not cure hydrophobia, he gives it." Another physician, Dr. Edward Berdoe, M.R.C.S., says: "So far as any good effects having resulted from the treatment, we know that it has undoubtedly led to the increase of hystero-epilepsy, a disease singularly like hydrophobia." Dr. T. M. Dolan, F.D.C.S., of Halifax, the erudite and independent editor of the Provincial Medical Journal, in his book, "Pasteur and Rabies," says: "Not only does M. Pasteur not protect from disease, but he has added a new terror to it by the introduction of paralytic rabies." Dr. Charles Bell Taylor, F.R.C.S., writes: "I regard the so-called wonderful discovery as the most extraordinary delusion which has afflicted men of science for centuries." Professor Von Frisch, of Vienna, makes the despairing admission: "The great hopes which the medical world has placed on Pasteur's discovery have not been realized."

"That the Pasteur system is unreliable is evident by the fact that more than 313 persons have died either under the treatment or in spite of it, and as it involves the infliction of infernal barbarities and torture, the sooner the public is made aware that a superior and more humane remedy for hydrophobia has been discovered, the better" (Herald of the Golden Age).

Dr. Charles W. Dulles, of Philadelphia, when appointed by the Pennsylvania Medical Society to investigate hydrophobia, stated as his opinion that a large number of deaths from that malady were directly due to inoculation with the virus of what ought to be called "Pasteur's disease."

The following well-authenticated case of Ethel Wilkins, which appeared in the London Globe, Nov. 12, 1895, tends to confirm the foregoing judgment: "In October, 1895, the child of the gardener on the Twickenham Park estate (age three years) was bitten on the face by a small fox terrier. The dog was immediately destroyed. There was no evidence that the dog was mad. The child was taken to a physician (Dr. Murphy) to have the wound dressed. At his earnest persuasion the anxious mother (being told that she would have the child's death on her conscience if she refused) allowed the child to be taken to the Pasteur Hospital and put under the regular treatment—inoculation with rabic virus twice daily for the first three days, and then once daily for twenty-one days. On the day she was discharged as cured (though there was no evidence that anything had been the matter with her) feverishness and other symptoms appeared. On Nov. 9 she was taken back to the institute, and the doctors then pronounced the case to be hydrophobia and hopeless. She was, however, inoculated twelve times that day—six times on each side. In forty-eight hours this child, three years old, received twenty-four inoculations. The 10th of November a witness reports seeing her strapped down on her bed; her hands (which had been left free) had torn her face in her agony."

Added to the foregoing opinions and statements, I have in my possession a carefully arranged list of 394 cases treated for hydrophobia by the Pasteur method, from August, 1885, to July, 1898, all of which were fatal. Some were bitten by wolves, some by cats and the vast majority by supposedly mad dogs. This "quadruple hecatomb," as it is called, is reprinted from a supplement to the Zoöphilist, June, 1898. It appears to be undoubtedly correct, as the journals from which the cases were taken are all given, with the dates of their issue. Pasteur's treatment then, according to these representations, has not only not lessened but increased the number of cases of hydrophobia; it has also introduced a new and terrible form of disorder—paralytic rabies. Further, it is essentially set forth as a preventive treatment only, but of little or no service after the attack has begun or well-developed symptoms have appeared; whereas, the treatment about to be placed before you is simple, is not injurious, may be used preventively, "and will cure if administered not later than the second day of its development, and frequently do so even if not given until the third day." This quotation is taken from some remarks by Dr. Montague R. Leverson, of Fort Hamilton, Brooklyn.



The treatment which I advocate is known as that of the "Buisson" bath. Dr. Buisson (doctor of medicine of the Paris faculty) was called in to a woman suffering from hydrophobia, just one hour before her death. She wished to be bled, and after the operation he wiped his hands on a handkerchief saturated with her saliva. He immediately noticed a small wound upon the first finger of his left hand, and thoroughly cauterized it upon arriving at his office. But on the seventh day pain developed in the wound and rapidly spread up the forearm, following the course of the radial nerve. As the disease progressed, the pain became intolerable; his eyes were extremely irritable, with dimness of vision; his hair seemed to stand erect; a current of fresh air prolonged the paroxysms; there were constant nausea and tightening of the throat, with excessive salivation and incessant expectoration; he had a horror of water, and a constant longing to run and bite. He continues: "For some time past I had been persuaded that a vapor bath was able to prevent, but not to cure, hydroprobia. My thought being occupied solely with death, I sought that which was the most prompt and least painful.

"Being the proprietor of a bath establishment, I resolved to die in a vapor bath (commonly called Russian). I took a Réaumer thermometer in my hands, fearing that the heat I desired might be refused me * * * and at 42° R. (127° F.) I was cured. I confess that at first I refused to believe in a cure which partook of the nature of a miracle. After the bath I dined and drank with ease, and went to bed and slept well. From that day to this I have felt no sort of pain or uneasiness." The report of his case was given to the French minister of public instruction. Thus this great discovery was simply blundered upon like many another one. "Subsequently over eighty people bitten by rabid dogs underwent his process, and not one died. The theory is simply that sweating (increased by hot drink) opens all the pores of the skin, and all poisonous matter in the blood or in surface wounds is forced out through the pores."

This statement is true, and poisons are eliminated by the sweating process, but there is a deeper truth involved by great activity of all the sweat glands and that is that no gland can secrete excessively, unless a much larger quantity of blood than in normal conditions is passing through it, since all glands, organs and tissues receive their nutrition from and deposit their refuse into the blood; in the former instance from the arteries, in the latter into the veins. Therefore, when there is an active sweating process carried on by the whole skin, there is an enormous and abnormal amount of blood drawn into these glands; consequently there must be a lesser amount than normal in other portions of the body. Thus, if there is an excess of blood in active circulation in the lungs, in the bronchi, in the pleura, the process of sweating will go a long way toward their relief, and the reason is very clear; because the sweat glands in order to sweat properly require such a large amount of blood that the excess of blood in the inflamed or congested area is withdrawn, the local congestion relieved, and the patient becomes convalescent.

Now as I have endeavored to show in the early part of this paper that in hydrophobia there is within the brain, the medulla and the nerve centers an excess of blood in active circulation, giving rise to the attack and the symptoms of the disease—so, when the Buisson bath is used and profound sweating results, not only is the poison, if there is one, eliminated, but also the excess of blood demonstrated to be in the central nervous system by the evidence of symptoms, and also pathological testimony, is speedily withdrawn from the congested cerebrum and centers, and as a result the symptoms are subdued and the patient recovers.

Thus this treatment not only can expel poison, but it also demonstrates a true physiological process, by which the excess of blood may be withdrawn from the abnormally functioning nerve centers. It is simply a beautiful instance of revulsion of blood from the brain and central nervous system to the skin, in the first giving rise to all the horrible symptoms of a greatly feared disease, and in the second this same excess of blood acting

as a beneficent and life-restoring vitalizer. It is the difference between a fire in the right place and a fire in the wrong place.

Buisson says: "Vaccinate an infant and give it a vapor bath directly afterward, the vaccine does not take."

This treatment expels any poison, and at the same time overcomes the dangerous conditions induced by the poison, or by the reflex irritation from the location of the bite. Suppose there is no poison but only reflex irritation from the seat of injury—then at the seat of injury there must be some local congestion, which for a long time may not become apparent; when it does the symptoms of hydrophobia show themselves. The sweating, being profuse, in this case would not only relieve the congestion of the nerve centers but also relieve that existing in and about the original wound; thus not only the attack would cease, but would not again recur. My personal opinion is that in some cases there is a poison absorbed, but that in others, especially in cases of severe laceration, the resulting attack may be in the main due to reflex action from the irregular and congested cicatrix, the central nerve congestion being also partially due to the fears of the patient; while the animal which has bitten the sufferer may not have been rabid at all.

But, whichever may be the truth, the Buisson system answers positively all the indications for a radical cure of the disease, while that of M. Pasteur does not; and statistics show that whereas Pasteur refused to receive patients when hydrophobia symptoms had begun, the Buisson treatment cures hydrophobia when fully developed. A notable case is that of Pauline Kiehl, at Paris. She was bitten, with two other persons, by a rabid dog. The others died of hydrophobia. Pauline was taken to Pasteur, who refused to inoculate her on the ground that the hydrophobia had gone past hope. She was taken to the baths in Paris, Faubourg St. Honoré, where Dr. Léon Petit subjected her to the Buisson treatment, and she recovered. Both as a preventive and cure it is now well known in England, where, according to the Herald of the Golden Age, it can be administered at thirty-three different institutions under the superintendence of qualified medical men. It can also be procured at every hydrotherapeutic establishment in the United Kingdom and at over seventy places in India. The Governor-General of India has accepted it for all hospitals and dispensaries under the Government control, and in consequence thirty baths have been sent there from London. Likewise in America it has been tried with pronounced success, as the following cases indicate; and in no instance, as far as the writer knows, has it met with failure.

Rev. James A. Curran closes an account of a desperate case of hydrophobia under his care cured by a vapor bath, and says: "The sufferer has been in convulsions two days—accompanying these convulsions are evident signs of hydrophobia—is apparently at the point of death." (The Buisson treatment was tried with perfect success.) "His cure," he continues, "was remarkable as it was sudden—and he has continued well ever since." A full account of the case was published in the Sacred Union, Arlington, N. J., April 26, 1886.

Dr. Charles H. Shepard, of Brooklyn, reported the following case to the American Medical Association, at a meeting held June 1-4, 1897: "Dr. M. H. Hermance, of Brooklyn, saved a boy from the agonizing death of hydrophobia by the use of the vapor bath, which was applied while the patient was tied down to the bed. In about three-quarters of an hour after beginning operations a profuse perspiration was induced. When he began to sweat freely signs of returning consciousness appeared, which increased as the perspiration was continued, until in the space of about two and a half hours he was fully restored to consciousness, with a perfect relief from all his hydrophobic symptoms, the pain in the bitten hand and arm included, of which he had complained very much in the intervals of consciousness between his convulsions."

Dr. L. P. Haskell, of Chicago, reports the two following cures of hydrophobia which he witnessed at the sanatorium of the late Dr. M. P. Hanson, of Milwaukee. He says: "I had opportunity to see much of Dr. Hanson's operations and the great success he attained. His son owned a dog which was attacked with all the symptoms of hydrophobia. His paroxysms were violent. He was secured at the end of a pole by a lasso and taken into the hot-air room (175° F.). After raving a while he quieted down, went to sleep and was cured. I saw him three years later. About a year after this cure a man, living in a Wisconsin town, and his horse were bitten by a mad dog. The horse soon after died in great agony. Then the symptoms were manifested in the man, and a friend who knew of Dr. Hanson's experiment with the dog took the man to the sanatorium, and he was cured."

Dr. P. Canitz, of New York city, testifies to having cured five cases of hydrophobia by means of the Buisson bath. The disease, in three of these cases, had advanced to a stage ordinarily pronounced hopeless. Convulsions had become so violent that the patients had to be strapped to their beds, and in one case, in which treatment was delayed until after the fourth day of the attack, the patient was in the extreme horrors of rapidly approaching death. In all these cases the aggravated symptoms subsided during either the first or second application of the treatment, and after four or six days all signs of the disease had disappeared. Strapped to a steam lounge these patients were subjected to steam and hot dry air—the temperature being gradually increased until 140° F. was reached; then, still sweating profusely, they were wrapped in cold wet sheets (wrung dry) and swathed in blankets, with hot-water bottles applied to the feet, calves and thighs, and allowed thus to remain from one to two hours, when a tepid bath (90° or 92° F.) was given, followed by a cold spray douche. The sweating process was repeated daily and the full pack twice daily up to the period of convalescence, and the treatment in a milder form continued for several days subsequently so as to insure complete success. In no instance was there a relapse.

The frequency of the bath must depend upon the severity of the symptoms; and the maximum rate of temperature must be regulated according to the facility with which the patient perspires. The head must be kept cool with cold applications and the patient freely supplied with cold water to drink, avoiding all alcoholic stimulants and adhering to a light, farinaceous diet. If the patient is subjected to a bath on the first day of hydrophobic symptoms, probably the first bath would prevent its development, but even after the patient is apparently well the sweating process should be continued daily until all danger of recurrence is past.

"The efficacy of the Buisson treatment for hydrophobia is testified to," says the London Star, May 3, 1898, "in a letter from B. K. Illava, District Abkari, Inspector of the Bassein District, written to Mr. Malabari, of Bandora. It says: 'It affords me great pleasure to note the result and let you know the genuine efficacy of the Buisson bath you were kind enough to get me a loan of from Dr. De Monte, of Bandora, to be used for my uncle, Mr. Jehangir H. Kotwal, as he was bitten by his own bull dog that had gone rabid. If it were not for your kind advice and prompt loan of the bath he would have been a positive victim to the fell disease, as two cows, one dog, one Hindoo woman, by name Gungabai, aged forty, and a boy of ten years of age, who were all bitten by the same dog, died at different periods, all showing symptoms of hydrophobia.' Why be Pasteured and run increased risk of death?"

On May 6, 1895, Dr. Ganguli, of Dinageyur, India, treated four persons bitten by a rabid jackal on the 29th day of April, 1895. All these four are now in perfect health. One man, who was bitten by the same animal and did not undergo the Buisson treatment, died of hydrophobia. A Mohammedan, bitten by a rabid dog March 22, 1896, and treated by Dr. Dass, of Naraenganj, India, fifteen days afterward, is now in perfect health. Eight persons who were bitten by the same rabid dog and did not undergo the Buisson treatment, died of hydrophobia. A Hindoo bitten by a rabid dog on April 2, 1896, treated by Dr. Dass twenty-two days after the bite, is now in perfect health. Three persons who were bitten by the same rabid dog and did not undergo the vapor-bath treatment, died of hydrophobia.

William Tebb, Esq., of Rede Hall, Burstow, Surrey, England, writes from Bombay, on March 21, 1896:

"At Lucknow there is an encouraging report of the success of the Buisson system in preventing hydrophobia in several patients who had been bitten by mad dogs—while one unfortunate man bitten by one of the same dogs (who refused the treatment) died of hydrophobia. At Allahabad, the superintendent of the Government hospital said that five persons had been bitten by a mad dog, four of whom were treated by him with the vapor bath, and no harm followed; the fifth refused the bath and died of hydrophobia."

It is very clear from the symptoms that in hydrophobia the nerve centers are in a state of excitement; it is also very evident from some of the symptoms that there is excess of circulation of blood within the brain and nerve centers. It has been demonstrated to me long since that by methods which withdraw excess of blood in active circulation from the brain and nerve centers, in nervous diseases as well as in those like delirium tremens, and the blood poisoning in the coma of Bright's disease, due to a poison absorbed, the conditions treated will rapidly be subdued. Pathological investigation also demonstrates excess of blood within the brain and nerve centers, and the results of the treatment, as we see, prove that by flushing the sweat glands with blood hydrophobia may be cured, even in the advanced stages.

A very sensible statement by a contemporary writer illustrates the effect upon internal congestions of this method, and why they are relieved:

"Very few people comprehend why the hot-air bath is so potent in the cure of disease. The reason is simple and readily understood. Nature's method of protecting the body from the effects of heat, especially high temperatures, is by the evaporation of moisture from the surface of the body, and this moisture is provided by the perspiration, and the less clothing the more effectual the results, so the natives of hot climates who are nearly naked realize more fully the benefits of perspiration. Upon submitting one's body, divested of clothing, to the 150° F. and upward of heat, demand comes for relief; soon the pores are opened, perhaps to an extent not before realized for months or even years, as many persons have inactive skins, and when this is the case other organs, and notably the kidneys, must take on double duty, and are thus overtaxed and diseased. So now the pores are actively at work, and the poisonous, worn-out material is being eliminated from the body through nature's sewerage system—the pores. What follows as a sequence? Why, *as the blood furnishes the perspiration, it necessarily comes to the surface, and thus the circulation is equalized over the entire surface, and as the logical sequence of this all congestive tendency is relieved, thus establishing perfect equilibrium, which is absolutely essential to perfect health*" (Italics mine).

NEW YORK.

Philadelphia Dog Show.

THE prizes of the first annual dog show of the Philadelphia Dog Show Association, to be held Nov. 22, 23, 24 and 25, are $15, $10 and $5 in limit and open classes and $10 and $5 in novice and puppy classes. A very liberal number of classes will be opened and kennel prizes will be offered for the best exhibit of four in each breed. Over $5,000 will be offered in class and special prizes.

The following is a list of the judges so far announced: Chas. H. Mason—Bloodhounds, mastiffs, St. Bernards, Chesapeake Bay dogs, pointers, all spaniels, collies, bull dogs, Boston terriers, Airedale terriers, bull terriers, Scottish terriers, Skye terriers, Bedlington terriers, Dandie Dinmont terriers,, Welsh terriers, Yorkshire and toy terriers.

G. Muss Arnoldt—Great Danes and dachunds.

Ronald Harwicke Barlow—Russian wolfhounds, deerhounds, greyhounds, Black and Tan terriers and Italian greyhounds.

H. Clay Glover, D. V. S.—English setters, Irish setters and Gorden setters.

Henry G. Trevor—Poodles.

Winthrop Rutherford—Fox-terriers.

O. W. Donner—Irish terriers.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Canoeing.

THOUGH dating back to 1881, the second year of the Association, the constitution, by-laws and racing regulations of the A. C. A. are in the main as complete and thorough as anything of the kind in yachting, canoeing or boating. The general plan of organization which superseded the temporary scheme of the first year was framed on broad and progressive lines, and such changes as have been made necessary by new developments, such as the establishment of divisions of the parent body and the board of governors, with revisions of the racing rules to meet new inventions and conditions, have been in the main well planned. The trouble with the Association to-day—and it is a serious one—is not with the laws as they stand, but with the manner in which they are disregarded by those whose duty it is to execute them. Apart from some verbal and clerical errors, which are due to the slovenly and slipshod manner in which too many meetings are conducted, there is very little fault to be found with the laws as they now stand; and if they were faithfully lived up to there would be small cause for disputes and misunderstandings.

Unfortunately a great deal of the business of the Association is carried on by its officers in ignorance or wilful disregard of the laws, the result being equally bad in either case. When an officer desires to do a certain thing he too often goes ahead with it without taking the trouble to consult the year book as to his powers and duties, or if he does, ignoring the plain wording of the laws. We have no desire to criticise the present administration beyond others, as it is no more deserving of blame in this respect than its predecessors, but as the result of various circumstances connected with the past meet there is likely to be an attempt at a general overturning and amendment of all the rules. Such an attempt is most unnecessary, and can only do harm, as the trouble has long been not with the laws, but with their non-enforcement.

The success of the Association in the past has been due in no small measure to one admirable feature of its laws, by which the officers are enjoined to give the most public notice possible of all proposed actions, so that the members at large may know in good season of proposed changes of the constitution, racing rules, etc., of candidates for membership, and all similar business, and may if they desire make objection through the proper channels.

Of late years the tendency has been to disregard the laws in respect to this early publication, the officers acting independently and at their own discretion, regardless of the wishes of the individual members.

It rests now with the members themselves to say whether they are willing to give up the rights secured to them by the constitution and to leave the entire management of the Association in the hands of a few officers, or whether they will insist on the literal observance of the laws by which no important action may be legally taken without public notice in due season. If they are satisfied with the former course, then those important parts of the constitution, by-laws and racing rules which are now disregarded should be stricken out; otherwise every legal requirement should be literally and rigidly observed.

THE New York C. C. will hold its annual regatta on Sept. 16, starting at 2:30 P. M., at the club station, Bensonhurst.

Members of all canoe clubs near New York are cordially invited to be present and take part in any or all of the events. In order to amuse the ladies a number of extra events have been arranged, and it is hoped that the interest will never flag during the afternoon. The usual club dinner will be served at 7 P. M.

Events—1. Sailing, three miles, record event. 2. Paddling, decked canoes. 3. Paddling, tanden, open canoes, single blades. 4. Sailing, club fours, upset. In this event the boats will upset at a given signal. 5. Sailing, man overboard; second man in each boat to dive overboard at signal and remain stationary until rescued. 6. Masquerade tournament. A prize will be given for the most unique costume.

The regatta committee are Barron Fredericks, chairman; R. S. Foster, Louis B. Jennings.

British Canoe Association Annual Meet.

Falmouth, England.

July 29 to Aug. 10.

THE following account of the recent annual meet of the British Canoe Association was written for the Field by A. E. Wale, Esq., vice-commodore B. C. A. It will be interesting to American canoeists in comparison with the report of the A. C. A. meet in the FOREST AND STREAM of Aug. 26:

The B. C. A. camp at Mylor Creek, Falmouth, is now in full swing, and fourteen tents have been erected. As every one knows, the locality is almost perfect for canoeing, and endless excursions may be made to the many beautiful and interesting creeks. So far the weather has been magnificent, and a good sailing breeze has prevailed on almost every day.

On Friday last, at Malpas regatta, a race was held for prizes given by the local sailing club. After a long and light wind race Psyche won easily, with Crayfish second and Galatea third.

On Saturday last the first race of the meet for prizes given by the commodore took place. Only three craft were eligible to compete, as the conditions were that competitors must have been in camp for three days prior to the race. The prizes were meant to be a reward for early attendance, but unfortunately did not secure that very desirable result. With a strong southeaster blowing against the ebb tide there was a fair sea out in the roads, and all available reefs were got in before the start. Galatea (Messrs. Nisbet and Hodder) was first across the

line, and Psyche (Messrs. Fair and Huntley) second. Five minutes later Psyche gave up, rather waterlogged. Crayfish (Messrs. Clayton and Bean) was far away to leeward changing jibs, and did not hear the gun. However, the six minutes she lost at the start were easily spared, and she rounded the windward mark at the Ganges about 5m. ahead of Galatea. A broad reach to the eastern mark and a run home resulted in no other change, and the powerful ballasted Crayfish finished an easy winner, with Galatea 6m. astern.

On Monday six of the craft present sailed in a race given for them by the committee of the Looe regatta. Unfortunately for Crayfish she lost her centerplate just before the start, but made a very fair show with a floor board as a substitute. In the light wind the canoe Prucas IV. (Mr. Laws) simply lost the rest of the fleet, but the actual order of prize winning is not yet settled, pending official measurement.

Many very pleasant little cruises have taken place, and many more are on the programme. To-morrow, weather permitting, all hands are going to the Helford River, and will camp out for the night there. So far the attendance of men and craft has not come up to the expectations of those who have been to all the trouble of arranging this meet. Of the yawls present Crayfish, Galatea and Psyche are well known, while Portmanteau (Mr. Ogilvy) and Walrus (Mr. Arnott) are fresh to the meet. Among the canoes are Prucas IV. and Solitaire, and of course the two famous Lilys of our veteran commodore, Mr. Bartley.

So far the Falmouth meet has been favored with magnificent weather, and in this respect it seems likely to form a record in the history of the Association. Unfortunately, the number of members who have availed themselves of the chance of such a glorious holiday as we are now enjoying is rather disappointing. When one sees the crowds of young fellows who dawdle about a fashionable watering place, crawl round golf links or even the more energetic who can enjoy scorching in an atmosphere of dust along a crowded, sun-baked highway, it seems strange indeed that so few can be found to support the healthier and more enjoyable sport of canoe cruising and camping out. Whatever the reasons may be, the B. C. A. officers are working hard to find them out, and to make the meets better attended. How difficult their task is may be gathered from the opinions expressed at a recent representative gathering. About half of those present thought the fault was lack of racing; the other half were equally certain that it was due to the number of races held, which prevented men from finding time to cruise, fish, sketch, etc., without undue hurry from morning to night.

My hurried report last week dealt with three races; this one will deal with four more, and others are to follow, but first let me speak of one of the most enjoyable events the Association has ever held. This was the cruise on Wednesday last to Helford River, one of the most beautiful harbors in the West. Through the good offices of Mr. Cecil Lane we had received the offer of an excellent camping ground above Helford, and other hospitalities from Mr. Blaney, the vice-commodore of the Royal Cornwall Y. C. About 11:30 A. M. all hands got under way, and with a fresh S.E. breeze and a good ground swell in the bay made a fast and pleasant voyage to the new camp, about eight miles. Only two shore tents were taken, and one of these was carried in Prucas IV.; the other men slept in their craft. Soon after pitching camp we all sailed or paddled off to explore the many lovely little creeks which branch off the Helford River. To those who know this spot no words are needed, and to those who do not no words will convey a fair impression of its beauties. Of one creek near the camp, Abraham's Bosom, otherwise Port Navas, I will only say that it is well named; no shelter could be more perfect.

That evening Galatea, whose owner, Mr. P. Nisbet, had been recalled to London some days previously, returned to camp, and on Wednesday morning sailed back with him and Mr. Hodder to the Helford River. They had a rough and exciting passage, but their performance was eclipsed by our veteran commodore, Mr. Bartley, who about the same time paddled back to the head camp in his well-known Lily. About midday all hands went to help to work the seine net, owned by Mr. Blaney, and a very interesting afternoon was spent with it; bass, red and gray mullet, plaice, dabs, eels, smelts, sprats, cuttlefish, sea adders and other curiosities were hauled ashore. Afterward a very pleasant hour was spent on our host's yacht, the Eagle, and a big basket of fish was presented to us. All this meant that a late start was made for home, and it was 8 o'clock when we left the mouth of the Helford River, the flood tide nearly done, and a light head wind and heavy tumbling ground sea. Mr. Ogilvy, in Portmanteau, like a wise man, at once gave up the pretense of sailing, and rowed home, arriving first; Prucas came second, about 11 P. M., and the rest at nearly 12 o'clock.

On Friday, Aug. 11, a very quiet morning about camp was followed by a company cruise round to Falmouth Harbor, where the local sailing club's regatta was being held. A race for B. C. A. craft had been kindly given by the committee, and the course was entirely within the harbor, which meant a lot of dodging of the hundreds of craft anchored there. Galatea won first prize; Prucas IV., 4s. behind her time allowance, second, and Psyche third prize. In the evening the committee drew up the programme for the B. C. A. regatta, and announced the entries and time allowances for the Lough Erne challenge cup. These were as follows (rating being taken thus: L. O. A. + S. A. ÷ 6000, time allowance on scale of old Y. R. A. rating):

	Rating.	Handicap.
Galatea, P. Nisbet	.45	scratch.
Crayfish, H. Clayton	.45	scratch.
Prucas, G. W. Laws	.3	0 06 50
Psyche, D. Fair	.25	0 10 10
Portmanteau, Mr. Ogilvy	.23	0 12 10
Solitaire, A. E. Wale	.13	0 25 10

Saturday, Aug. 12, the day of our annual regatta, opened with a strong E.S.E. wind and brilliant sunshine as usual. Soon after 11 the craft competing for the challenge cup were afloat and ready for the gun, but just before the first one Psyche was seen to drop her mainsail and signal for help. Solitaire reached over to her and found she had carried away her sternpost rudder and was helpless. Solitaire then ran down between the guns to tell the committee to send a boat to Psyche's assistance, but nearing the rough beach hit hard on a sharp rock, and unknown to her skipper got badly holed. Two minutes later the second gun went, and Crayfish was first across the line, closely followed by all the others.

The course, which had been measured off with great care, was from the camp to the St. Just Buoy, a dead beat out; thence to a markboat off Messack Sands and back to the starting line, both legs being broad reaches, three times around. After a close start the boats soon spread out in short tacks, but in ten minutes Solitaire was so badly waterlogged that she had to retire and find out and start repairing her damage. This reduced the fleet to four. At the St. Just Buoy Galatea and Crayfish had a good lead on Prucas. On the reach to the Messack mark Prucas closed up the gap,, and if she had stayed instead of jibing would have caught Galatea before rounding the home mark. As it was there was little between them, but again Galatea made good work to windward, and held a long lead at the St. Just mark. Once round this, however, Prucas came flying along at such a speed as the writer had never seen a canoe or yawl equal, rounding the home mark with a lead of 40s. Once more Galatea's good weatherly qualities took her to the St. Just mark first, but the flying Prucas, on the two last legs, reached past her like a bird, and crossed the winning line 1m. 25s. ahead. Meanwhile Portmanteau had been going very well, and seemed to have a fair chance of saving her time; she failed to do this, but secured second prize. Crayfish, last year's cup winner, was doing the best she could with an old centerboard in place of the one she lost at Looe regatta, but was quite out of her proper form. The official timings were as follows:

	Start.	First Round.	Second Round.	Finish.	Rating.
Crayfish	11 40 45	12 14 15	12 47 30	1 21 10	.45
Galatea, 3d prize	11 40 48	12 10 35	12 44 40	1 17 15	.45
Prucas, winner	11 40 47	12 11 10	12 44 00	1 15 40	.3
Solitaire	Withdrew.				
Psyche	Withdrew.				
Portmanteau, 2d prize	11 41 00	12 15 30	12 49 53	1 24 20	.23

The most remarkable feature of the race was the very fast time in which it was sailed, viz., 1h. 34m. 53s. by Prucas, and by Galatea in 1h. 36m. 27s. As the record for the same distance in R. C. C. cup races open to racing machines is 1h. 50m., I believe, this time is all the more creditable to cruising craft.

After lunch a tug-of-war between the fourteen B. C. A. members and twenty-one Ganges boys resulted in a narrow victory for the B. C. A. The shore race in oilskins and sea boots was amusing to the spectators, but not satisfactory to those whose big boots would come off. It was won by Mr. D. Fair by a foot from Mr. Ogilvy.

The next sailing event secured five entries only: Galatea, Crayfish, Portmanteau, Walrus, Solitaire (who had quickly repaired her damage). A good start, and a fast race resulted in a win for Galatea, with Crayfish second and Solitaire third. There were no time allowances for this race, and the prizes were given by our old friend Mr. Aydon, whose presence in camp was heartily welcomed. Another sailing race over the same course (3 miles) took place immediately after. This was from moorings with sails down. Solitaire was much the quickest under way, but being moored a long way from the line only crossed 1s. ahead of Crayfish. Galatea again soon worked out the usual windward lead and won the race, Prucas being second and Crayfish third.

Monday, Aug. 14.—After some short excursions to various places all hands mustered at 5 P. M. for the annual meeting. After the usual passing of reports, which showed the Association to be in a sound financial position, Mr. T. H. K. Bartley was re-elected commodore, Mr. P. Oliver vice, and Mr. Harold Clayton rear-commodore. A long discussion on the question of a permanent headquarters for the B. C. A. then took place. It was then resolved that a sub-committee, consisting of Messrs. Bartley, Lane and Nisbet, be empowered to make all preliminary arrangements, and to select a site and report upon it to the annual meeting in London next spring. Such a home is not intended to interfere with the usual meets in any way, but to provide an attraction for those members who cannot take their holidays at the time our camp is held. Photographs and other particulars of camp sites for next year were laid before the meeting by Mr. Clayton, who advocated Strangford Lough, and by Mr. Thorpe (by letter), who strongly urged the attractions of Holland. The decision will not take place until the London meeting in the winter or spring. At 7 P. M. the annual dinner was held in the large marquee.

On Tuesday, the 15th, all hands went out cruising in search of camp sites, the most suitable one being discovered at St. Mawes, near Falmouth, and photographs were taken of it by Mr. Clayton. The weather still remains magnificent, and only two showers haven fallen in the last three weeks.

Yachting.

Fixtures.

SEPTEMBER.

6. Norwalk, open, Norwalk, Long Island Sound.
7 to 11. Interlake Y. R. A., meet, Put-in-Bay, Lake Erie.
9. Royal Nova Scotia, open handicap, Halifax, N. S.
9. Atlantic, Gould cups, Sea Gate, New York Bay.
9. Seawanhaka Cor., fall race, Oyster Bay, Long Island Sound.
9. Larchmont, special, Larchmont, Long Island Sound.
9. Hull, Mass., open, Hull, Boston Harbor.
9. Winthrop, cruise to Hull, Winthrop, Boston Harbor.
9. Wollaston, handicap, Wollaston, Mass.
9-10. Y. R. A. of Massachusetts, rendezvous and sail, Hull.
9. Wood's Holl, club, Wood's Holl, Quissett.
9. Burgess, 3d cham., Marblehead, Massachusetts Bay.
10. Penataquit Cor., knockabouts. Bayshore, Great South Bay.
14. Newport, ladies' cruise, Newport, Narragansett Bay.
16. American, fall regatta, Milton Point, Long Island Sound.
16. Philadelphia, cup, Philadelphia, Delaware River.
16. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Riverside, fall regatta, Riverside, Long Island Sound.
24. Williamsburgh, annual fall regatta, Bowery Bay, L. I. Sound.
27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

THE new 35ft. class of the Great Lakes, made up of the twelve yachts designed for the Canada cup contest, offers an interesting field of study for all advocates of the girth rule, especially those on the other side of the water. With the exception of the one detail of the measurement of a portion of the centerboard for girth, the rule is identical with the present linear rating rule of the British Y. R. A., and the class is only 1ft. smaller than the Y. R. A. 36ft. class. While in England the waterline length of a 36-footer is from 30 to 31ft., in the new 35ft. class it has been cut as low as 24ft., the majority of the yachts being from 27 to 28ft. We hope later on to be able to publish the lines of some of the best of the new class, with such information as will give grounds for a critical study of the interesting development of the rule. With the data now at hand it is impossible to discuss the question fully, but there are several points which show on the surface. Though plainly under-canvased, the keel boat Beaver was almost a match for the centerboard boat Genesee in the very light weather in which all the races were sailed; and if the claims of the Genesee crew of the ability of their boat in strong breezes be accepted, it may be assumed that the two radically different types are practically equal in speed. If, as seems probable now, Beaver represents the fastest type of keel boat which can win under the rule, it certainly has failed of the end looked for by many, as she is very little more than a fin-keel in internal space. At the same time, she is of a safe and generally seaworthy type for the lakes.

The centerboard boat Genesee illustrates very forcibly the point made by Mr. John Hyslop some time since through the FOREST AND STREAM, that while the measurement of girth does not of necessity place a premium upon a larger area of midship section, in certain types it actually imposes a penalty upon an increase of area. The hull girth of Genesee is the minimum, owing to her very shallow section, being but 11.75ft., or almost the exact figure of her beam, 11.63ft. If an attempt be made to improve her by deepening the body, giving a more roomy and abler type of centerboard boat, the result is an immediate increase of the girth factor. In the keel types the reverse of this is the case, any filling out of the section from the fin or semi-fin to a wholesome S form decreasing the girth measurement, though not to a material extent.

THERE is no doubt that Genesee, Beaver and Minota are very fast yachts, and would hurry some of the leaders in the classes about New York and Boston. It would be a most interesting experiment if Beaver could be brought to New York, and as she is for sale at a moderate figure, this would be easily possible if it were not for the foolish and cowardly Payne bill—now a law. Under this law, Beaver, if owned by an American citizen, would be compelled to enter and clear at every port, so that apart from the mere amount of the customs dues, it would be impossible to sail her day by day on Long Island Sound, as most of the time would be taken up in the formalities of the custom house.

Shamrock's Spars.

ON Friday of last week Mr. Barrie, the representative of Sir Thomas Lipton in New York, with Capt. Matthews, of the steam yacht Erin, went to Boston to charter the steamer Plymouth as an additional tender for the challenging fleet. With this charter Sir Thomas will fly his flag over a fleet of nine vessels in New York Harbor for the next six weeks. Many estimates are being made of the amount of money which he will spend in the attempt to secure the America Cup, but they are necessarily very vague. The total outlay on both sides will, however, run up to an enormous figure. The following, from the Tribune, gives some idea of the outlay in the one detail of spars for the challenger:

The unlimited expense which Sir Thomas Lipton is lavishing on his quest of the America Cup was in evidence again when two sets of rigging and four suits of sails were brought to port on Saturday and skilled workmen arrived from foreign yards to make the challenging yacht ready for the races. Three ocean liners brought the material and men from British ports. The Etruria brought the carpenters sent by Fife from the Fairlie yards, and they were taken to South Brooklyn in the steam tender Nonowantoc, which met the Cunard liner at her pier. Ratsey and Lapthorne, of Cowes, perhaps the greatest sailmakers of the world, sent over six skilled men in the St. Louis from Southampton. The St. Louis also brought several wagon loads of picked material. This included twelve bales of sails, one steel backstay runner, one gaff saddle, one throat bolt, one brass sheave, two galvanized iron sheaves, three steel and aluminum spars, two wooden spars and foreplates.

Besides the above, which were entered on the ship's manifest, the St. Louis brought over a lot more of interesting material for the Lipton boat. From the Woolston Naval Works, near Southampton, she brought the Shamrock's racing spars of aluminum bronze. They were carried on the upper deck, tightly lashed and wrapped in slats and canvas, where they could be measured by any of the passengers.

These spars are cylinders made of closely riveted plates. The two lashed on the starboard side were a topmast and jibboom. The former is 71ft. long. In diameter it is 14in. in the thickest part, and it tapers to 4in. at the truck. What is meant by "the jibboom" is not well understood here, because these 90ft. cutters do not carry jibbooms; but the spar that was shipped under this name is 55ft. in length, 5in. in diameter at its outer end and 12in. in diameter in its thickest part.

The main gaff, also of the same material, is 67ft. 6in. long. Where the peak halyards attach it is 12in. in diameter, and at the jaws end it is 7in. thick. At the peak it is only 5in. This spar and two club topsail spars were on the port side uncovered, and in places the brown paint has been knocked off, showing the white metal underneath. One of the metal poles, the club topsail yard, measured 62ft. in length, and in its thickest part is 10in. through. The club that will go with the same sail is 50ft. long and 9in. in diameter, tapering to 3in. at each end. It is not

certain that these two are not both clubs and that the yards are to follow.

The Atlantic Transport Line steamer Mesaba, from London, also arrived on Saturday, carrying still another set of racing spars for Shamrock. She brought one lower mast, a topmast, a spinaker boom, a club topsail yard and the club, two crosstrees, and two cases of metal fittings and consignments of rigging and blocks. All the spars brought in the Mesaba are of wood, and as most of them will probably never be used in this country except in case of the failure of the metal ones, they may be regarded as spare spars only.

The actual measurements of the racing spars which have arrived show that nothing was to be prejudged of the challenger's speed by the size or appearance of the outfit with which she raced with Britannia. When the challenger meets Columbia every sail she carries and every spar on board of her will be different from those she carried in England. Not only are they different in size, but also in material. Instead of being made of wood the spars are intended to be raced with are of a new alloy. The ingredients that go into this alloy are wholly unknown in this country, and it is a special discovery that has been utilized by Fife. What the virtues of the whitish looking product of the secret processes are, nobody in America knows, but it is safe to say that Fife has satisfied himself that this "aluminum bronze" gives a metal of great strength combined with great lightness.

All that is known of the product is that the huge mast composed of this material was handled with such extreme ease on its arrival in New York that its evident lightness was remarked by every one who saw it moved.

With the exception of this mast, the spars which are now going in Shamrock are not those with which she will race Columbia. The bowsprit which was put in place on Saturday morning is a heavy Oregon pine stick, which will be used merely for practice and will be replaced later on by a hollow bowsprit of aluminum bronze, which arrived here on Saturday.

If the length of Shamrock's mast from deck to hounds has been rightly measured at 79ft., her truck will be just 150ft. from the deck, and 9ft. higher than Columbia's present masts.

Lake of Two Mountains Regatta.

Saturday, Aug. 26.

The Lake of Two Mountains regatta, always one of the events of the season for the yachtsmen of Dorval, Pointe Claire and other places on Lake St. Louis, was sailed on Aug. 26, a large fleet being in attendance. The Lake St. Louis fleet cruised up to the Lake of Two Mountains, returning on Sunday afternoon. The principal race, for the challenge cup, had the following Starters: Glencairn III., G. H. Duggan; Glencairn II., W. C. Kennedy; Speculator, A. Hamilton; Strathcona, W. S. Clouston; Manitou, A. Drummond; Millie, Jeffries and Ives. Twenty-two-footers, Waldo, C. T. Williams; Bona Dea, J. Paton; Viking, L. J. Smith; Koorali, S. Finley. The course was a triangle of four and one-half miles, sailed twice. Glencairn led easily, with Bona Dea second, until just at the finish, when she was passed by both Strathcona and Manitou. The times were:

	1st Round.	2d Round.	Elapsed.
Glencairn III.	4 10 38	4 47 17	1 12 17
Strathcona	4 16 19	4 56 36	1 21 50
Manitou	4 15 16	4 56 36	1 21 50
Bona Dea	4 16 44	4 57 16	1 22 16
Speculator	4 16 53	4 57 38	1 22 35
Millie	4 17 58	4 58 29	1 23 29
Glencairn II.	4 17 26	4 59 56	1 24 55
Viking	4 16 34	5 01 02	1 25 12
Ivaloo	4 18 54	5 02 33	1 27 33
Koorali	4 19 38	5 02 50	1 27 50

The starters in the cruising race were: Seventeen-footers, Habitant, Mr. Hemsley; Brenda, Prof. Capper; Turtle, Mr. Routh; Folly, A. E. Abbott; Lalage, J. B. Abbott; Otter, Prof. Durley; White Squall, R. Starke; Water Witch, H. Paton. Folly had a long lead at the end of the first round, but she broke her gaff and Turtle took first place. After repairing the gaff Folly finished second, the times being:

Turtle	1 28 52	Habitant	1 34 47
Folly	1 31 42	Boomerang	1 35 66
Lalage	1 31 42	White Squall	1 45 45
Water Witch	1 32 24	Otter	1 47 22
Brenda	1 33 50		

The visitors were entertained by the Hudson Boat Club, a dance being given in the evening.

Shelter Island Y. C. Fall Regatta.

GREENPORT—SHELTER ISLAND.

Saturday, Aug. 26.

The fall regatta of the Shelter Island Y. C. was sailed on Aug. 26 in a strong S.E. breeze, the yachts having all they could do to carry double-reefed mainsails. Dilemma, the first Herreshoff fin-keel, won from the new Herreshoff 25-footer Oiseau. Mira lost her bobstay, and her opponent withdrew, so the race will be resailed. The times were:

	Start.	Finish.	Corrected.
Class B—Sloops.			
Eidolon, James Weir, Jr.	2 34 02	Did not finish.	
Mira, Charles Poor	2 33 52	Withdrew.	
Special Class			
Dilemma, L. A. Fish	2 36 37	4 25 23	1 48 14
Lynx, R. B. Lynch	2 36 36	4 33 31	1 55 03
Oiseau, P. L. Maxwell	2 37 27	4 26 39	1 49 12
Class D.			
Marion, F. M. Smith	2 37 35	4 39 02	2 01 27
Ottalie, O. E. Lohrke	2 37 16	4 39 17	1 58 43
Martha D., P. L. Coe	Did not start.		
Thalia, E. F. Nugent	Did not sail		
Class E.			
Asthore, Charles H. Otis	2 41 08	4 51 34	2 10 26
Rover, J. N. Luning	2 42 00	Did not finish.	
Class 2—Cats.			
Vinata, T. M. Towl	2 41 32	4 56 11	2 14 39
Allair, George F. Little	2 42 00	5 01 10	2 16 48
Class 3.			
Mendota, C. F. Cartledge	2 40 33	4 55 10	2 14 13
Merula, F. W. Jenkins	2 41 04	5 01 09	2 23 24
Edna, Edward Burns	2 39 58	5 53 06	2 13 08
Rattler, D. Masters	2 40 27	4 58 45	2 14 53
Class 5.			
Francis, J. L. Cooney	2 45 49	4 15 55	1 30 15
Spook, J. L. Hutchenson	2 45 47	4 22 20	1 34 27

The winners were Dilemma, Ottalie, Asthore, Vinata, Edna and Francis.

GLENIFFER—SCHOONER.

Designed by G. L. Watson, for James Coats, Esq., 1898. See Forest and Stream, June 10.

Manhasset Bay Y. C. Fall Regatta.

PORT WASHINGTON—MANHASSET BAY.

Saturday, Aug. 26.

The race of the reorganized Douglaston Y. C. on Aug. 26 was properly the first event of the Manhasset Y. C., the future name of the club. There was no wind in the early afternoon, and the race was not started until 3:55, the course being shortened to two rounds of a three-and-three-quarter-mile triangle. On the second round there was a fresh breeze. The times were:

	Finish.	Elapsed.
Cabin Cats—25 and 30ft. Classes—Start, 3:35.		
Grayling, H. W. Warner	6 01 36	2 26 36
Win or Lose, J. S. Appleby	5 39 30	2 05 50
Hypatia, O. C. Belding	5 59 39	2 24 49
Knockabouts—21ft. Class—Start, 3:40.		
Mongoose, S. Ford	5 49 03	2 09 03
Kitty, Hazen Morse	5 45 02	2 05 02
Spindrift, F. C. Pirie	5 49 58	2 09 58
Lassie, E. C. Wallace	6 01 02	2 21 02
Knockabouts—Seawanhaka Design—Start, 3:40.		
Thelga, A. Thayer	5 46 27	2 06 27
Midge, E. N. McLellan	5 50 41	2 10 41
Open—Jib—18ft. Class—Start, 3:40.		
Edwina, J. N. Gould	6 12 20	2 32 20
Nike, Guy Forbes	6 14 05	2 24 05
Fiddler, H. T. Vulte	Did not finish.	
Open Cats—21ft. Class—Start, 3:45.		
Palm, C. A. Miller	Did not finish.	
Ox, R. Bavier	Did not finish.	
Open Cats—15ft. Class—Start, 3:45.		
Lobster, T. J. S. Flint	6 20 08	2 05 08
Scout, H. E. Hall	6 21 44	2 36 44
Open Cats—Special Lark Class—Start, 3:45.		
Dodo, G. R. Moran	Did not finish.	
Old Squaw, S. F. Carstein	6 24 20	2 34 20
Dories—Start, 3:50.		
Tom Cod, Louis Harway	5 44 33	1 54 33
Ketch II., L. C. Ketcham	5 29 09	1 39 09
Periwinkle, H. N. Francis	5 45 52	1 55 52
Zena, F. E. Barnes	5 34 49	1 44 49
Rudder, J. R. Thomas	5 38 40	1 48 40
Dud, G. A. Corry	5 35 00	1 45 00
John Doty, C. M. Greene	5 41 35	1 51 35

The Regatta Committee included Messrs. C. P. Tower, T. F. Day and F. E. Barnes.

Williamsburgh Y. C. Ladies' Day.

NORTH BEACH—LONG ISLAND SOUND.

Saturday, Aug. 26.

The Williamsburgh Y. C. sailed its annual ladies' day regatta on Aug. 26 in a fresh N.E. breeze, the times being:

	Finish.	Elapsed.
Class A—Cabin Sloops and Cutters over 35ft.		
Portia, Brush and Fennel	5 06 47	1 21 47
Gypsia, McAleist and McKillop	Did not finish.	
Class B—Cabin Sloops and Cutters Over 30ft.		
Kelpie, F. W. Smedley	4 57 00	1 12 00
Class C—Cabin Sloops and Cutters Over 25ft.		
Rosa, R. Perino	5 03 00	1 18 00
Olympia, O. Read	5 24 10	1 39 00
Class E—Open Sloops.		
Lady, P. Hamburger	5 06 40	1 11.04
Flushing, C. Hartman	Did not finish.	
Class F—Cabin Cats Over 25ft.		
Cupid, T. Airey	Did not finish.	
Ripple, W. C. Hurst	Did not finish.	
Class H—Open Catboats.		
Marguerite, J. S. Poole	5 33 51	1 28 51

The winners were Portia, Kelpie, Rosa, Innocent and Marguerite.

Mosquito Fleet Y. C.

SOUTH BOSTON—BOSTON HARBOR.

Saturday, Aug. 26.

The South Boston Mosquito Fleet Y. C. sailed the last of its series of handicap races on Aug. 26 in a light east wind, the times being:

	Elapsed.	Corrected.
Ariel, W. J. Dinneen	2 24 05	2 24 05
Venture, W. C. Cherrington	2 17 51	2 26 04
Myth, James T. Powers	2 20 15	2 27 58
Romer, J. W. Reardon	2 22 58	2 33 12
Kismet, David Byford	2 39 58	2 40 28
Seaweed, S. C. Higgins	2 20 23	2 43 48
Alda, C. P. Mooney	2 30 37	2 53 26
Aurealis, R. F. Landers	2 16 29	2 55 58
Carrie M., M. C. Robinson	2 05 48	2 56 38
Nonpareil, W. F. Davis	2 42 44	3 09 30
Alcyone, J. Tuttle	Withdrew.	

Duxbury Y. C. Open Regatta.

DUXBURY, MASS.

Saturday, Aug. 26.

Atlantic Y. C.

THE Atlantic Y. C. regatta was sailed on Sept. 2 over a triangle having two long legs and one short one. It was laid from off the club house to buoy off Fort Hamilton, to buoy off Coney Island Point, back to the starting line. Sloops sailed this three times, fifteen and a half miles; knockabouts and cats twice, and the canoes once.

The winners of the races were: Acushla II., walkover prize; Uvira, Awa, Eidolon, Genia, Bonito, Midge, Chinook (won the Weston cup), Qui Vive and the canoe Kosata. The summary:

	Finish.	Elapsed.	Corrected.
Sloops—All Classes—Start, 2:05.			
Acushla II.	4 05 25	2 00 25	2 00 25
Uvira	4 15 20	2 10 20	2 10 20
Zingara	4 16 35	2 11 35	. . ..
Athlon	Did not start.		
Daphne	4 18 15	2 13 15	2 13 55

Columbia and Defender.

THE first of the trial races of Columbia and Defender was sailed off Newport on Sept. 2. The course was fifteen miles to windward and return, from Brenton's Reef Lightship to a mark east of the entrance of Buzzard's Bay. The wind blew from eight knots an hour at the start to twelve knots and fifteen knots, with a smooth sea. Columbia led from the start, and beat Defender over the thirty-mile course by 6m. 49s. The official times were:

	Start.	Finish.	Elapsed.
Columbia	1 35 40	5 22 43	3 47 03
Defender	1 35 23	5 29 15	3 53 52

The official times at the outer mark were: Columbia, 3:50:03; Defender, 3:54:56.

Columbia made the beat of fifteen miles to windward in 2:14:23, and Defender in 2:19:33; Columbia's gain, 5m. 10s.

Columbia made the run home in 1:32:40, and Defender in 1:34:17; Columbia's gain, 1m. 39s.

The second race was sailed on Monday, Sept. 4, in a whole-sail breeze, over a triangular course of ten miles on a side, the first two with free wind, the last one a beat to windward. The race was like that of Saturday before, a lead for Columbia from start to finish, and she came in 10m. 7s. ahead, the times being:

	Start.	Finish.	Elapsed.
Columbia	11 26 09	2 43 33	3 17 24
Defender	11 26 22	2 53 53	3 27 31

On the first leg Columbia's time was 0:58:36, Defender's 1:02:21; Columbia's gain, 3m. 36s.

The time for the second leg was: Columbia 1:03:08, Defender 1:05:17; Columbia's gain, 2m. 9s.

The time for the third leg was: Columbia 1:15:40, Defender 1:20:02; Columbia's gain, 4m. 22s.

Shamrock.

SIR THOMAS LIPTON, owner of Shamrock, with William Fife, Jr., the designer, and Thomas Ratsey, the sailmaker, arrived at this port on Friday of last week. On Monday the party took Shamrock out for a trial race off Sandy Hook. The yacht will remain at the Hook until the races.

Beverly Y. C. Sweepstake Race.

WING'S NECK—BUZZARD'S BAY.

Saturday, Aug. 26.

THE Beverly Y. C. sailed an open sweepstake race on Aug. 26 in a fresh N.E. breeze. Daisy was sailed by ladies—the Misses Stockton, her owners, having a friend with them. The times were:

Beatrice	2 07 28	1 57 38
West Wind.	1 52 00	1 42 25

People in the country who are annoyed by flies should remember that clusters of the fragrant clover, which grows abundantly by nearly every roadside, if hung in the room and left to dry and shed its faint fragrant perfume through the air, will drive away more flies than sticky saucers of molasses and other fly-traps and flypapers can ever collect.—New York Tribune.

Hull Mosquito Y. C.

HULL—BOSTON HARBOR.

Saturday, Aug. 26.

THE Hull Mosquito Fleet Y. C. sailed a race on Aug. 26 in a light air, ending in a drift. The second class boats were in doubt as to the proper buoy, so the committee separated the boats in two divisions, with a prize to each. The times were:

	Length.	Elapsed.	Corrected.
First Class.			
Idler, R. Campbell	20 03	1 59 45	1 52 15

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of John Parker's eighth annual international live-bird and target tournament, Sept. 19 to 22 inclusive, is now ready for distribution. The first page sets forth a very attractive lot of facts, namely, that $500 in cash is added by Peters Cartridge Co., and $300 worth of trophies; and one-fare railroad rates from all parts of the United States and Canada. Shooting commences each day at 9 o'clock. There are ten events on the first day, $10 added to each. Event 5 is at 25 targets, entrance $3, $10 added, for Peters Cartridge Co. individual target trophy. Six of the events are at 15 targets, three at 20, with entrance $1.50 and $2 and $2.50. The programme of the second day is similar in every respect to that of the first day, excepting that No. 5, at 25 targets, entrance $5, $10 added, is a two-men team contest, 25 targets per man, for the Peters Cartridge Co.'s international two-men team trophy. The third day's programme is similar to that of the preceding days, excepting No. 5, 25 targets, $3 entrance, $10 added, is for the Peters Cartridge Co.'s international individual expert trophy. The fourth day, live-bird day, has five events, as follows: No. 1, 5

birds, $3, divided, 60 and 40 per cent.; No. 2, 7 birds, $3, divided 50, 30 and 20 per cent.; No. 3, 10 birds, $7, divided 50, 30 and 20; No. 4, miss-and-out, $3; No. 5 for the international live-bird championship trophy, value $150, at 25 live birds, $25 entrance, $100 added, divided 30, 25, 20, 15 and 10 per cent. Other events will be shot at the pleasure of the shooters. The Schmelzer cup, now held by Mr. C. W. Budd, will be shot for during the tournament, at 100 targets, $7 entrance. As an important notice the management sets forth the following: "A one-fare rate for round trip from all parts of the United States and Canada to Detroit can be secured, on account of the meeting of the Sovereign Grand Lodge of Odd Fellows. They will be for sale in Michigan from 16th to 19th, and outside State on 16th and 17th, all good until Sept. 25, but by depositing ticket with ticket agents in Detroit will be good until Sept. 30. Here is a good chance to take in the excellent bass fishing on St. Clair Flats, also a little duck shooting though rather early. Take car in front of Wayne Hotel and transfer to Jefferson avenue through car, which runs direct to grounds. Ship all shells, etc., to Hodgson, Howard & Marks, 93 Woodward avenue, and they will be delivered free of charge on grounds. First-class up-to-date meals at Rusch House on grounds. Fish, frogs and chickens a specialty. Shooters protected from weather. Plenty loaded shells on grounds. Extra live-bird sweeps shot every day, birds and traps ready for practice at all times through tournament. Practice shooting Monday, Sept. 18. All participants in shoot are cordially invited to partake of a trip on boat to St. Clair Flats Saturday, Sept. 23; boat will leave dock foot of Third street, near Wayne Hotel, at 8:30 A. M., returning that evening. American Association rules. No targets will be thrown over 50yds. Target moneys divided 30, 25, 20, 15 and 10 per cent. Those not classed as manufacturers' agents shoot over five traps, as per diagram. Events 1, 3, 5 and 8 each day are open events, no handicap, everybody shooting over three traps, Sergeant system, except event 5 on third day, for the expert trophy, when everybody shoots over the five traps, as per diagram. All of the target trophies become property of winner. The Gillman & Barnes' live-bird frophy must be won three times, not necessarily in succession; nobody has won it over once. E. D. Fulford's live-bird traps will be used. Those not desiring to shoot in sweepstakes in the trophy races can contest in same by paying for birds only, and same will count on average, and are also eligible for trophies. $100 average money will be divided 30, 25, 20, 15 and 10 per cent. (not high guns) among those making highest average in all events during the four days except team race and miss-and-out. Class division in live-bird events. Plenty of help. Come and see a first-class up-to-date shoot. If anybody by his shooting first day proves that he is unfairly classified, the mistake will be rectified the next day. Address all communications to John Parker, 465 Junction avenue, Detroit, Mich."

Under date of Aug. 30, Mr. A. W. Walls, secretary of the Worcester Sportsmen's Club, Worcester, Mass., writes us as follows: "In connection with the programme of the shoot of the Worcester, Mass., Sportsmen's Club, Tuesday, Sept. 12, there will be a 100-bird race for a purse of $50, one money, open to all shooters of New England. Mr. A. B. F. Kinney offers this purse to determine who is the champion 100-bird race shooter of New England for 1899. The race is to be shot unknown angles and will bring out all of the crack shots of New England, and there are twenty or more who can't be beat, and who will no doubt try to down the other nineteen or more. We hope to get them all together and watch the fun. Come over, Ed and Harold, and the rest of the good ones and show the New England boys what you would do to them if you could play in our yard."

We learn that Mr. Ed Johnson, the great master of the shotgun, met with a most grievous accident on Wednesday of last week while on the marsh shooting rail birds. By some means his gun was accidentally discharged as he picked it up in the boat, the load tearing through the muscles of his right arm, and there were fears that it would have to be amputated. We earnestly hope that the accident will develop none of the serious turns which are feared, and that this modest and excellent shooter will soon be as good as new.

The programme of the Glenwood Gun Club's third annual fall tournament and merchandise shoot at Newburgh, Sept. 15, provides eleven events, six at 10 targets, three at 15, one at 20; the eleventh is the merchandise event at 25 targets, $1.25 entrance. All the other events have a uniform entrance of $1. Targets 2 cents. Ten per cent. of purses taken for average money. Amateurs may shoot for targets only. Mr. C. Hoppenstedt is the secretary.

Mr. Chris Wright, famous as a trapshooter in and out of New Jersey, has challenged Mr. Harold B. Money for the E C cup, emblematic of the championship of New Jersey, and his challenge has been accepted. Sept. 23, at 2 o'clock, on the grounds near the Rouclere House, Ridgewood, N. J., are fixed as the time and place. Mr. Zellwerger, proprietor of the hotel, will prepare the grounds so that everything will be ready for the contest.

Mr. John S. Wright, manager of the Brooklyn Gun Club, has sent out invitations to his pupils to attend a pigeon brewing at Tom Morphy's grounds, Wednesday of this week. Mr. Morphy has promised to have on hand 1,000 of his best copper-distilled birds, while Mr. Wright has promised to have on hand enough shooters to put the pigeons out of business. Shooting commences at 10:30.

Mr. Geo. B. Thorpe, secretary of the Connecticut Trapshooters' League, Bridgeport, Conn., writes that "the Bristol Gun Club unfortunately will be unable to hold the usual Connecticut Trapshooters' League tournament this season, owing to mishaps to their trap pits and their inability to get the local members together to take charge of it."

In a brief note, under date of Sept. 2, the secretary of the Worcester Sportsmen's Club, Mr. A. W. Walls, 6 Woodbine street, Worcester, writes us, "We expect a great shoot on Sept. 12. The boys will all be here." Write to him for programmes and for particulars of the 100-target race, $50 prize, entrance price of targets, for the championship of New England.

We learn that Messrs. Daly & Chanfrau have abandoned all shooting at Elkwood Park, and that this historic place in shooting annals will be devoted henceforth to golf. The new Interstate Park, with its special advantages, is recognized as a factor in the shooting world against which it is useless to cope.

The New Jersey State League, in a quiet but firm manner, has arranged to hold a two-day's tournament on Oct. 11 and 12, on the grounds of the East Side Gun Club, at Newark. The first day will be at targets, the second at live birds. The programme will be announced later.

The Bristol sheepbake, served by the Parker Gun Club, at its Labor Day shoot, was an event where everything was divided most equitably. It, however, is what is termed a barbecue in the West and South, but whatever the name, like the rose, the sheep is just as sweet.

Mr. L. Harrison, of Minneapolis, Minn., has returned to the East, and we are told with greatly improved health. He is one of the most popular of visiting shooters, and therefore the report that he will make a long stay in this neck of woods is received with pleasure.

Ballistite, a powder well known to English sportsmen, is now being introduced to American sportsmen by Messrs. J. H. Lau & Co., No. 75 Chambers street, this city. The special advantages of this powder, and the special offer concerning it, are set forth in our business columns.

The programme of the Rummel-Gaston Gun Club's tournament can be obtained of the secretary, James E. Gaston, Mineral Ridge, Ohio.

The next contest of the Central New Jersey League will take place at South Amboy, N. J., on the grounds of the Columbia Gun Club.

Mr. Joe George, of San Antonio, Texas, is again a welcome visitor in New York, where he will remain some weeks.

BERNARD WATERS.

Trap Around Reading.

READING, Pa., Sept. 1.—At the meeting of the South End Gun Club, of this city, held this evening, the tournament committee reported as having selected Saturday, Sept. 9, as the date for their annual all-day target tournament, and also the second shoot for the intercounty team championship for the handsome sterling silver trophy, valued at $45, for teams of five men each, each man to shoot at 25 targets. The following clubs have already entered teams: Shuler Gun Club, of Pottstown; Penn Gun Club, of Norristown; Chambersburg Gun Club, of Chambersburg; Independent, of Sinking Spring; Phœnix Gun Club, of Phœnixville, two teams; West Chester Gun Club, of West Chester; Mt. Penn Gun Club, of Reading; South End Gun Club, of Reading, and it is thought the Keystone Gun Club, of Lebanon, and a team from Pottsville will also contest for the trophy. A fine programme of sweepstake events has been arranged for the day, shooting to commence at 9 A. M. Shells and lunch for sale on the grounds. The magautrap will be used in all events to throw the targets. The club has secured the services of Arthur A. Fink to manage the events. All shooters are invited to be present, and a good time is guaranteed.

Aug. 28.—The fifteenth target shoot of the Mt. Penn Gun Club, of this city, for a fine Parker gun, was held to-day, the event calling for 25 targets, handicap of added targets to the number broken. The scores were as folloys: Yeager 17, Rhoads 19, Ball 18, Lawrence 17, Dietrick 14, Osborne 10, Laird 16, Shaaber 15.

Aug 30.—At the annual meeting of the South End Gun Club, held this evening Joseph Downs was elected President, W. W. Essick, captain; Harry Ball, assistant. The club is in excellent financial condition.

Pottstown, Pa., Aug. 30.—The Shuler Shooting Club, of this place, held a successful target tournament and clambake on their shooting grounds at Sanatoga Park, near here, to-day. Sportsmen were present from Philadelphia, New York, West Chester Reading, Phœnixville, Royersford, Boyertown, Sanatoga and other places. The clambake was under the direction of Madison L. Dengler, of Reading, and was a success, the shooters certainly enjoying the clams and green corn. The shooting was under the direction of Capt. Slonaker and secretary Showalter, who deserve great credit for their good work.

The scores:

West Chester, Pa., Sept. 2.—Peters won the West Chester challenge cup to-day by breaking 24 out of 25. The scores follow: West Chester Gun Club's challenge cup, 25 targets: Harrison 21, Gill 22, Peters 24, Henry 18, Ford 16, Ferguson 22, Davis 17, Todd 11, Mowere 18, Jackson 18, Hoar 19, Murtagh 9.

DUSTER.

Leavenworth Tournament.

FIGURATIVELY speaking, the tournament given at this place Aug. 23 and 24 was not a success, so far as attendance went. The first day saw only twenty-two entries, and the second these had been reduced to fifteen; so that the shoot was by no means a financial success, for it is well to remember that there was $100 added each day, so that in this case the amount added exceeded the price of targets. However, Mr. Sexton writes me that he is very well satisfied with his outlay, as this gave him an opportunity to mingle once more with his old-time friends at the trap, while it was also gratifying to him to be able to more than hold his own in such a fast class as was here in evidence.

The programme consisted of ten 20-target events each day, $2 entrance and $10 added in each event. Rose system, five moneys, ratio 7, 5, 4, 3 and 2.

The shooting was done over a magautrap, and bluerocks of course were the targets used.

The out-of-town shooters consisted of Dave Elliott, Lil Scott, Chas. Wright, Chris Gottlieb, J. De Shong and Walter Howe, of Kansas City; Frank Hodges, Olathe, Kan.; Dr. C. B. Clapp, Moberly, Mo.; T. J. Lytle, Atchison, Kan.; Harry Davis, Richmond, Mo.; W. S. Allen, Raymore, Mo

J. W. Sexton and H. W. Koohler were the promoters of this shoot, but notwithstanding that this entailed some additional duties upon them, they succeeded in outshooting all of the visitors. The general average table showed up as follows:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Koohler	400	378	.945	Clapp	400	366	.915
Sexton	400	371	.927	Wright	400	361	.902
D Elliott	400	370	.925	Gottlieb	400	338	.845
Scott	400	368	.920	De Shong	400	337	.842

It will be seen by the above that of the eight who shot through the programme six made an average of over 90 per cent., which speaks for itself how hard the game was.

First Day, Aug. 24.

When looking at the average table for to-day it appears that the management has been somewhat selfish, for the table reads Koohler first and Sexton second, but when you put your money up in the target game it is a case where friendship ceases; so that the visitors submitted without a murmur. Dave Elliott led the visitors with an average of .915, closely followed by Scott and Wright in the order. All of this trio hail from Kansas City.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

C E McGee	..	..	..	..	..	..	..	18	..	..	14	40	32	.800

Second Day, Aug. 25.

Koohler is again high man, though with a materially increased percentage, on this occasion it being .955. Dr. Clapp is second with .950; then come Sexton, Hodges, Dave Elliott and Scott, a single break separating each of these from the other.

Aside from the regular programme there was also a match shot between Koohler and Hodges, which resulted in a win for the former on a score of 98 to 94. Hodges started off poorly, as he lost 4 out of his first 25, but from thence on he shot a good steady gait, making one run of 55. However, it was out of the question to beat Koohler on this day unless one could break them all, as he dropped but 1 out of each 50.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Koohler	20	20	19	20	18	19	19	19	19	18	200	191	.955

Capital Gun Club.

The principals in to-day's competition for club honors were most of the novice class, and singularly enough one of this class developed such a stride that it was simply impossible to head him off, and he easily carried off the honors. He broke 42 out of 50 and then broke 8 of his first 10 in his allowance of 15; so this gave him a total of 50. Heretofore he had been breaking about 50 per cent. Weigel, the previous winner, broke 41 out of 50, but did not shoot his allowance. This was the nearest approach to Field's score of 42, so it will be seen that this youngster won strictly on his merits. This was the final medal shoot of the season. Henceforth the members will turn their attention to game, as everything but quail can now be legally shot in this State. About half of the club members are now off after chickens.

PAUL R. LITZKE.

WESTERN TRAPS.

Eureka Gun Club.

CHICAGO, Ill., Sept. 2.—Nos. 2 and 3 are trophy events. No. 4 is the Mussey cup, handicap, 15 singles and 5 pairs.

In a team shoot, 20 targets, five men on a side, the scores were: Adams 19, Heikes 18, F. P. Stannard 17, Cunnyngham 16, Buck 12; total 82.

E. Steck 20, Antoine 14; W. D. Stannard 19, Dr. Miller 19, Sprague 7; total 79.

Garfield Gun Club.

CHICAGO, Sept. 2.—The following scores were made on our grounds to-day. A medal was won by Richards on a score of 21; B medal was won by Northcott on a score of 20; C medal was won by Kehl on a score of 15.

Northcott and Mrs. Shaw tied on a score of 20 for B medal, and after a spirited shoot-off Northcott won by the narrow margin of 1 target.

The small attendance is accounted for by the opening of the duck and chicken season, which a great many of our members are celebrating by taking a few days in field and marsh.

Trophy shoot:

Kehl	1110010000101001101111111—15

DR. J. W. MEEK, Sec'y.

Portsmouth, N. H., Prize Contest.

PORTSMOUTH, N. H.—The scores of prize shoots which have been occupying the attention of the members of the Portsmouth Gun Club Saturday afternoons from May 6 to Aug. 26, inclusive, concluded on the latter date with the contestants quite closely bunched, and scoring as follows: W. I. Philbrick, shooting at 28 targets, wins first prize, the Remington hammerless shotgun, with a total of 342. W. Manson, shooting at 29, takes second prize, a Winchester take-down repeating shotgun, with a total of 328. W. H. Newick, shooting from scratch, 25 targets, wins third prize, a Winchester repeating rifle, his total being 320. H. E. Philbrick, shooting at 27, takes fourth prize, a fountain pen, with a total of 319. A. Stinson, shooting at 26, has a total of 313. A. W. Frizzell, shooting at scratch, has a total of 310. W. J. Lewis shot from scratch and had a total of 291. F. W. Manson, shot from scratch and had 274. W. E. Storer, shooting at 32, had a total of 253. L. Drew, shooting at 29, won total of 233. The two latter were at the traps for the first time this season.

Much interest has been displayed in the shooting this season, and a number of the new men have made rapid progress, especially Messrs. W. Manson, W. E. Storer and L. Drew, whose scores have been uniformly good.

The club is one of the live organizations of the State, and bound to be recognized in the sporting world. On Labor Day a large delegation from this club will be the guests of the Dover, N. H., Sportsmen's Association at their annual field day shoot. A general good time is sure to be enjoyed, as the Dover sportsmen are first-class hosts and spare no effort to make the day a pleasant one to all their guests.

At the last regular meeting W. I. Philbrick was unanimously re-elected secretary and treasurer for the coming year, and a committee appointed to select a new shooting grounds on the line of the electric road or near it. The other officers of the club are: President, W. H. Newick; Vice-President, H. E. Philbrick; Field Captain, F. W. Manson; Directors, W. E. Storer, A. S. White, C. Jackson, L. Drew and W. E. Chesley; Judges, F. J. Brown and J. Weston; Referee, E. P. Merwin.

W. I. PHILBRICK, Secy.

Springfield Gun Club Tournament.

SPRINGFIELD, Mo.—*Editor Forest and Stream:* Will you kindly insert in FOREST AND STREAM a notice that the Springfield Gun Club will keep open house on Sept. 5 and 6, the occasion being its third annual tournament?

The members of the Springfield Gun Club have felt very much gratified over the success of last year's tournament and will endeavor to make this year's shoot equal it in every way.

A liberal programme has been selected—plenty of money, and it divided on the Rose system, so that all a visitor has to do is to shoot for it.

To our friends in Kansas City and St. Louis we know that a simple announcement of the dates will be sufficient to bring them here, but to those who were not fortunate enough to attend last year's shoot we beg leave to extend a most cordial invitation to get their gun and shells and join us in a two days' frolic. All the railroads entering Springfield have offered a rate of one fare for the round trip, so our friends can be sure of returning home.

HERBERT TAYLOR.

Bison Gun Club.

BUFFALO, N. Y., Aug. 31.—The following are scores made in the regular weekly club shoot of the Bison Gun Club of Aug. 31. Event No. 4 was the badge shoot, and was won by E. C. Burkhardt, who scored 25 straight. Event No. 7 was at 7 live birds. E. C. Burkhardt did remarkably fine shooting, scoring 74 out of his first 75, and 95 out of 100. Also scoring straight in the live-bird event:

BISON.

Confabulations of the Cadi.—XIX.

IT came to the morning when that fourfold personage—paw, paw-in-law, grandpaw and ego—contemplated taking his departure at some hour of the day, journeying thitherward to his own sweet home. It will be remembered that he had been making a visit to his son-in-law's home, which was all the happier for his coming and much excited over his going. On account of this event the Cadi and his family rose at a much earlier hour, though they were early risers at all times. Hopie Jane and the children seemed to be nervously apprehensive that something dreadful was going to happen, and all were more or less fretful in consequence. The good mother found much difficulty in issuing commands and rebukes consistently with enjoying a good mouthful of snuff; and in the excitement of the forthcoming event the children either heeded not the words of their mother or forgot them a moment after they were uttered. The Cadi, however, was calm and collected; he assured his beloved brevet parent that he had risen earlier than usual so that thereby he would have more happy hours in which to enjoy said parent's society; he mentally reserved stating that paw by rising early could complete all arrangements for his departure and go, beyond peradventure. In the good Cadi's code of hospitality not only should the latch string hang on the outside of the door to welcome the coming guest, but it should also hang outside the door so that the parting guest might handily close it after him on his departure, thus making a true equation of "Welcome the coming, speed the parting guest."

At breakfast the Cadi looked grave, and his good wife looked tearful. Every one had a fair allowance of corn pone and buttermilk, and paw in addition had, as guest of honor, a delicately cooked young rabbit. There was a respectful silence, though there was no falling off in rapid, two-handed action on the pone and milk, for breakfast in the domicile of the Cadi was not at all in the nature of a social function; it was treated as a necessary incident, to be dispatched with expedition, commencing when the corn pone and buttermilk were fairly set on the table and ending when they were eaten. This standard was conducive to rapidity and alertness, for if one dallied unwisely the main incident of the morning might be closed and the race finished before the laggard had time to realize what had happened. Father-in-law having but three or four teeth which articulated properly and being a guest also, was privileged to place an extra piece of pone beside his plate to finish at his own pace, while the children remained in their seats and watched him with gleaming envy, and swallowing sympathetically every time that he swallowed.

The Cadi and Hopie Jane arose from the table, swallowing their last mouthful of breakfast as they walked away, for there was no dawdling over morning papers, nor nibbling at tidbits, nor squeamish toying with knife or fork in the home of the Cadi; any one who hesitated was lost. It was miss-and-out.

Hopie Jane told paw that the harvest work needed attention and that she and the children would have to go out to the fields in consequence, and she charged him to blow the dinner horn when he got ready to go from them, so that she might return and bid him an affectionate farewell. He mumbled "All right" without losing a single chew on the rabbit leg which he was holding to his mouth in both hands, and Hopie Jane hurriedly stacked breakfast dishes at the foot of the table for future reference, intending to wash them later in the day. She cautioned the Cadi against any exertion, and told him to be sure and drink plenty of coffee, of which there was an abundance in the coffee pot for his special delectation. Then, after shooing the children together, and under pretense of being happy, as she went to the field, she sang in a voice made up mostly of false notes:

> "He promised to bring me a basket of posies,
> A garland of lilies, a garland of roses;
> A little straw hat to set off the blue ribbons
> That tie up my bonnie brown hair."

The morning was cool and mildly bracing. It was of autumn's best days, when the Cadi could bask in the mellow sunshine of the morning or repose sweetly in the shadow of the house during the midday hours, as was proper and becoming to an invalid philosopher who considered things both little and great as matter for abstract contemplation.

There were sere places in the landscape, mere patches here and there, significant of the great transformation scene of nature when she seems to die, but wherein she only prepares to rest in winter's mantle, to begin again in the spring, rejuvenated and beautiful. To Hopie Jane, however, all the mellow sunshine and falling leaves and strange migratory birds which ceaselessly hopped about or flew southward, were indicative of a time when malaria becomes a thing to be thought of, and she pampered the good Cadi with extra good corn pone and strong decoctions of what she truly believed to be coffe, to guard him against a disease so insiduous and so intractable. While the amiable Cadi took all these wifely attentions with the deference which he owed to her as the bread-winner of the family, he never failed to suggest to her that all her remedies were greatly assisted by an abundance of good hard cider, taken before and after eating in a manner which, he gravely assured her, the best doctors termed ab lib, a term they only used with the very best remedies. A reasonable amount between times, he further assured her, aided greatly as a preventive, besides being a tonic of inestimable goodness, all of which Hopie Jane assented to by word and deed.

It may be remarked, en passant, that many good people who are wiser than Hopie Jane assent to fallacies equally weak, believing in a universal panacea which makes them cool when they are warm, warm when they are cool, happy when sad, well when ill, witty when dull, etc., a nectar which is good in summer and better in winter and good in winter and better in summer—all as fallacious as well could be imagined.

Behold the afflicted Cadi and his aged friend sitting on the sunny side of the house after Hopie Jane and her cluster of olive branches had straggled away to the labors of the day. The Cadi sat in his easy chair. Opposite him sat paw on a log, with his feet resting on its side and his elbows out, his posture suggesting strongly a descent from arboreal ancestry, while ever and anon the gentle breeze toyed with his whiskers and sifted out the corn bread crumbs which had found lodgement therein at the morning meal. He thought that the Cadi was able to work, but he was awed somewhat by the greatness of him, so he compromised the matter by keeping the Cadi company in his long daily rests, incidentally taking a hearty pull at the cider pitcher whenever his dutiful son-in-law pushed it toward him; after this incident had happened two or three times, father-in-law would look at son-in-law with a very fishy expression of countenance, listening with painful intentness, nodding his head with peculiar unction at wrong junctures and moving his hands about in the meaningless manner in which a silly gosling, cast on its back in a hole by the wayside, claws the air weakly.

The Good Old Days.

The Cadi had regaled his parent with a long dissertation on the advanced state of the sciences at the present day, to which the latter gave frequent assent in a rather foggy fashion, at length breaking in with the remark that:

"It do seem to me, Cadi, as how these days hain't not no mo' like them good ole days when I was a boy. Them days was days all right. Everybody and everything was better and was different. I wish I was a boy ag'in, way back in them good ole days ag'in, with the corn huskin's and the fishin' and the good ole dog and the woods and the squir'ls, with a gun."

"Bother the good ole days, paw, and bother a squir'l with a gun," retorted his good son, with some impatience. "There weren't any good days then any more than there are good days now. They seem like good old days to you now because when you look backward through the years you come to yourself as a boy and see yourself in those years when you were free from care. They indeed were blithesome years as compared with the years of the present. Chasing butterflies and mastering tin horses, with board and lodging provided by your parents, made rather happy days; but your parents and elders had then all the cares and troubles that you have now, and they in turn looked back on the years of their youth as being the years containing the good old days. These years which you and I are now enjoying so well together will years hence be the good old days of my children and the children of others of the present day—and why? Because they are furnished with corn pone and a roof and clothes, be the same more or less, and because they have a lightning digestion and a keen palate for anything which is eatable, and withal a crass belief that the surface of things is as things really are. And moreover they don't know any better. We are prone to believe that, as we gain more knowledge of the world, it is changing, whereas it is really the same old world, the change being in our knowledge of it. You don't take as much interest in your old single-barrelled gun and the squirrels as you did when you were a boy and a younger man, but you will note that the young men of to-day shoot squirrels and enjoy what you enjoyed, and that in a way the good old days are still doing business at the same old stand. You are having good old days right now, but you don't seem to know it. Happiness is always like good fishing, or good hunting—always a piece ahead. In the good old days of which you sing so sweetly, you were then looking ahead, and if you were back again in them you would be still looking ahead. The present time is the time to be happy in, paw, and let past and future take care of themselves. Drive a nail, paw," and the Cadi pushed the pitcher toward his revered companion.

"Whew!" exclaimed father-in-law. "It mought be that you'r' right, but I'm an older man than you air 'n' p'raps I know a thing or two from sperience. Things has changed, 'n' I know it. And I'm having a good time too all the same," and here paw looked long into the pitcher.

"It is well, paw, after all, to look at it that way. If you could stand here double—as you are now and as you were when a boy—you would indeed see that there is a change; but you are wrong in thinking that the good old days are far away in the past. The good days are as we make them, and they can be the days passing at present. Stop living in the past or future. A man who lives that way passes through life without having lived in reality. Join a gun club, endeavor to be high gun at every shoot, and you will find something that will engage your time, money and best effort at the present. You might need a handicap at the start, but if you had a good one it would make things all the easier."

"What kind of a handicap is the best one?" queried paw.

The Hunch Handicap.

"The hunch handicap is the best," replied the good son. "Look at those pigs which have just come out of the woods and found their breakfast left by Hopie Jane in that trough. Do you notice how that end shoat has one forefoot in the trough and his shoulders braced against the others so that he can boost them all along in a row at will? That pig makes his own handicap and is sure to win out before the game is ended. That is the true hunch handicap. If you become a shooter, paw, never forget the hunch handicap. You will find that few shooters ever think they have enough handicap, and if you make good use of your foreleg and shoulder you may always win out."

"I swow, that's not a bad idee, as a gin'ral propersition," paw replied.

"My head is feeling light this lovely morning, Paw," continued the Cadi, sweetly, "and I will do something which will remind you of the good old times. I will sing you a song such as mother used to sing—"

"Scuse me, son Cadi," interrupted Paw, as he rose hastily. "My mommer had a bass voice much like yourn, and it uster be a awful grind when she sawed off a song. Blow the horn for Hopie, for I'm gwine home. I don't want no pies like mommer uster make, nor no songs that mommer uster sing."

BERNARD WATERS.

An Old Home Week Shoot.

DUNBARTON, N. H., Aug. 31.—On Aug. 29 Dunbarton decided to celebrate "Old Home Week." This is a farming town some nine miles in length by five or six in width. A few years since it was said that we did not have within our borders a railroad, a telegraph, a doctor, a lawyer, a pauper or a poorhouse. I am quite sure the same state of things prevails to-day. Our celebration was a most decided success. The village at the center overflowed with visitors—former residents and many prominent New Hampshire men, including Gov. Rollins, Senator Wm. E. Chandler and others. Dinner was served in the town hall for something over 1,100. As a member of the executive committee I proposed to get up a trapshooting contest as one of the events of the day, and something which I thought would be a novelty, as we have never had anything of the kind in the town before, and most of our residents had no idea what a bluerock target looked like. I heard a woman say when she first saw one: "Is that what the boys call a bluerock pigeon? It looks more like a pot cover." In getting up this match I said that I would do my best to make it a success, and that I would not ask any one in the town to contribute one cent toward any expense it would entail. Some of my friends, however, outside our town were generous in giving me some assistance. I think there has seldom if ever been a shooting contest held on grounds affording as fine a view. A short distance from where our traps were set a magnificent view of our mountains and valleys can be had. To the north Kearsarge and the Franconia ranges are plainly seen. Westward Monadnock, Ragged Mountain Sunapee and miles on miles of lesser hills, and the valley of the Contoocook. South, the double-headed Uncanunucs stand out clear against the sky.

The match, as I planned, was to be a tetam race between five men from our town and a like number from the neighboring town of Henniker. It was not very easy to pick up five men for our team. With the exception of myself and one other, none of those I could think of had ever shot in a target match. I got hold of four young fellows and tried to give them a few lessons in target shooting. The accuracy and almost unfailing regularity with which those fellows would shoot into empty space was not very encouraging. The only redeeming point was in the few targets needed. Ten or a dozen bluerocks would nearly always furnish twenty-five or thirty shots. I tried my men on targets thrown high, on targets thrown low, on slow and on very fast ones, with the most regular results. They would miss them just the same. I heard that our opponents were doing some work and making pretty good scores, but I also found out that they were throwing slow high targets. I made up my mind then to throw the targets in our match as hard as I could under the rules. I knew our men would miss the greater part, no matter how trapped, and all I could do would be to make the other fellows miss as many as possible. We knew we could not win under any conditions.

The match was to be called at 2 o'clock, and to be at 50 bluerock targets per man, targets thrown from expert trap, unknown angles, revised American Association rules to govern; class shooting. The following prizes were put up for best individual scores:

First, one 6¼lb. can Du Pont's Smokeless powder; second, 300 U. M. C. Smokeless shells; third, 25lbs. Tatham's No. 7 chilled shot; fourth, Powers' brass cleaning rod; fifth, 2,000 U. M. C. felt gun wads.

Some consolation prizes were put up for those not winning or being in team match.

The match was started promtply at 2 o'clock before a large crowd. As leader of the Dunbarton team I went first to the score and distinguished myself by missing 3 out of the first 5. There was a time when I asked no odds of any one anywhere at target shooting, and my record in different parts of the country bears out my statement. My day has apparently passed. Possibly lack of practice for a number of years may have something to do with it. Probably lack of skill in handling a gun with the precision of former days is the real cause. Every dog has his day, and I may have had mine. Yet the old spirit sometimes partially revives, and I do not at times like to think of myself as an altogether "has been."

In our match, prizes, bluerocks and such things were furnished free. The score is as follows, at 50 each:

Henniker Team.

Goss	01101101111111111111010111111111011111100110110100 10—37
Bouton	00111100101110110111000101000111010111111001110011—30
Chadwick	10111100111101110010111110111011100610011111011111—36
Chandly	01010010100100000110001001010000100011011011001000—18
Woodruff	10111000111110111011101111111110011101111011011—36

Dunbarton Team.

Stark	01001111011001111111111101010110100111011111111110—36
J Perley	11101100101110111011011111111011011110110111111101—38
Smith	00101010000010000001001000000010000001011011010100—14
Story	01000000001000010000000100010110000000100000000000— 8
F H Perley	10001101010011101010001101100111100011011110110111001—28

J. Perley won first, Goss second, Woodruff, Chadwick and Stark tied on third, Bouton won fourth, F. H. Perley won fifth.

Woodruff, Stark and Chadwick shot off. Chadwick out, Woodruff and Stark tied on 9 each out of 10. Second tie, Woodruff won.

Consolation prizes, $2 to first, $1.75 to second, $1.25 to third: Smith first, Storey second, Chandler third.

The small boy as a spectator was very much on hand, and although it was the first shooting match they had ever seen their criticisms of some of the shooters were freely given, and at times rather severe. The scores are all small—some ridiculously so—but it was hard shooting. Targets thrown at unknown angles at a distance of 64yds. by tape measure and an elevation of 9ft. I have in my time been at a good many shooting tournaments where there were some of the then most expert shots in the country present, and invariably where targets were thrown as we threw them on the 29th, high scores were scarce. Some of the members of the opposing team have been making scores of 43 to 47 out of 50 as targets usually are trapped.

Even in this back country town the wonderful shot who never misses, and who also is never seen, although often heard of, was spoken of. One of my neighbors came to me on the morning of the 29th saying, "There is a young man camping near my house whom you want on your team. He can break 25 straight bluerocks every time. (The young fellow, as I understood, was from Harvard College.) I sent an urgent message to this wonder, asking him to bring up his gun and show us how to break bluerocks, and saying that some of us had a few wads of greenbacks in our pockets he could easily win by breaking two or three strings of 25 straight as we were trapping. As usual he did not show up, although I was told he was among the spectators.

C. M. STARK.

Soo Gun Club.

SIOUX CITY, Ia., Aug. 28.—On the afternoon of Aug. 24 the twelfth and final shoot of the summer series of the Soo Gun Club resulted as follows:

Trotter	10001110110111111111110110111110—22	
Hunter	11111101111111111111111111010011—26	
Meyer, 4	11110101110111011011111000101—21—	4—25
Huberg, 4	11101110100111110111111111111—25—	4—29
Geiser, 5	00111101111001101011001111011 1—20—	5—25
Chapman, 3	11101011111110010101111111111—24—	3—27
Milchrist, 10	01111110101110110111111101111—24—	6—30
Ellis	00011101101111101011111111111—23	
Kortright	10100101111001110111101001110 1—19	
Keefe, 2	01111111111111101111111111111—28—	2—30

A number of the boys shot up back scores with the following results:

Event No. 1.—Trotter (3) 30, Geiser (5) 24, Hoberg 18, Milchrist (1) 22, Keefe 23, Ellis (2) 23.

Event No. 2.—Trotter 29, Geiser (6) 30, Hoberg (7) 30.

Event No. 3.—Trotter 27, Geiser 24, Hoberg (1) 21.

Event No. 4.—Trotter 23, Geiser (1) 29.

Under the rules of the club committee, each member was compelled to participate in at least ten of the twelve contests, and as the leaders were so far in advance only ten members finished the series, and in the following order:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Leach	360	325	.902	Ellis	300	249	.830
Duncan	360	322	.894	Gray	360	298	.827
Hunter	360	319	.886	Hoberg	360	298	.827
Keefe	300	252	.840	Geiser	330	273	.827
Kortright	360	301	.836	Meyer	330	270	.818

The trophy and club championship was awarded to Leach, who won it fairly without the aid of a handicap.

WANECHA.

Trap at Sedalia.

SEDALIA, Mo., Aug. 26.—At the regular monthly medal shoot, held Aug. 26, Arthur Linabary, the youngest member of the club—not being quite fifteen years old—tied for the gold medal with Mr. Lucy on a score of 18 out of a possible 25. In the shoot-off Arthur won. Herr won silver medal. The scores:

J Linabary	12	Smith	16
Schnair	16	Roe	15
Fleming	14	Patterson	13
Lucy	18	Dr. Scales	15
A Linabary	18	Tnyman	13
Kerr	17		
Shoot-off:			
A Linabary	3	Lucy	2

J. LINABARY.

Budd—Gilbert First Annual.

Arnold's Park, Ia., Aug. 25.—The Budd and Gilbert first annual tournament, held at this place Aug. 23, 24 and 25, closed to-day. About fifty contestants took part in the shoot. About 18,000 targets were thrown from two sets of three traps, Sergeant system. The programme for each day was eight 15 and three 20 target events, with $7.50 added to the 15 and $10 added to the 20 target events. Two cups were given to the amateurs, one to those making an average of 85 per cent. and over, and one to those whose average was less than 85 per cent. Marshall, of Keithsburg, Ill., won the 85 per cent. cup on shoot-off, scoring 48 out of a possible 50. Kirsher won the other cup with a score of 45 out of 50.

Among the contestants and visitors were the Hon. Tom A. Marshall, mother, wife and daughter; Mr. and Mrs. Shattuck, R. O. Heikes, of the U. M. C. Co.; Mr. Stegge, of Waterloo; Abbott, Densel, Jack, Kibby, Dumm and Cook, of Marshaltown; Clark, of Nora Springs; Shelden, of Mason City; Baldwin, Bird and Church, of Fairmount; J. G. Smith, of Algona; Kirsher and Abraham, Des Moines; Gray, Duncan and Leach, of Sioux City.

The shoot was a success in every way, and will be repeated in August, 1900, with more added money. The cup winners, Mr. Marshall and Mr. Kirsher, both used U. M. C. factory loads; Marshall used Du Pont powder; Kirsher used a Parker gun and Hazard powder. Pop Heikes was not feeling well until he caught a good string of fish; he then got back in his old form and lined out a number of straight scores.

The shooting commenced at 9 A. M. each morning, and the programme was all finished by 4 P. M., giving those who were so inclined ample time for fishing, sailing and boat riding around the lakes. Dancing was in order each evening, Mr. Marshall being among those who seemed to enjoy everything in sight.

Lake Okoboji is one of the most beautiful lakes we have ever seen, and Arnold's Hotel is first class in every respect. The hotel management laid themselves out to make it pleasant for the visiting sportsmen, and did all in their power to make them comfortable, and Mr. McCartney and Mr. Myerly were on hand each evening, with their sail boats, and all who felt inclined were invited to enjoy a sail with them.

The writer was too busy to weigh the large fish, and would not dare to say who caught the largest one; but we think Pop Heikes caught the largest string.

Wednesday, Aug. 23, First Day.

Shoot-off of those making an average of less than 85 per cent., 50 single targets, entrance price of targets: Abbott 42, Klein 43, McCartney 41, Linell 37, Henshaw 43, Clark 35, Mrs. Shattuck 35, Kirsher 45. Kirsher won cup.

Shoot-off of those who made an average of 85 per cent. or better, 50 targets: Marshall 48, Cook 41, Henry 42. Marshall won cup.

Notes of the Shoot.

Mrs. Shattuck on Thursday made a run of 47 straight, and was one of the greatest attractions at the tournament. Some four or five hundred people were on the grounds and took great interest in her shooting. She used U. M. C. factory loads, and made a number of straight scores.

Marshall and Kirsher were in good form. Their scores of 48 and 45 were good ones, as a high wind made the targets quite erratic in flight.

When Pop Heikes gets his hotel and shooting in running order the boys will all go to the grand opening.

On Thursday Fred Gilbert with his Parker scored 98 out of a possible 100.

Geo. McCartney is a great sailor, and knows how to run a hotel.

Abrahams is the best posted man at Arnold's Park, and was kept busy giving the boys pointers during the shoot.

Dago.

Cincinnati Gun Club.

Cincinnati, Ohio, Aug. 27.—Herewith are the scores of the first and second diamond medal contests and the monthly class medal. The latter takes place the third Thursday each month.

As you will see, Wanda (Mrs. Lindsley) made straight scores on each shoot for the diamond medal. Small also made a straight score on the first shoot, but was not on hand for the final.

Capt. Du Bray tied Wanda, but magnanimously would not shoot the tie off.

Mr. Arthur Gambell was re-elected superintendent for another year at the last meeting.

Aug. 26.—Second monthly contest for diamond medal, 50 targets, handicap:

Winners: Gambell, A; Nye, B; Pease, C; Cook, D.

Brockton Gun Club.

Brockton, Aug. 26.—Within find scores of to-day's shoot. We had a good attendance and after the three first events the weather was perfect. Wm. Allison, of South Weymouth, and Leroy did equally well. Worthing is doing very well, as his scores show 87 per cent.; Miskay, 81 per cent. Barrett, Allen, Bartlett, Stork and Grant all shot well.

The first position in the medal contest was won by Stork and Worthing. In the merchandise event: First, Barrett, Leroy and Allison, each 30; second, Worthing, Grant and Bishop, each 28; third, Allen, 27.

The next shoot will be Labor Day, and a hot one. A new event will be inaugurated at 100 birds, handicap, known as the Brockton handicap trophy—a beautiful cup costing $35—to be contested for Labor Day and Memorial Day until one member has won it three times. If the weather is good I will have a good report send you. Nos. 3 to 6 were the medal events, Nos. 7 to 10 merchandise. Scores:

Rochester Gun Club.

Rochester, N. Y., Aug. 23.—A very pleasant afternoon was enjoyed by the members of the Rochester Rod and Gun Club last Wednesday. The programme was a little more than the regular practice events—a 25-bird handicap merchandise event, in which there were sixteen entries, six of whom tied for first prize., and in the shoot-off Rullfison and Booker tied again and divided first. Five men tied for second place, and in the shoot-off Hadley won out. Paukner won third prize alone. Four men tied for fourth place; Glover and Weller won out. Kirchner took fifth all alone. The most interesting shooting was done by W. C. Hadley, who was in such poor health that he was compelled to have a chair carried from one shooting position to the other, so that he could rest between shots, and the way he snuffed them out was a caution. He says he could have broke them all, but wanted that second prize, which was a leather shell case.

Mr. Rullfison, who never shot over the traps before, only broke 2 out of his first 20, and then started in at a 70 per cent. gait and kept it up. The club will be well represented at the Dansville tournament Labor Day.

The club intends giving a similar programme every two week
Glover and Weller have agreed to shoot a match at 50 birds each for $25 a side, and will shoot as soon as they can the birds.

Parker Gun Club Tournament.

Sept. 4.—The Labor Day tournament of the Parker Gun Clu with a sheepbake added, was a success in every particular. Th attendance was large, the weather was cool and delightfully cle and pleasant, and the shoot ran off as smoothly as clockwor There was quite a representation from New York, Messrs. Mone Banks, Schortemeier, Dudley and Dr. Webber and his charmir wife, who had the pleasure of seeing her husband make the close kind of a competition with some of the best shots of Americ for up to the last programme event at 10 pairs he and Leroy we in the lead and tied on their averages, but the latter won out the finish with 19 out of 20; then Claridge broke his 10 pai straight, for which he deserved and received the most hearty co gratulation. A magautrap was used to throw the targets, and was kept busy working till about 6:30, one extra event beir shot off, No. 11, after the ten regular events were finished.

During the midday hours fragrant odors of baking sheep we wafted now and then to the noses of the shooters. In the re of the club house a long trench had been dug, and over the slo fire in it several sheep were cooking, which, with sweet potatoe fried sweet corn, excellent coffee, etc., were served a while aft midday on long tables set for the large company present. B sides the shooters there was a large attendance of spectators, gentl men and ladies, who enjoyed the day thoroughly.

The tournament was open to all. The programme called for 1 targets, with a total entrance of $18.50. Purses were divided by th Rose system, four moneys.

The cashier's department was run with admirable skill. Cas was paid in and paid out without friction, and the accounts the day closed out within a few minutes after the last gun wa fired.

IN NEW JERSEY.

Central New Jersey League.

Fanwood, N. J., Sept. 2.—Three clubs were represented in th contest of the Central New Jersey League, Dunellen taking premie honors on a rather low score. The light was bad, and the weathe was unfavorable. The next contest will take place at South Amboy on Sept. 16. The shoot to-day was under the auspices of th Climax Gun Club.

Dunellen Gun Club, of Dunellen—Brantingham 20, Lindzey 2 Giles 10, Fletcher 17, Hovey 16; total 83.

Columbia Gun Club, of South Amboy—Disbrow 11, J. Bloodgoo 19, Ivins 17, Green 5, Vanderveer 13; total 65.

Climax Gun Club, of Plainfield—Williams 9, Hunt 4, Terry 1 Ziglio 7, P. Jay 13; total 44.

Boiling Springs Gun Club.

Sept. 2.—The monthly shoot to-day of the Boiling Springs Gu Club was well attended, and was the first shooting of any im portance which this club has indulged in this summer. Th weather was not favorable for good scores, the light being dul from an overcast sky, and the targets were thrown hard. Dudle was high in the club event, with 43, an excellent performance con sidering the conditions. He and Huck broke 24 out out thei last 25 in the club event. There was quite a lot of sweepstak shooting besides. Scores in the club event follow:

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 16, 1899.

VOL. LIII.—No. 12. No. 346 BROADWAY, NEW YORK

"It's indoors, sir, as kills half the people; being indoors three parts of the day, and next to that taking too much drink and vittals. Eating 's as bad as drinking; and there ain't nothing like fresh air and the smell of the woods. There 's always a smell from trees, dead or living, and the air is better where the woods be."

—Jefferies' Gamekeeper.

EGRET PLUMES.

THE question as to how egret plumes are obtained, long ago settled in the minds of those who had made any inquiry into the destruction of these beautiful birds, appears to have been revived again in England, by an amusing individual, who locates the scene of his experiences on the Orinoco River in Venezuela. He states, among other things, that the plumes used in the decoration of bonnets and dresses are not obtained by the destruction of the birds, but are collected in the swamps, where the birds breed, after the molt at the end of the breeding season. He declares that it would be impossible to shoot the birds returning to their roosts, as they would at once desert the trees where they were killed. He also says that on the banks of the Orinoco these birds have been domesticated for their plumes just as in Africa ostriches are bred for theirs. Incidentally he tells of one spot where forty pounds of the plumes were obtained, and speaks of two collectors who gathered one hundred pounds weight of the plumes without killing a single bird, and yet each plume weighs only a few grains, about as much as a spear of grass.

We are inclined to believe this writer a twin brother to another, who, a year or two since, told with great elaboration a tale of some one who was farming egrets in Algiers and was making great sums of money at the trade. When that story came out, requests for further facts and details were met by absolute silence, and nothing further has been heard of the Algerian twin. It is to be observed that the twins tell their stories always of distant localities, concerning which few persons have such positive knowledge as to be able to directly controvert them. If, for example, the Orinoco twin had allowed his imagination to play about Florida or Louisiana or the Texas coast, some one would have promptly arisen to convict him of lying; but the Orinoco is a long way off. It is certain that egret plumes, as handled by the wholesale trade, are always found fast in the skin of the bird's back. No other condition of egret plumes is known commercially. The Orinoco story has been contradicted by Mr. Alfred Newton, the eminent English ornithologist, and its life, like that of its Algerian twin, has been brief.

THE NEW YORK ZOO.

IT is a little more than a year since ground was broken in the New York Zoological Park, and the hope was then expressed that it might be possible to open the Park for the reception of visitors with the small beginnings of a satisfactory collection of animals during the autumn of 1899. This hope is justified by the event. The work has been pursued with so much energy as to show results very satisfactory to those interested in the Park, in buildings erected, dens built, grounds inclosed and roads and walks made ready for the public. In fact, the work is in so advanced a condition that the Zoological Society is now ready to receive the animals, which it will shortly exhibit to the public in a well-equipped park. It has already received some animals as gifts from persons who are interested in its plan and its purpose, and when the fact becomes generally known that the Park is ready for its inmates, it can hardly be doubted that a large number of gifts will be offered to it.

While the Society has as yet hardly begun to bring together its collection, it has already accumulated something over three hundred specimens, many of them of great interest and beauty. The tropical department of the reptile house is already being fitted up with plants, and with cases in which the snakes and lizards are to be confined with the surroundings of their natural homes, and gives promise of being a very beautiful and interesting place.

The number of wild animals, birds and reptiles in the possession of individuals in different parts of the country cannot be known, but it is undoubtedly very great—a squirrel here, a crow there, a hawk, an owl, a raccoon, a crippled duck that has recovered, or half a dozen snakes—animals of all sorts and conditions. Some of these are pets valued for themselves, or as objects of study; others collected more through idle curiosity than through any real interest, soon become a nuisance to their owners, who quickly lose pleasure in them and tire of the trouble of caring for them. Many such creatures—mostly small animals—might find a comfortable home in the Zoological Park, where there is room enough for them to live under conditions approaching those of nature, and where competent persons deeply interested in the welfare of the collections will devote all their time and energy to caring for them.

The knowledge that the Park is well advanced toward completion should bring out from persons possessing them a considerable number of our more common birds, mammals and reptiles, and it may even be that hunters, who, in their pursuit of big game, find at remote points captive specimens in the hands of settlers, may purchase these and present them to the Park.

It is well to remember that the Zoological Society wishes to receive for its collection specimens which are as nearly perfect of their kind as may be. Animals that have been crippled or broken down by accident, or by the incident of capture, cannot be accepted, but specimens that show no permanent injury will be very welcome.

With the largest zoological park in the world, most advantageously situated and supported by the wealth of America's greatest city, the New York Zoological Society will no doubt before long exhibit collections unrivaled anywhere in the world.

SNAP SHOTS.

Intelligent opinion of the Adirondack deer hounding situation, based on a close study of the ground, is that the law forbidding dogs promises to have much better enforcement this season than was given it last year. Among the reasons for this is the change of public sentiment affecting the law. The residents are being persuaded by the actual operation of the statute, where it has been enforced, that it is a good thing, for the deer are increasing. With time, too, they are outgrowing that spirit of resentment which naturally followed the forcing upon them of a law they did not want. A feeling has been powerful in many districts of the North Woods that the anti-hounding law was the work of outsiders, in the operation and fancied results of which they themselves were not duly considered. All that is now required to win cordial support of the system is a demonstration of its beneficial effects with respect to Adirondack dwellers; and this is precisely what time is working. Another influence has been the realization by some of the Adirondack protectors, like Mr. Beede, that they were not to be given the soft privilege of being a law unto themselves to enforce the statute or not to enforce it, as they had the notion. The outside clamor has been too much for them; they have fairly been forced into doing their duty. These conclusions are not to be accepted as applicable to the entire territory of the North Woods. There always have been, and probably always will be, diversities of sentiment and practice, governed by the varied interests or differing opinions respecting local advantages or disadvantages of hounding.

Some of the Maine visitors who have taken out licenses to kill September deer are reported to be coming out of the woods dissatisfied because of their failure to hang up venison in camp; and they appear to blame the State authorities for their ill luck. It is difficult to understand the logic of this. A license to kill deer is not at all an assurance that the licensee shall get his game; that depends upon his choice of country, his guide and himself. The Maine authorities simply provide the deer hunting country and turn the hunter free in it, and if then he fails to find his game it is no concern of theirs. There are deer in Maine in plenty; and in years past the game has been killed in large numbers in September. The license system which has gone into effect for the first time this season had its origin in a recognition of the September deer killing. It was a concession by the authorities that the game was taken in the close time by fishing parties for camp supplies; and most Maine visitors were familiar with the facts. In view of these circumstances the proposition now set up that the license is a fraud because there are no deer to be taken under it is difficult of acceptance. There are deer in Maine, and the visitor may find them if he goes into the deer country, and if the licensed guide he is compelled to employ is worth his wages.

If the Maine deer hunter who pays $6 for the deer he does not get is a disappointed man, what shall be said of the Scotch salmon angler who at the end of the fishing season finds himself out $2,500 for river rental, and no fish to show for it? The chagrin and disappointment of such a one can only be faintly imagined. The London Fishing Gazette describes his plight: "He paid the longest price in the market for the best chances. He spent his time and energies in the hope of making a record, or at least in enjoying every hour of his time to the full, and thought himself entitled to value for his money, and all he gets is innumerable blank days, relieved only now and again by a 'flash in the pan' in the shape of a tantalizing rise, or at best an occasional fish, and finishes up a most disgusting and disappointing season with only a fifth of the aggregate he bargained for, and probably not even that. He is indeed a disappointed angler."

From all accounts, the rentals of salmon fishing privileges in Scotland have been run up to preposterous figures. We read of anglers paying sums for the season which in rent mean from $55 to $75 for each fish killed, not counting the other expenses of travel, maintenance and attendance. The rentals have increased in many instances out of all proportion to the fishing returns. One Dee water, the Invercauld, which formerly brought £75 per annum, was leased last spring at £450, and the fish taken cost £15 each. In illustration of the uncertainty of the sport, another section of the Dee may be cited, for which in one season the lessee paid £200 and took from it 300-odd fish. The following year he had to pay £300, and his bag fell to 60-odd fish. The next year, as might have been expected, he let it alone.

The Adirondack wolf story has come around again this summer; and it runs that deer have been chased and killed by wolves. A few years ago we had this same tale, and it was then substantiated by a wolf pelt, which on being sent to the FOREST AND STREAM for identification proved to have been worn in life by a dog. The wolf may have returned to its ancient haunts in the North Woods, but the more plausible theory is that the deer destroyers belong to the species which the law makes owners responsible for if the animals are found running at large in the territory inhabited by deer.

Dr. Nicholas Senn, of Chicago, has returned from the Hawaiian Islands with a weird tale of the game conditions on the Island of Molakai, where, along with wild turkeys, goats, peacocks, pigeons, quail and pheasants, all counted as game for the gun, the deer are so numerous that when it comes to velvet time they kill the trees by rubbing their horns; and professional hunters from California have been imported to destroy the deer and save the forests. This fable teaches that when it comes to expert tall talk in hunting stories we have nothing to teach the native talent of the Hawaiians.

Commodore J. U. Gregory, of Quebec, calls our attention to an error in identifying the late M. Albert Menier, of Paris, with M. Henri Menier, his brother, who is the proprietor of Anticosti, and the promoter of stocking that island with game. The work of making a game preserve of Anticosti is now in progress. M. N. Le Vasseur tells us that the red deer already put out will soon be supplemented with another consignment; and beaver will be among the other species introduced. Anticosti will be represented at the Paris Exposition by an exhibit of the native woods.

Mr. Henry Talbott makes a vigorous and uncompromising defense of the carp in American waters, denying all the hard things that have been said about it, and claiming for it a place among the most valuable of our food species. We commend his argument to the consideration of those who have been unable to find anything of good in the imported fish.

The Sportsman Tourist.

After Salmon with Alaska Indians.

While en route to Cooke's Inlet, Alaska, about three months ago, I was obliged to wait at Sitka several days for a steamer up the coast. The delay had become tedious, and time began to drag heavily after the first day, which can be put in very well visiting the old Russian buildings, Indian Mission school and the Indian settlement; after that I was ready to clutch at anything to break the monotony; so when I saw some Indians getting their canoe, nets and other trappings ready, and heard they were going out after salmon, the first of the season, I hustled down to the beach and asked the chief mogul of the outfit, who I learned was called Sitka Jake, an old ex-chief of the Thlinklet tribe (who possessed the ugliest face I ever saw—one of those faces that would cook coffee) if I could go along with them. He grunted and still kept at work. I pulled out a couple of silver dollars and held them up, and he then condescended to grin and put up three fingers; so we closed the bargain at $3 and started off at 2 o'clock in the afternoon.

I supposed we were only going to the mouth of a river about six miles distant and would return that night.

There were seven Indians in the crew. I made eight. The canoe, like all of their craft, was hewed out of a solid log, and was about 25ft. long and 5ft. wide in the middle. Five young bucks did the paddling, and from the time we started they did not stop until 11 o'clock that night, when they landed the canoe on the beach of a narrow inlet, and as nearly as I could calculate about thirty miles from Sitka. We started a fire, and while my companions chewed on their dried salmon and tough bread I got away with a little lunch I had, all with the exception of a little piece of raw venison, which I saved for breakfast. In the meantime old Sitka Jake had dug out of his grub basket two seal's feet—that is, of the coarse-hair seal, which is very plentiful all along the Alaska coast. These they proceeded to roast in the ashes until they looked black and greasy; then they split them down between the toes, divided and devoured them, and I think felt hurt because I did not indulge. I did want to be sociable, if for no other reason than that I was so distinctly in the minority; but I had to draw the line on seal's foot; and I thought then, as I saw them licking their chops (over what seemed to them to be a sweet morsel), of my friend up at Standing Rock Agency on beef killing day, watching the Sioux eat, when he casually remarked that, "If that was the Indian meal he did not want any of the mush." I took the liberty to ask Chief Jake, who was the only one who would "sava" at all, why they ate seals' feet. His reply was simply, "Injun eat seal's foot catch big salmon." So I concluded they were eating them to carry out some superstitious notion or custom, and not because it was particularly appetizing.

After this Indian meal was over they held a sort of war council around the camp-fire, jabbering away among themselves in their strange dialect. You could hardly call it a language, and I can best describe it by conparing it with three chokes and a swallow, and I had about concluded that I was to be "stuck for the drinks" or roasted for breakfast, when they coolly piled into the canoe, pushed off, and anchoring it about 100ft. from shore lay down in the bottom and went to sleep. I tried to make the best of it, but with no blankets, rain, wet ground and mosquitoes, sleeping was out of the question.

About 2 o'clock my partners began to grunt and stretch (a little cramped, I imagine), pulled in shore and made a bluff at breakfast. I found my piece of venison, which I cut into nice little steaks, and tried to fry it in a tin dish, but it was conspicuously lacking in tallow, necessitating my borrowing a little grease of the Indians, which I thought to be pork grease. With this I managed to fry the venison in good shape, but not until I took a mouthful did I discover that the pork grease was fish oil. Bah! I can taste it now. The Indians got the venison.

After this repast was over off we started. The night before old Jake had told me we were going back toward Sitka in the morning, which, I presume, meant just the opposite, as a Thlinklet or Ckilkoot Indian can't tell the truth. After paddling about two hours, the inlet or strait began to narrow down to about one-half mile in width. Suddenly something attracted their attention on the opposite shore, and they jabbered away again excitedly. I strained my eyes for the object of their attention, but no sign of life appeared—not even a fish jumped. All at once Capt. Jake hollered "Chuk, chuk" (which means go, go), and away we went, the old kyak fairly jumping out of the water, and I began to think the crew were going mad, when the canoe struck the beach. One Indian jumped out and grabbed the end of a rope about 150ft. long, which was tied to one end of the net; and while he held on to this the others pulled out, playing out the net, making a half-circle in order to bring the other end of the net and rope up toward the beach, about 250ft. away. Then all except two of the Indians waded out along the ropes and with their paddles striking the water and yelling attempted to drive what I soon discovered were salmon toward the center of the circling net, which was hauled in as far as possible. Then with a gaff hook arrangement the Indians dragged the fish up on the beach. I counted 134 salmon, of which not one would weigh less than 15lbs—big, gamy, beautiful fish, with bright silvery sides. It was fun for the Indians, and would have been for me if I could have caught them one at a time with hook and line. As it was, I could only look upon it as an experience, not sport. When we got them loaded into the canoe, I was seriously considering whether the boat would not sink with eight persons added to the cargo, and so told Capt. Jake; but he responded, "Injun want more salmon." I kicked like a mule, but they insisted on going through the same performance again as soon as they located another school of fish. Fortunately the haul was not quite so heavy, and the boat still floated after catch No. 2 was loaded into it; but I was sure that it would not carry us back to Sitka, and I contemplated seriously which was best to do, take my chances in the boat or on the isolated beach. I concluded that drowning was preferable to starvation, and consoled myself with the thought that if the boat capsized and I was drowned the Indians would not all escape; so I embarked with them. Why or how we ever made the trip back to Sitka without being shipwrecked is a mystery and a miracle. We went across a three-mile stretch of open sea, with a swell that would make an ocean steamer roll, and through a school of whales spouting and playing so close to our boat that the Indians became quite uneasy. One whale in particular, about 60ft. long, just to show us what he could do, came up within 100ft. of our boat, spouting water 30ft. high and then going under with a flop of his huge tail which made the water foam as does the propeller of an ocean liner. But, thanks to immortal destiny, at 8 o'clock that evening, thirty hours from the time I had started—cold, wet, cramped and hungry—I landed at Sitka, and all the gold in Alaska would have been no temptation for me to take another such trip. I admit I was looking for experience, but not in such chunks as I got on this expedition.

F. H. Russell.

Bee Hunting.

To the lovers of nature, ozone and hunting, and to the man who requires some motive other than these to take him from store, office or shop for the good of his health, bee hunting offers a field where each may enjoy himself in his own peculiar way. Coming as it does during the summer and early fall months, it is followed when other kinds of hunting are out of season. I have seen many description of bee hunting, but none that came very close to our mode of procedure here. I do not mean to say that our way is best, but it gives me the best satisfaction of any I have tried.

The first things to be considered are the tools to work with; these consist of two boxes, or rather a double box. The upper box, or catcher, is made about 4in. long, 3in. wide and 3in. deep. It has a sliding bottom of wood, which projects beyond the box far enough so that it may be readily drawn out; a sliding partition of glass about half-way between the top and bottom of the box, which projects the same as the bottom, and a fixed top of glass. Both of these slides work in grooves cut in the sides of the box. The bottom, or honey, box, is a plain wooden box with wood bottom, but no top, and is made about 2in. deep and just large enough so that the catcher will fit inside. There should be some cleats around the inside of the bottom box about ¼in. from the top for the catcher to rest on. Care must be taken to cut the grooves for the bottom slide of the catcher high enough up so that the slide may be drawn when the catcher is on the honey box; also that the catcher box fits the honey box loosely, so that it may be taken off without jar.

Tack a leather loop on the long sides of the box, the loop to be large enough to take in ½in. stick. Procure a tough piece of honeycomb and cut it to fit the honey box snugly, for if it is loose around the edge bees are apt to get down on the bottom of the box and bother you. Take a small bottle of honey, or if honey is not handy, take some granulated sugar and melt in hot water until about the consistency of honey. This makes a very good substitute. Take another small bottle with a little water in it and a pocket compass, and you are ready for business.

Go out into the fields and find where the bees are working, and when you have found one draw the bottom slide of your catcher box part way out and hold the box in your right hand; take your handkerchief in your left, approach the bee carefully, and catch him by clapping the box over him and at the same time bringing the handkerchief up against the bottom of the box. By looking down through the glass top of the catcher you can see if you have caught the bee. If not, try again. You will probably miss some at first, but a little practice will enable you to catch all you need. When you see that you have one in the bottom of the box, shut the lower slide, open the middle one and the bee will go into the upper part of the box, then you can shut the middle slide and you are ready to catch another. Repeat until you have three or four more bees.

Cut a stick small enough at the top to go into the loop on the honey box, and as long as you can have it and see into the honey box. When the stick is stuck up in the ground, leave a limb at the top about an inch long for the loop to rest on to keep the box from sliding down the stick. Point the lower end of the stick. Get on to a hill, knoll or any place where you can have as clear horizon as possible. Set up your stick and hang your honey box on it.

Take some of your clear honey, reduce it about one-third with water in your other bottle (this is done so that the bees will fill up quicker), pour some on the middle of the comb in the honey box. Take your catcher and get a bee into the lower chamber, place the catcher on the honey box and draw the lower slide part way out, cover the top of the catcher with your handkerchief to make it dark inside and the bee will generally go down on to the honey. I say generally, because sometimes a bee will refuse to work, but not very often.

After waiting a short time, close the lower slide and look through the glass on top of your catcher and see if the bee has gone down. If he has not, open the slide, cover her up and try again. You may have to try several times with some before they will go down, but when they do step back from the stick, reach out and lift the catcher gently from the honey box. If the bee flies off as soon as it sees the light, we generally consider it no good, but if she stays and gets a full load, she will likely come back and work. If the bee clears out at once you will have to let down another and try again. However, do not be in haste about it. Sometimes a bee will go back on, after she has looked things over a little, and work all right. We will suppose a bee has filled up all right. The next thing will be to see where she goes. This will be rather a hard task for the amatuer, for a bee on her first trip will circle a good deal before she gets straightened out on her true course for home. After the eye has had a little practice, however, you can generally get very near the true course the first time.

When the bee has gone, look at your watch, note the time and remember it or set it down. Then let down another bee, watch where she goes, and so on, until you have let them all go. Now look at your watch again and note the time. Timing bees I consider one of the most important parts of the sport, as by it I have found bees that I probably should never have found without it. For instance, suppose the bees have gone toward a house where you know tame bees are kept. You know about the distance you are from the house, and after a little practice you can tell about how long it would take a bee to fly that distance, deposit her load of honey and return to the box. Carefully note the time of several of the bees marked, as I shall hereafter tell you, and if you find that some are gone a shorter or longer time than you think it ought to take them, or if you find any great difference in the time of the several bees, it will be well to follow them up, and be sure whether they go to the house or not. I found a swarm of wild bees in this way this summer.

But while we have been talking about this part of the sport, our bees ought to be coming back. Note the time the first bee arrives. This will give you a rough estimate of how far you are from the nearest swarm of bees. After the bee has gone on to the box (which she probably will not do until she has done more or less fussing and bobbing around the box to see that everything is all right), carefully approach the box and mark her so that you will know her again. To do this I have a small bottle with some whiting mixed up thick with water. Take a spear of grass, dip in the mixture and just touch the bee where you want to mark her, being careful not to get any on her wings. Some I mark on the shoulders, others on the back, some on one side, some on the other, or on both, and so on. But as each marked bee goes, carefully note the time and direction, and if you cannot remember them all, set them down on a piece of paper.

You will find that after the bees have made two or three trips you can see where they go much more readily, as they do not do so much circling then. As each marked bee comes back, note the time, and then by comparing this with the time she went, you will find how long she has taken to make the trip, and so by noting the return of each bee you will find the one that makes the quickest time and is therefore probably of the nearest swarm. The quickest time that bees will make even when you are close to them is about five minutes. A bee will go a mile in from fifteen to twenty minutes, according to how hard the wind blows and how far she has to crawl to get in to where she deposits her honey. I never had bees work in less than four minutes, and they were fool bees that were hung up on the outside of a limb.

If the bees all go in the same direction you have but one thing now to decide, viz., whether they are tame bees or not. To determine this, you have two points to go on, namely, the direction they take and the time they are gone.

But if you have two or more times you have additional points, some of which are as to which line is the most likely to be wild, which line leads through the best country to follow them through, which works the quickest, etc. When you have decided on which line to follow and have watched them go several times so that you are sure of the direction, catch the marked bees that you know go on that line by carefully and quickly setting your catcher box over the honey box while the bees are filling up, draw the slides and let them into the upper part. After having caught all the bees going in the right direction, catch a few fresh bees and move forward as far as you can, and be sure you are keeping nearly on the line.

Set up your box and proceed as before. If the country you have to go through is open, you can gain up quite fast, but if it is through woods it is slower work. If the piece of woods is small and you judge by the length of time the bees are gone that they go through, go around or through the piece to the opposite side, get as near on the line as possible (here is where a pocket compass comes in handy), and let the bee go from there. If you think the bees do not go through the wood, get a cross line and that will very soon tell you whether they do or not. To do this it is better to catch new bees, if possible, as the old ones if they are taken so far directly off the line may not come back. Then go to a point as nearly at right angles to the line you have been following and as near opposite the point on that line as you should judge they would have time to go to, as you can set up your box and let the bees go from there. Wherever this new line crosses the old, there will your bees be. If the piece of woods is large and the time record tells you the bees are quite a distance from the edge of the woods, you have got more of a job on your hands. Try and find some open place in the woods on as high land and as near the line as possible (here the compass helps again), let your bees go from there. If the woods are thick and you cannot find any such place, I have a great many times climbed a small tree on top of a ridge or knoll and let the bees go from there.

If the bees are working well, when you get near enough so that they will work in eight or ten minutes, they will commence to gain up. That is, the other bees in the swarm will find out that the bees you have working are bringing in honey and will follow them back along the line till they find it, then they will go to work too, so that when you get close to the tree the woods will be full of bees looking for the honey. This is not always the case, however. Sometimes when you get quite close to a swarm they will not come back to you at all, thus leaving you in the lurch. I have had this happen to me several times in my experience, and it is considered a good sign, as the bees that do this generally have a large quantity of honey. As a general rule the less honey a swarm has the more eager they are to work, and vice versa.

If you get caught in this way, all you can do is to keep as near on the line as you can and go ahead, looking over all the likely trees until you find the right one.

When you get near enough so that your bees work in five or six minutes, you ought to be able to find the tree by going along the line and looking carefully over all the trees in range. Often it takes some little time to find them, especially if they go into the tree high up, but patience and perseverence will generally disclose them to you. Sometimes a pair of binoculars are a great help to you in seeing the bees if high up in the tree.

There are one or two things I have noticed that may help you in finding a bee tree. One is that you will nearly always find them near the border of the woods or some open place in the woods; another is you will nearly always find them near the water. In taking up a tree we save both bees and honey.

If there is anything in the above description of our mode of bee hunting that any would-be bee hunter does not understand, I should be very glad to explain more fully if he will let me know wherein the difficulty lies.

SHAWNEE.

A Midsummer Journey.—III.

THE parties on our homeward journey were Brimfull and daughter, the two schoolmarms, for whom I must purchase an edition of Seneca's "Camp Cookery" in large type; Shoshone, and a rustic damsel, concerning whom the following incident will tell more than a whole biography.

We arrived at Salt Lake simultaneously with the volunteers, and shared the honors of the fête. The aforesaid damsel had white skirts and other female paraphernalia to be done up ere she could make a respectable public appearance, so she sallied down Main street, and in the suburbs was arrested by the sign, "Whitewashing done here." She took in her bundle to get it whitewashed. Further comment is unnecessary.

I applied to Indian Agent Howell P. Myton for a permit to fish on the reservation, but received no answer, and our rods were not taken from their cases, nor did we shoot at a chicken. I did, however, secure a few rare birds for my collection. So far as "varmint" were concerned, we had more than our share of scorpions and rattlers, by which we were not molested on the outward trip. A magnificent drill of colored cavalry compensated for many annoyances that we have heretofore experienced at the post. Horse feed was the best that I have ever seen, and the entire trip was enjoyable.

Near the Duchesne one of our horses gave out, and a wily Ute came to our aid with a pair of bronchos, for which he demanded $100, but which he sold, after a day's palaver, for $20 and an old pair of chops. Five days of hard driving brought us home, and the main object of this epistle is to catalogue some of the birds secured during our month's outing.

Cathartes aura, Linn.—Buzzard.
Accipiter atricapillus, Wilson—Goshawk.
Buteo borealis calurus, Cass.—Western red-tail.
B. swainsoni, Bonap.—Swainson's hawk.
Aquila chrysaetos, Linn.—Golden eagle.
Speotyto cunicularia hypogæa, Bonap.—Burrowing owl.
Dryobates villosus harrisii, Aud.—Harris' woodpecker.
D. pubescens gairdnerii, Aud.—Gairdner's woodpecker.
Sphyrapicus varius nuchalis, Baird—Red-naped sapsucker.
S. thyroideus, Cass.—Williamson's sapsucker.
Melanerpes torquatus, Wilson—Lewis' woodpecker.
Colaptes cafer, Gmel.—Red-shafted flicker.
Trochilus platycercus, Swains.—Broad-tailed hummingbird.
Myiarchus cinerascens, Lawr.—Ash-throated flycatcher.
Carpodacus mexicanus frontalis, Say—House finch.
Spinus tristis, Linn.—Goldfinch.
S. pinus, Wilson—Pine siskin.
Chondestes grammacus strigatus, Swains.—Western lark sparrow.
Junco caniceps, Woodh.—Gray-headed junco.
Amphispiza bilineata, Cass.—Black-throated sparrow.
Melospiza fasciata montana, Hensh.—Mountain song sparrow.
Pipilo maculatus megalonyx, Baird—Spurred towhee.
Passerina amœna, Say—Lazuli bunting.
Lanius ludovicianus excubitorides, Swains.—White-rumped shrike.
Dendroica æstiva morcomi, Coale—Western yellow warbler.
D. auduboni, Towns.—Audubon's warbler.
Seiurus noveboracensis notabilis, Grinn.—Grinnell's water thrush.
Icteria virens, Linn.—Yellow-breasted cleat.
Troglodytes aedon parkmanii, Aud.—Parkman's wren.
Turdus fuscescens salicicolus, Ridg.—Willow thrush.
T. ustulatus swainsonii, Cab.—Olive-backed thrush.
T. aonalaschkæ auduboni, Baird—Audubon's hermit thrush.

These are not all the birds collected, but I have simply given species that I have not before noted in the columns of FOREST AND STREAM as coming from the Wasatch, the Uintas and the intervening valleys.

SHOSHONE.

Real Names and Others.

Editor Forest and Stream:

On returning from a long trip I find my file of FOREST AND STREAM awaiting me, and taking advantage of a day of enforced leisure, I run over the numbers, finding no end of things provoking question and discussion. Among them is your very interesting editorial on the desirability of using a "pen name" instead of one's own proper name in signing letters.

You made some good points, undoubtedly, and it is true that there are a dozen or two of such names, from Frank Forester and Nessmuk down to Podgers and El Comancho and Jay Beebee and Shoshone and Pine Tree and Kelpie and Coahoma and Ransacker, and all the rest, ever welcome and sure to be appended to literature we wouldn't miss. But there is another side to the question. There may be a deal more glory in a pseudonym, more halo about it, more literary character to it, but there are at times others than the author to be considered. Let me illustrate. Out in the Canadian Rockies a few weeks ago I met some delightful people from Toledo. They were not hunters nor fishermen, and unfortunately for me—and for themselves—they did not read FOREST AND STREAM. But they were good people nevertheless, and I wanted to ask them if they knew Jay Beebee. I knew him well once—by correspondence. That is, I knew one side of him—the one that was interested in domesticating ruffed grouse—or at least inducing that splendid bird to breed in captivity.

I have a file of letters from him on that subject, and over his own name, too, but out there in the Rockies I couldn't for the life of me remember anything but Jay Beebee, and I was helpless. That pen name was, and doubtless always will be to me, the name I shall most readily remember him by.

This was about the time, I should think, when he was writing No. 1 of his papers on "Toledo and Thereabouts," I am glad to see his handiwork again, and his "pen name" signed to it, but if I want to write to him I might have to do it by way of the office of FOREST AND STREAM, with a trifle of bother to others and some delay in time.

Now, here comes Pine Tree, with his "Memories of the Connecticut Valley"—particularly interesting to me, by the way, by reason of my knowledge of his old stamping ground—complaining in the very paper to which he signs his pen name, that another correspondent, whose letter in FOREST AND STREAM he has enjoyed, has signed himself with two stars. Pine Tree adds, "I wish he would not be quite so modest, but would give his name."

And are we so sure that we don't relish a good thing in our paper quite as well if it is signed by the writer's real name instead of another? Here in one issue of FOREST AND STREAM I find letters or articles by Rowland E. Robinson, E. Hough, W. W. Hastings, J. B. Burnham and A. N. Cheney. Now do any of us care to ask Mr. Hough to sail under other colors? Who isn't glad to know that it was Rowland E. Robinson who wrote "Sam Lovel's Camp" and "Uncle Lisha's Shop"? If W. W. Hastings had signed something else to that wonderful third number of his "Types of Sportsmen" should I have been any more certain to cut it out and put it in my pocket for quiet re-readings and send out for another copy for a particular friend? And isn't it good to know that about the keenest, most interesting and most veracious accounts of the Yukon country that have appeared anywhere are the work of J. B. Burnham? And as for Mr. Cheney—but the very suggestion that he should have hidden himself behind some other name is a bit ridiculous, isn't it?

The truth seems to be that the good hunter and fisherman and the good writer will win his audience no matter what his signature; that there is greater freedom for the writer under an assumed name, and greater convenience to his friends—and enemies, if he have any—if he use his own.

C. H. AMES.

The reference by Mr. Ames to Jay Beebe makes pertinent this paragraph from a letter just received from our Toledo correspondent:

"I am indebted to the FOREST AND STREAM, through Commodore Thompson Burton, of Youngstown, O., for a most enjoyable three weeks at Detour, Mich., in August, and for the acquaintance of a royal good fellow in Burton himself, between whom and the writer there sprang up quite a mutual admiration society. This is an illustration of the good things the FOREST AND STREAM is doing "on the side," as the boys say. Burton I had never met before, but I was attracted by his letter in the FOREST AND STREAM in June last, a correspondence followed, and the result was as heretofore alleged. He has bought a couple of adjacent islands in that delightful archipelago of the Soo River, just north of Drummond Island, and the Beebes are going up next summer to help him occupy them."

Natural History.

Dixie, a Florida Pet.

A SMALL boy from the rurals, a small box and a little impish black-eyed creature within the box.

"How much will you'ns gimmee fur my muskrat?" was the query put by the barefoot boy.

After many assurances as to its perfections, the trade was closed, and the little animal was ours.

Dixie was the christening we gave to this small creature, pronounced by the natives of the county to be a muskrat. He was the greatest curiosity in the way of a pet we had ever possessed. No one of the many visitors that came to see him had ever seen an animal like him. In size he was similar to a large rat, his head resembled a mink's somewhat, his tail was bushy, he was beautifully marked with white and black stripes, and in his forehead was a perfect triangle of white. His movements were similar to those of a squirrel, although he could not climb so easily; his long slender claws served him well as he dug for insects or worms, and his jet black eyes were as keen as an eagle's.

Dixie's introduction into the home was full of surprises and queries. Will he bite? What does he eat? Will he run away? and What is he? Immediately on being turned out of his box he commenced a series of acrobatic feats around the room, walking on his front feet, his bushy white tail standing erect, causing some one to call it a night-blooming cereus; others compared him to a railroad truck as it is trundled along empty. He glided or seemed to roll along rapidly and smoothly on his front feet as if on an electric current, then back again without reversing; backward and forward like a railroad engine at a switch. Around and around he played in a half-teasing manner, but as we learned from better acquaintance, it was his mode of defense, and he was trying to frighten the many strange objects away. His movements were so quick and stealthy that he would pass out of view, leaving only a memory of a whisk of white.

This cunning as well as impish little pet kept the cat and the kitten in peril many times, and while Mistress Tabby could have demolished him as easily as she would a rat, she did not have the authority, and Dixie would race her around the room until she would leave in disgust. The kitten soon saw in Dixie a playmate, and they rollicked like two kittens, first one and then the other inviting a tussle. Dixie would give a tiny little squeak, the only voice he possessed, and heard only when in pain, then a cry from the kitten, and both would play "quits"; to begin again the next moment, playing hide-and-seek around the portieres.

The next moment he might be seen frisking around the setter dog, circling round and round on front feet, that formidable tail erect, with the idea of frightening or teasing the big creature, who would skulk away as the temptation to snap at the impish little Dixie became too great to be resisted.

With that perverse nature that wishes coaxing and petting, yet insists upon pursuit, he would hide and scamper away when he would hear the call "Dixie, Dixie, Dixie." Let the person become indifferent and begin to read or write and Dixie would come and climb upon our laps—but never still an instant—to be pushed off, only to return as often and as quickly as he could make the ascent again. After these rollicking plays, the little fellow would slip off as stealthily as a fox, and we would find him dead asleep in some favorite dark corner, curled up, with his tail over his face.

Because this little creature was so pretty and showed so much reason he was allowed many liberties that would not have been given to a less attractive pet. He was too cunning to be resisted when he climbed stealthily to the chair at meal time and reached small bits of meat from the plate and scampered off to a secluded place to enjoy the morsel, then back again until the edict "enough" went forth. In all his eating he would seek a hiding place to enjoy it. In these hiding places would be found trophies in the shape of cut paper, feathers, fish heads and bones; where he had found them was hard oftentimes to determine. Dixie had a sense of reason that surprised us very often. After finding his way into the cupboard he seemed to divine that the key played an important part; his little mind resolved the matter over and he would work by the half hour with his paws and teeth at the key and door fastening.

Those who have lived or visited in Florida know the annoyance the roach is to the housekeeper, but in Dixie we found a roach catcher superior to all combined patented devices.

He loved to get out at night, and was small enough to slip through the slats of the French window shutters; when once out, his society would be missed during the rest of the evening, but about midnight a rustle of the shutter would be heard, a quick pattering of feet over the floor, and in a minute Dixie would be upon the bed, gently biting nose or ears, and playing like a frolicsome kitten. On such occasions he would be put into the closet, where he would get between the folds of some clothing and sleep till morning.

His drinking cup, always ready, served also as his bath. He would dip his paws into the water and wash himself much as a person would do, or as a raccoon does.

One night a cackling of the chickens announced an intruder, and on our looking into the cause of disturbance a whisk of white skirted by, and Dixie was found to be the culprit. It was his first and only offense, and he was soon forgiven.

With the instinct of so many animals, he changed his sleeping quarters very often. In daylight he preferred the bureau drawers and the hat box of the trunk. While any one was in the room he would slip in and out as if in play, but when everything became quiet he would stealthily hide himself among ribbons, collars, etc.; but let him hear approaching footsteps and his cunning little face would peep out; then if no objection was raised he would quiet down and go to sleep.

A few years ago a hunting party was out and saw one of these little animals skirt across the prairie in front of them and take refuge in a gopher hole. An intrepid member of the party ran his hand into the hole, felt a painful throb, and discovered that he had been bitten by a large rattler, from the effects of which he died in a short time. Some Florida natives claim that this pretty little animal finds a home with the gopher (a species of land terrapin), and as the gopher's home is known to be a favorite retreat of the diamond-backed rattler, we may picture these three odd and strangely different creatures inhabiting a common home and remaining friendly.

For the benefit of the reader who may not have guessed the classical name of Dixie we will add that he is the little striped skunk (*Spilogale putorius*), found in some localities on the east coast of Florida.

MINNIE MOORE-WILLSON.

The Beaver in the National Zoo.

DR. FRANK BAKER, Superintendent of the National Zoological Park, gives us some particulars of the beaver which were caught for the Zoo in the Yellowstone Park by Mr. E. Hofer. He writes:

"Nine beaver, captured by Mr. Hofer in the Yellowstone Park, were received at the National Zoological Park on Nov. 23, 1894. They were placed in an inclosure 100 by 230ft. in extent, situated in a rather secluded valley, which was supplied with running water and contained a considerable amount of underbrush and numerous small and medium sized trees. Two young were born there, which were first seen on July 5, 1896, when they were a little smaller than ordinary muskrats. They are now as large as the old ones. The fence around the inclosure, when the animals were put in, was a cheap, temporary affair, and they succeeded in breaking through this at one time in order to procure a supply of wood from the adjacent territory outside. One of them, apparently the father of the two young, escaped into Rock Creek, and although seen many times in the vicinity of the inclosure, and at other places along the creek, could not be captured. He was finally killed about six months later on the bank of the Chesapeake & Ohio Canal, several miles west of Georgetown. Two other male beavers were so seriously injured in fighting that they died, and two of the animals were found dead in the inclosure without any apparent cause. The remaining four of the original beavers, and the two young, are still here and in fine shape.

"I should add that the beavers promptly cut down all the underbrush in the inclosure, as well as all unprotected trees, and have been given from time to time many wagon loads of branches cut from trees of the species which seem to be most acceptable to them."
